But Congress was chiefly absorbed during its recent extra Session with those measures, and did not provide as amply as could be wished for the fortification of our sea and lake coasts. In previous wars the loyal States have provided themselves by independent and spontaneous exertion in support and aid of the Federal Government in its arduous responsibilities. The same disposition has been manifested in a degree eminently honourable by all the loyal States during the present insurrection. In view of this fact, and relying upon the interest and enthusiasm of the same disposition on the part of the loyal States, the President has directed me to invite your consideration to the subject of the improvement and perfection of the defences of the State over which you preside, and to solicit to submit the subject to the consideration of the Legislature when it shall have assembled. Such proceedings by the State would require only a temporary use of its means. The expenditure ought to be made the subject of conferences with the Federal Government, being thus made with the concurrence of the Government for general defence, there is every reason to believe that Congress would sanction what the State would do, and would provide for its reimbursement.

Should these suggestions be accepted, the President will direct the proper officers of the Federal Government to confer with you, and to superintend, direct, and conduct the prosecution of the system of defence of your State.

I have, &c., WILLIAM H. SEWARD.

American public opinion is at a loss to know what is the immediate cause of this panic-struck policy. The New York Herald believes it to be European intervention in Mexico, which the Federal Government would, in certain eventualities, oppose with all its power.

LORD LYONS'S PROTEST.

The British Ambassador has protested against the arbitrary confinement of British subjects, alleging that the authority of Congress was necessary for such imprisonment.

Mr. Seward replies to the effect that in the present emergency all means of defence and safety alike must cheerfully be used, whether which the safety of the people demand, and that the British Government would hardly expect the President to accept their explanations of the Constitution of the United States.

The New York *Commercial Advertiser*, a journal of good authority, says that the personal relations between Mr. Seward and Lord Lyons are far from friendly.

MISCELLANEOUS.

The telegraph line which is to connect New York and San Francisco has been opened to Utah City, its eastward progress.

The Confederate Congress of the North Pacific has organised themselves by electing Secretary Seward chairman, and Cesnus Commissioner Kinsley secretary. The Congress has passed resolutions of thanks to the President, with a request that he would send a national vessel to England to convey such goods as American contributors might send to the Relief Fund.

The New York banks have offered for the third 30,000,000 dollars of the Federal loan, and for 100,000,000 dollars of Seven per Cent Bonds.

THE DUKE OF ARGYLL ON THE WAR IN AMERICA.

THE Duke of Argyll was entertained at a grand banquet in Inverary yesterday week by his tenantry and neighbours, on the occasion of the coming of age of his son and heir, the Marquis of Lorne, K.T., M.P. for Argyllshire. The Duke Colin Smith, D.D., in the chair. The formal toasts having been disposed of, the Duke of Argyll addressed the company. He said he had a toast to propose, which was most enthusiastically responded to.

"I am sure," he continued, "that the heart of no Briton come in at the close, when, having discussed on agriculture and the causes of its prosperity, he referred to the fact which these causes of prosperity, he referred to the fact which these causes of prosperity, he referred to the effects of the civil war on the other side of the Atlantic. On this subject he said he had a few words to say to them.

"I say that there has been some fair excessed lately that the inconvenience which is felt in this country from the cotton famine is very much due to the trust that there will be a pressure put upon the Government to interfere in that question. I am sure that no Member of this House will ever be a party to it. I have no bias on spheres of the great sense and of the public principle of a non-intervention policy. I believe that we cannot interfere in it, that we can do the Government; and I unmixed, that I have too great confidence in the sense of the people of this country to believe that they will be willing to embark in such a policy. I believe that they will be willing to embark in such a policy. I believe that they will be willing to embark in such a policy. I

CHURCH AND UNIVERSITIES.

On the 22nd ult. the parish church of South Luffenham was reopened, after restoration of the interior.

In the channel of Sandy Church, Bedford, a white marble statue of the late Sir William Peel has been placed.

Mr. John Thornton, the treasurer of the Bible and Church Missionary Societies, died suddenly on Tuesday at his residence, Clapham.

A diocesan missionary festival was held at Ely Cathedral on Thursday week, when a sermon was preached by the Rev. Lord Arthur Hervey, Rector of Ickworth.

The vice-principalship of the Theological College of the diocese of Rochester, which has been held by the Rev. Arthur Wollaston Grafton, B.A., into scholar of Trinity Hall, Cambridge.

On Thursday week the parish church of the little village of Cuthelton, in Yorkshire, was consecrated by the Bishop of Worcester, after an entire rebuilding of the edifice, with the exception of the tower.

The Rev. C. B. Kennaway, Vicar of Chipping Campden, was installed Honorary Canon in Gloucester Cathedral on Saturday last, and on Sunday morning preached in all the Lords of the Sabbath Society.

A meeting of the Society for the Propagation of the Gospel was held on Thursday week at Derby, at which the Bishop of Oxford made an appeal on behalf of the society, urged on the meeting the obligations under which England lay to send the Gospel to Africa, on account of having been among the first to introduce slavery the curse of slavery.

The Society for the Propagation of the Gospel in Foreign Parts have awarded to Charles a year for three years, and the benefit for the meeting of Christian Knowledge £200 a year for five years, towards the proposed Church of England mission to the Aleutian Islands, forwarded with the assent of the Institution of the King and Queen of Hawaii.

The Bishop of the Society for the Education of the Poor in the Principles of the Established Church was celebrated on Tuesday on Whitsuntide, when the Bishop of the Queen, Lord Calthorpe, Lord Lyttelton, Sir John Pakington, Sir Stafford Northcote, Mr. Newdegate, and Mr. Adderley, M.P., by the ceremony. The new system of the society has occupied a large share of attention. Sir John Pakington expressed his opinion that the best way to secure the religious education of the poor would be to diminish the expenditure, and that the plan of testing efficiency by results would prove the best. Sir Stafford Northcote was glad that another meeting was to be exempted from their new mode of testing by results; and all the speakers expressed that the Government should not withdraw their support so much as one cutes had the society on private liberality.

The Bishop of Oxford and Lord Lyttelton issued a statement with regard to the cathedral restorations. It appears that of the sums borrowed on security of £14,000, under the Cathedral Restoration Act, in March, 1858, £10,000 has been expended on the external and internal restorations of the cathedral and aisles, the south transept, the north door, the Lady Chapel, including Bishop Stanbury's Chapel, the north-east transept, the staircase to the roof, and the south aisle of the choir.

MUSIC.

The opening for the season of COVENT GARDEN as the "Royal English Opera," under the direction of Miss Louisa Pyne and Mr. Harrison, took place on Thursday week, with Mr. Howard Glover's new opera, "Hop Blossom." In our last Number we could only mention the opening of the theatre and the musical success of Mr. Glover's work. We have now the satisfaction to say that the libretto has been carefully constructed, the opera-company to be repeated nightly to full houses, with even greater applause than it received on its first performance.

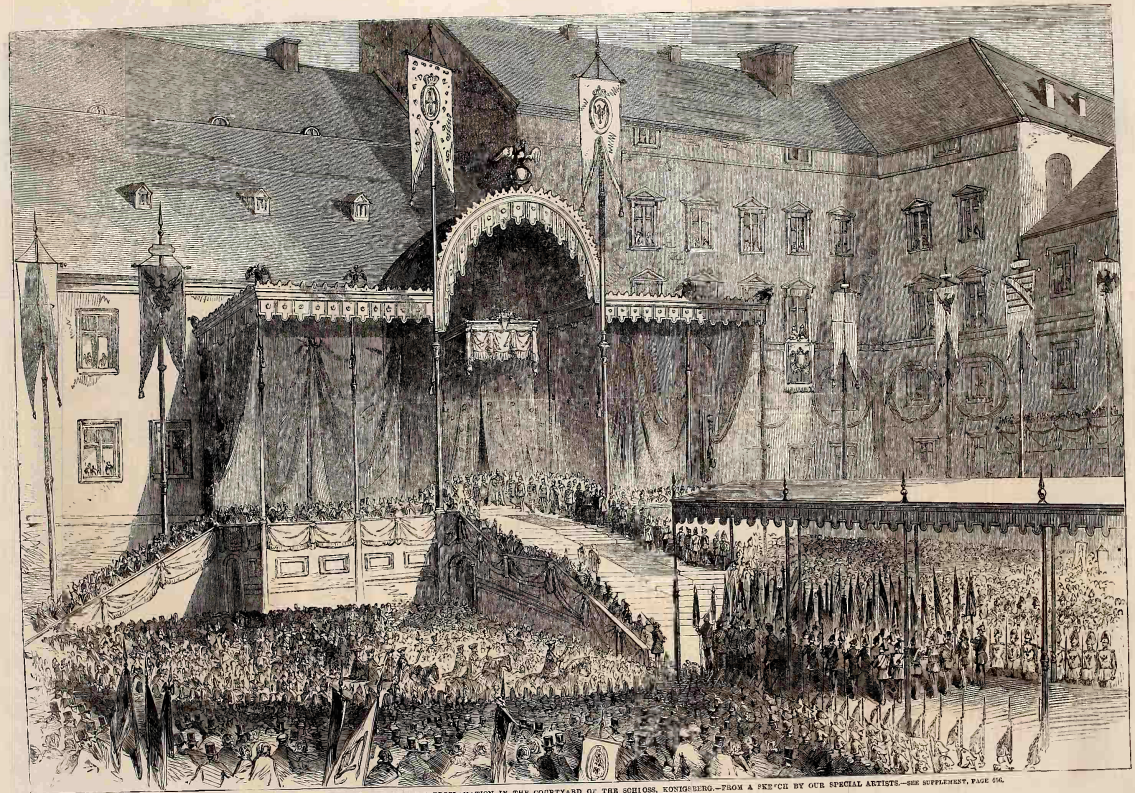
The subject is familiar to the theatrical public, the drama being a version of Victor Hugo's celebrated romantic story, "Le Roi s'Amuse," made his debut on the English stage, and created so strong a sensation by his performance of the principal character, M. Lucrey, who in this opera appears as well as of the music, has closely followed the author of the libretto, and has given every incident and character their original, preserving every scene and every incident, and even the dialogue in the principal part of the dialogue. He has made no alterations, in short, but such as were necessary for the transformation of a play into an opera. For such a transformation Victor Hugo's play was well calculated, for it is a melodrama rather than a regular tragedy; and the transition from melodrama to opera is easy. The subject, however, is sometimes of the extreme, has a wild, romantic interest, which strongly impresses the imagination and the feelings; and a train of circumstances, natural and consistent, gives allowance is made for the improbability of the subject, lead to one of the most exciting catastrophes to be found on the stage. Mr. Glover, therefore, has been happy in his materials and happy in the use he has made of them. His libretto is by no means the kind of thing usually given to musical play-wrights: written with elegance and spirit, it is worthy of the author's literary reputation.

The music is masterly, and rises in power and effect along with the progressive interest of the subject—the music of the last act, especially in the terrible scene of the catastrophe, being the most elevated and striking portion of the work. Mr. Glover shows that he is largely gifted with the creative faculty, and possesses a command over the resources of his art. His melodies have much variety, as well as beauty and expression; and even his simplest ballads, of which the materials and happy in the use he has made of them. His theatric

NATIONAL SPORTS.

The result of the Criterion Stakes has been to give Old Calabar an undisputed premiership in the Derby betting, despite the alleged unsoundness of one of his fore-leg joints. Although he was completely shut out of the Middle Park Plate, and has never yet won a race of more than a mile and a half, he reached the head of the poll on Wednesday, and has since maintained his position. Whether he will be able to stay the Derby distance remains to be seen, but he is undoubtedly a fine, powerful colt, and, if he can get over the ground, he is sure to be in the first three. Of course, the Criterion Stakes was a very poor race, and the time was slow, but Old Calabar won in a canter, and, as he is a horse of great power, he may improve greatly in his pace. Of the others who ran for the Criterion Stakes, Lord Clifden's Wenlock is the most likely to win the Derby. He is a fine, big, handsome colt, and, although he was beaten by Old Calabar, he ran a very good race, and, as he is a son of Newminster, he may be expected to improve greatly in his pace. Of Mr. Merry's Lord Lyon, Mr. Graham's Lord Clifden colt, and Mr. Cookson's Lord Clifden colt, it is not necessary to say much, as they were all beaten a long way from the front. Mr. Merry's colt is a fine, big, handsome animal, and, if he can get over the ground, he may improve greatly in his pace. Mr. Graham's colt is a fine, powerful animal, and, if he can get over the ground, he may improve greatly in his pace. Mr. Cookson's colt is a fine, powerful animal, and, if he can get over the ground, he may improve greatly in his pace.

Another Stakes, Hunt and Rend set, the to 6th, after, 6th to 4th, Norfolk and Suffolk set, 8th to 6th, 6th to 4th, Hunt and Rend set, 8th to 6th, Suffolk after, 12th to 8



THE CORONATION OF THE KING AND QUEEN OF PRUSSIA: THE PROCLAMATION IN THE COURTYARD OF THE SCHLOSS, KONIGSBERG.—FROM A SKETCH BY OUR SPECIAL ARTISTS.—SEE SUPPLEMENT, PAGE 456.

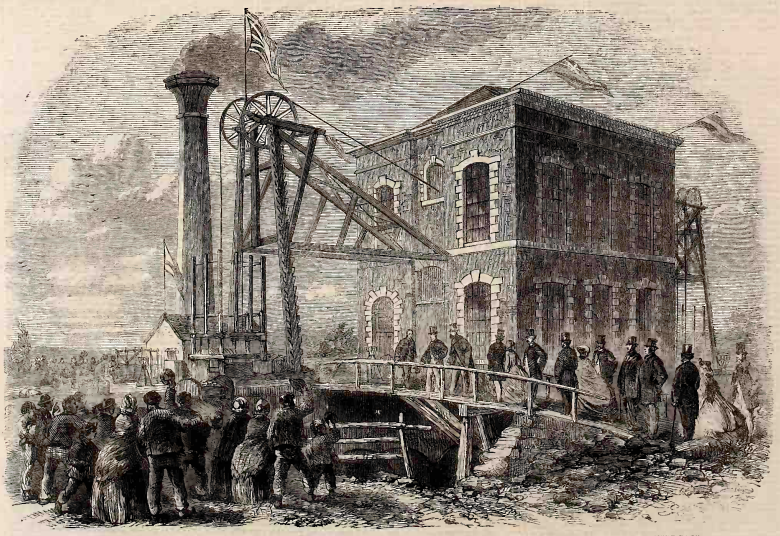
THE PRINCE CONSORT LAYING THE FOUNDATION-STONE OF THE NEW GENERAL POST OFFICE AT EDINBURGH.

On Wednesday week the foundation-stones of the new General Post Office and the Industrial Museum at Edinburgh were laid by the Prince Consort, in the presence of an immense concourse of people. The weather was extremely favourable, and holidays was completely suspended in the city during the double ceremony.

The route from Holyrood Palace to the site of the Post Office, immediately opposite the Register House, was lined by the military and several companies of volunteers, as was also the route along the North and South Bridges to the site of the Industrial Museum, at the back of the University. The principal streets were gaily decorated with flags, and, besides the crowds who occupied the two platforms from which a view of the ceremonies could be obtained, the streets were densely thronged with spectators, although thousands could only obtain a view of the carriages forming the procession as they passed along. The Prince Consort left Holyrood Palace at twenty



THE PRINCE OF WALES AT SHIREOAKS COALMINE, NOTTS, THE PROPERTY OF THE DUKE OF NEWCASTLE: THE SHAFT ENGINE-HOUSE.—SEE NEXT PAGE.

minutes past one, accompanied by Sir George Grey, the Duke of Buccleuch, General Walker, Colonel Maclean, Major Hyde Pope, and Earl Spencer. The Royal carriage was preceded by the Lord Provost; and, as the carriages passed along the Regent-road and Waterloo-place, were accompanied by the band of the Scots Greys, his Royal Highness being received with the utmost enthusiasm by the assembled crowd.

On arriving at the Register House his Royal Highness received a number of noblemen and gentlemen who were to take part in the ceremony, and proceeded across the street to the site of the Post Office, which was reached by the Lord Provost, the Magistrates and Council, the Lords of Session, the members for the city, and the other gentlemen who had been invited to his Royal Highness. The procession having taken their places, his Royal Highness read the stone, and the Lord Provost presented an address to the Prince Consort, congratulating the Royal Family on the safe arrival of her Majesty and the Royal family in the city, and thanking him for his presence on that occasion.

His Royal Highness replied to the following effect:—

My Lord Provost and Gentlemen,—I thank you very sincerely, in the name of the Queen, and also for myself, for the cordial welcome which has been greeted us on our arrival in Edinburgh. Your fresh assurances of loyal and devoted attachment to her Majesty's person and throne cannot but be deeply gratifying to her. In thanking you more particularly for myself for the very flattering manner in which you have received me, and for your kind invitation, let me assure you of the pleasure it has given me to be able to add myself of your invitation to take the foremost part in the ceremony of this day. I congratulate the citizens of Edinburgh, who watch with such solicitude and jealousy the care over all that can add to the improvement and the embellishment of a city already so remarkable for its beauty, on the acquisition of a new and important building, which will be an ornament to the city, and a source of much public convenience. It is the most important duty of Parliament to provide for intercourse with the remotest portions of the kingdom, and the national prosperity depends in a great measure upon the rapidity and facility of communication between London and Dublin, in the erection of an Industrial Museum; and it is particularly gratifying to me to find that Edinburgh is about to take the lead among the great towns of Scotland in this respect. Here is a new post office, that has been rendered necessary by the increase of the correspondence of the country; and it has been erected on the principle which has been adopted in London, and which, I believe, will be found to answer well, of providing separate buildings for the transaction of the business of the Post Office, and for the residence of the officers employed in it. I am glad to find that the Post Office authorities have not neglected the opportunity which the new building has afforded them of introducing into it the most important benefits to the working classes. I must also congratulate you on the commencement of the Academy of Music, so successfully established in London and Dublin, in the erection of an Industrial Museum; and it is particularly gratifying to me to find that the President of the Board of Trade has been able to lay the first stone the educational object will be kept carefully in view—that your Academy will not be a mere concert room, established to excite the wonder or stir the interest of casual visitors, but that, by its immediate connection with the University, it will become the means of supplying the student with practical illustrations of what he has been taught in his classroom. The system pursued in the Edinburgh lectures is most satisfactory, and must remind you of all that is the most engaging associations of the first character of your University. I am aware that while I must increase your interest that he should not himself be overburdened with the results of labour, in the development of the plans of the building announced by him have received under the able and excellent direction of the architect. Gentlemen, I have forced on your attention the few observations with which you have invited to the part I took in the ceremony of the day, under the influence of the kind sentiments which you have expressed towards myself and the Queen. I have only to add, that I shall have much pleasure in taking our receive in the practical proof of the wants and requirements of the city, and I trust most confidently that the University, and the Corporation, and the Commissioners of Police, will make such arrangements for holding a second celebration of this interesting event, as may afford the opportunity of the inhabitation of this interesting event, during the ten years that have elapsed since the opening of the first. And more warmly do I express this wish, as I am happy to think proper that there should be undertakings may conduce to the edification amongst the citizens of a taste and a love of science and art.

The foundation-stone was then laid with the usual forms and cloud cheering, and the proceedings terminated with three cheers for the success of the undertaking, and three cheers for her Majesty and the Prince Consort. Her Majesty was not present at the ceremony having retired to the Retaining Hall, where the children of Prince Leopold and two of the younger Princesses occupied a room in the Register House, from which a view of the proceedings could be obtained.

Immediately after the above ceremony, the Prince Consort, accompanied as before, proceeded to the University, in the large quadrangle of which the Principal (Sir David Brewster) and the members of the Senatus Academicus were in waiting to receive him. Sir David Brewster presented an address from the Senatus to the Prince Consort, which his Royal Highness briefly acknowledged. The marriage then took place on the site of the Mu-mum through one of the windows of the University, where the ceremony of laying the foundation-stone was gone through, the whole proceeding only occupying a few minutes.

THE PRINCE OF WALES'S VISIT TO SHIREOAKS COLLIERY, SOUTH.

His Royal Highness the Prince of Wales during his recent visit to Clumber inspected the surface machinery of Shireoaks Colliery, the property of Lord Galway, the Duke of Newcastle, and Messrs. Hall and Co., the latter of which is situated near the Manchester, Sheffield, and Lincolnshire Railway, was commenced in March, 1854. It was sunk to the depth at the depth of 48 yards, but this, and not of very inferior quality. Below this was found a sandstone bed, 60 yards thick, and extremely hard. The two shafts also made to the depth of 500 yards without difficulty. The difficulties at this point were so great that a less resolute man than his Grace would have abandoned the undertaking. The Duke, however, persevered; by the use of cast-iron tubing to an almost unprecedented extent—1200 tons having been put in—he was enabled effectually to control any, and at length the greatest, portion of the water. The owner was rewarded by the discovery of a fine seam of coal. The seam, however, was only reached at the depth of 500 yards, the tubing by far the deepest in this neighbourhood, and among the deepest in the country. More than 300 men are now employed in the colliery, and about 200 tons of coal are sent out daily. Though the seam contains little gas, the pits are worked exclusively with Davy lamps, and the whole is called the "long-wall" system. The utmost precautions are taken against casualties, the discipline of the colliery as regards all such matters being very strict. The pits are worked by a 60-horse power locomotive and general steam purposes. It is largely exported from Shireoaks, and is also extensively used both on the Lincolnshire line and at Sheffield and other places, supplied by means of that and the neighbouring lines. It is of superior quality for steam purposes, as shaw by its evenly-compact and bright appearance when time ago. The seam is two feet in thickness, and is what is called the "Top bard or Barnsley coal." The colliery is under the superintendence of Mr. Chas. Tylden Wright, F.G.S. The Prince of Wales and party arrived at the colliery shortly after three o'clock on the 15th inst., and spent nearly half an hour in inspecting the engine-house and surface machinery, which is of the most improved description, and is now being formed specimens of mechanical skill. His Royal Highness was invited to descend the colliery, but declined, having previously explored collieries in other parts of the country.

Mr. E. M. Ward's picture, in fresco, to be placed in the Common, over-right of the Houses of Parliament, illustrating the story of Charles II., with Jane Lane after the battle of Worcester, will shortly be placed in its proper situation.

THE EFFECT OF THE NEW BANKRUPTCY ACT UPON THE "LONDON GAZETTE."—The recent act, since the 1st of October, has come into operation, but there only have been issued, tends to augment the list of bankrupts to no less four steps. First, it gives compulsory power to the creditor to petition against a debtor, and full control of their own affairs which before they only enjoyed under a private arrangement. Secondly, it gives power to the creditor to petition. It may be regarded as the pleasure of the creditors, and the estate wound up accordingly, they think fit, in any manner. This great advantage will accrue early small the list of bankrupts. Secondly, it deserves private arrangements of that secrecy which before but not unfrequently in their being preferred to a bankruptcy. All arrangements which are to be binding as non-signing creditors must now be advertised in the *London Gazette*. Thirdly, the bankruptcy law now includes non-traders as well as traders. It is true that the sole for which a non-trader can be made a bankrupt are not so numerous as those for which a trader can be so made; yet still a non-trader can now be made a bankrupt, which he could not before. Fourthly, the diminished cost of bankruptcy proceedings will, it is to be hoped, bring within the scope of the law many little estates which before were wholly beneath its reach. These four causes are quite sufficient to account for the augmented number of bankrupts, without any aid from the imagination that the trade of the country has been a sudden become unsound.—*Economist*.

THE CORONATION OF THE KING AND QUEEN OF PRUSSIA.

THE STATE ENTRY INTO BERLIN.

THEIR Majesties the King and Queen of Prussia, after the coronation ceremonies at Königsberg, made their solemn entry on Tuesday week into Berlin, which was festively decorated for the occasion. Copious details of the entry have been supplied by the correspondents of the daily journals. The following particulars are taken from the account given by the special correspondent of the *Daily News*:—

The point of entry for the Royal procession was the Frankfort Gate, being the nearest railway station to the Frankfort Railway station. Thence it was to proceed through the Frankfort-street, over the Alexander Platz, through Königsstrasse, and so to the Palace. The distance to be traversed was about two miles, including by no means the widest or most imposing portion of the city. I chanced to take up my quarters immediately opposite the palace, as being the point at which all the day's splendours were likely to culminate. I had to wait two hours for the arrival of the King, but the interval found ample employment in noting the various groups as they one by one came up to take some part in the business of the day. At length the bankers took precedence of everything, and were immensely cheered by the crowd. The chief of the firm, Bleichröder, was mounted on a magnificent charger, and as he passed under the palace windows he stopped and saluted with wonderful grace and effect, while the band took off his name with a flourish in a fig from which most of the crowned heads of Europe might take a lesson. The hand of this personage (Bleichröder) is the most important in the trade; there are upon record dealings to the tune of millions of thalers, and upon 28 in number, all well mounted, and having white waving plumes and swords, which at least gave the idea of a very imposing and martial appearance, but, in attractiveness to the hutchen I may perhaps, be permitted to rank the students of the University of Berlin, who were allowed to form a body-guard to the King from one end of Berlin's way, were permitted to draw up immediately in front of the Schloss. The students, numbering about 1,500, were divided into two corps d'élite, each under the command of their respective professors. Here is a copy but in addition I observed amongst them certain apparent leaders with gay sashes, and each distinguished by a white cockade and white feather, which gave the youthful wearer, as he swaggered along, a good deal the appearance of a juvenile Faust just stepped out of the pages of Retzsch's designs. Retzsch himself could not have chosen finer colours represented certain political societies into which the students are divided, and which, in the event of war, are ready to march in the Prussian Government to permit a numerous parade, which, as has frequently proved, may have entailed serious consequences on the peaceful portion of the community.

After some time the crowd, which at first only dotted the pavement, began to grow more dense, and rapidly to close up, as it were, as if acted on by some unseen pressure from afar. Squadrons of cuirassiers and of the body-guard now appeared, and the latter moved about, and ponderous State equipages drove to and fro, carrying very important personages to their destination. Amongst the latter, which I must increase your interest that he should not himself have to overburdened with the results of labour, in the development of the plans announced by him have received under the able and excellent direction of the architect. Gentlemen, I have forced on your attention the few observations with which you have invited to the part I took in the ceremony of the day, under the influence of the kind sentiments which you have expressed towards myself and the Queen. I have only to add, that I shall have much pleasure in taking our receive in the practical proof of the wants and requirements of the city, and I trust most confidently that the University, and the Corporation, and the Commissioners of Police, will make such arrangements for holding a second celebration of this interesting event, as may afford the opportunity of the inhabitation of this interesting event, during the ten years that have elapsed since the opening of the first. And more warmly do I express this wish, as I am happy to think proper that there should be undertakings may conduce to the edification amongst the citizens of a taste and a love of science and art.

The foundation-stone was then laid with the usual forms and cloud cheering, and the proceedings terminated with three cheers for the success of the undertaking, and three cheers for her Majesty and the Prince Consort. Her Majesty was not present at the ceremony having retired to the Retaining Hall, where the children of Prince Leopold and two of the younger Princesses occupied a room in the Register House, from which a view of the proceedings could be obtained.

Immediately after the above ceremony, the Prince Consort, accompanied as before, proceeded to the University, in the large quadrangle of which the Principal (Sir David Brewster) and the members of the Senatus Academicus were in waiting to receive him. Thence it was to proceed through the Frankfort-street, over the Alexander Platz, through Königsstrasse, and so to the Palace. The distance to be traversed was about two miles, including by no means the widest or most imposing portion of the city. I chanced to take up my quarters immediately opposite the palace, as being the point at which all the day's splendours were likely to culminate. I had to wait two hours for the arrival of the King, but the interval found ample employment in noting the various groups as they one by one came up to take some part in the business of the day. At length the bankers took precedence of everything, and were immensely cheered by the crowd. The chief of the firm, Bleichröder, was mounted on a magnificent charger, and as he passed under the palace windows he stopped and saluted with wonderful grace and effect, while the band took off his name with a flourish in a fig from which most of the crowned heads of Europe might take a lesson. The hand of this personage (Bleichröder) is the most important in the trade; there are upon record dealings to the tune of millions of thalers, and upon 28 in number, all well mounted, and having white waving plumes and swords, which at least gave the idea of a very imposing and martial appearance, but, in attractiveness to the hutchen I may perhaps, be permitted to rank the students of the University of Berlin, who were allowed to form a body-guard to the King from one end of Berlin's way, were permitted to draw up immediately in front of the Schloss. The students, numbering about 1,500, were divided into two corps d'élite, each under the command of their respective professors. Here is a copy but in addition I observed amongst them certain apparent leaders with gay sashes, and each distinguished by a white cockade and white feather, which gave the youthful wearer, as he swaggered along, a good deal the appearance of a juvenile Faust just stepped out of the pages of Retzsch's designs. Retzsch himself could not have chosen finer colours represented certain political societies into which the students are divided, and which, in the event of war, are ready to march in the Prussian Government to permit a numerous parade, which, as has frequently proved, may have entailed serious consequences on the peaceful portion of the community.

After some time the crowd, which at first only dotted the pavement, began to grow more dense, and rapidly to close up, as it were, as if acted on by some unseen pressure from afar. Squadrons of cuirassiers and of the body-guard now appeared, and the latter moved about, and ponderous State equipages drove to and fro, carrying very important personages to their destination. Amongst the latter, which I must increase your interest that he should not himself have to overburdened with the results of labour, in the development of the plans announced by him have received under the able and excellent direction of the architect. Gentlemen, I have forced on your attention the few observations with which you have invited to the part I took in the ceremony of the day, under the influence of the kind sentiments which you have expressed towards myself and the Queen. I have only to add, that I shall have much pleasure in taking our receive in the practical proof of the wants and requirements of the city, and I trust most confidently that the University, and the Corporation, and the Commissioners of Police, will make such arrangements for holding a second celebration of this interesting event, as may afford the opportunity of the inhabitation of this interesting event, during the ten years that have elapsed since the opening of the first. And more warmly do I express this wish, as I am happy to think proper that there should be undertakings may conduce to the edification amongst the citizens of a taste and a love of science and art.

The foundation-stone was then laid with the usual forms and cloud cheering, and the proceedings terminated with three cheers for the success of the undertaking, and three cheers for her Majesty and the Prince Consort. Her Majesty was not present at the ceremony having retired to the Retaining Hall, where the children of Prince Leopold and two of the younger Princesses occupied a room in the Register House, from which a view of the proceedings could be obtained.

Immediately after the above ceremony, the Prince Consort, accompanied as before, proceeded to the University, in the large quadrangle of which the Principal (Sir David Brewster) and the members of the Senatus Academicus were in waiting to receive him. Sir David Brewster presented an address from the Senatus to the Prince Consort, which his Royal Highness briefly acknowledged. The marriage then took place on the site of the Mu-mum through one of the windows of the University, where the ceremony of laying the foundation-stone was gone through, the whole proceeding only occupying a few minutes.

We turn now on the eve of witnessing by far the most delightful and interesting sights of the whole pageant, and one which was all the more attractive because we had not seen one used about it in the programme. The King came to the balcony accompanied by the Queen, and exchanged salutations with the people. Then came the Crown Prince and Princess, who were equally well received; but suddenly his Royal Highness retired, and immediately returning to the balcony held aloft in his arms a third Royal personage, who received a great ovation than the King, Queen, Crown Prince and Princess, and, I may add, all the rest of the Royal family put together. This was his Royal Highness the infant Prince Regent prince grandson, who nowhere about two years old, whose fine ruddy appearance and truly princely nonchalance threw the shoulders of people who passed up at him from below into perfect paroxysms of delight.

But the general pageant was not ended on Tuesday night with illuminations on a grand scale—gas-fountains, electric lights, Bengal fires, and fireworks unlimited; but the Court celebrated its triumph by a succession of splendid balls, concerts, balls, and dinners followed each other in quick succession.

We give two illustrations in connection with the State entry into Berlin—one, at our first page, showing the Trades Defiling before the Royal party at the Schloss; and the other, at page 461, depicting the King passing under the triumphal arch erected in the Alexander Platz. In this building the King received an address from the municipal young ladies, in style of decoration which we seem to have met with general approval. One correspondent writes thus disparagingly of the arrangements:—"Nothing can be more equally well received than the route was undoubtedly the Alexander Platz. Here stood the triumphal arch, a building of wood and canvas, of which I am no judge of architecture. This monster of human invention is so ugly as it could not be made worse. Figures, banners, banners, velvet, statues, and sometimes can make it, with flags, banners, banners, velvet, statues, and sometimes can make it, with flags, banners, banners, velvet, statues, and sometimes can make it, with flags

Relics of the Past.

PRESENTATION PIECE TO THE EMPEROR CHARLES V.

THE accompanying Engraving represents an ornament in silver, gilt and enamel, beautiful exceedingly in workmanship, which is supposed to have been given to Charles V. in commemoration of the stupendous victory obtained over Francis I. at the battle of Pavia, in 1525.

The original forms part of the celebrated Ambras Collection, in the Belvidere at Vienna. This collection takes its name from the Castle of Ambras, near Inspruck, in the Tyrol, which belonged to the Archduke Ferdinand, second son of the Emperor Ferdinand I., A.D. 1564. It was one of the revived spirit of learning which arose in the sixteenth century, commenced, about the year 1570, the most splendid collection of works of art of every kind then existing, and named it the Chamber of Arms, Arts, and Curiosities. This collection remained untouched at Ambras till the beginning of the present century, when it was transferred to Vienna. It is, probably, the most interesting historical collection in the world, and has preserved for us all that was remarkable in armour and arms, in the arts of sculpture and painting, the history of the furniture, printed and in manuscript, not of Europe only, but also of the East. Here, as they appeared at feast or tourney, stand the Kaiser Maximilian, Cich and Ferdinand: Don John of Austria; Ferdinand the Catholic of Aragon; Stephen Bathori, Poland's King; Perseus, of France; Phillip the Good, Duke of Burgundy; Albrecht of Brandenburg, the German Achilles; Maurice of Nassau; Alexander Farnese, Governor of the Netherlands; Gonzago, and many other of the old high-sounding, sometimes heroic, names of one of the most stirring periods of Europe's battle-scarred story.

No lover of the arts, the literature, the history of the sixteenth century should fail to visit Vienna in order to study these and countless other antiquities of the same class preserved in that city. Let us add, however, to the intending visitor a word of caution—go not in winter, nor even in autumn, but choose the sunny summer's time.

CURIOUS ANECDOTE OF SIR WALTER RALEIGH.—Sir James

Mackintosh, it is known, obtained innumerable manuscript documents from the archives of various distinguished English families for his history. Among them was the following story. Queen Elizabeth passing through an apartment of her palace saw Sir Walter asleep on a couch. She awakened him and said, "You have had a dream Sir Walter; what was it about?" "I have, please your Majesty. I dreamed that your loyal father, Henry VIII., came into the Council, and, seeing you surrounded by nobles, asked you who such and such are. 'Who is that standing on your right?' 'That is Lord Leicester, formerly Dudley.' 'Ah! I cut off his father's head. Who is that venerable man upon your left?' 'That is Lord Burleigh—his name was Cecil.' 'Oh! I remember, I cut off his father's head also. And who is that youngman behind?' 'Oh! he is Sir Walter Raleigh.' 'Well, he's the only gentleman among them all.'

We learn from an advertisement in the native Arabic paper of Beyrout that a certain "wallin" (professor) has just made the translation of Shakspeare's play called Romeo and Juliet, "the celebrated history of the Arabic language, and that the first part is now ready.

THE MORTON OF GLACIERS.—The following interesting letter on the subject, by Professor Tyndall, has been published in the *Times*. It has been addressed to the author of the "Glaciers of the Alps," Professor D. Forbes Hopkins, of Cambridge, pointed to the state of the rocks over which glaciers have passed, and which, consequently, are left smooth, and have a polish like stone their beds. These rocks are known to have angles rasped off, and to be rounded and polished by the wear which has passed over them. Geologists have, indeed, constitute the entire evidence of the former existence of glaciers in the valleys of other countries, discovered in the writings of Venetz, Charpentier, Agassiz, Buchland, Darwin, Ramsay, and other eminent men. I have now to offer a proof of the rubbing of rocks by glaciers contemporary in its nature, because a glacier to be a plastic mass, which did not slide, and suppose such a glacier to be moved upside down, so as to present a convex surface, and we should hear the ingenious of its bed, exactly as noticed was been the ingenious of its bed, exactly as noticed was been the impression of the bottom of the glacier. Moreover, the fine scratches of their own shape in the moraines, and the depressions of the bed of the glacier, would be produced in corresponding lines on the rocks under surface of the glacier. But suppose the mass to slide over the bed, the scratches would be produced on the rocks underneath, and the bed would form longitudinal furrows, while the depressions of the bed would produce corresponding ridges. Instead over, nothing more regular and beautiful could have been executed. Furrows and ridges on one by on the direction of the motion, and the deeper and larger ones were chased by finer lines, produced by the smaller and sharper asperities of the bed. The lee was perfectly symmetrical, and the white dust of the rocks over which it had slidden, and which it had abraded in its passage, still clung to it. The fact of sliding has been hitherto inferred from the action of the glacier upon the rocks; the above observation leads to the same inference from the action of the rocks upon the glacier. As stated at the outset, it is the complementary proof that the glacier moved bodily over its bed."

EXTRAORDINARY RISE OF THE NILE.

EGYPT owes, as is well known, its existence as a productive and habitable region to the Nile, the periodic overflowings of which save than answer the purpose of rain in other countries; and accordingly, in olden times the beneficent river was worshipped by the inhabitants as their tutelary god. The rich alluvial deposit which the Nile spreads over the lands of Nubia and Egypt is mainly derived, through the Blue River and its affluents, from the high lands of Abyssinia. The White River brings no such alluvial deposit; but its stream, rising about the same time as the Blue River, assists in raising the combined waters over the lands which they fertilise in their northward course. The rise of the Nile begins in June, about the summer solstice, and continues to increase till September, overflowing the low lands along its course. The Delta then looks like an immense marsh, intersected with numerous islands, with villages, towns, and plantations of trees just above the water. Should the Nile rise a few feet above its customary elevation the inundated country will present the appearance of the Arabs, drowns their cattle, and involves the whole population in ruin. Again, should a fall short of the ordinary height, bad crops and dearth are the consequences. The inundations, having remained stationary for a few days, begin to subside; and about the end of November most of the fields are left dry, and covered with a fresh layer of rich brown slime. This is the time when the lands are put under culture. During our winter months, which are the spring of Egypt, the Delta and the Valley of the Nile look like delightful gardens, smiling with verdure and covered with a rich blossom of trees and plants. Later in the year the soil becomes parched and dusty; and in May the suffocating Khamseen begins to blow frequently; and now the south, emerging from the fine sand, and causing various diseases, until the rising of the Nile comes again to refresh the land.

The Nile has risen this season feet and a half higher than the customary floods, causing, as has been previously stated, great losses, and rendering it difficult for the inhabitants to utter ruin. Letters from Egypt recently received state that, beyond the fact that the Nile is gradually falling, nothing new has occurred. The communications with the interior are so completely destroyed that there had been no steamer even from Cairo since the Calcutta passengers came through. From accounts of the damage done by the overflowings of the Nile there is no doubt that a large quantity of cotton is lost, it is thought that the injury will not prove so great as has been represented. A considerable portion of the Delta is still under water; and in one village, among others, many thousand cattle were waiting perishing for the going down of the Nile. The railway accident at Kafr Zayat occurred on the 1st ult., as previously stated. The bank was undermined by the flood, and on the train passing it gave way and left the carriages as shown in our Engraving on the 19th ult.

Another of our Illustrations shows the colossal statues in the Plain of Thebes during the inundation of the Nile. The ancient capital of this famous city of antiquity, long the capital of Egypt, extend for seven miles along both banks of the Nile, in Upper Egypt, and present an imposing appearance of ruins and monuments. Among the numerous temples the most remarkable are those of Karnak and Luxor, on the east bank of the river; and Gournou, Medinet Abou, and Rameseum, occupying an area of nine acres, and in many parts comparatively perfect. The Temple of Luxor, a mile and a half from Karnak, is of a less size, but still very edifice, and in front of it were formerly two monolith obelisks, 80ft. in height, one of which has been removed to Paris, and is erected in the Place de la Concorde. West of the Nile are the famous Temple of Medinet-Abou, the Rameseum, and two colossal statues of Memnon (the Vocal Memnon), one of which was the celebrated Memnon; and in the mountains on the same side are the tombs of most of the entire Pharaohs. Several villages are scattered over the site of Thebes.

FLIGHT BETWEEN ENGLISH AND FRENCH SAILORS.

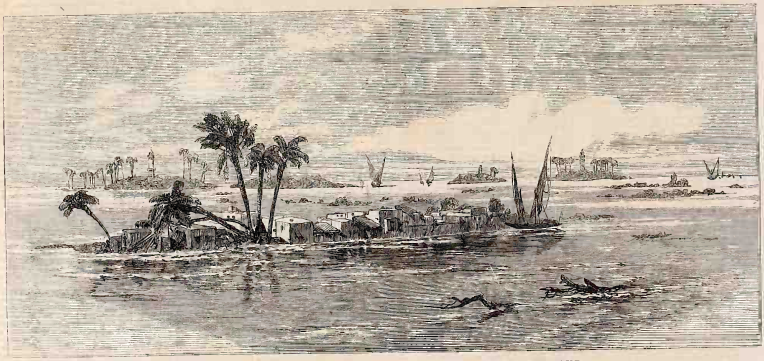
The right of frequenting fishing-grounds has frequently been matter of dispute between Governments, and sometimes the subject of treaties, while occasional disputes and invasion of grounds by the fishing-ground off the North Foreland. On Friday, Oct. 4, at two p.m., the weather fine and clear, and the wind in the right sea gear, which was part of a wreck or something; had a riding flight up (a large glass barrow), about halfway up on the foreing to walk on drawing a good light, when a Boulogne fishing-boat (No. 439), under sail, closehauled on the starboard tack, heading about N.E. by N. ran her bowsprit between Arthur's starboard shrouds, right overnight, four stanchions, rail and bulwark, and parted her bulwarps, thereby causing the smack to heel over. The jib of the vessel remained in collision for about half an hour. The master requested the Boulogne boat to get it disengaged, which was between the bowsprit rigging and her mast, and which prevented the two vessels from separating. The crew of the Boulogne boat then commenced pelting the crew of the smack with stones, which broke the lantern to pieces. The crew of the smack then went forward to endeavour to clear the Boulogne boat's anchor, which was foul of the smack's rigging, cut at the master with an axe. Upon several of the French fishermen attempting to rush on board one of the smack, he made use of a fire Arthur, and went below and loaded a fowling-piece with powder, and fired it towards the other vessel; the third time he loaded it he put in about three shots, and fired it towards the deck of the smack, in order to intimidate the French fishermen from boarding the Prince Arthur. The master and his men then cut away the several stones, one of which cut his eye and another wounded his right hand. Others of the crew were struck by stones, a large piece of which struck the master's eye, when she came into Ramsgate harbour, about five a.m. The Boulogne fishermen had no light up."

A PANTELEGRAPH.—Nothing in the mechanical department

of the Florence Exhibition struck us more wonderful than Caselli's pantelegraph. The illustration of it herewith represents the connection between Florence and Leghorn, and himself attends at the Crystal Palace to exhibit the results of his portentous invention. The pantelegraph is, in reality known, is intended for the transmission of messages immediately from one place to another, and is the connection between the writing, and bearing the full authenticity of the hand and signature. A teacher at London may thus, for example, correct the exercise of a pupil which his correspondent will transmit as usual, being as sure as the identity of the writing as if he had received it by the post. The machine is intended for some time in connection between Paris and Rouen, and between Paris and Lyons, and in connection soon with the four lines of Paris, in two very handsome rooms which the company have taken for the purpose of having them on the proposed paper in Leghorn. Presently a third room is opened for the public. The machine consists, in principle, simply two little boxes one, line by line, shade by shade. Atom, again, it was a passing delay in Italy's complicity. In one word, it is the representation, at a distance, of anything that pen or pencil can produce. A small point, somewhat like the hand of a watch, runs, coincidently, moved by a very simple machine, upon a chronically prepared paper, tracing almost invisible lines, the aggregate of which soon exhibits the words, line by line, or the various parts of the design, till the whole stands before us. The motion is so rapid that the average transmission is of twelve words in a minute, being somewhat quicker than the usual mode of telegraphic communication, with the avoidance of all possible mistake or equivocation. Caselli has exhibited his invention before the French Emperor, who assured him "the pantelegraph did great honour to Italy, and was a discovery of which France herself might be proud." A communication between Florence and Paris is soon to be established.—*Times Correspondent.*

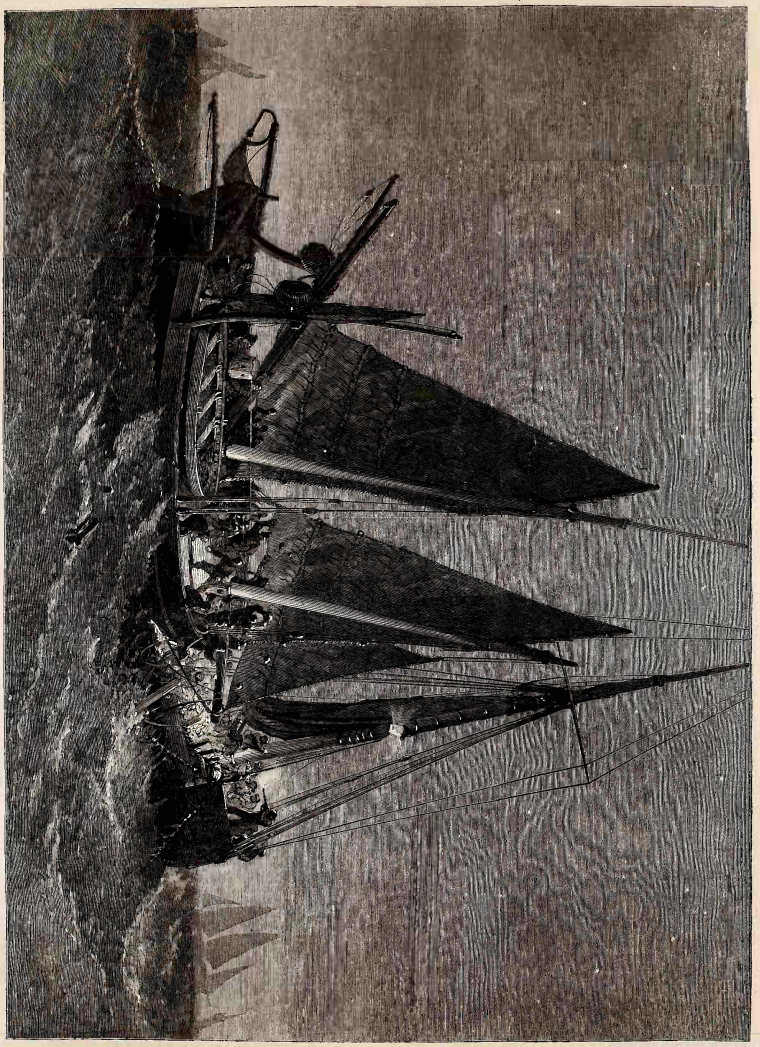
INUNDATION OF THE NILE.

VIEW BELOW KAFR HAYAT, SHOWING THE RAILWAY-BRIDGE, AND TRAIN OFF THE LINE.



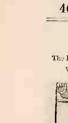
VIEW ON THE NILE: INUNDATION OF VILLAGES AND ENCAMPMENT ON THE BANK OF THE NILE.

COLOSSAL STATUES IN THE PLAIN OF THEBES DURING THE INUNDATION.—SEE PRECEDING PAGE.



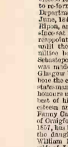
FIGHT OFF THE NORTH FORELAND BETWEEN THE CREW OF THE FRIGATE ARTHUR FISHING-SMACK OF RAMSGATE AND OF THE DUTCH MAN-OF-WAR FRIGATE No. 47—SEE PAGE 467.

OBITUARY OF EMINENT PERSONS.



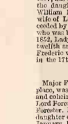
SIR JAMES GRAHAM, BART.

The Right Hon. Sir James Graham, second Baronet of Netherby, Cumberland, G.C.B., LL.D., a distinguished statesman and member of Parliament, who died on the 25th ult. at Netherby, the family seat, near Carlisle, from fibrosis of the heart, was the representative of a branch of the very ancient and illustrious house of Graeme or Graham, a race of gallant and loyal Scots, which traces its descent from the Graemes, Barons of Esk, and Viscounts of Dundee. He was the eldest son of Sir James Graham, first Baronet of Netherby, by his wife, Lady Catherine Stewart, eldest daughter of John, seventh Earl of Galloway. He was born on the 1st of June, 1792, and succeeded his father as second Baronet on the 13th of April, 1824. Ten years later Sir James was called to the Bar of Lincoln's Inn, and was admitted a member of the Northern Circuit. He was elected for the county of Carlisle, which he represented in the Tory and Conservative interest down to the year 1832, when, on the passing of the Reform Act, the county was divided into two constituencies, and Sir James Graham, who was then in favour of Reform, was returned for the northern division of the county of Cumberland, which he represented in the Liberal interest down to 1841. He was also returned for Dorchester in 1826, and for Ripon in 1828, but he preferred to sit for Carlisle, which he represented from 1829 to 1832. Ten years later Sir James was returned for the city of Carlisle, in the Whig interest, to which party he soon became an influential supporter. In 1830 he was elected for the county of Cumberland, and was one of the most strenuous supporters of the Reform Bill, as he had previously been of the repeal of the Test and Corporation Acts and of Catholic Emancipation. On the formation of Earl Grey's Administration in 1830 he was nominated First Lord of the Admiralty, with a seat in the Cabinet. In 1832 Sir James was returned for the eastern division of the county of Cumberland, which he represented down to 1852. In 1834 dissensions in Earl Grey's Cabinet arose on the Irish Church question, which led to the retirement of Sir James, together with Lord Stanley (now Earl of Derby), the late Duke of Richmond, and the late Earl of Ripon. In 1841 he was elected for Dorchester, and in that year, on Sir Robert Peel being called upon to re-form a Ministry, Sir James took office as Secretary of State for the Home Department, a post which he held until the dissolution of the Government in June, 1846. From 1847 to 1852 he not as representative for the borough of Pontefract, but in the latter year he was re-elected for Carlisle, which he continued for in the House of Commons. In December, 1852, Sir James was appointed First Lord of the Admiralty, and remained for the following year the effective vote on Mr. Bethell's motion "That a Select Committee be appointed to inquire into the condition of the Navy and Naval establishments." From that period he was not officially engaged. Sir James Graham was twice married, first to Fanny, only daughter and heiress of Sir John Hamilton Dalrymple, of Dalhousie, through his wife owner of the subscriber of a high-minded, spirited, and accomplished lady, who died in 1838. In his native county and in the adjoining county of Durham Sir James was popular, but his one object evidently being to benefit his country to the best of his power. He built, and added to the family estate, with much taste and expense. Sir James Graham married, on the 8th of July, 1819, Fanny Callander, youngest daughter of Lieutenant-General Sir John Callander, of Craigforth and Ardkinglas, and by her, who died on the 28th of October, 1857, has no issue, but three daughters, all of whom survive their father, viz. the daughters two are married—viz., Mabel Violet, the wife of the Hon. William Ernest Dundas, eldest son of Lord Dundas, and Sybil Mary, the wife of Lieut.-Colonel Charles Baring, Coldstream Guards. Sir James is succeeded by his eldest son, now Sir Frederick John Graham, Bart., D.C.L., who was born on the 2nd of April, 1820; and married, on the 30th of October, 1852, Lady Lucy Hereford, Sir Mary Adelaide Elizabeth, daughter of Richard, twelfth and present Duke of Somerset, and has a son and four daughters. Sir Frederick was called to the Inner Bar at Lincoln's Inn in 1842, and was subsequently to the 17th Lancers and the 1st Life Guards.



MAJOR FORSTER.

Major Francis Forster, who died on the 22nd ult., at his house, 21, St. James's-place, was the youngest son of Cecil Forster, Esq., by his wife, Anne, daughter and heiress of Baker Townsend, Esq., and the brother of Cecil, Wm., Revd. Lord Forster, and the uncle of John George Weld, second and present Lord Forster. He married, 1st, 1815, Lady Louisa Caroline Barbara Vane, third daughter of William Henry, third Duke of Cleveland, by whom, who died in January, 1817, he has a son, Cecil Henry Forster, who married Evanson, sister of Lord Saltoun.



H. LAMBERT, ESQ.

Henry Lambert, Esq., of Carnagh, in the county of Wexford, was the eldest son of Patrick Lambert, Esq., of Beau Park, by his wife, Mary Anne, eldest daughter of George Latten, Esq., of Shortdown Lodge, in the county of Surrey, and was born in the county of Kildare, representative of the very ancient house of Lambert, of Meriton, in Yorkshire in the time of the Conquest, and Baronets of Calton,

NAVAL AND MILITARY INTELLIGENCE.

The number of men now serving in the Navy is nearly 2000 in excess of the Parliamentary vote. The Admiralty have consequently ordered the discharge of the pensioners employed in the harbour duties, who number 1000 in ordinary.

The anniversary banquet of the officers engaged in the charge at Balaclava took place yesterday week at the London Tavern, when there were present thirty-eight noblemen and gentlemen, including Colonel Hodge C.B. (in the absence of the Earl of Lucan), the Earl of Cardigan, and Lord Scarlett, K.C.B.

The Duke of Cambridge, the General Commanding-in-Chief, attended by Colonel Bingham, Deputy Adjutant-General of Royal Artillery, and other officers, on Saturday last reviewed the whole of the troops in Woolwich garrison, consisting of three batteries of the Horse Brigade of Artillery, the 2nd battalion of the 1st regiment, two batteries of garrison artillery, a squadron of the 5th Lancers, three battalions of the Military Train Corps, the mounted men of the Riding horse establishment, and the Royal Marines of the Woolwich division of Royal Marine Light Infantry.

MUTINOUS CONDUCT AT WOOLWICH.—On Wednesday week considerable excitement took place among the gentlemen cadets at the Royal Military Academy at Woolwich, the immediate cause of which appears to have been a new regulation which deprives them of the leisure time customarily allowed on Wednesday afternoon; but the true source of discontent is said to have been the quantity and quality of the provisions. The next sequence of any importance was that a party of cadets left the academy in themselves at the rebel-call on parade. When called a second time no one refused to obey. In the evening, however, the Old Hill gone posted about in front of the Academy (trophies from Waterloo) were thrown into the ditch of the enclosure, and a number of the drill sergeants were at the same time driven into the Governor's garden, while other guns were loaded with ffi. bowers recently furnished to the artillery. In vain the authorities endeavoured to put a stop to the proceedings by paralding some of the supposed ringleaders, and also by depriving all ranks of the distinguishing badges of the following morning. In the course of the day the Governor barricaded the malcontents, informing them that the Commander-in-Chief at the garrison had offered the artillery men at his disposal in the event of any further disturbance. The succeeding evening the Governor's windows were all shuttered, and a number of police posted about the barracks. On Friday the mutineers seem to have obtained what they wished—an Investigation into the causes of complaint and full satisfaction. The cadets who were under arrest have, for the present, been allowed to return to duty. The ringleaders are supposed to be few, and these are the unjust manner in which the "peaceable" special chose to take them proceeded from the mouth of many gentlemen of the corps, and there is a new code of privileges to be chosen lately introduced by the cadets themselves, and not unconnected with any disturbance may find the regulations are finally settled to the general age of the cadets, and that in various ways they are not treated as gentlemen.

THE VOLUNTEER MOVEMENT.

A new company in connection with the 1st Middlesex Engineer Volunteers, of which Sir J. Burgoyne is Colonel, is now forming in Holborn and Bloomsbury. A corps of the title of the Old Soldier Volunteers is also in the course of formation in the metropolis: it will consist of members who have served in the Army.

The interesting ceremony of the presentation to the 19th Middlesex Rifles of a handsome silver bugle, subscribed for by a number of ladies, took place in the hall of the Metropolitan Institute, Cleveland-street, Fitzroy square, one day last week. Wilhelm presented the bugle to the Captain Brown with some well-chosen remarks.

A match for the examples's badge among some of the members of the St. George's Rifles took place at Wormwood Scrubbs on Tuesday week. The contest ended in favour of Private Hawkins (chemist), by a score of 49 against Waller by one point.

The secretary of the fourth company of the 20th (North West) Middlesex Rifle Volunteers that for their prizes at the butts at Willesden on the 19th ult. The shooting was very good, the three highest scores being made by the following gentlemen:—Sergeant H. Clarke, 28 points; Sergeant Scott, 28 points; and Captain Thake, 25 points. On shooting at the Scrubbs on Saturday afternoon the members of the 22nd Middlesex (Cossar's Westminster) Rifle Volunteers that for a number of prizes at the butts at Wormwood Scrubs. A silver cup, value ten guineas, the gift of four fellow-members of the corps, and 400 yards, for which the highest score was 30 points, was won by Private Weatherston with 25 points. Various other prizes were shot for.

Last Saturday a fine party of the 4th Middlesex (North London) Rifles, under the command of Lieutenant Panther, proceeded to Pinner, to contend their prize-firing for the season. The first prize, a handsome silver cup, presented by Mr. Charles Wyman, and contended for at 200 and 500 yards, for shots at each range, was won by Private Inglis, making 12 points; for the second prize, a cup given by Mr. Panther, Sergeant Simpson and Private Wilmot, each made 10 points, but in shooting off the ties at 500 yards Sergeant Simpson won.

The annual contest for the regimental prizes of the 8th or West Middlesex Rifle Volunteers commenced on Thursday at the butts at Notting Barn. There was a good muster of the officers and members of the corps, and the shooting during the day was good. The company's prize was won by those who were sharply contested for on the first day, and were won by Captain Fenton, Ensigns Armstrong and Bishop, Corporal Baker, and Privates Hall, Hunt, and Hooker.

At a meeting of the 4th Tower Hamlets Rifles, to consider the report of a committee, appointed in July last, in reference to the question of amalgamation with the North Middlesex Rifles, Major De Las Casas in the chair, it was resolved, with only two dissentients, that the proposed amalgamation should take effect on and after 1st November next.

A match took place last Saturday at Wormwood Scrubbs between the 81st Middlesex (Hackney) Rifle Volunteers and the Kensington Volunteers. Fifteen men were chosen on each company. The ranges were 200, 500, and 600 yards, and seven shots at each range. The match was won by the Kensington corps, who made the highest score, the total number of the winning side. After firing at 200 yards the points were equal, but at the long ranges the 81st Company gradually distanced their opponents, and finally won by 9 points. The three highest scores were on the winning side: Mr. Goodman, for a cluster of nine, making 31 points, Lieutenant Hughes and Cribble 16 points.

On Saturday last the members of the 38th Middlesex (Finsbury) Rifles contended at Plumstead for a handsome challenge model, presented by Lieutenant Marquess of the company. The conditions were that seven shots at 200 and 500 yards, and the competition was very excited, the prize being ultimately won by Private Wilson, against Private Hall, by 2 points. A series of prizes was recently competed for by the different companies of the regiment. In the third company a handsome silver cup, presented by Mr. Alfred Hall, was won by Corporal Harding, who scored 15 points at 200 and 500 yards; and a valuable rifle was won by Private Fisher making 12 points, 10 of them in the second. The seventh company contended for their prizes at Barnsey Wood. They consisted of a rifle and silver medals, which were won by Lieutenant Cribble, and Ensigns Pontifex, the ranges being 200 and 500 yards, seven shots at each. After some good shooting, Mr. Pontifex scored the rifle, making 18 points, and Sergeant Arch the silver medal, scoring 14 points. The eighth company contended for their prizes at Barnsey Wood. They consisted of a rifle and silver medals, which were won by Lieutenant Cribble, and Ensigns Pontifex, the ranges being 200 and 500 yards, seven shots at each. After some good shooting, Mr. Pontifex scored the rifle, making 18 points, and Sergeant Arch the silver medal, scoring 14 points. The eighth company contended for their prizes at Barnsey Wood. They consisted of a rifle and silver medals, which were won by Sergeant Rose at 200 and 500 yards, the ranges being 200 and 500 yards, seven shots at each. The shooting was very good, the highest score being made by Sergeant Rose, who scored 30 points.

The members of the volunteers of Hampshire and the Isle of Wight took place on Compton Down, near Winchester, on Thursday, for the purpose of affording the officers an opportunity of the movements expressed his gratification at the proceedings of the day in the manner in which the various movements were executed. The Hampshire proved had no ordinary difficulties would prevent the volunteers of Hampshire assembling in such numbers whenever their services were required. The review on the ground, exclusive of the Light Horse (60) and Artillery Brigade (240), was about 1200 men. The number of persons who present on the ground, the carriages and on foot notwithstanding the inclement state of the weather.

The officers of the 4th Essex (Stratford) Rifle Corps took place at Lilliput on Tuesday week. The conditions were seven rounds each, at 500, 600, and 700 yards, for the silver medal and £2 for the second prize, and for those throughout the three ranges was won by Colour-Sergeant Farmer.

The Duke of Cambridge entertained the Prime Minister at Long-leat House last week on occasion of the presentation, by Lady Edward Thynne, to the 2nd Somerset, of a handsome silver cup, subscribed for by the officers of the corps, in the presence of a distinguished assembly.

The Tower Hamlets Rifles held their prize meeting on the 19th ultimo, at Tottenham.

On Friday week the 2nd Anglesey Artillery Volunteers, commanded by Captain Hughes, were inspected by Colonel Merriott, R.A., Inspector for the Northern and Midland Districts. The movements were gone through with much precision, and the corps received a high compliment from the Inspector for its efficient appearance and discipline.

In Suffolk the Administrative Battalion, under the command of Lieutenant-Colonel Antrobus, has been reviewed at Bury St. Edmunds by Lieutenant-Colonel Dickson, Inspector of the Eastern District. The strength of the battalion was 416, and at the close of the manœuvres Colonel Dickson expressed himself well pleased with what he had seen, observing that the firing has been excellent, the wheeling good, and the marching steady. The members of the Needham and Stowmarket corps have been entertained at a banquet by the members for G. F. Hyde Middleton presided, and promised two annual prizes on the part of Lady Middleton and himself.

The members of the Norwich battalion have finished their annual course of target practice. The battalion is nominally 450 strong, and the result of the practice has been to bring out 72 "marksmen," the largest number being supplied by the second company. The Rev. Lord Hastings has presented the Irish Norfolk Corps with a silver bugle, and has also entertained the members of the company at dinner.

The Yarmouth Artillery Volunteers commenced a competition with their carriages for various prizes on Thursday week. The principal prize for the greatest number of points scored at 100 and 200 yards was won by Gunner Watson, of Southtown.

Several interesting matches came off during last week among the Lincolnshire corps. The Lincoln Archers' Society met on the 23rd ult. at the butts for on the Outmarsh, about five miles from Holbeach, by six members selected from each of the local companies—viz. Boston, Spalding, Holbeach, and Donington and Gosberton. The shooting was at 200 and 500 yards, five rounds each, and the aggregate score stood—Boston, 94; Spalding, 76; Holbeach, 68; and the Donington and Gosberton 58. The highest scores per man were made by Corporal Storr, of the Boston company, and Sergeant Bergwin, of the Holbeach. On the two being shot off Corporal Storr proved the winner of the cup.

The Oxfordshire battalion, under the command of Colonel North, M.P., was inspected on Wednesday by Sir Lowry Cole, accompanied by Colonel Wyndham. The volunteers from various parts of the county, including Banbury, Henley, Thame, Witney, and Woodstock, mustered in the park at Wroxton, and, after going through a variety of movements, on the conclusion of which Colonel North put addressed the corps, and congratulated them upon the creditable appearance which had taken place since his last inspection. Afterwards the battalion marched together to the Tewkesbury, under the presidency of Captain Fane, the Adjutant, who was supported by the Mayor of Oxford, Mr. Sheriff Thompson, and other gentlemen of position in the city.

Yesterday week the prizes offered by the Horse Rifle Association, by Earl Bective, and by the ladies of the county, were shot for in Lord George's park, Tenbhamore, near Hereford. The ladies' challenge cup for aggregate score at three ranges of 200, 500, and 600 yards, was won by T. G. Scott, of Bisley's Scotland, value £20, with a game of fifteen sovereigns added. The second prize was won by Captain W. Davies, of Bisley's, value £10. Earl Cowper's prize, value £25, were for five shots at 200 yards range; the first, a cup, value £15, was won by Mr. J. Hamilton, Bisley's, and the second prize, value £10, by the Marchioness of Salisbury.

The Bisley's Challenge Cup, given by Sir Joseph Radcliffe, Bart., and the second presented by Mr. Hancock, of Knaresborough, silversmith—were shot for by fifteen members of the Knaresborough Rifle Volunteer Corps on Thursday week. The distances were 200 and 400 yards with five rounds each. Private Whitaker, the captain, won the first prize.

The Bottlington Volunteers held their annual prize contest last week. The chief cup given by Mr. Harrington Hodgson, of Bewleigh, to be won at the ranges of 100, 200, and 300 yards, was won by Private W. Comwick. The silver cup presented by Captain W. Norbagh to Bisley's Bower, to be shot for at 100, 200, and 400 yards, was won by Sergeant Comwick, with two 5 rings 31, and 4 rings 28. The gold cup presented by Mr. Bisley's Taylor, of Bottlington, to be contested at 200, 400, and 500 yards, was won by Sergeant Hodgson—Bell, with 29 points.

A match between six members of the 1st and six of the Harrogate Volunteer Corps was decided at the Harrogate butts on Wednesday week. The ranges were 400, 500, and 600 yards. The match resulted in favour of the Ripon riflemen, who made a total of 82 points against 72 scored by the Harrogate. Ensign T. Wood was the highest scorer on the side of Ripon, and Lieut Watson on the other side. The former made 16 and the latter 15 points.

The Dewsbury Corps of Rifle Volunteers held their annual rifle-firing competition on the 22nd ult. at the range, Ripton Mirfield, in the West Riding of Yorkshire. The first prize, a silver cup—a handsome silver service, the gift of Captain Wormald, was shot for by forty members of the corps, with five rounds at each distance of 150, 200, and 300 yards. Private J. Wilson made 19, the highest score.

A few days ago the 3rd Yorkshire (Cleveland (Margate) Rifle Volunteers, under the command of Captain Bennett, underwent an official inspection by Major Herman at Margate. The corps was put through the manual and various exercises, and performed a series of light-infantry movements.

The first county competition among the members of the Cumberland Battalion of Artillery Volunteers took place at Maryport on Wednesday week, when prizes were given to be competed for with the artillery guns, with which the corps are supplied. Four corps were represented by squads—viz., Carlisle, Whitehaven, Workington, and Maryport. The weather was very unfavourable, the first prize, which was kept Prince Albert, the Carlisle corps, making 19 points out of a possible 20, and 20 yards in length, the second prize was won by the Whitehaven corps, with 18 points, the distance being 15 and fourth prizes. On Friday a competition took place at Silloth among the members of the Carlisle corps for the prizes offered for by the pleasures of the two companies. There were forty competitors. The ranges were 150 and 300 yards, five shots at each distance. Private Graham, of the Carlisle corps, was the highest scorer.

The Rhos College Volunteers, under the command of their captain, A. G. Ackerman, Esq., went through a series of evolutions last week in the street Park, Wrexham, in the presence of several officers of the Queen's, who expressed warm commendation of the admirable precision of their movements. Two prizes—a beautiful field glass and a handsome rifle—given by Dr. Goodland, Head Master of Rhos College, were competed for by the members of the best shots in the corps carried the field as competitors, and Mr. Hoyes, son of O. W. Hoyes, Esq., M.P., was the hearer of the day. The second prize was won by Mr. Johnson, son of Captain Johnson, of Upton Park, near Slough.

SHARK CAUGHT OFF EXMOUTH.

Two of the sharks which have been lately seen off the English coast striking terror into the hearts of sea-bathers, we caught a short time ago off Exmouth. Devon. The specimen, of which we give an Engraving (from a photograph by Mr. Sugg, of Exmouth), was taken by some fishermen in a drift, or herring-net, almost within shore. It appears to be one of the British species of sharks known as the fox-shark (Carcharias vulpes); also termed the sea-fox, the long-tailed shark, or the thresher—the latter name being applied to it from the habit of defending itself by blows with its tail. It is said to attain a length of fifty, and a girthing of thirty feet. The British seas 1864, long. The great length of the upper lobe of its tail give to this a particular appearance. The monster figured here weighs 2300lb., and its entire length is 10ft. 6in., the upper lobe of its tail

being prolonged 8in. beyond the length of its body. The Exmouth is a familiar and more under the mast than in many of the sharks, but is has their characteristic snout, and the pointed belly. Another species of the Carcharidæ, or true shark, which, although an inhabitant of the Mediterranean, is not unfrequently met with on our south coasts, is the blue shark (Carcharias glaucus). It sometimes reaches the length of 8ft., and is exceedingly rapid and voracious creature, being regarded by the fishermen as one of our greatest scourges. The blue shark lives almost entirely upon fish, of which it devours great numbers; and it often escapes the fishermen's nets by hanging about the boats seizing the fish that are being drawn up. It has also the habit of following the line for its legitimate purpose of getting off with its prey, but even sometimes apparently for the mere pleasure of the destruction. Sometimes, however, it gets hooked when thus engaged, when, if it cannot bite through the line, it immediately puts itself round so as to wind the line upon its body; and Mr. Crouch states that "this it sometimes does so effectually as to placed tenance that he has known a fisherman give up any attempt to haul in his line, considering it lost." The fish-hook transfixed in the pickled fishery on the Cornish coasts it is an equally dangerous shark, the upper lobe of its tail being of the net, and picking out the pickheads by biting them away, together with the portion of the net in which they are entangled.

THE CATTLE DEPARTMENT AT THE ITALIAN EXPOSITION.

THE cattle show at the Florentine Exhibition consists of the bovine race, including buffaloes, horses, camels, sheep, goats, pigs, rabbits, and poultry of every description; and, as a proof of what Italy can at the present moment supply in this department, it is very interesting exhibition. To an Englishman it is not so much so in any other point of view as in that of the cattle, and it is only to be regretted that so far ahead of any part of the Continent in all these matters for us to take any interest in an enquiry which may lead to the improvement of the Italian cattle. The building is now filled from end to end with the finest animals of every race known from the slopes of the Alps to the promontory of Sicily and the very extremity of the peninsula, the mellowed light occasioned by the precautions taken to prevent the heat from the glass roof, and the evident pride of the Italian peasants of different provinces lying about among their animals on the steps of forage, produce together a scene more picturesque than might have been supposed possible from the elements composing it. It is this scene which we have endeavoured to represent.

The reason why this portion of the cattle show offers to observation much that is new to Englishmen, notwithstanding our decided superiority in the art of cattle-breeding, is that the Italian breeder has a different object in view from that of the English agriculturist. Of all the hundreds of cattle of very different races gathered together here, there is probably no one beast which has been bred with a view to human food. The main and paramount object of the Italian peasant is to have animals adapted for labour. From Lombardy, indeed, there are specimens of race originally Swiss, and still constantly recruited with fresh Swiss blood, the object of which is the production of the rich and valuable Parmesan, Lodi, Gorgonzola, and other cheeses. And it is said that the dairy produce of these rich and deep milk is so valuable—and so increasingly valuable, having risen some hundred per cent within the last twenty years—that the land could not be employed to grow meat to such good purpose.

In any very early or unexperienced that the qualities needed for animals designed to labour are very different from, in some respects even diametrically opposed to, those which the breeder for the shambles has to produce. A huge framework of great bones, cable-like sinews, vast chains of immense thickness down to the hocks, hollow flanks, if this is desirable enough in the plains and valleys of Tuscany or the Roman States, but would by no means do in Newgate Market. Look at that bull, lumpy as beasts of draught, many of those collected are truly magnificent creatures. These are three or four yoke of oxen from the Val di Chiana of a size never seen in England. Devonshire and Smithfield prize beasts may be as heavy or even heavier than those Tuscanesis; but the fine carcasses of the denizens of the Val di Chiana is larger than anything of the kind among ourselves. The colour of these plants is invariably that beautiful dove colour, or cream-colour, which the ancients used to yoke to the car of Virgil. In the three fine bulls of the beasts at the exposition are of this classical colour, which is almost universal throughout Central Italy.

Nevertheless, although breeding with a view to beef is as yet little in the infancy in Italy, it not altogether unknown there. It is a certain fact that the beef met with in the Tuscan markets is very far superior to that found in any part of France. A most conclusive proof of the extreme delicacy of the latter is the enormous difference in price which it obtains in the Paris markets between the inferior cuts and the best. The price of the latter is double that of the latter may be some fifteen or sixteen sous, the value of the prized inferiority is as high as four sous. And what is the cause of so enormous a difference? Simply the fact that the quality of the meat is so bad that the under muscle of the loin is the only part it to be eaten simply roasted. In England, as well as in Italy, nearly the upper part of the sirloin is worth fully as much as the under. And the same is the case in Tuscany, where the fat is not thrown away. But to whatever circumstance this undoubtedly-superiority may be attributed, the fact is that the beef raised by any one Italian—or, indeed, Tuscan—upon the breed.

In the show of bulls it must be admitted that there were evident signs of judicious improvement. There were specimens of straight backs and clean legs among the younger animals which might have been sought for in vain among those of four years' old and upwards. Some of the older bulls were of curious and special interest, with their huge frames and small flanks—all features carried into every phase of bovine deformity.

Of the horse little is to be said. The show of them is comparatively small, and the scientific breeder has his task all before him in Italy.

Pigs are, for the most part, very bad—long in the head, long in the legs, carked in the tail, and with a total absence of knowledge of better things was not wanting.

Sheep were like the pigs, and evidently kept, in the generality of cases, for the wool-merchant rather than for the butcher.

Then there were two or three specimens of camels from the sandy plains of the Roman States—a trifle—the only place in Europe where the camel has reproduced itself, and where it has been permanently established for many generations.

The show of poultry in its various kinds is not bad, and indicates that more has been done in the way of improving breeds by scientific treatment than in any other department of the farmyard.

Appended to the cattle show, as a specimen of the rustic life of Italy, there is a building raised to represent the dwelling of a Piana peasant, and furnished, down to the utmost trifle, with all its furnishing, in all kinds, with specimens of every kind, and every article, and every cooking utensil the *contadino* is in the habit of using. There are even specimens of the food he is wont to consume and of the bed he sleeps in.

The idea of presenting such a picture of the life of an Italian peasant was a very happy one, and it is to be feared that, in whatever other department of industry England may boast herself far ahead, as she ought to be, of her young sister, in the decent and comfortable lodging of her agricultural labourer she is, after her three centuries of modern civilisation, much behind her. It must be remembered, however, that the dwelling exhibited is a Tuscan dwelling, and that other parts of the peninsula are not to be expected to rival that garden and privileged part of Italy.

There were sundry noble gentlemen and some noble ladies evidently interesting themselves in an intelligent manner with this very important part of the exposition; but there were not so many as—bearing in mind all that has to be done in this line and the importance of doing it—might have been wished.

PARIS FASHIONS FOR NOVEMBER.

AUTUMN is fast progressing, with pleasant strides, it is true, but still that should not prevent us from looking forward to the cold and rainy days that the fall of the year is sure to bring with it. The month of November is a disagreeable time for Mdme. la Mode, a sort of cul-de-sac between the seasons. However, winter fashions are not yet in question, if we except the outer covering, which, as a sanitary precaution, can never be prepared too soon. On this account we have selected two out of a number of new Parisian cloaks for illustration, the Manteau Marchesa and the Manteau Hongrois, described below. We intend on future occasions to introduce the Murillo, Magician, and Ecalis cloaks to the appreciation of our fair readers.

For morning toilet light or dark coloured alpacas or foulard are to predominate during the ensuing month: marlaon, grey, and brown are preferred. The Valois alpaca is also a great favourite for the last days of autumn, as well as the chestnut. Such morning dresses are generally plain, or trimmed merely with rich check ribbons, violet and white, black and white, scarlet and black, according to the colour of the robe.

As for bonnets, the time has at length arrived for the abandonment of all those eccentricities which obtained so much success throughout the summer at the different English and Continental watering-places, and the return to the serious chapeau, which is indisputably the most suitable of all coverings for the female head. It is but useless to say that the hats now to be laid aside are most becoming, for country or seaside wear, to young and pretty faces; but, at the same time, how ridiculous they appear when worn by Nature's unfavoured or by elderly persons! A great richness in the floral and ribbon ornaments is the peculiar characteristic of bonnets for the coming season, as will be seen on consulting the models in the accompanying Engraving.

For out-evenings as bonne, or as an additional covering over the shoulders of an out-of-door garment, there is nothing better than one of the little woven crochet shawls that are just now creating quite a sensation with all classes in Paris, and are to be seen in every form and variety of mixed colours at all the Monsteurs' shops in the capital. They are exceedingly pretty and graceful, and their cost is so moderate as to place them within the reach of the most modest purses.

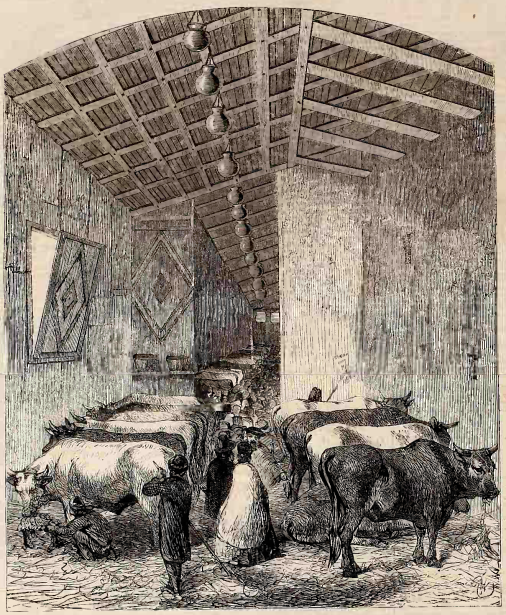
THE ILLUSTRATIONS.

Fig. 1. *The Manteau Marchesa.*—The general disposition of this cloak is sufficiently indicated in the illustration. The material of the body is cloth, but the facings and ornaments are of velvet, and the edges are bordered with narrow plain silk trimming; the hood is composed of velvet edged with crape. The robe of this toilet is of velours grenadine; and the bonnet of green silk, having a very rich lace tour-de-tête surmounted by roses, over which the feathers proceeding from the passe are made to fall gracefully.

Fig. 2. *The Manteau Hongrois.*—This cloak is composed principally of velvet-pile cloth with passementerie ornaments; the sleeves and the cuffs are bordered with a satin cording. Plain silk dress, [illegible] with flounces, [illegible] mented with a feather forming a diadem and placed rather on one side; the cap is a mixture of blonde passing nearly all round the face, with velvet ribbons at the top partly concealed by the depending feather.

Fig. 3. *Evening Dress.*—Grey silk robe, ornamented at the bottom of the skirt with a gauffered tri-coloured flounce surmounted by two narrow green-edged ruching trimmings attached festoon-wise. The corsage is double, the lower one advancing with a point upon the skirt, and fastened with metal or stone buttons. The upper corsage and the cuffs and jockey of the square-cut sleeves are of three colours, to match the flounces. Green crape bonnet, trimmed with a large feather; under the feather there is a roll of black lace carried forward to the front edge of the bonnet, which is also bordered with black lace.

The headdress in the medallion is composed of black figured lace, falling loosely at the back. The trimming consists of lace combined with magenta and black ribbon-velvet.



THE CATTLE DEPARTMENT AT THE ITALIAN EXPOSITION, FLORENCE.

PARIS FASHIONS FOR NOVEMBER.

THE ILLUSTRATED LONDON NEWS.

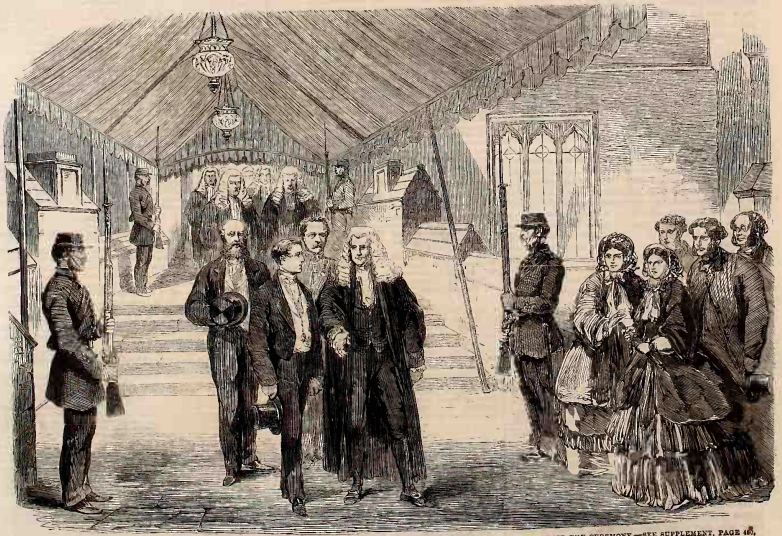
No. 1116.—VOL. XXXIX.] SATURDAY, NOVEMBER 9, 1861. [WITH A SUPPLEMENT, FIVEPENCE

BELLIGERENT RIGHTS.

AMONG the incidental benefits likely to result from the civil war in America, as some compensation for the intolerable evils it inflicts, we are not without hope that a revision of belligerent rights will be one. Much of what the world now accepts as international law with regard to them is unsuited to modern civilisation. Take the right of blockade, for instance, as it was being illustrated in the unhappy contest between the Northern and Southern States of the great American Republic. The right is held, and no doubt justly held, to be in perfect conformity with the law of nations. But the instincts of mankind will infallibly teach them that the instrument of coercion which cannot be applied to crush the rebellious without at the same time exposing to equal damage the rights and interests of millions innocent of the smallest wrong ought not to be left in the hands of any Power. It is hard that because the Confederate States have renounced their allegiance to the Union, and are strong enough to maintain their separate independence for months, and perhaps for years, large departments of manufacturing industry in England and France, upon which the subsistence of millions depend, should be visited with a calamity little short of destruction. The mischief done by privateering, which the great Powers of Europe have agreed to abolish, is as nothing compared with the wholesale suffering which the blockade now being enforced by the Federal Government is causing to nations not in the least implicated in the pending quarrel. We do not dispute the fact that the Federal Government is only availing itself of what all other Governments have insisted upon as a belligerent right. We should be the last to suggest that we should be justified, in the present instance, in breaking the blockade merely because we happen to be the chief victim of its enforcement. We must make up our minds to bear with patience and dignity the evils which a bad law we have been foremost in sustaining has unexpectedly brought upon ourselves. But we do trust that the severe hardship which has overtaken us will open our eyes to the essential injustice of this belligerent right, and dispose us to take such steps as will preclude the chance of any similar visitation in future.

It is too true, we fear, that we owe our present helpless position in regard to the blockade mainly, if not exclusively, to the policy of our own statesmen. When the Government of the United States was invited, at the close of the Russian War, to agree to the article of the Treaty of Paris which abolishes privateering, the Secretary of State, in declining that proposition on the ground of the obvious disadvantage at which it would place the American Government in relation to other maritime Powers, submitted a counter proposal, unless our memory greatly deceives us, which would have placed the entire commercial marine of all countries beyond the range of international hostilities. If that project had found favour with the Governments of Europe the right of blockade would have been applicable only against vessels of war, and goods contraband of war; and the only obstruction to the usual flow of cotton to this country would have existed in the determination of the Southern States not to sell it—a determination which high prices and the prospect of raising up rival producers in other parts of the world would very surely and very speedily have overborne. England alone, we believe, opposed to this reasonable and liberal proposition insuperable objections, and England is now fated to endure the heaviest penalty in consequence of the short-sightedness of her international policy. In our too great anxiety to retain a weapon of offence which we could wield with better effect than any other Power we unconsciously hung up a scourge for our own backs, and we are now smarting under its infliction.

The unfortunate decision at which we then arrived was owing, probably, to our having limited our view of the evils of war to the injuries which belligerents are capable of doing to each other. It was thought at the time, and powerfully argued, that Great Britain, the most formidable of the maritime Powers, would gratuitously fling away her sharpest weapon by acceding to Mr. Marcy's proposition; that, being at the expense of keeping afloat a great naval armament, it would prove comparatively useless, in case of hostilities, unless she could avail herself of it



OPENING OF THE MIDDLE TEMPLE LIBRARY BY THE PRINCE OF WALES: HIS ROYAL HIGHNESS LEAVING THE NEW LIBRARY AFTER THE CEREMONY.—SEE SUPPLEMENT, PAGE 485.

to strike a blow at the commerce of her enemy; and that the more fact of her retaining the right and the power of devastating the commercial marine of any country with which she might chance to be at war would tend to the preservation of peace by compelling other nations to be cautious of embroiling themselves with her. It was not foreseen, or not sufficiently considered, how this determination would hear upon neutrals. It seems not to have entered into the mind of any one that, without being ourselves at war with the United States, our own excessive jealousy in upholding our naval supremacy might involve us in miseries almost as intolerable as those of actual warfare. We were unwilling to see the commercial navy of any contingent foe withdrawn by previous arrangement from the reach of that navy, in the strength of which we place our chief reliance; and, in refusing to forego our advantage in this respect, we retained, of course, the right of blockade. But it is as a neutral, not a belligerent, Power that the evil consequences of our own decision have come home to us. We have sided with neither of the contending parties in America—we have carefully abstained from giving just cause of offence to either of them; but we owe it to our own deliberate decision that, in their quarrel the one with the other, our cotton interests are being crushed as between the upper and the nether millstones.

Such being the circumstances, there would seem to be no alternative in the present case but to hear as best we may the calamity we have indirectly brought upon ourselves. We must carefully shield the stores of cotton in our warehouses and the belligerent rights we have insisted upon for ourselves. We hope that her Majesty's Government will loyally and to the end preserve the neutrality they have proclaimed; and that no temptation offered to them by the Confederate States, and no inconvenience entailed upon them by the action of the Federal Union, will prevail upon them to break the blockade, either alone or in concert with other European Powers. The present distress may be great, but we had far better endure it patiently than expose ourselves to the charge of a breach of international morality. Any departure from our present neutral position would but be purchasing immediate relief at the expense of future and much greater suffering. We cannot take direct steps towards putting an end to the existing crisis without sowing the seeds of enmities the bitter fruit of which we should be compelled to reap at no very remote hereafter. We might, it is true, by recognising the South, put a speedy end to the present unnatural system, and liberate the stores of cotton that our manufactures are pining. But our intervention to close the dispute whilst the passions of, the disputants are yet hot and eager would but precipitate a war of one or both of them with ourselves. The vast army now nesting on the Potomac would probably seek conquest in Canada, and the Federal States bereft of the territory which they held south of Washington, and that, too, partly by our agency, would infallibly turn to the North for compensation. No, we are not interfere. Cotton is precious, but the price paid for it may be too high. The alternative of neutrality is contingently such as may well

make us rather bear the ills we have,
Than fly to others that we know not of.

England now resembles a man who, having entered into an engagement and refused when opportunity offered to reconsider it, unexpectedly finds that it has an aspect of extreme inconvenience towards himself. She is utterly precluded by all the obligations of national honour from seeking relief by practically disowning her own book. Her true policy lies in another direction. She cannot get cotton from America without breaking open the doors which, as the law of nations now stands, are rightfully barred against her. She must reject every temptation to commit an international breach of piety, and resolutely look elsewhere for what she wants. No doubt she will feel the pinch; but, having made up her mind to have it, she will be the better prepared to use every legitimate appliance which will mitigate her sufferings. She is not destined, under any conceivable circumstances, to face the entire cessation of her cotton manufacture. The very extremity of distress to which she seems to be exposed will attract to her markets all the disposable cotton which tropical climates can forward to her. The strain which is put upon her will have the effect of the obstacles which have hitherto indisposed her to seek her supplies elsewhere. Even from America some part of the crop which is locked up by the civil war may find its way hither whenever the Confederate States shall have arrived at the conviction that we have no intention of breaking the blockade, and that they are in danger of losing the monopoly of our markets. The hope of realising high prices on the one hand and the fear of being permanently supplanted by India on the other will operate powerfully towards the discovery of some method by which to convey their produce to Europe. The slave trade has never yet been put down on the western coast of Africa by blockading squadrons, and the cotton trade, no doubt, will be equally fertile in expedients and equally successful in partially evading or surmounting the difficulties by which it is beset. The greater our efforts to render ourselves independent of the Confederate States for our supplies of cotton the more desperate will be their attempts to reach our markets. Indeed, it is because we have all other and higher ends in view that we are determined to abide by our present course. Our immediate as well as our remoter interests may not be best subserved by our loyal and steadfast observance of belligerent rights.

The events of the last few months, however, have surely sufficed to demonstrate that the law of nations embodying these belligerent rights is altogether out of tune with the spirit and wants of modern civilisation. We trust the lesson which has been taught us will not have been thrown away. War is now carried on under far different conditions than those which prevailed in olden time. Armies are not now allowed to devastate private property in the countries in which they are engaged, nor is there any sound reason why navies should be permitted to do so at sea. The interests of humanity equally demand the exemption of commerce from warlike liabilities. But justice also demands it; for no one can pretend that the state of things which may involve the most vital interests of neutrals in every international dispute that may trouble the repose of the world is conformable with the first and most obvious principles of justice. England has had to accept a new and liberal doctrine to obtain for it universal acceptance. She is the first commercial nation in the world, and it would be as much to her interest as it would redound to her honour to place commerce beyond the lawful reach of international hostilities.

FOREIGN AND COLONIAL NEWS.

FRANCE.

According to the *Patrie* the Reports of the Senate and the Chamber of Deputies will open on the 15th of January next.

The Emperor intends, it is said, to appropriate the Palace of St. Germain-en-Laye to the establishment of a museum of Gallic and Gallo-Roman antiquities.

Extensive excavations have taken place in the neighbourhood of Castres (Tarn). Owing to extraordinarily heavy rains the River Agout, a few marches back, began rising very rapidly at Revaure, and, having before long overflowed its banks, carried away a spinning manufactory and a mill, both of which stood on its banks. The sudden inundation of these edifices were driven by the current against a bridge, and pressed so violently on it that after a while it gave way. Many houses in the town were inundated, and many fled for safety to the upper. The waters entered the latter so rapidly that the chief magistrate and his family had to escape by a window. Ere long the lower stories of the buildings were swept away, and others sustained serious damage. Although many persons are in imminent danger no life was lost. In many other places the same river overflowed and did great damage. At Valve and Lanieres bridges were injured, and in the latter village part of a mill, and washed away. At Labessonié many houses were uprooted. Roquecourbe was completely inundated, and the waters rushed into the church with such rapidity that an aged priest who was celebrating mass would probably have been drowned if a gendarme had not come to his assistance and carried him on his shoulders through a hole made in the church. Two girls caught hold of the pulpit and in a field had to climb up a tree. At Berlot two houses were carried away, and a number of others, as also several manufactories, sustained considerable damage. At Castres upwards of 1,000 and some other places there were inundations, but no great damage was done owing to the precautions taken in time.

It is announced that the seas east of the Cape are to be portioned out shortly between the two establishments of Bourbon and Reunion, the Island of Reunion, the coast of Madagascar, and the Mozambique Channel; the other flag to float in the Red Sea, Persian Gulf, and waters of Bengal.

FRANCE AND SWITZERLAND.

Another matter of disagreement between France and Switzerland has sprung up, involving, it is said, serious rights, and calling forth official action and recognition on both sides. There is an ill-defined portion of frontier-land on the northern side of the Canton of Geneva, over which one or the best of terms—between the two countries on the passes of the Jura, and in the Canton Vaud. The police authorities of the Canton de Vaud recently sent their agents to arrest a Frenchman on the territory in question at the little Swiss village of Ceseonnière, or Du Chanonnière, on the Jura. The Swiss authorities of the Canton maintain because known a detachment of French soldiers and gendarmes was despatched specially to arrest the fugitive, and that they violated the territory and occupy the Valley of Dappes and the village, and prevent what the French papers call an "illegal" arrest. The accounts from Berne represent that the detachment passed through Verrières and thereby violated a recognised portion of the Swiss territory. However, the question does not seem to turn upon that latter point, but upon the right of the French force into the Valley of Dappes, which the Swiss claim as their own ground. The Canton de Vaud has immediately memorialised the Federal Government on the subject, and the Federal Council after sending two superior officers, the President Stæmpfli of Berne, and the Vice-President of the Council of Vaud, Colonel Veillon, to the spot for information, has thought the matter serious enough to send a circular round to all the cantons, declaring known the violation of territory, and to address, at the same time, a remonstrance to the French Government. The *Moniteur* says that the Swiss have only a very slight ground for complaint, having no political object of any kind. It distinctly declares that the Emperor's Government does not find the slightest idea of deciding, by means of a military occupation, the territorial question between France and Switzerland; but that the Canton of Vaud having made an attempt to arrest on the French territory a French subject who was not a Frenchman there, the Imperial Government simply sent "a few French gendarmes and soldiers" into the village of Chanonnière, in order to prevent the arrest. The *Moniteur* "does not doubt that from the explanations which the Federal Council will receive, all fear of its real proportions, and perhaps lead to the conclusion of an arrangement destined to put an end to the conflicts which could not fail to arise from an ill-defined state of things."

PORTUGAL.

The King has lately had a slight attack of fever, and the Infante Don Augusto has been suffering from rheumatism. The Infante Don Fernando has left off tertian ague on Wednesday evening.

The Cortes were opened on Wednesday. The Royal message contained nothing of importance. The Cortes were afterwards prorogued until January next.

An immense quantity of cotton has been received at Lisbon from the Portuguese possessions of Goa. It is stated to be of good quality, and the cost of production moderate.

The yield of wine in the province of Alemtejo is immense. Throughout Portugal the vintage is more satisfactory than last year.

ITALY.

The Italian Parliament will, it is announced, be convoked to meet on the 20th inst.; and we may, therefore, expect that in its debates some light will soon be thrown on the question of future relations and negotiations between Victor Emmanuel and Rome and the Emperor Napoleon respecting the Pope's temporal sovereignty.

On Tuesday General della Rocca received the Staff of the National Guard at Naples, and addressed them in a speech in which he said he had resumed the post that the Bourbons would soon fly from.

It is contemplate to establish a tele-cosmine post throughout Italy. Garibaldi has appointed Colonel Caccia Master of the Cadet Company.

Heavy rains have caused great destruction on the railway from Rome to Civita Vecchia. The traffic has been interrupted in consequence. In one instance the train was thrown off the rails, but none of the passengers were hurt.

AUSTRIA AND HUNGARY.

The Empress left Corfu on the 23rd ult. in an Austrian war steamer for passage to Venice. It is said now to be the opinion of her Majesty's medical advisers that her lungs are not affected, and it is owing to this circumstance, and her great partiality for the climate, that she makes her stay at Corfu, that they have ventured to recommend her to pass the winter at Venice.

The official journal of Vienna has been ordered to declare a pure invention the report that a foreign Power had entered into negotiations for a cession of Venetia. It has likewise been instructed to announce that, as Austria refrains from interfering in the domestic affairs of other States, no Power can think of making proposals to her respecting Hungary.

The Government have taken measures for meeting the difficulty in which the Hungarian officials stress pled to place it by the resignation of their various offices. According to the Vienna papers the administration of Hungary will be placed in the hands of a Governor, Field Marshal Count Palffy, and the present Obergespans will be superseded, the Assembly of the Comitats dissolved, and military tribunals established throughout the country. The effect of these measures is to place Hungary under military rule. Expectation will now be anxiously directed to the course the Hungarians will pursue in face of this direct challenge of the Vienna Government.

PRUSSIA.

The elections for the Prussian Chamber of Deputies will takes place in the first degree on the 22nd of this month, and in the second degree on Dec. 6.

The King has addressed to the authorities of Potsdam some remarks intended, it is said, to destroy the impression produced by his speech at Königsberg. He said that he would ever remain faithful to the Constitution, and he hoped that the people would do the same, and would give him new proofs of it in the result of the approaching elections. Similar language was used by his Majesty to a deputation of students, to whom he observed, "I am for reasonable and moderate progress, and I intend to adhere to it."

The *Moniteur* publishes details of the ball given on the 29th ult. by the French Envoy Extraordinary, Marshal M'Mahon, to the King and Queen of Prussia. After having taken supper the King rose, and asked for a pen and paper and wrote the following despatch :—

Queen Victoria.

The King of Prussia to the Emperor of the French.

I thank your Majesty for having given me an opportunity which the Embassy is now giving me. WILLIAM.

On Thursday week the King of Prussia gave a farewell dinner to the Ambassadors sent to the coronation by foreign Powers. Lady Clarendon, the Duchess of Magenta, and the whole of the members of the Embassy were present. The King proposed a toast to the distinguished Sovereign who were represented by Embassies, and at the same time expressed his thanks that personages so distinguished had been chosen on that occasion.

The negotiations for a treaty of commerce between France and Prussia appear to have failed, for the *National Zeitung* of Wednesday says France does not seem disposed to agree to the new programme submitted by Prussia, and that, consequently, the French commissioner will leave in the course of the week.

The King has conferred on M. Meyerbeer the Order of the Crown, recent class, for his recent composition, "The Coronation March." The *New Prussian Gazette* confers the Black Eagle Order of the Black Eagle has been conferred on Marshal O'Donnell, President of the Spanish Ministry; and that to Abd-el-Kader the Order of the Red Eagle has been granted in recognition of the protection of the pilgrims and Christians in the Lebanon—both decorations being of the first class.

The Berlin *Gazette* says that the commercial treaty received a despatch from Count Rahlenburg, chief of the Prussian mission in China, announcing that the Chinese Government has opened that country and Prussia was signed on the 2nd of September at Tien-Tsin.

RUSSIA AND POLAND.

The Emperor returned to St. Petersburg from the Crimea on the 4th inst. His Majesty was received with much cheering by the people.

According to Russian intelligence published in Berlin, a conciliation bed been found to exist among the students of all the Russian universities, three of which, we believe, have remained open, at Moscow, as well as at St. Petersburg, military force was employed to disperse the students; and at Kasan a house was fired by them to cover up his insubordinate schoolars. But the statements which most significantly show the relations between constituted authority are contained in the Director General of the Political Police is about personally to tender his resignation to the Emperor Alexander, and that a petition, praying for the release of the imprisoned Polish nobles, and for the re-introduction to the empire, has already received 17,000 signatures.

There seems to be no abatement in the arbitrary proceedings of the Russian soldiers towards the Poles. In Warsaw, as well as in the provinces, numerous arrests are daily made, the religious services of the churches is often disturbed, and members of the congregation wounded and made prisoners. Two Jewish Rabbis have also been imprisoned. The late Governor of Kalisch, Count Lambert, has been sent on his travels, and General Lodors appointed in his stead.

CANADA.

At Quebec, on the 25th ult., Lord Monck, the newly-appointed Governor-General, was sworn in as Administrator of the Government, while awaiting the arrival of his commission. Addresses were presented by the Corporation, the Legislature, &c. Mr. Head and family were to leave for England by the next Wednesday's steamer.

The militia question has been raised at Quebec. It is a militia force, in which occurs the following passage :—

His Excellency confidently believes that the whole militia of Canada, sedentary and active, will be ready at all times to defend their homes and support the Crown and flag, and to that end he does not believe that he will be required to call out, except in the event of overwhelming force, but he will and gratefully accept their offer, will assure Canadians as to and able to protect their country as any soldiers in the world, and the strength of the British nation will, in case of necessity, be found to be ample to enable it to wrestle heartens in support of a people thus qualified to fight in their own cause. In accordance with the generally trends that no war will touch the frontiers of Canada, and that peace and goodwill towards them will whom the Queen and the British nation have so long felt and which has been done for many years. With this prayer he bids the militia of Canada heartily farewell.

Public opinion in Canada is much divided on the policy of enforcing the provisions of the Foreign Enlistment Act against Colonel Rankin. The Ministerial press is generally hostile, and is rapidly losing the influence of the Opposition manifest sympathy with the Northerners.

Rioted-Owings have been laid down in Toronto and the Parliament Houses at Ottawa, the future capital, are making good progress, some of the buildings being roofed in.

The elections to the Chamber of Deputies at Baden-Baden have resulted in a large majority for the Liberal party.

The *Danube Gazette* says that the Russian Government continues its gradual preparations for occupying Independent Tartary."

M. Louis Bellet, a *redacteur* of the *Patrie*, has just received the Cross of the Legion of Honour at the hands of the King of Greece.

The Queen has appointed Frederic Henry Crowe, Esq., now British Vice-Consul at Bengasi, to be her Majesty's Consul at Cuba.

In the archives of Guadalupe, Mexico, has been found an unpublished drama of Metastasio, have just been discovered. They are to be published at Leipsic.

The Mormon Hierarchy now consists of 3 presidents, 7 apostles, 2086 seventies, 15 high priests, 994 elders, 614 priests, 479 teachers, 277 deacons, and 487 missionaries.

A memorial cross is to be erected at Aumgnadhad, India, to the memory of the two officers who were killed at that station during the late mutiny.

The *Madrid Government Gazette* of the 18th ult. contains the estimate of the sums required to defray the expenditure of Mexico for the year 1862, showing also the amount actually expended in 1861, which was £1,481,265 16s. 8d., and the total estimated to be spent in 1862 is £1,911,111.

The Calcutta Chamber of Commerce have presented an address and a testimonial of plate to Mr. Campbell, the valuable services he caused of the recent famine and the depression of trade in the North-Western Provinces, and the successful efforts he has exerted by him to remove it.

The testimonial consisted of a silver tea service of the value of £200.

THE MEXICAN CONVENTION.—According to Tuesday's *Moniteur* the convention between France, England, and Spain, for a common action against Mexico, is now being satisfactorily carried out. Preliminaries were signed in London on the 31st of October. The *Débats* and *La Patrie* each contain a version of the contents of the convention respecting this intervention in Mexico. The principal are that the three Powers will each send an equal naval force, that Spain will furnish 6,000 men, and France 2,000. The united forces will occupy Vera Cruz and other points on the coast, and have under their command as the convention anticipates all Mexico. If the Government refuse to concede these demands an advance will be made on the capital, and a further agreement come to as to its future proceedings. An effort will be made to effect a suspension of hostilities between the belligerent parties in Mexico, but the country will be left free to choose its own form of government. The Powers engage not to occupy permanently any portion of Mexican territory, nor to seek any exclusive advantages. The French Government of America will be invited to join in the expedition. The *Patrie* states that the contingent which France will dispatch to Mexico will number 3000 men. About 600 officers, non-commissioned officers, and privates belonging to the Fifteenth Regiment of Foot have been ordered to prepare for service in Mexico. The Chatham, Westwich, and Portsmouth divisions have also been called upon to furnish contingents for the same service.

THE CIVIL WAR IN AMERICA.

By the arrival of the steamer North American we have advices to the Confederate 21st inst. The most important event of the week has been the completion of the great continental telegraph line, uniting San Francisco with New York, and so with Cape Race, Newfoundland, a connected line of 6600 miles, and the longest in the world. It was finished on the 24th ult., and a message exchanged between the Mayors of San Francisco and New York.

BELLIGERENT OPERATIONS ON LAND AND SEA.

A battle has been fought on the Upper Potomac to the advantage of the Confederates. On the 21st ult. the Federals, to the number of 17,000, advanced upon Leesburg. The Federals were commanded by General Crook and the Confederates by General Evans. The former were eventually compelled to abandon the field and fall back across the Potomac with the loss of 600 men, including General Lloyd, killed. Of these 400 are set down as "missing." The retreating forces had to cross a ford about twenty miles below Leesburg, which, as there were no means of conveyance across the river, those who could swim plunged into the river, some carrying their arms and others throwing them away. Many were drowned. The Federals were subsequently reinforced, and returned to the charge; but on the approach of two strong columns of Confederates, again retreated into Maryland. General Baker was Senator for Oregon, and an Englishman by birth. He commanded, when young, filibuster and chance to California. He was, we believe, the only Englishman who ever sat in the United States' Senate.

The Confederates have obtained the command of the Potomac from Quantico Creek to Chopowamsic Creek. A crowd of small vessels employed in the commissary service of the Washington army are detained below the batteries, and fears are entertained that the supplies of forage for the 20,000 horses and mules in and around the capital will run short unless the batteries are silenced.

In Kentucky General Zollicoffer at the head of a body of the Confederate forces defeated General Gerach. He was repulsed three times. This skirmish is the first which has taken place on the soil of this State.

In Western Virginia the campaign is over for the season. The Northerners hold the ground from Gauley River to Kanawha, at the Chest Mountain on the east. The Federals were suffering much from sickness in this now inclement region.

In Missouri, Arkansas has been retaken by the Federals. 15,000 troops under General White surprised the garrison, numbering 2000. Only two pieces of ordnance were found in the fort. The capture of Arkansas is said to be in pursuit of General Price. General Fremont has not been removed from the command and Lieutenant-General Halleck, who is now with the Western people is so great that the Cabinet fears but his removal would damp the popular ardour for the war there and put a stop to recruiting.

The accounts of the Confederate attack on the Federals on Santa Rosa Island with the hostile fleet off Pensacola Harbour appear to be exaggerated, especially the latter. No vessel was destroyed or even damaged, and only one man killed. Some timber was destroyed in the transport laden with coal taken.

The great naval expedition, composed of 80 vessels, carrying 500 guns and some 20,000 and 40,000 men, would sail from Hampton, near Fortress Monroe, on the 27th ult., for some undisclosed point on the Southern coast.

The Southern Commissioners to England and France who ran the blockade at Charleston have arrived at Cardenas, Cuba.

THE ARREST OF BRITISH SUBJECTS.

In an important correspondence between Lord Lyons and Mr. Seward relative to the last, by order of the latter, of Vice-Consul Dudley Mann, and the refusal on the part of the military authorities to recognise the writ of habeas corpus, Lord Lyons, in the name of the English Government, vehemently complains of this proceeding as being at variance with the ties of amity between the two countries and a violation of the American Constitution. Mr. Seward, in his reply, describes the circumstances under which the two British subjects in question were arrested, with a view to show that the Government were justified in regarding them as objects of suspicion, and that when their innocence was made apparent they were at once liberated. Mr. Seward then defends the adoption of extreme measures on the ground of the exigencies of the country in a time of civil war, when battling for its existence, and with some reference to the fact that the British Government will hardly expect that the President will accept their explanations of the institutions of the United States." He adds, at the same time, argues that the President has in no respect transcended his powers.

The Northern press, without exception, sustain Mr. Seward; but the *New York Tribune* hopes that these extraordinary powers will be used as seldom as possible, and that the officials will in loyal districts be specially brought to trial.

MISCELLANEOUS.

Mr. Seward's previous circular to the Governors calling on them to fortify their coasts is condemned by the moderate portion of the press as unwise. It is assumed a panic in the New York community when Federal Six per Cents fell three per cent, and the popular subscriptions to the national loan dwindled to one half the previous amount. The stocks have since recovered their position. No suggestion as to the loan continue to feel the effect of the panic.

Arms and munitions of war are arriving in New York from England and the Continent. They are chiefly destined for the army of the west. The Quartermaster-General having sent an agent to England to purchase £1,000,000 worth of clothing for the army, the New England manufacturers protested and declared that the supplies could be better made at home. The Quartermaster-General replied that his wants were urgent, and himself dependent on an immediate supply, which could not be had at home, but that as soon as possible he would buy at home.

The Confederate have left the port of New York, where they find themselves watched too narrowly. Nine persons indicted for participating in this traffic are now in gaol in New York awaiting their trial.

Lady Franklin and niece have visited Nevada Territory, where they were received with honour by the Legislature then in session there.

The port of Rosarna, San Domingo, will be closed to foreign and national trade after the 1st of January next.

The Forest Queen, of Bristol, has been burnt off Cuba, having first run on rust. Six lives were lost of the fifteen persons on board.

Snow has made its appearance on the mountain tops in the environs of Chambery. All the range running to the Mont de Cuni has assumed its winter aspect, which it will keep till March next.

The sculptor Giovanni Paudiani, of Milan, has been commissioned by H. Ernesto Zucconi, of London, to execute a white marble statue of Garibaldi, to be of the natural size, and said to cost 1000 guineas.

A letter in the Brussels *Indépendance* states that Ismail Pacha, the well-known Ottoman General Kmety, is about to retire from the military service of Turkey and to reside in London.

The *Monitor*, *Victoria* says:—"At Brussels the greatest quantity of beer is consumed, a thousand to the man, nearly, at Munich the most chocolate, at Berlin the most absinthe, at Constantinople the most coffee, and at London the greatest quantity of strong waters."

The *Turanski Herald* says that, during the New Zealand outbreak, Lieutenant Chevallier, of the Colonial Defence Force, was struck with an Enfield rifle at the distance of 200 yards. The Maories fired upon rather hurt any one by anything.

The Germanic Diet re-assembled a few days back at Frankfort. Berlin, the Prussian capital, already claims that the Diet do appear to have a laborious task to perform. Then Hanover, having decided to appeal to a Chamber not called, and presumed her famous project to destroy all the coasts and the creation of a German navy, a project which would deprive Prussia of the direction of the movement in favour of the fair. The Gazette must at Ems Count Bismarck that the motion of Heinr Duranwald against the National Association, which its supporters only timidly defend, shall not be discussed and disposed of. The question of the reform of the political organisation of the Confederation is also soon to be placed on the order of the day, the representative of Saxe-Coburg having strongly insisted on the necessity of satisfying the national wish by taking up that grave question. The *Presse* of Vienna publishes extracts of a letter from Duke Ernest of Saxe-Coburg which contains an entire programme of reform. That programme is not approved of by the Prussian press; and the *Cologne Gazette* declares that, for the honour of the Prince, it hopes the letter assigned to him is apocryphal.

COUNTRY NEWS.

The Dublin Art-Exhibition closed on Thursday week after a very successful career.

The winter season of the Brighton Fishermen's Home was inaugurated on Thursday week.

The Queen has approved of Mr. William B. West as Consul at Galway for the United States of America.

On Monday the foundation-stone of a schoolhouse in connection with the Conig Presbyterian Church was laid by Lord Dufferin.

A free passage to New South Wales has been obtained for 150 of the persons lately evicted from their holdings on Derrycrag, in the county of Donegal.

On the new stone last week 700 lasts of herrings were landed at Yarmouth, containing the immense number of 9,240,000 fish. One boat alone brought in fifteen lasts, or 105,000 fish.

The Peterborough statue is about to be erected in Todmorden to Mr. John Fielden, a gentleman well known for his active benevolence in assisting whatever has the least appearance of merit.

The Prince Consort has forwarded £50, and the Prince of Wales £20, towards the fund for the relief of the poorest inhabitants of Lancashire in connection with the Preston Guild of the period.

The Earl of Derby has granted the loan of a spacious piece of land in the central part of Rochdale for the term of five years for a public playground, and Mr. C. P. Melly has undertaken to fit up as a public gymnasium.

The Lord Chancellor has appointed H. R. Bagshawe, Esq., Q.C., to be County Court Judge for the circuit No. 31, on the Promotion of Addisons, Esqs., who has resigned the office on account of his health. The Circuit Court No. 31 has its principal place in the counties of Carnligan, Pembroke, Carmarthen, and Glamorgan.

A new Wesleyan chapel is about to be erected on Holt-hill, Birkenhead, to accommodate 1200 persons, at an outlay of £3000. On Thursday week the foundation-stone of the building was laid by Mr. Thomas Brocklebank, jun., Mayor of Birkenhead. The architect is Mr. Mitchell, and the contract for about 1000 persons.

The Mansion-house committee has been formed at Cambridge for the purpose of successfully carrying out the approaching meeting of the Church Missionary Society in the Advent season of the present year. The gathering will be held later in the season than usual, and will not take place till the last week in December.

A dreadful explosion of firedamp took place at a colliery near Wigan yesterday week, resulting in the immediate death of ten persons, and in the injury of three more, who died in the course of the day. The force of the explosion was conveyed by the death of the wife of one of the sufferers a few minutes after the intelligence of her husband's death reached her.

The following inscription has been placed in Coulston churchyard on the tombstone erected to the memory of the late Mr. Wells Scott-Rent:—"To the memory of Francis Saville Rent, the dearly-loved son of Francis and Elizabeth Rent, who was crushed to death at Westbury, June 30, 1860. Aged 3 years and 10 months. 'Shall not God search this out? for He knoweth the secrets of the heart.'"

Mr. C. P. Melly, a Liverpool merchant, barrister, and member for Tavistock, has presented on Wednesday week to the people of Fountain Melly," which was opened with much animation in which he held high hilarity in the erection of numerous drinking-fountains throughout the town. The place chosen for the first was the Pier-head, which is now a very playground and capable benches which Mr. Melly has also made for a time.

PRESENTATION OF CAMP COLOURS TO THE 5TH LANCASHIRE RIFLES.—On Saturday last a beautiful set of camp colours and a silver-gilt temperance medal were presented to Hyde-road Barracks, by Mr. Pim Peaton, of Crumble Hall. The entire strength of the corps was present on the occasion, and the Rev. Joseph Mayo, of Hulme, and the presentation took place in the ground in front of Crumble Hall. The colours were carried into the three sides of a square, and the colours were placed the drums of the corps, upon which the colours rested. Miss Peaton, daughter of the donor, presented the colours to the corps. After the presentation ceremony the battalion was put, by Major Hutchinson, through a variety of military evolutions, manœuvres, and marches. The presentation and tenderness for which the corps has become distinguished. The presentation ceremony was followed by a public tea, which, with a supply of refreshments, provided for them by Mr. Alderman Peaton, on Bridge in the corps. The evening was spent in the interesting manner usually observed on the happy occasions of spectators and visitors attending, which passed off without a single disturbance to mar the general enjoyment.

THE STORM OF SATURDAY.

OUR COASTS WAS visited on Saturday last with a storm of great severity, which WAS MADE destructive in its results on the north-eastern portion. The barometer fell to a very low point in the course of the day, and the Meteorological Board, as early as Friday evening, notified to the outports the coming change. The Falmouth telegraph station was the first to announce the wind, which blew a fresh gale from the south-west, and lightning flashed in all directions. On Saturday the storm burst on all sides. The principal damage was done on the coasts of the Bristol Channel and Northumberland. The wind brought up shipping thereabouts from sea and from the ports within a short distance, numbers of which were driven from their moorings, broke adrift from the racks, swept over each other before the wind, and were dashed to pieces on the rocks. Even the steamboats and passenger vessels found their way to the shore, and the passengers, after vainly striving to keep at sea, ran for shelter towards the few harbours on our eastern coast, and, finding them crowded with vessels of every description, were compelled to run for any point which promised safety.

It is stated that the commotion of the sea was such that the rocket-lines came into play. In the official reports there are records of the saving of nineteen lives in this way, and twenty-six by means of the life-boats at Whitehaven, Banff, and Seaton Carew. In one case a life-boat, launched through a tremendous surf, picked up a crew of fourteen persons, and, pulling to a vessel, took both sets and crew. In another the boat was hurried two miles overland on the receding tide, and in another the boat was driven by the force of the waves bodily into the air, and, after being carried a considerable distance, fell with a crash upon the deck of the vessel, which it was intended to succour. Even the steamboats and passenger vessels found their way to the shore, and the passengers, after vainly striving to keep at sea, ran for shelter towards the few harbours on our eastern coast, and, finding them crowded with vessels of every description, were compelled to run for any point which promised safety.

It is stated that the commotion of the sea was such that the rocket-lines came into play. In the official reports there are records of the saving of nineteen lives in this way, and twenty-six by means of the life-boats at Whitehaven, Banff, and Seaton Carew. In one case a life-boat, launched through a tremendous surf, picked up a crew of fourteen persons, and, pulling to a vessel, took both sets and crew. In another the boat was hurried two miles overland on the receding tide, and in another the boat was driven by the force of the waves bodily into the air, and, after being carried a considerable distance, fell with a crash upon the deck of the vessel, which it was intended to succour. One sad instance of the fearful power of the storm was that of the life-boat, with seven noble men, belonging to the harbour. There was the life-boat, and a gallant fellow, Thomas Mr. Thomas in the water, and, as he was being dragged to the shore, the ship cannon: the boat got afloat to reach to her succour. She sailed round and round the ship, and, after many attempts, succeeded in getting a rope from the mizen-top sail yard-arm, and the vessel was thus drawn clear of the rocks. But the life-boat was not to be saved. Before the ship the latter struck upon the rocks, and was dashed to pieces. Not even one man was left to tell the story. There, and it is to hold that the life-boat should have stopped. The

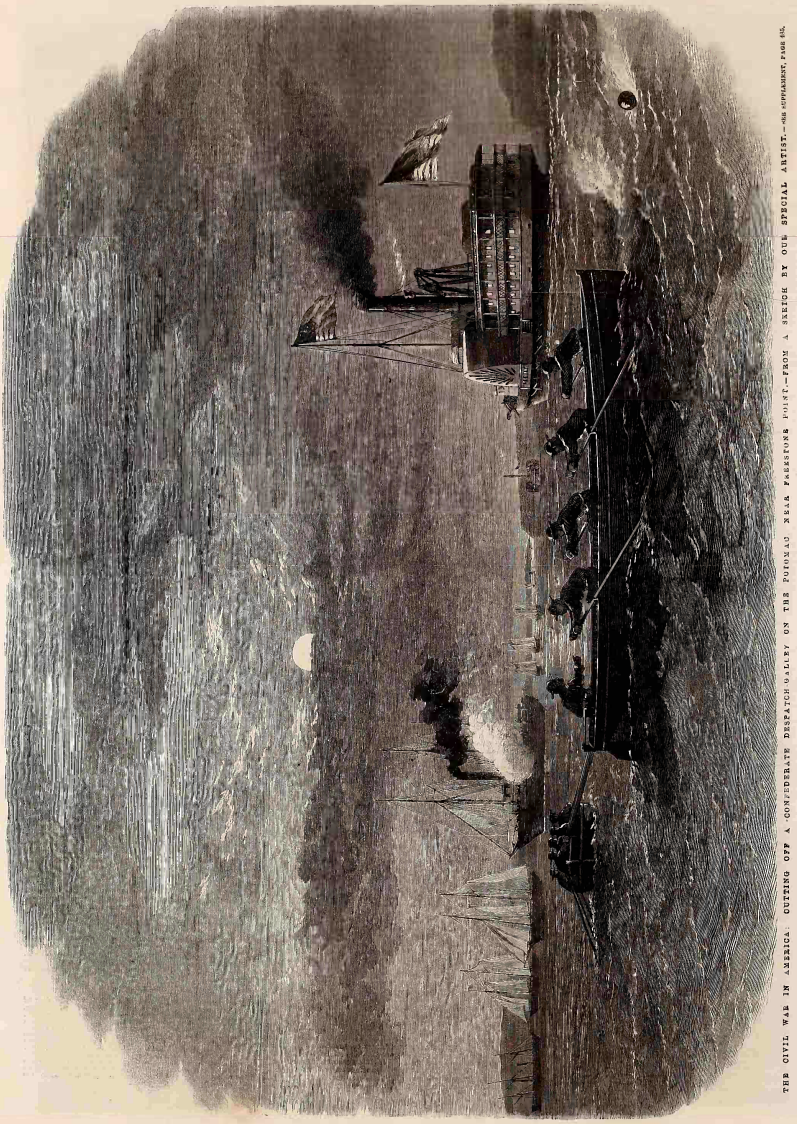
THE COURT.

The Queen, after the Investiture, yesterday afternoon, of the first batch of Knights of the new Indian order of knighthood, left Windsor Castle, at which were present their Royal Highnesses the Prince of Wales and Princess Alice, her Serene Highness the Princess of Hohenlohe, his Highness the Maharajah Duleep Singh, the Duchess of Wellington, the Earl of St. Germans, Viscount Sydney, the Marquis of Abercorn, Earl Spencer, Lord Clyde, the Hon. Sir Charles Wood, Viscount Gage, Lord Harris, Lord Cupple, the Right Hon. Sir John Lawrence, Sir George Pollock, Major General the Hon. R. Bruce, the Hon. Mrs. Biddulph, Colonel Grubbant, and



THE CIVIL WAR IN AMERICA.—CUTTING OFF A CONFEDERATE DESPATCH-GALLEY ON THE POTOMAC NEAR PASSTONS POINT.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE SUPPLEMENT, PAGE 485.

THE GUNPOWDER PLOT: GUY FAWKES BEING INTERROGATED BY JAMES I. AND THE COUNCIL IN THE KING'S BEDCHAMBER, WHITEHALL.—BY JOHN GILBERT.—SEE NEXT PAGE.

THE ARREST OF GUY FAWKES ON THE EVE OF THE 5TH OF NOVEMBER, 1605.

More than two centuries and a half have elapsed since the memorable Gunpowder Plot; yet so great has been the perversion of circumstances connected with this atrocious design by religious and political partyspirit that it is only of late years we have attained to anything approaching a true knowledge of the event. Even now, indeed, there is much relating to it which is involved in mystery. It was the policy of James I., and of his Ministers, to represent the Gunpowder Plot as having been encouraged by the Popes and approved of by the great body of Roman Catholics in England. For this purpose, before the trial of the conspirators, an artfully-concocted but dishonest account, entitled "A Discourse of the Gunpowder Plot," was industriously circulated in England, and, after translation into various languages, was assiduously spread over every part of Europe. With the same object, in the published accounts of the examinations and trial of the chief conspirators, the evidence is designedly misrepresented in some parts and altogether suppressed in others. The result is, that upon similar occasions to declare the world upon the subject has been to leave everything concerning it but the notorious and indisputable fact of a design framed by Roman Catholics to blow up the Peers and Commons, questions of doubt and controversy almost to the present day. Through the researches and labours of late years among the documents in the State Paper and in the Crown Offices, but chiefly in the Record Office of the exchequer, a great deal of light has been cast upon especially by means of the manuscript accounts of Sir Edward Greenway, who had brought from Rome, the public have now at command sufficient materials for obtaining a juster view of the transaction than any history presents. We have no intention to describe these important papers. Our business with the extraordinary conspiracy on which they shed light is narrowed to the point at which Guy Fawkes, the explosive agent, was arrested in the cellar under the House of Lords, and the explosive material found in his possession. Before that examination of the prisoner which is to be made by the Council that "it was his Majesty's intention to exonerate the English Roman Catholics from the participation of the guilt of the Gunpowder Plot, and to punish severely" and for two years after this assurance the fines for recusancy appear to have been nearly all remitted. The Roman Catholics were soon discovered by the Government declarations of James that he had no intention of granting them toleration. An Act passed both Houses declaring all the laws of the realm against Jesuits and Priests were to be put in due and exact execution. Two thirds of the estates of recusants were to be sequestered to the use of the State, in satisfaction of the fine of £20 a month. A bill was introduced to the effect that all persons who refused to subscribe to the Royal Supremacy should also be incapable of possessing property within the King's dominions. These and other proceedings of still greater severity were resented by Roman Catholics with disappointment and indignation proportioned to their previous expectations of indulgence. Among those who were the most disappointed was Robert Catesby, a gentleman descended from an ancient and opulent family in Northamptonshire. His father, who had become a convert to the Roman Catholic religion in the time of Elizabeth, had been more than once imprisoned for recusancy; but the son at one time had abandoned the ancient religion of his family and heirdom from the yoke under which they suffered. Catesby, however, rejoined the Church of Rome, engaged in the ill-judged insurrection of the Earl of Essex, was wounded and taken prisoner, and escaped his forfeiture of life by the strenuous exertion of his friends, and at the cost of three thousand pounds. After his discharge he became involved in pecuniary embarrassments by his avowed opposition to the succession of the Scottish King. Falling in all, intrigues to prevent the succession of the Scottish King, and in desperate of redress by insurreotionary means, and in search of self-desperate of redress by insurrectionary means, and in search of self-gratification, he had at length conceived a plan of vengeance which required no help from abroad and the co-operation of but few associates. His project was to blow up the Houses of Parliament, during the session, and thus involve in one common destruction King, Lords, and Commons. The person to whom he first disclosed this horrible scheme was Thomas Winter, a young gentleman of Worcestershire. Winter was thunderstruck at the proposal, and as he was known to have exertion of his friends, and at the cost of three thousand pounds. After his discharge he became involved in pecuniary embarrassments by his avowed opposition to the succession of the Scottish King. Failing in all, intrigues to prevent the succession of the Scottish King, and in desperate of redress by insurrectionary means, and in search of self-gratification, he had at length conceived a plan of vengeance which required no help from abroad and the co-operation of but few associates. His project was to blow up the Houses of Parliament, during the session, and thus involve in one common destruction King, Lords, and Commons. The person to whom he first disclosed this horrible scheme was Thomas Winter, a young gentleman of Worcestershire. Winter was thunderstruck at the proposal, and as he was known to have connections abroad, Catesby instructed him to proceed to Flanders to consult Sir Charles Somerset, who had reached Flanders to conclude a peace between England and Spain, it was resolved to postpone Catesby's desperate project until they had endeavoured to effect, by the mediation of the Spaniard with King James for the repeal of the penal laws against Roman Catholics. This view Winter readily undertook. In Netherlands, but he was not long in finding there was no hope of obtaining what he sought through Spanish influence. Passing to Germany, he tried and did obtain the sympathy and countenance, one Guy, or Guido, Fawkes. Of the early education and history of Fawkes scarcely anything is known. He is said to have spent his youthful years in the Netherlands as a soldier of fortune in the Spanish Army of the Netherlands. In his character as Constable of Castile, he

NATIONAL SPORTS.

ANOTHER tremendous half-mile performance under 1m. 48h. has taken place at the odd-looking Nutbush as a second Vulture, and it is seldom that one season has blown the public the full quota of two such high-class horses at a distance as Haven Duchess and Rattledrum, and two such half-mile clippers as this daughter of the deceased Filbert, and Cosmopolite. Nor has it ceased to lay Wallace, and mince beef with it, since his head on Thursday to do a good thing over the T.Y.C., giving East Sheen, who seemed a fiyer over the Limekilns on Tuesday, 8lb. and a thorough beating. The Kingstons, like the Stockwells, have been slipping into a good many stakes of late, and we fancy Wallace will be the future of both strains. A £50 forfeit for Lord Glasgow in a match wound up the Newmarket Houghton, which fell flat, as in 1856, to be cut short in full career. Mr. M'Grigor's term of office ended, and with from some cause or other, it has not been a satisfactory one.

It is still the case on Sunday Lord Glasgow, being in a peculiar mood, emulated Lord Barrymore, and sent round a bellman to say that if any one would step over to his paper Alderney he would give him a present of one of his Miss Whip colts. What with his Reivieres in old days, and what were popularly called at Malton "High-ears by Barbarine," his Lordship might have often employed the "Wyper type o' it" with advantage. St. Albans has succeeded Voltigeur at the Royal Oak. Turpentine remained at Alhorpe, Voltigeur's old quarters, but is full; Mr. Ashton has declined Mr. Cookson's offer to rent Lambton; Fulwar has gone to the stud; Mr. Simpson has purchased Violette at £3,000 (three years' hire included); Longbow changes his quarters from Knowsley to Newmarket; and Coulsfordon, Dundee, Misty Morn, Gardevisure, Moorcock, Gyldesdale, Dynamo, and Manicure, are for sale. Botanist, 22 st.; Lochroe, 20 st.; and Dicaster, 23 st. 9 lb., were purchased by Mr. Robert, at Tattersall's, on Monday. Dicaster had about £85 worth of fortune half-forfeits on his head, and no one would look at him but Mr. Eliot made 300 gs., and was bought by Mr. Morris.

The Ocony opened the season at Bardby on Monday, found plenty of fence, and ran remarkably well up wind, but all scent vanished when "Charley" turned. Mr. Talby's found an odd fox in a hedgerow as they were trotting to draw Attenborough Gorse for Wollaton, ran him a mile in view, and fairly "split him up." The country is very dangerous, but daily improving, and a few more days of pretty fair ride Tuesday will set things all right. We hear that his Grace the Duke and Duchess of Marlboro' sailed for Gibraltar on Tuesday. Lady Christian, Jun., the first ship at Badminton, and who has been suffering from illness this summer, has gone with his Grace for change of air, and will remain in hunting in Gozo and Malta. Mr. Fowler, Berkshire, to which Nimrod Long, son of the renowned Will, is now huntsman-in-chief, have had a capital embarkering, and The Lewes five in twenty-four days, besides marking thirteen to ground. On Wednesday week they began at Rogate, and finished at Ringmer last, and handed up to him at the end of 15 min. more. A second for gave them a ringtime of 1 h. 30m. and was also pulled down.

The South Lancashire Coursing Meeting is fixed for Tuesday and Wednesday; the Newmarket Champion and Cup at his Club (where 152 dogs are entered) for Tuesday, &c.; Audley (of the Wednesday); Circencester Club for Wednesday, &c.; and Baldock for Thursday.

The Sporting Review is embellished with a portrait of Cadet On after Mr. Harry Hall, and a Shooting Group after Corbet. "The Omnibus" contains an obituary notice of Lord Eglinton; the hunting reminiscences are resumed by an old sportsman, under the "Uncle Scribble," under the title of "The Pauperdom Family;" and the pigeon shooting for the last and present year at Harwood Wood are well dealt with by Lord William Lennox, who evidently knows every one of them from a Mark's Tey to a Mark's Head. Mr. Frank Fox and Sam Rogers as portraits. Both likenesses are good, but Sam "gets the last nan," and wins in the biography. His wasting feat before the Duke of Beaufort, when at seventy-three, made his rode first forty miles and then twenty-four miles in mufflers to get off 9lb., should have found some notice (who was duly presented to the Holy Apparent on the Oesterwich day) is still as hearty as ever at forty-five. Mr. Gosden has also full justice done to his "Cambridge Van" in full of quaint little conceits and notabilia.

Derfoot's appearance at Sheffield on Monday drew together such a number of the crack champions and ex-champions as Yorkshire had never witnessed before. The fourteen competitors ran the one-mile handicap in a body, and Derfoot had to give A. Day 10 yds., Hutchinson thirty yards start, and M'Donald (the nose *de guerre* of an amateur and friends of Cooke, forty yards. Derfoot had a most difficult shadow of a chance at such a short distance, and Day won easily in four minutes thirty seconds. The pugilistic champion, Jem Mace, who was quite out of condition, ran a long and a hard, and finished fourth in the second heat, which Brighton, who started level with Mills, won after a desperate race by two yards; and Jones had no place in the final No. 3. Jones and Day had each forty-five yards start of Brighton in the three-mile handicap on Tuesday for the stakes, and ran severely by twenty yards. In future the Deer will run in no more handicaps, give nothing away, and only run long distances. On Monday Brighton and Mills ran for the six-mile champion belt at Hadney Park, and on Wednesday Derfoot comes on in a ten-mile sweepstakes, at Portsmouth, with Hutchinson, Mills, and Howard.

Mr. Alfred Mynn, the celebrated Kentish cricketer, died yesterday week, in his fifty-fourth year. He was fully fit, fat, and weighed as hard cricketing condition quite 18st. He played, we believe, in one or two matches last season, and just lived long enough to see his favourite country rise by Wilshire's and G. Bennett's help, to newly-won old colours. The *Sporting Life* says of him in a very admirable memoir—"We need to think it the very perfection of cricket to see Mr. Mynn and Mr. Felix defending the stumps against the scientific onslaughts of old Adaptable and Sam Redgate, with Box behind, or in the Kent and Sussex matches, to have Mr. Charles Taylor and Hawkins at the wickets, Mr. Mynn and Hillyer bowling. Mynn's keeping wicket, Dorrington long-stop, Mr. Felix point, and Tom Adams long-leg, was, to the writer of this, one of the most perfect cricket treats ever had. How perfectly grand was the style in which Mr. Mynn to the wicket to deliver the ball if the very earth seemed to tremble after his measured, manly, and graceful stride, as, with form upright, his vast chest expanded, 'dand' would come down the left foot on the ball, and the right arm would shoot out, and, with a graceful sweep, round, low, and fair as law X, itself, away shot the ball, as if propelled from a Whitworth gun, and, if straight, woe to the mimicky wicket opposite to whom, when bustling, Mr. Mynn as an umpire appeared to us as never putting forth his huge strength to its full tether, but to merely tap the ball with such happy precision as to deepen the field for him when hitting, as they soon do for Griffith."

NEWMARKET HOUGHTON MEETING.—FRIDAY.

Handicap Plate of 100 sovs.—Kingfisher, 7 (Custin), 3.
Optional Selling Plate.—Lagellet, 1 (Pendrey), 2.
Sweepstakes of 50 sovs. each.—Amy, 1 (Osborne), 2.
Sweepstakes of 50 sovs. each.—Salamanca walked over.
First-class Sweepstakes.—Marie walked over, receiving 10 with Spark.
Second class Nursery Stakes.—Gaze, 1. Bonbonham, 2.
Free Handicap Sweepstakes.—Schiller, 1. Dagley, 2.

SATURDAY.

Sweepstakes of 10 sovs.—Gazelle, 1. Paragona, 2.
Handicap Plate of 50 sovs. each.—Mistress D. Duna, 1. Dagley, 2.
Hawthorn Handicap.—Mad-at-Arms, 1. Custhing, 2.
Sweepstakes of 10 sovs. each.—Thunderstorm, 1. Vulture, 2.
Handicap Sweepstakes of 10 sovs. each.—Lady Peel, 1. Chadwick's Gem, 2.
Sweepstakes of 10 sovs. each.—Lady Peel, 1. Rotas, 2.
Handicap Sweepstakes of 15 sovs. each.—Petra, 1. Gibraltar, 2.
Autumn Flying Stakes.—Lord of the Manor walked over.
Shorts Selling Stakes.—Grant, 1. Shillelagh, 2.
Purdle Race of 5 sovs. each.—Butterfly, 1. Mercurmaza, 2.
Worcestershire Grand Annual Steeplechase Handicap.—Bastard, 1. Pineapple, 2.
Free Handicap Steeplechase.—Heads or Tails, 1. Premier, 2.

WORCESTER RACES.—TUESDAY.

Nursery Plate Handicap.—Mayflower, 1. Bloodhound, 2.
Visitors' Plate.—Mopus, 1. Lord of the Manor, 2.
Selling Stakes.—Brownie, 1. Extravaganza, 2.
Worcester Autumn Handicap Sweepstakes.—Shepherdess, 1. Noblesse, 2.
Handicap Sweepstakes of 5 sovs. each.—Queen of Spain, 1. Rotas, 2.
Severn Bank Stakes.—Mosiers, 1. Black Rose, 2.

WEDNESDAY.

Handicap Plate.—Bookalcom, 1. Crocstadt, 2.
Autumn Flying Stakes.—Lord of the Manor walked over.
Shorts Selling Stakes.—Grant, 1. Shillelagh, 2.
Purdle Race of 5 sovs. each.—Butterfly, 1. Mercurmaza, 2.
Worcestershire Grand Annual Steeplechase Handicap.—Bastard, 1. Pineapple, 2.
Free Handicap Steeplechase.—Heads or Tails, 1. Premier, 2.

THE WEATHER.

Direction of Wind ..... S.W. S.W. S.W. S.W. S.W. S.W. S.W.

Rear-Admiral J. E. Erskine is appointed to the naval command in the Mediterranean.

Lord Brougham has allowed his name to be added to the list as vice-president of the National Association.

The council of the National Rifle Association request that all gunmakers intending to compete at the trial of small-bore rifles, already announced to take place at Wimbledon on the 19th inst., will send their names to the secretary of the association, 11, Pall-mall East, on or before the 1st of January next.

The Malta and Alexandria submarine telegraph was successfully opened to the public last Monday. During the twenty-four days the twenty words each were transmitted at the rate of five minutes per message. The length of the line is 1409 miles.

MONETARY TRANSACTIONS OF THE WEEK.

ALTHOUGH there is an unusually large supply of unemployed capital in the hands of bankers, and although the advices from Paris have a tendency to the positive that the Bank of France will reduce the rate of discount, no change has been effected, and the minimum remains at the rate of 5 per cent. for Home Stocks; the Unfunded Debt, bearing interest at the rate of 3½ per cent.; and the Indian Government Securities at 4 per cent.

On Thursday the directors of the Bank of England reduced their minimum rate of discount one per cent.

We have no improvement to notice in the demand for accommodation either at the Bank of England or at the Lombard-street. In some instances the rates have ruled easier, the best commercial paper being readily done in the open market at the following quotations:—

	Per cent.		Per cent.
Thirty Days' Bills	3½ to 3¾	Four Months' Bills	3¾ to 4
Sixty Days' Bills	3½ to 3¾	Six Months' Bills	3¾ to 3
Two Months' Bills	3¾ to 4		

There is a moderate amount of business doing in exchanges, and loans for short periods are still offering at 1 to 2 per cent.

Most of the Continental bourses are closed, Paris, Frankfort, and Berlin per cent dearer than in Paris, and 1 ths dearer than at Hamburg. The quotations on the Paris Bourse are somewhat limited and irregular. The exchange from New York comes at 107½ to 107¾ for bankers' bills. These quotations show a profit on gold exported per *Europa*, 99½ ; and about £9,000 has been sent away. To other quarters the exports have been trifling, and only amount to £2,000 sent to the Brazils and £1,000 to Egypt.

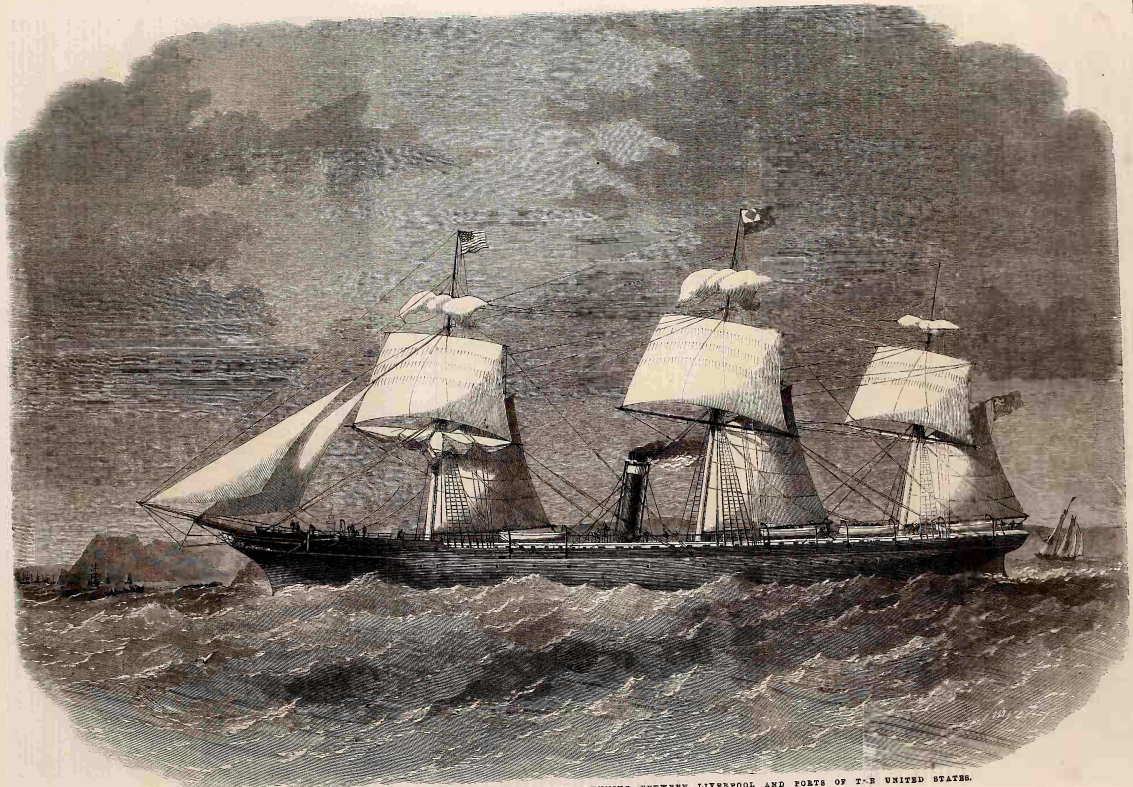
Letters from the Continent state that money is in fair, though not to say active, request, as follows:—

	Bank rate.	Open market.		Bank rate.	Open market.
	per cent.	per cent.		per cent.	per cent.
Paris	4	3½	Porto	6	5 to 6
Vienna	5	4	Trieste	5	4
Berlin	4	3½	Hamburg	3½	3
Frankfort	4	3½	St. Petersburg	7	6
Amsterdam	3	2½			

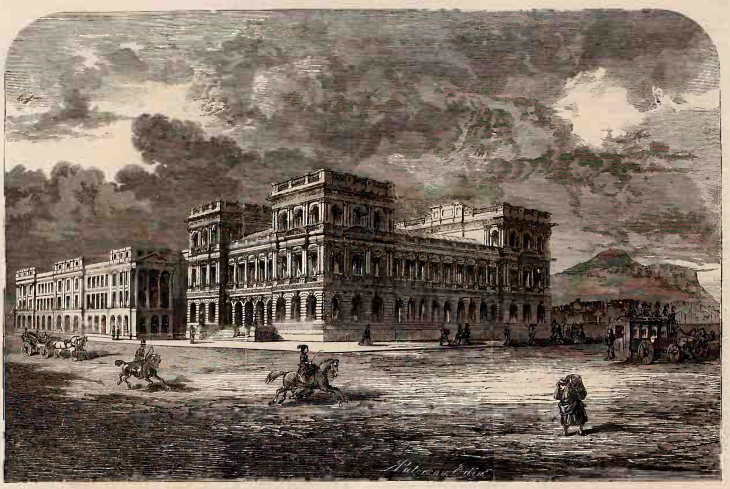
The Government of Ceylon have succeeded in placing £100,000 debentures, bearing interest at 6 per cent., at the minimum price of 95, and at the high prices varying from £104 2s. 6d. to £106. The minimum quotation was 95½ to 96, and the maximum 97½ to 98. The amount of tenders was £1,200,000.

Before 12h. per course, receipt of the works of the old Rel Sea Telegraph Company's line (now the property of the Government) at Suez, and the line has been connected into an unbroken circuit at the Bank of England.

The Australian Agricultural Company have declared a dividend of £3 per share, being at the rate of £6 per annum, free of income-tax



THE SCREW-STEAMER CITY OF NEW YORK, ONE OF THE INMAN LINE RUNNING BETWEEN LIVERPOOL AND PORTS OF THE UNITED STATES.



THE NEW GENERAL POST OFFICE, ABOUT TO BE ERECTED AT EDINBURGH.

strong bulkheads passing right across her hull, from the top of the keel to the under surface of the upper-deck. To strengthen her still further, she has steel plates (of the Mersey Steel and Iron Company's paddle steel) running all along her deck, and extending from the gunwales on each side to the outer side of the house-on-deck, in which her dining and other saloons are placed. These steel plates are securely riveted to the beams, and, being placed so high in the hull, they constitute admirable ties, by which the whole framework of the vessel is firmly bound together. The City of New York is propelled by a screw of three blades, 18ft. in diameter and 30ft. pitch. The screw is driven by two engines, which work horizontally, and have a direct action of nominally 500-horse power, but which may be worked to double that power. They are furnished with patent surface condensers, and have cylinders 85in. in diameter, with a 3ft. 6in. stroke. The ship has six tubular boilers, which have been proved by a pressure of 60lb. to the square inch. These boilers are heated by twenty furnaces, which are fired athwart-ships. The City of New York, viewed externally, presents an exceedingly elegant appearance, and the impression created by the outward aspect is fully sustained by an exhibition of her interior arrangements and fittings. Her principal saloon is situated in a house-on-deck, and measures 50ft. in length by 18ft. in width, the height of its ceiling being 7ft. This extensive and elegant saloon is fitted up in a style of beauty which accords admirably with its extent and dimensions. It is chastely fitted up with light-coloured and highly-polished oak, richly upholstered in crimson velvet, with curtains and carpets en suite. The interspaces between the numerous windows are filled with panels, containing views of British and American scenery, richly coloured, and in harmony with the general aspect and arrangement of the saloon, which, as is usual, extends from the stern forwards. Immediately in front of the saloon are placed the steward's pantry and bar; still further forward there are fourteen state rooms, beyond which are the saloon gallery and other culinary departments, to which succeed the engine space, sleeping berths for the officers and engineers, and the surgeon. The principal state rooms and sleeping passenger accommodation are on the deck beneath the saloon, in which there are twenty state rooms behind the second after bulkhead, all forward of which is devoted to the accommodation of intermediate and steerage passengers. In laying out and fitting up the interior of this fine steamer the utmost attention has been paid to securing the comfort and safety of all on board.

The City of New York was constructed by Messrs. Tod and Macgregor, of the Clyde, and, like the other vessels built by this eminent firm for the Inman Line, is a model of marine grace and beauty.

THE NEW POST OFFICE, EDINBURGH.

OUR last Number contained an illustration of his Royal Highness the Prince Consort laying the foundation-stone of the new Post Office at Edinburgh; and we now give an Engraving of the splendid edifice as it will be when completed. The *Caledonian Mercury*, from which we extract the following particulars respecting the new Post Office, says that the site chosen for the building is beyond all question the best that could have been obtained, whether as regards convenience to the public or appropriateness to the architectural features of the locality. The front to Princes-street will be 197ft. in length, and the façade to the North Bridge will be 174ft. long. The building will consist of three stories, rising to the height of 66ft. in Princes-street, and to considerably upwards of 100ft. at the south side looking to the Old Town. There is a basement story in addition. Towards the northern convex the building will be considerably higher than the façade towards the North Bridge, giving to those portions of the structure the character of massive towers. The principal floor will be decorated externally by a series of sixty Corinthian columns, running round the whole building with the exception of the east side, which adjoins and is hid by the Stamp Office. The floor above is decorated by an equal number of pilasters supporting an enriched cornice and balustrade. The principal entrance faces the General Register House, and the public lobby, which is approached by a handsome flight of steps, is 32ft. square. To the left of the public lobby is the paid-letter office, in connection with which there are several clerks' rooms. On the right of the lobby is the money-order office, with an extensive range of offices in connection with the accountant's department. Opening from the paid-letter office is the inland or sorting office, which is in communication with the letter-carriers' office. This latter, again, is provided with three large windows, communicating with a spacious public passage for the convenience of the Sunday delivery. The inland and letter-carriers' offices are each 80ft. long by 42ft. broad. On the second floor there are spacious offices for the secretary's and comptroller's departments, for the dead-letter office, &c. The third floor is generally appropriated for clerks' chambers, and the north end provides accommodation for the resident housekeeper. Below the level of the street, on the North Bridge side, there is further accommodation for clerks, and also for the convenience and comfort of the letter-carriers when not on actual service. The present letter-carriers' room is 90ft. long, with an average width of 26ft. The corresponding apartment in the new building will be 80ft. by 42ft., giving upwards of 170ft. more space in square yards. The public lobby in the new building will also be larger than the present one by 46 square yards, and the other accommodation will be on a proportionally more liberal scale than at present; in fact, the whole building will prove one of the finest ornaments of the city.

THE NEW RANGE OF THE 1ST SURREY RIFLES, PECKHAM RYE; FIRING FOR THE PRIZES AT THE 200 YARDS.—SEE SUPPLEMENT, PAGE 481.

** *The charge for the insertion of Births, Marriages, and Deaths is Five Shillings for each announcement.*

BIRTHS.

On the 4th inst., at the Vicarage, Barrow-on-Humber, the Rev. Mr. Mockell, of a son.
On the 26th of October, at Sunderland, in the county of Durham, the wife of Charles James Briggs, Esq., of a daughter.
On the 30th of October, at Castle-hill, Downshire, Cumbre Portstewart, of a Hendred-street, Park-lane, the wife of Lieut.-Colonel Gardner, of a son.
On the 5th inst., at Stockwell, Surrey, the wife of Captain Barlock, late 7th Highlanders, of a son.

MARRIAGES.

At Brechin, on the 30th ult., by the Rev. Dr. M'Coish, Queen's College, Belfast, brother-in-law of the bride, Wm. Ferrier, Esq., Greenhead, Lanarkshire, to Charlotte, youngest daughter of Alexander Guthrie, Esq., surgeon, Brechin.
On the 30th ult., at Brechin, by the Rev. Dr. M'Coish, Queen's College, Belfast, brother-in-law of the bride, William Hendry, Esq., merchant, Glasgow, to Charlotte, youngest daughter of Alexander Guthrie, Esq., surgeon, Brechin.

DEATHS.

On August 20, 1861, on his journey from Debra Ismael Khan to Jhung, John Watkins, Esq., Assistant Surgeon, Bengal, deeply regretted, greatly lamented by his friends, aged 38. R.I.P.
On the 3rd inst., at Boulogne-sur-mer, Captain John Alexander Telfer, late H.E.I.C.S., aged 61.
On the 4th inst., the infant son of the Marchioness and Marquis of Carmarthen.

FOR FAMILY ARMS send Name and County to COLLEN'S Heraldic Office, 2 Cecil-street, Strand. Sketch, 3s.; in heraldic colours, 6s. Family Pedigrees, with copious grant of Arms, to whom it may concern, guaranteed, for One Hundred of Heraldry," 50 engravings, 3s. 6d.; post-free, Arms found, Sketched, and Painted, 5s. Crests on Seals or Rings, 7s. Illustrated price-current of 91, Marlborough-st.

THE PEN SUPERSEDED.—The only method of Writing Lines is with COLLETON'S PATENT ELECTRO-SILVER PLATES. By pressure, impress, and you have Initial Plate, in card; Name Plate, 3s. 6d.; Set of Movable Numbers, 5s. 6d.; Crest, 7s. 6d. Initial Dies and Presses for Arms, Crests, and Monograms. Colleton, 20, Cranbourn-street, corner of St. Martin's-lane, W.C.

FOR FAMILY ARMS—the LINCOLN'S-INN HERALDIC OFFICE—and Steel Dies, Sketch, 3s.; Painted, Tinpaled, and Quartered, Sketch, 8s. 6d., or stamps. Pedigrees of Families.—R. BLACK, Lincoln's-inn Chambers, Lincoln's-inn.

ENGRAVING in accordance only with the Heralds' College Rules. Crests on Rings or Seals, Sketch, 5s.; Book-plate Arms, 10s. CAUTION TO THE PUBLIC—The errors perpetrated on me, that inscribing my monogram instead of my assumed bookplate, the motive withered. For correct ENGRAVING and HERALDIC DESIGNS consult T. MORING, 44, High Holborn.

LINCOLN'S-INN HERALDIC OFFICE.—To prevent the unlawful use of Armorial Bearings, Engraved Dies, Arms, Crests, &c., authentically. "The Manchester Manual of Heraldry," 3s. stamps.—R. LAKE, Great Turnstile, Lincoln's-inn-fields.

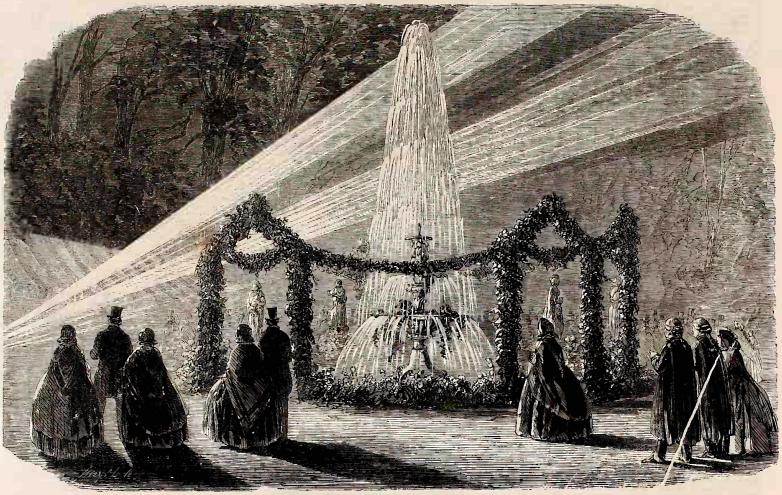
VISIT OF THE PRINCE OF WALES TO THE MIDDLE TEMPLE.



THE FOUNTAIN ILLUMINATED BY ELECTRIC LIGHT.

On Thursday week the Prince of Wales took the leading part in the most important public ceremonial in which he has engaged in this country. Having been first elected a member and then a Bencher of the Middle Temple, he formally opened the spacious and elegant Library which has recently been erected by the authorities of the Inn in their trim little garden bordering the Thames, at an expense of about £19,000. (Illustrations of the Middle Temple Library were given, with description of the building, in Nos. 1054 and 1059 of this Journal).

Those who know the silent courts and quadrangles in the Temple only as places of solemn, serious, business can hardly fancy it in its festive aspect. On the wide area of Fountain-court an edifice of canvas had sprung up which seemed illimitable in its capacities. From Middle Temple-lane you stepped into a spacious vestibule adorned with statuary, flowers, and plate-glass, where the guests alighted, and where the guard of honour was drawn up to receive his Royal Highness. Beyond that was a dining pavilion, calculated to accommodate five hundred guests, and between that and the hall there was a long and handsome corridor leading down to the garden, brilliantly illuminated with gas pendants. Groups of statuary, trophies of flags, mirrors, and exotic plants abounded in all directions, and, instead of hard, flag-pavement, the feet trod on the softest carpeting.

By one o'clock the corridors and all the open spaces on the line of procession began to fill with the barristers and their friends, who were directed by their tickets to range themselves there. The Library, too, was filled even earlier. The Benchers showed not only their gallantry but their good sense in issuing ladies' tickets with a profuse hand, for the varied hues of their morning costumes were absolutely necessary in an artistic point of view to relieve the sombre monotony of the wigs and gowns. About half-past one the guard of honour, consisting of eighty rank and file of the famous Devil's Own, under the command of Captain Lysley and Lieutenant Babington, headed by their band, marched down Middle Temple-lane, and took up their station in the vestibule, and the invited guests began to arrive soon after. Among the first was the Lord Chancellor, who, in his gold-laced robe of office, and attended by his trainbearer, sealbearer, and secretary, was no doubt regarded with wistful eyes by many of the young students who clustered round the steps. Lord Clyde came next, but he, having won his honours in a different field seemed scarcely so well known as his brother peer, and entered the hall almost unnoticed. The Duke of Cambridge, attended by Colonel Clifford, C.B., came next, and after him followed in rapid succession Lord Cranworth, the Vice-Chancellor Kindersley, Wood, and Stuart, Lord Chief Justice Cockburn, the Lord Chief Baron, Lord Chief Justice Erle—all three, as well as the Lord Chancellor, members of that Inn—Mr. Justice Byles, Mr. Justice Blackburn, Mr. Justice Willes, Mr. Justice Keating, Mr. Baron Channell, Mr. Baron Martin, Sir Lawrence Peel, Sir Cresswell Cresswell, the Master of the Temple, Lord J. Manners, Mr. Milner Gibson, the Attorney and Solicitor General, the Lord Mayor, the Sheriffs Cockerell and Twentyman, the Recorder of London, and the Treasurers of the Inner Temple, Lincoln's Inn, and Gray's Inn. As each arrived he was conducted to the old Parliament Chamber, his style and title being duly proclaimed at the door by that ubiquitous M.C., Mr Harker.

Punctuality is the politeness of Princes, and it was just on the stroke of two when the cheers of the crowd outside, which were taken up and continued down the Middle Temple-lane, announced that his Royal Highness had arrived. The Treasurer, Mr. Anderson, Q.C., and the Attorney-General to the Prince of Wales, Sir W. Alexander, Q.C., were

MIDDLE TEMPLE LIBRARY.

GENERAL VIEW OF THE TEMPLE FROM THE RIVER.

swaiting him in the vestibule, and conducted him to the new Parliament Chamber, where the Benchers had already assembled, the guard of honour presenting arms, and the band playing "God Save the Queen." In attendance on his Royal Highness were Major-General Bruce and Major Teesdale, C.B. Here the Benchers were first presented in due form, and afterwards two representatives of the barristers, Mr. E. P. Moore and Mr. H. W. Buck; and two representatives of the students, Mr. Wotherspoon and Mr. Bliss; together with Mr. Abrahams, the architect of the Library, had also the honour of being presented.

A Pa Samuel was then formed, the Lord Chancellor, Sir L. Peel, Mr. Thesiger, the Treasurer, the Lord Chancellor, Sir L. Peel, Mr. Knowles, Mr. Whitehurst, Mr. Greenwood, Mr. Heppner, Mr. Bellamy, Mr. Knowles, Mr. Whitehurst, Mr. Greenwood, Mr. Heppner, Mr. Bellamy, Sir F. Smith, Mr. O'Malley, Mr. Smith, Mr. Erle, Mr. Bagshawe, Mr. Bovill, Mr. Monk, Mr. Greene, Dr. Phillimore, Mr. Rodwell, Mr. Hawkins, Mr. Mills, Mr. Karslake, Mr. Coleridge, Mr. Wood, Mr. Pitt-Mr. Brocket, and Mr. R. B. Cabbell. The proceedings here were very short, and, unlike a Parliament in session, the Master Treasurer moved, and the Lord Chancellor seconded, the motion that his Royal Highness be admitted a Bencher of the Middle Temple; and next, "That his Royal Highness be called to the degree of the outer Bar, and that the oath on palliation be now administered to him." There being no opposition, both motions were carried unanimously, and the Prince was invested with the Bar gown and coif-called the Calcott. The next motion, also by the Treasurer, and seconded by the Lord Chancellor, was "That his Royal Highness be invited to the Bench." This motion was also agreed to, and the Prince assumed the Benchers gown, and took his seat as Master of the Bench at the right hand of the Treasurer. A vote of thanks was moved "That the Parliament do now adjourn and proceed to open the Library.

This concluded the ceremony in the Parliament Chamber, and a procession was then formed to the Library, the Prince of Wales and the Treasurer leading the way, the Lord Chancellor and the Duke of Cambridge next, and the other Benchers and visitors following in their order of precedence. Each side of the passage down the corridor was lined with the Prince's guard of honour, and the band preceded, and in the Library it was with some difficulty that a way was kept clear from one end to the other. Arrived in the Library, the Treasurer, on his stand in the dais in the bay window, and the Treasurer read an address to the Prince expressing the thanks of the Society of the Middle Temple for the honour which his Royal Highness had conferred upon the society by becoming one of its members and presiding at the opening of the new Library.

To which His Royal Highness read the following reply in a clear, firm tone :-

Gentlemen,-I thank you most cordially for this address and for the gratifying terms in which you have to my personal feelings. I have long had a sincere and true invitation, and esteem it a high privilege to be enrolled on your list of members, and permitted to assume the gown and coif of the Middle Temple Library, so worthy of your ancient and renowned society. Although but very imperfectly acquainted with the noble science of the law, which is the study either of more specially devoted, I am deeply sensible of its vast interest and importance, and I value the honour conferred upon me by admitting me to the Bench and Bar of this country are so justly celebrated. Your firm has contributed so largely to the literature of our profession, and to the advancement of its annals; and, while heartily congratulating you on the completion of the great work, I venture to express a hope that the Library may become beautified in every way largely profit by the advantages so wisely and liberally provided for them, and may successfully emulate the fame of the old and celebrated Library.

The Prince then signified his pleasure to the Treasurer that the Library be opened, and the Treasurer declared it to be opened. This concluded Royal Highness this Library is declared to be opened. This concluded Royal Highness this Library is declared to be opened. This concluded Royal Highness this Library is declared to be opened." This concluded Royal Highness this Library is declared to be opened." This concluded Royal Highness this Library is declared to be opened."

OPENING OF THE MIDDLE TEMPLE LIBRARY BY THE PRINCE OF WALES: MR. ANDERSON Q.C. THE TREASURER READING THE ADDRESS TO HIS ROYAL HIGHNESS.—SEE PAGE 485.

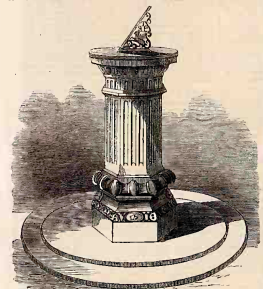
OLD TREE IN THE MIDDLE TEMPLE GARDEN.

when the Queen Henrietta Maria, disguised as a citizen, sat amongst her subjects a spectator of the gay scene.

We find many men of rank and learning among the members, notwithstanding the taunt—

The Inner Temple for the rich, the Middle for the poor.

Treasurer Plowden has already been named Sir Walter Raleigh studied here, and wrote his poem to Gascoigne from the Middle Temple. Of this Inn also were Sir Thomas Overbury; John Ford, the early dramatist; Sir Edward Brunstor, who had for his chamber-fellow Mr. Edward Hyde (Lord Clarendon), admitted when his uncle, Sir Nicholas Hyde, was Treasurer. The future Chancellor devoted the forenoon to the business of the courts, the evenings to taking instructions and other legal employment. It was not his habit to dine in the Temple Hall, as most of the other students were accustomed to do.



SUNDIAL IN THE INNER TEMPLE GARDEN.

Bulstrode Whitelock was of this Inn, as also Ireton, Cromwell's son-in-law; John Evelyn, Lord Keeper Guildford, and Lord Chancellor Somers. Wycherley is said to have received here visits from the Duchess of Cleveland, in the disguise of a milliner, Shadwell, Southern, and Congreve studied here; and certain wits were satirised as "pert Templars" by Pope, partly because none of the reigning wits, with the exception of Congreve, had received a Temple education:—

There College sophs and there pert Templars came,
The same their talents, and their tastes the same;
Each prompt to query, answer, and debate,
And emit with love of poesy and prate.—*Dunciad*, book ii.

Edmund Burke was entered at the Middle Temple in 1747, and came to keep his terms in 1750, when the heads and limbs of the rebels were

INNER TEMPLE GATE, FLEET-STREET.

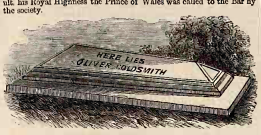
stuck upon Temple-bar. He never hired law studies, and was not called to the Bar. In 1756 we find him in two-pair chambers at the "Pope's Head," the shop of Jacob Robinson, Pope's publisher, just within the Inner Temple gateway.

Richard Brinsley Sheridan, a few days before his marriage with Miss Linley, entered his name on the Middle Temple books; but he never gave one serious hour to the law.

Sir William Blackstone had chambers in Brick-court. When he entered the Middle Temple he wrote "The Lawyer's Farewell to his Muse," printed in "Dodsley's Miscellany": he had received a prize for a poem on Milton.

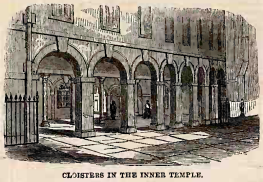
Dunning, Lord Ashburton, was induced by the then Master of the Rolls to study for the Bar, and entered the Middle Temple May 8, 1753, and was called, according to the Temple books, July 3, 1756. He used often to dine at a little eating-house near Chancery-lane, for sevenpence halfpenny. Thurlow, who was of the Inner Temple, described Dunning as "like the knave of clubs."

Cowper, who had for his fellow-clerk in a solicitor's office the future Lord Thurlow, was of the Middle Temple, where he resided eleven years, neglecting the law, but dallying with literature. While living here Cowper made love to his cousin, Theodora Cowper, the sister of his correspondent, Lady Hesketh. He frequented Dick's (then Richard's) coffee-house, and while at breakfast here he read a letter in the newspaper which he imagined to be written to drive him to self-destruction. Thomas Moore, the poet, was also of the Middle Temple, as is the present Chancellor, Lord Westbury; and on the 31st ult. his Royal Highness the Prince of Wales was called to the Bar by the society.



GOLDSMITH'S TOMB IN THE INNER TEMPLE.

As you stand in Fountain-court, the grouping of the Hall, the fountain, and the surrounding trees is very pleasing. The other Inns of Court have not been so careful of their fountain as the Middle Temple, which has now played for more than a century and a half. Hatton describes it as forcing its stream "to a vast and almost incredible altitude"; it was then inclosed with timber palisades, which have given way to iron fencing. A more ornamental group has been substituted for the plain pipe-jet, and the white marble moulding of the basin is well kept. The effect of the sound and sparkle of the water in this secluded corner is very refreshing, and has been commemorated



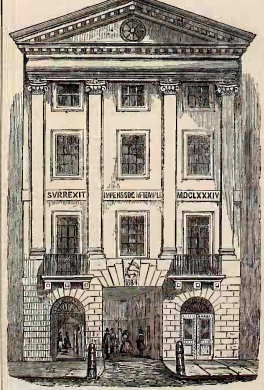
CLOISTERS IN THE INNER TEMPLE.

by Miss Landon in a descriptive poem of pensive beauty, opening with:—

The fountain's low singing is heard on the wind,
Like a melody bringing sweet fancies to mind;
Some to grieve, some to gladden: around them they cast
The hopes of the morning, the dreams of the past.
Away in the distance is heard the vast sound,
From the street of the city that compass it round,
Like the echo of fountain's or ocean's deep call:
Yet that fountain's low singing is heard over all.*

* "Vow of the Peacock; and other Poems." 1836.

The garden of the Middle Temple is more secluded than that of the Inner Temple; and the adjoining hall, the new Library (the latter built upon a portion of the garden), contribute much to the picturesqueness of the spot; while from the rich oriel looking over the river the view of the bridges, Somerset House, and the Houses of Parliament, is very striking. The staircase-tower, the bold machicolation, the high-crested roof, and the louvre, and the traceried windows of the new edifice, are altogether in more ornate taste than the Hall. Here is an aged tree memorial, a *catalpa syringifolia*, which tradition relates to have been planted by Sir Matthew Hale, who, however, we

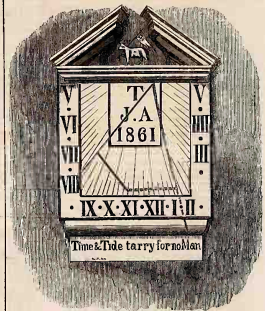


MIDDLE TEMPLE GATE, FLEET-STREET.

OLD TREE IN THE MIDDLE TEMPLE.

not of the Temple but Lincoln's Inn. The garden, from its sheltered position, in fine seasons presents one mass of flowers; the bank of blossoms presented by the richly-variegated bank of chrysanthemums is very beautiful, and the general management in graduating the plants strikingly effective. On the grass plot is a large and elaborate sundial, handsomely finished.

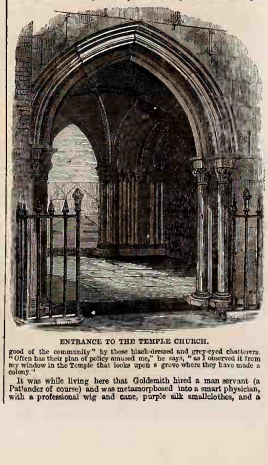
In Garden-court, to which you descend from Fountain-court, Oliver



SUNDIAL IN THE MIDDLE TEMPLE.

Goldsmith removed from the Inner Temple Library staircase chambers; the rich old Tory, Dr. Scott, describes them as a miserable garret; Oliver, nevertheless, would not accept the Doctor's proposal that he should write for the Administration. Here he passed many happy hours at his window, looking over the garden at the old Temple rookery, watching the habits of the rooks. Mr. Forster, in his delightful "Life and Adventures of Goldsmith," says:—

He saw the rookery, in the winter deserted or guarded only by some five or six, like old soldiers in a garrison, resume its activity and bustle in the spring; and he moralised, like the great Reformer, on the local constitution established, the social laws enforced, and the particular castigations endured "for the



ENTRANCE TO THE TEMPLE CHURCH.

good of the community" by those black-dressed and grey-eyed chatterers. "Often has their plan of policy amused me," he says, "as I observed it from my window in the Temple that looks upon a grove where they have made a colony."

It was while living here that Goldsmith hired a man servant (a Patlander of course) and was metamorphosed into a smart physician, with a professional wig and cane, purple silk smallclothes, and a

scarlet requeaire buttoned to the chin; but he soon grew tired of his profession and the small amount of fees.

In 1769 Oliver, the author of his comedy, "The Good-natured Man," purchased chambers in Brick-court, Middle Temple, for which he gave £400. They were No. 2 on the second floor, on the right hand ascending the staircase. He furnished them handsomely, and thus laid out all his capital*—

Thus, say Mr. Forster, began a system of waste and debt, involving him in difficulties, which "he never surmounted." The first was in the shape of money borrowed from Mr. Edward Bott, a barrister, who succeeded to several vacancies in the same floor, who remained very intimate with him for the rest of his life, and whom "Poor Law" treatise is supposed to have received revision and improvement from him.

Under Goldsmith's were the chambers of Mr. Blackstone, then finishing that splendid volume of his "Commentaries." He used to compare all on the latter made overhead, and a Mr. Chilleon, who succeeded him, mimicked the complaint. And now could be discovered, for how Goldsmith gave dinners to Johnson, Reynolds, Barry, Bickerstaff, and other friends; and supper parties to persons of fallen or high estate. These last were preceded by noisy round games of cards, and followed by blackboard whist, and vanishing games of forfeits, and no serious singing and dancing. Sometimes "a former friend" called not inopportunely, as was the case one evening when the Doctor was thinking of vice with Popham, Beauclerc, and General Oglethorpe. The caller was half drunk, but sat down with the fine connections, and all at once drew from his pocket a quarter of a pound of tea and half a pound of sugar, which he offered Goldsmith, as he could not repay two guineas which the Doctor had lent him. This was too much even for Goldy's good nature, and the intruder was turned out with his tea and sugar.

In these chambers Goldsmith breathed his last. He was asked, "Is your mind at ease?" "No, it is not," were the last recorded words of Oliver Goldsmith. He grew too weak to talk, and sunk gently into a state of what was said to him. He sank at last into a deep sleep. He awoke, but in strange convulsions, which continued with short intermission until he expired on the 4th of April, 1774, at five o'clock in the morning, in the forty-sixth year of his age. On the stairs of his chambers there was the lamentation of the old nurse, and the sobbing of a crowd of the poor objects of his charity, to whom he had never turned a deaf ear, even when struggling himself with poverty.

There was some talk of a public funeral, but as the poor poet had died £2000 in debt, his idea was dropped. Five days after his death, therefore, at five o'clock on the evening of April 9, he was privately interred in the burial-ground of the Temple Church. Burke and Reynolds attended the funeral unostentatiously, but the chief mourner was Sir Joshua's nephew. The poet rests at a short distance from the back wall on the north side of the burial-ground, immediately opposite the door of the vestry. Formerly a tree shaded the spot.

In Essex-court, adjoining, lived another great man of letters, Richard Porson, whose irregularities were of a more reckless cast than those of Oliver Noll. Porson, probably, chose this abode to be near his friend, the editor and proprietor of the Monthly Review, and whose state he marred. Perry's house was in Lancaster-court, in the Strand. Porson fractioned apartments with him "for board and lodging." Many a time at early morn must Porson have staggered to his chambers in Essex-court from his old haunts, the Cider Cellars in Maiden-lane, where he scarcely ever failed to pass some hours after spending the evening at the deanery of Westminster, at Perry's, or elsewhere. It is related of him, upon better authority than

* We hear of excellent private dinners given in Johnsonian in the Temple, at which Lord Chief Baron and Q.C.s have thought it their proudest privilege to preside. In more humble quarters, of course, the accommodation is less complete; and we remember to have heard of a Temple dinner being served out in a bedroom, when a huge tureen of soup was more unfortunately upset by one of the Templars' newly-made bed.

THE LADIES' CHALLENGE CUP. LIEUT. POCKLE'S PRIZE. MISS ELLIOTSON'S PRIZE. LIEUT. GUDGEON'S PRIZE. CHALLENGE CUP PRESENTED BY LIEUT.-COL. MACDONALD.

1ST SURREY RIFLES PRIZES.

The first annual prize competition among the members of the 1st Surrey Rifle Volunteers, for prizes amounting in value to about £400, has just taken place at the new butts of the corps at Peckham-rye. The proceedings were under the superintendence of Captain and Adjutant Freeman and Captain Rebottom, the musketry instructor. Lieutenant-Colonel Goldsmid, Captain Irvine, Lieutenant Pocklé, and other officers were also on the ground. Prize No. 9, the chief prize, amounting to thirty guineas; No. 8, the officers' contribution of thirty guineas; No. 7, value five guineas; and No. 6, value ten guineas, were contested for, but not awarded, there being several ties to be shot off. Prize 5 and 4, of the value of £25, the gift of the Misses Elliotson, and a Whitworth or Henry rifle of the value of twenty-five guineas, the gift of Mr. J. Knowles, were also fired for, but not awarded. The ties for all these prizes will be shot off shortly. We may, however, remark that, in reference to No. 9 prize, Private Hewett made 24 points, and Private Lewis 23, in the competition of No. 8 prize, Corporal Neville made 22 points, and for No. 7 prize, Captain Irvine and Private Lewis made 21 each. No. 3, company, made 18 points each, and for No. 2 prize, Private Sadd, of No. 2 company, made 15 points, and Sergeant Hinchley 14 points. Several other prizes will be shot for at the Government long range at Pimlico on a future day. We give at page 485 an illustration of the new range, with members firing for the prizes at 500 yards, and annexed are engravings of some of the prizes.

The Island of Sark is governed by feudal customs and peculiar laws. Its language retains many peculiarities of the ancient Norman French mixed up with a good deal of English and a sprinkling of other languages. There is no town or village to be seen; no house can be built without consent of the feudal lord, and no one can live or even hold on the island if he refuses Rent, which all this appeared tyranny, matters, both petite and private, appear to go on very smoothly. Once there was a threat of serious change, when a vein of silver was discovered in Little Sark; but after some £10,000 had been swallowed up in researches with but little satisfactory result, and the seigneur most of the stories told to his discredit, that one night, or rather morning, Gurney (the Baron), who had chambers in Essex-court, under Porson's, was awakened by a tremendous thump in the chambers above. Porson had just come home dead drunk, and had fallen on the floor. Having extinguished his candle in the fall, he presently staggered down stairs to relight it; and Gurney heard him fiop dodging and poking with the candle for the same for about ten minutes, as he thought, all the while very lustily cursing the nature of things. It is a grievous thing to be waked out of one's sleep by such a noise as Porson's fall must have made; but the laugh which Gurney must have enjoyed at the scholar's perplexity, and his learned way of meeting it, was worth the aggravation of the moment.

We read also of Porson shutting himself up in these chambers for three or four days together, admitting no visitors. One morning his friend Mr. Rogers went to call, having ascertained from the barber's close by that Porson was at home, but had not been seen by any one for two days. Rogers proceeded to his chambers, and knocked at the door more than once: he would not open it, and Rogers came down stairs; but as he was crossing the court he observed the window and stepped him. He was then busy about the Grenville Homer, for which he collated the Harleian MS. of the Odyssey, and received but £50 for his labour and a large-paper copy. His chambers must have presented a strange scene, for he used his books most cruelly, whether they were his own or belonged to others; he would let them lie about his room covered with dust and all sorts of dirt. He said that he purchased more "copies of good books than any private gentleman in England.

With a glance at a few more changes we conclude.

The Temple was formerly guarded by its own servants in livery, by certain of whom the hour was called at night, and whose duty it was, moreover, to accend each staircase at certain hours to see that all was safe. These servants have been discharged, and in their place the metropolitan police have been introduced. Among the changes, it may be observed that the Temple is not so much a place of residence as formerly. Mornings visits are not made in black silk gowns and powdered wigs; and the Chief Justices of our Courts have ceased to wear furs, as Sir Edward Coke was in the habit of doing.

Dr. Dibdin thus describes the garish promenade of the last century:—"Towards evening it was the fashion for the leading persons to promenade during the summer months in the Temple Gardens. Cocked-hats and ruffles, with satin smallclothes and silk stockings, did duty, and were continued the usual evening dress. Lord Brekine, though a good deal shorter than his brethren, somehow always seemed to take the lead both in place and in discourse, and shouts of laughter would frequently follow his dicta."

Wig-shops are few; but Lord Chancellor Campbell has left us some amusing particulars. Dick Dunbuy, in the Close; and in Essex-court, at Alibin's, a full-bottomed wig for a Q.C. may occasionally be seen in progress; here the ancient style of Johnson, and more ornamental wig of Goldsmith, may have been often dressed.

Throughout the Temple the Latin inscriptions recording the repairs and restorations of the buildings remind you of the ancient use, and, at which time is so valuable, it is fit we should take note of it at every turn. Accordingly, the following inscriptions have formerly appeared:—"Time remain, with notices: Temple-lane, "Prevent et imputabitur." Essex-court, "Time and tide tarry no man." Pump-court, "Time and tide tarry for no man." In Pump-court and Garden-court are two dials without mottoes. The pillars dials in the gardens have been turned. Upon the old brick house at the east end of Inner Temple-terrace, removed in 1829, was a dial with the quaint inscription, "Begone about your business;" and, as the story goes, this was the answer of a cobbler old Beecher to the painter who importuned him for a motto for the newly-painted dial. With this kind of repair, by-the-way, we venture to suggest that the original dates of the dials should be kept, instead of the date of each painting being recorded upon them. These are things of archæological revivalism this is worth consideration.

OBITUARY OF EMINENT PERSONS.

SIR W. E. MURRAY, BART.

Sir William Keith Murray, seventh Baronet of Ochtertyre, in the county of Perth, who died on the 19th ult., was the eldest son of Sir Patrick Murray, the sixth Baronet, by his wife, Mary Anne, youngest daughter of John, second Earl of Hopetoun. He was born on the 19th of July, 1810, and was educated at Harrow; was early in life in the Army, and was a Captain in the 42nd Highland Regiment; he was also Lieutenant-Colonel of the first administrative battalion of the Perthshire Rifle Volunteers, and as such took an active part in the competition at the Queen's Volunteer Review, the 17th of September, 1860, at Edinburgh, when our correspondent wrote—"Next, on the 20th of November, Lord Abercorn, Marquess Clydesdale, and the Baroness of Sir Alexander Keith, of Ravelston and Dunnottar, in the Mearnshire of Scotland, by whom she died in August, 1859, he leaves a large family of sons and daughters. He succeeded to the title on the 8th ult. July, 1854, Lady Adelaide Augusta Agustus Hastings, fourth daughter of Francis, tenth Marquis of Hastings, by whom, who died in December last, he had no issue. Sir William is now succeeded by his son, Sir Patrick Keith Murray, the eighth Baronet of Ochtertyre in the Stewartry of Strathearn, in the county of Perth, and of Murrayshall, in Scotland, as heir-at-law, the present Baronet, who is unmarried, was born on the 17th of January, 1835. The death of Sir William Keith Murray is followed by the consonality of Sir Siegfried—a personality in the inhabitants of Crief and the poor of the district, who benefited greatly by his munificence. For several years previous to the commencement of the late Government, in which he has taken an active part, Sir William devoted much of his time to the science of agriculture, and was a great supporter of agricultural society at Ochtertyre, to which he freely invited the inhabitants of the neighbourhood. He was a fellow of the Royal Agricultural Society. Ochtertyre, the House of Murray, at Ochtertyre, is one of the most ancient in Scotland, and members of it were distinguished in Scottish history, as Perthshire and elsewhere. The patient of inventory dates the 7th of June, 1673.

SIR WILLIAM MILLER, BART.

Sir William Miller, fifth Baronet of Glenlee, in the county of Kirkcudbright, was the eldest of a family of nine in the Judicial records of Scotland. He was the eldest son of Sir William Miller, Knt., by his wife, Eleanor, daughter of Sir Alexander Ferrier Gordon Cumming-Gordon, Bart., and was born in 1810. Sir William Miller, the second Baronet, a senator of the College of Justice, was raised to the title of Lord Glenlee, and was the great-grandson of Sir Thomas Miller, Lord President of the Court of Session, in Scotland, who was created a Baronet on the 19th of February, 1788. Sir William Miller, the late Baronet, was by the title of Baron Glenlee, of Glenlee, and was educated at Eton. He, in early life, served for some years in the Scots Fusilier Guards. He succeeded to the honourary, on the death of his grandfather, on the 9th of March, 1846. He married, on the 27th of April, 1841, Emily, second daughter of Lieutenant-General Sir Thomas M'Murdo, Knight, who survives him, by whom he had seven sons and two daughters. Sir William died on the 29th ult., at his residence, Grange-place, Portobello, and is succeeded by his eldest son, now Sir Thomas Macdonald Glenlee, the fourth Baronet, a youth in his nineteenth year.

LORD CHARLES BEAUCLERK.

The Lord Charles Beauclerk, who died on the 2nd inst. from injuries received at Scarborough, while rode steeplechase during a torturing gale, was the fourth son of a life-boat, was the fourth son of William, eighth Duke of St. Albans, by his second wife, Mary Amelia, eldest daughter of John Scott-Harpur, Esq., of Little Crichety Hall, Lincolnshire, and was the brother of William Aubrey de Vere, ninth Duke, and uncle of the present Duke, who was born in 1844, and present Duke of St. Albans. He was born on the 19th of October, 1813, and entered the Army in 1833, and became a Captain in the 1st Royals; he was, at the time of his death, a Major in the Northumberland Light Infantry Militia. He married, on the 15th of August, 1839, Lady Georgiana Elizabeth Isidora, of Oldend Edward Stopford, by whom (who died on the 29th of September, 1859) he leaves a young family of three sons and four daughters.

R. E. E. WILMOT, ESQ.

Robert Edward Barclay Wilmot, Esq., whose lamented death occurred recently at Brighton, was the eldest son and heir apparent of Sir Henry J. Wilmot, fourth Baronet, of Chaddesdon Hall, by his wife, Marta, eldest daughter of Edward Miller Mundy, Esq., of Shipley Hall, in the county of Derby. He was Captain of the Eleventh company of Derbyshire (Chaddesden) Rifles—a company which he had himself formed—and was one of the most popular officers in the county. He was beloved by all, and the men under his command sensibly felt his loss. He was honorary secretary of the Derbyshire Hall Association, and took an active interest in the Derby Town and County Museum, and other cultural institutions. He had travelled a great deal, both abroad and at home, and had acquired an extensive knowledge of various subjects. He was a magistrate for Derbyshire, and sometimes was expected to fill the chair at his county meetings. He was a liberal supporter of the Conservative interest, and his remains were interred in Chaddesden churchyard, with military honours, the regimental band playing the funeral march. Mr. Wilmot was the eldest of a large family of the county and neighbourhood and the loss of his father's untimely.

Died, on the 27th ult., at Pinner, after two days' illness, aged 91, Mrs. Pye, widow of the late John Parsons Pye, Esq., formerly Poet Laureate and M.P. for Berks, whom she survived only eight years.

WILLS AND BEQUESTS.

The will of Sir William Cubitt, F.R.S., civil engineer, formerly of Great George-street, Westminster, and of Clapham Common, Surrey, was proved in the London Court on the 29th ult. by the executors, Lady Ann Cubitt, Esq., and Francis E. Bing, Esq., solicitor, Bedfordbury, the only executors to the personalty was sworn under £30,000. The will was executed on the 5th of January, 1857, and Sir William died on the 11th of last month, aged 76. Sir William has bequeathed his fortune to his relict and family. To his widow, Lady Cubitt, he has left an annuity of £2000, with other specific bequests. To his son and two daughters, each of whom take certain specific bequests, he has bequeathed one-third each of the entire residue of his estate. The specific bequests, with the exception of a few small legacies to his brothers, sisters, and executors, are the contents of the will.

The will and codicil of the Rev. John William Cunningham, M.A., Rector of Harrow-on-the-Hill, Middlesex, proved in London on the 29th ult. by his three sons, the Rev. Francis Macaulay Cunningham, M.A., John W. Cunningham, and Henry S. Cunningham, the surviving executors, and the personal property sworn under £12,000. The will bears date the 6th, and the codicil the 21st, of May last, both executed on the 29th of the same month. The reverend testator has left his property to his family, declaring to his son John W. Cunningham a freehold estate, and bequeathing to him and his other two sons the residue of his estates, real and personal, equally amongst them. There are numerous specific bequests to his daughters and grandchildren. The Rev. Mr. Cunningham had the power of disposition over another large property which he has bequeathed amongst his children, giving the residue of this trust property to his two sons Francis and John. To his son Francis he has bequeathed the sum of £5000, and the residue to be the property of Harrow for warm clothing, &c., and legacies of £5 to the Harrow Dispensary, the Harrow Infirmary, and the Harrow Sunday-school Society; and legacies are also bestowed by the reverend gentleman upon all his servants.

THE SULTAN OF MOROCCO.—On the 15th ult., about ten a.m., a Moorish salute of sixty-eight guns announced the entry of the Sultan at Rabat. He hoists were hoisted on the occasion of the arrival, and it was generally supposed that he would embark at Salee, and land at the Custom House quay at Rabat; but the Sultan preferred to land at Salee, and ride from that place to the city. The reason for this change is not known, but as his troops were assembled in a vast plain, to the left of the road to Rabat, it was thought that the desire of exhibiting his military power to them, and to foreigners, might have induced him to do so. Whatever may be the reason, it is certain that the change was not intended to cause any disappointment to the people of Rabat. This latter fact is evident, for there is little doubt that the threat would be immediately put into execution; and it is the opinion of many that he would have had no more reverent towards the people to be so will and even civilly disposed towards him as they are now. Since the arrival of the Sultan at Rabat, the Soldiers and Christians dared not show their faces outside the door, and confined themselves to walking on the terraces of their houses. Now they are promenading about all the muddy groups and burlesque characters that pass. Many are dressed with European upper garments and Moorish lower garments; some black men have got white doeskin gloves, and mimic the Europeans with their caricature handkerchiefs by paying a piece of coarse calico, about two yards long, and unhemmed, continually over their faces. Said Mohammed has much more idea of the pageant of royalty than his father had; he has even a band of European music and good brass instruments; but the poor fellows are so badly paid, and nearly half starved, that they have hardly strength to blow their instruments. There are several hundred Spanish renegades, beyond doubt the very worst part of the mass of men lately arrived; but there is good reason for hoping that all will pass on well, and that such sad scenes as have been witnessed on former occasions at Rabat will never be renewed. It is thought probable that Muley Abbas, on his return from Mekinez, will land at Rabat.—*Jersey Chronicle.*

ANIMALS AT THE FLORENCE EXHIBITION.

In our last Impression we published an Engraving and some general observations relative to the animals exhibited at Florence. In the specimens selected for our special illustration at 15-de-y's Number our Artist has devoted himself principally to the drawing of the animals acclimatised with such success in Italy as to have become indigenous and self-propagating without any further importations. The great size and weight of the cattle shown by each and bulls may be looked upon favourably by a British agriculturist; but it must be borne in mind that each country seeks to produce the description of animals most suited to its peculiar requirements; and, although beef is certainly eaten by our Italian friends, it is not altogether such a staple commodity as in Great Britain, and there is thus the less demand for the bovine race in Italy, being usually required to devote their youthful energies to locomotive purposes, as are largely promoted by goads for the till an advanced age renders them no longer useful as draught cattle. By means of the following description (for some of which we are indebted to the kindness of Signor Marchi, director of the cattle department of the Florence Exhibition) our readers will be enabled to judge for themselves of the merits of the different animals so ably depicted by our draughtsman.

The cattle are for the most part folded in the Royal domain of San Rossore, near Pisa, where they multiply readily and become exceedingly useful as draught animals, well fitted for every sort of labour. The race may be looked upon as indigenous, having been acclimatised on a great many years since. The females are employed exclusively for the reproduction of the species, and live in herds of from twenty to the males are stalled at the age of three years, when they are put into training for work.

The most precious species of the Italian bovine races is that of the province of the Val di Chiana. The enormous size and great strength of these animals renders them fit for the most arduous agricultural labour, and they are fattened to advantage when their advanced age prevents them from continuing their severe occupations. Their skin is of a beautiful cream colour with say spots, and if the appearance should tend to diminish in any particular animal it would on no account be used for breeding, and would be immediately separated from its tribe. The centre face is always perfectly symmetrical either in form, in size, or in the shape of its horns. Throughout Tuscany the Val di Chiana type has been chosen to improve the local races, and having been used with the advantage for that purpose. Considerable advantages have been found to arise from this system, and almost identical races are now met with in the Val Tiberina, the Val d'Arno, the province of Pisa, the Val d'Elsa, the Val d'Era, and in Volterra. Still, other races exist in Tuscany, as the Swiss, the Pisan (brown in colour, and serviceable for draught purposes and as food), and the chestnut Pontebo, celebrated for the excellence of its flesh. During the last few years many experiments have been made by crossing the Tuscan breed with the Charolais and Durham races, but their result is not yet known with any certainty. Some specimens of the Bolognese and Upper Italian races were also much admired at the exhibition, especially a dapple-grey bull and a light dove-coloured ox from Bologna. Several Swiss herds have been acclimatised with so much success in the Upper Tuscany and in the Casentino mountain districts that they may now be looked upon as native: their colour is uniformly light yellow. A peculiar race better fitted for locomotive than for agricultural labour is found in the country parts of the Pietra Santa, the principal industry of which neighbourhood consists in the extraction of marble. In some cases from the Appuanian Mountains (in the Abruzzo); the animals are small in size, hunched, and capable of retaining the fatigue attending the transport of large blocks of marble.

The race of sheep called delle Ginestre, which produces very valuable wool, is found on the hillsides of Arimino and the Romagnano near Florence; unfortunately, they often suffer greatly from the want of pasture. The Merinos of the Casentino district are a fine collection were much admired for the purity of their type.

The Italian buffaloes although they are of the same genus than the oxen, and require less care; but they also suffer at times from excessive heat or cold. It happens occasionally that during the high temperatures of the Tuscan summer these animals will drink in any other part of Italy the buffaloes refuse to work, and they show a similar aversion to cold when the cold is at all severe. In the Alps and Apennine herds, the young male buffaloes remain at liberty with the females till three years of age, when they are put under stalled or sent into the field to labour.

The herdsman on horseback in our illustration is a Tuscan Maremman, and will recall to the remembrance of our readers many an Italian landscape in which the Maremme is not the least picturesque figure.

ILLUSTRATIONS OF THE WAR IN AMERICA.

GUARD TENT; PUNISHMENT DRILL IN THE FEDERAL CAMP.

THE modes of punishment adopted in the Federal army may be thought, perhaps, to savour of undue leniency. Although American writers have been prone to taunt the English and other European Powers with the brutalities practised on their soldiers. Judging by what has been said and written on this subject by Americans, it would appear that a free and enlightened people like our Transatlantic cousins, even when serving in the army, could not be treated as the bondsmen of a despotic Government. Yet, glancing at the illustration on page 467 (from a Sketch by our Special Artist), it would require a very prejudiced eye to affirm that the English soldier is treated with greater indignity or cruelty than the American citizen. On the left is another unhappy Unionist with a cannon-ball chained to his ankle, and carrying on his shoulder a heavy log of wood. Another delinquent is made to stand erect on a small barrel for hours together, with his hands in a wretched wight, trussed like a fowl for the spit. In the background a poor fellow, corded, with his hands behind him, is fastened to a tree—the rope which supports him cutting into his wrists and stopping the circulation of the blood.

CUTTING OFF A CONFEDERATE RESPATCH-GALLEY ON THE POTOMAC.

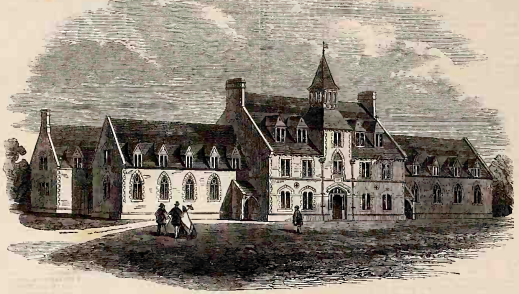
The Confederate of Maryland keep up a constant communication with the Secession forces on the Virginian shore of the Potomac, and most hazardous are the means frequently employed to convey information of the Federal movements to the enemy. At times a swift-going galley, manned by four oarsmen and a coxswain, will suddenly dash out from a creek at night and make rapidly for the Virginian side, trusting to escape the notice of the blockaders. In this is the method if speaking the numerous supply-boats carrying stores to Washington from Chesapeake Bay. Sometimes these boats, it is likely enough, are successful in their attempts; but they are frequently detected, as in the instance illustrated by our Special Artist on page 470, and then ensues an exciting chase. The quick-boat has nearly got out of range to go in pursuit, while she fires a shot from her bow-gun at the traitor galley. There is full another mile to row ere the shore, the man-of-war's gig is coming up fast, and one more shot will shiver the "Secesh" to shame. On the left have given in, and the papers they attempted to throw Beauregard are sent up the next day to the State department at Washington, while the blockade-breakers are provided with quarters in Fortress Monroe.

Since receiving this illustration from our Special Artist the command of the Potomac has passed by the Federal forces from General M'Clellan. Thus we read that on the 19th ult., as the Federal top-boat the Baltimore was towing up the Potomac a supply-vessel, the Confederate batteries opened upon them, and the latter, having got adrift, was boarded by the enemy the same day the flag-ship Union was down the river from Washington, destined for Fortress Monroe. The Secretary of War, in consequence of the movement, has appointed Major-General Banks to the command of the Potomac army, and Major-General M'Clellan has assumed the command of the Federal forces in Kentucky, which had previously been under the command of General Anderson.

THE BOMBARDMENT OF FORT PICKENS.

The Confederate Government have been for some time past concentrating their forces in the neighbourhood of Pensacola, with the intention of attacking Fort Pickens, which is held by the Federal troops. Fort Pickens is situated on the extreme point of the sand-spit which forms the harbour of Pensacola, and is a strong work, mounting 100 guns, and capable of containing a garrison of 1,000 men. The Confederate batteries are erected on the mainland, and on the opposite side of the harbour, and consist of Fort M'Rae, Fort Barrancas, and the Navy Yard. Fort M'Rae is a strong work, mounting 32 guns, and is armed with 10-inch mortars and 32-pounders. Fort Barrancas is a small work, mounting 12 guns, and is armed with 10-inch mortars and 32-pounders. The Navy Yard is a large work, mounting 32 guns, and is armed with 10-inch mortars and 32-pounders. The Confederate batteries are armed with 10-inch mortars and 32-pounders. The Confederate batteries are armed with 10-inch mortars and 32-pounders. The Confederate batteries are

then strange-looking buildings, seven stories high, tumbling, as it were, over each other, with curious figures peeping out of loophole windows; old, tottering walls, covered with motley-coloured vegetation—thick tufts of ivy, currant and fig trees, seeming to dispute every chink and corner;—all these combine to produce a picture more charming, in its wild, irregular beauty, to the artist's eye than any range of modern buildings, however stately, can possibly be. But, judging the matter simply from an artistic point of view, there is something to reconcile one to the demolition of these picturesque buildings. The views obtainable by the inmates from their lofty belvideres will in future be enjoyed by the multitude from the top of the boulevard promenade—and what views! How gloriously that wide expanse of Mediterranean, so blue as the sky with which it blends, spreads before one! Afar off stand out the Atlas Mountains, beyond which again tower peaks of the snow-capped Jurjura; whilst, nearer, the eye rests on the vast plain of the Mitidja and the rolling hills of the Sahel, all dotted with snow-white houses. The whole of this magnificent perspective will be embraced from the Boulevard de l'Impératrice.



DEVON COUNTY SCHOOL, WEST BUCKLAND, RECENTLY OPENED BY EARL FORTESCUE.

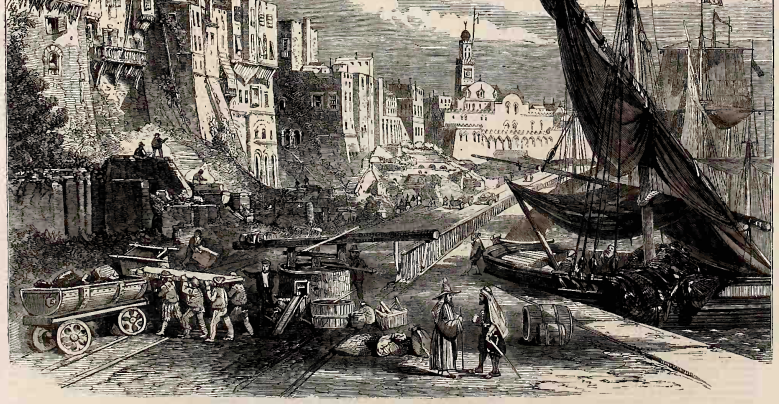
THE DEVON COUNTY SCHOOL, WEST BUCKLAND.

In the year 1856 the Rev. Prebendary Brereton, an energetic and popular clergyman in the north of Devonshire, addressed a letter to the late Earl Fortescue, Lord Lieutenant of Devon, suggesting a scheme of "county middle-class education." Mr. Brereton's proposal was, that in each of the larger counties a number of public schools for the middle classes should be established, under the direction of a county board, of which, if possible, the Lord Lieutenant should be the patron or president; and that in connection with the schools there should be a county college, to which those youths who might be able to devote a longer time to their education should proceed, and which should have the power of creating diplomas or certificates—the scheme being, of course, somewhat modified in the case of the smaller counties.

Before ascertain practically the difficulties likely to be encountered, and the degree of success which such schools would probably meet with among the classes for which they would be principally designed, a school was started in an unpretending manner at a farmhouse in the parish of West Buckland towards the close of the year 1858. At first only three pupils presented themselves. Patiently and hopefully, and in the face of many difficulties and discouragements, it was carried on, and every successive quarter brought an increase in its numbers. The farmhouse became too small to accommodate the candidates for admission, and three large wooden rooms (a dormitory for twenty boys, a dining-room, and a schoolroom) were added to it. These rooms became crowded, and another farmhouse at the distance of a mile was engaged, to which Mr. Thompson, the Head Master, proceeded with the older boys, leaving a second master in charge of the younger ones. As, notwithstanding the disadvantage of having two separate establishments in farmhouses very ill-adapted to the purpose, both rapidly became full, and, as it was felt that the school was likely to become a much larger and more important institution than had been anticipated by the most sanguine of its friends, a number of influential noblemen and gentlemen of the county, headed by the Lord Lieutenant, formed themselves into an association for the purpose of erecting new and complete buildings in which it might be permanently carried on. The foundation-stone was laid by the late Earl Fortescue, K.G., on the 4th of October, 1860, and the building was opened on the 8th ult. by his son, the present Earl, in the presence of the Earl of Devon; Mr. Buller, M.P.; Mr. Sillifant, and a very large assembly of the gentry, clergy, farmers, and tradesmen of the county. His Lordship delivered a touching address referring to the interest his father, the late Lord Lieutenant, had taken in the school and to the hope he had expressed on several occasions before his death that he might be spared to take part in the opening of that day. The noble Earl then, on behalf of his father, presented a valuable marble bust of the Rev. Prebendary Brereton to the school, and in the afternoon his Lordship gave a luncheon to about two hundred of the tenantry, guests, and friends. In the evening there was a dinner in the schoolroom, presided over by Mr. Buller, M.P., at which a very large number of the gentry, farmers, and tradesmen of the district were present.

The following is the architect's description of the buildings:—"These buildings are situated on what is perhaps more properly described as an eminence or rising than a hill. The school stands in its own grounds a little to the right, on a road leading from West Buckland to East Buckland and South Molton. It has a south frontage of 180ft. in extent, and is surrounded on all sides by the peculiar woodland scenery of North Devon. The style of the building is Early Pointed, freely treated, but the most rigid severity has been adhered to in the details. Some additional effect has been obtained by the introduction of dark bands of slating in the roofs. The main building forming the centre comprises—on the ground floor, a spacious entrance-hall, board-room, and library, residence for the head master, housekeeper's room, store, &c. The first floor contains master's apartments, sick and convalescent wards, domitories, &c. The second floor is occupied entirely by dormitories, lavatory, &c. The west wing contains, on the ground floor, a dining-room capable of seating 130 boys, and over the dining-room and other offices of this wing there are dormitories for boys and assistants, lavatories, and a bathroom. The school, about 60ft. long, occupies the entire length of the east wing and the whole height from floor to roof, which is open, the timbers stained and varnished, and the iron spans painted blue. Immediately behind the school are lavatories and other convenient offices."

Mr. R. D. Gould, borough surveyor of Barnstaple, is the architect, and Mr. John Cock, jun., of South Molton, the builder. The cost will be about £2000.



RANGE OF OLD MOORISH BUILDINGS AT ALGIERS TO BE PULLED DOWN TO MAKE ROOM FOR THE BOULEVARD DE L'IMPERATRICE.

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes in the County of Middlesex, by GEORGE C. LEIGHTON, 198, Strand, aforesaid.—SATURDAY, NOVEMBER 9, 1861.

THE ILLUSTRATED LONDON NEWS.

No. 1117.—VOL. XXXIX.] SATURDAY, NOVEMBER 16, 1861. [WITH A SUPPLEMENT, FIVEPENCE

RUSSIAN PROSPECTS.

LET us place side by side two pictures. The one shows us a country enjoying the most perfect unity of government though extending geographically through no less than three of the great divisions of the world; which has a population probably equal to that of France and England united, and an army of a million or more of men animated by the consciousness that they have struggled—and struggled successfully—even with the great Napoleon; an empire which seems to be ever advancing beyond—in order to increase—its territorial limits, now into Finland, now partitioning Poland, now towards China, and now towards Japan; which only needs to be supposed to look towards our Eastern empire to make England forget her wonted caution and plunge into an Afghan war; which does attack Turkey, and is instantly herself attacked by France, England, and Italy: so momentous are supposed to be the issues of her policy, if successful, on the fortunes of Europe.

This is one picture. Let us now glance at the other. We behold one of the greatest of earthly Potentates dying in anguish amid the desolation and ruin caused by the loss of an arsenal that had cost half a century and twenty or thirty millions of money to produce, and which, if intended to be an instrument for the successful accomplishment of the mightiest schemes of aggression, was certainly equal in strength, scientific arrangement, and magnificence of cost and appliance to whatever reasonable demands even such a policy might make upon it. We see peace not only forced upon this Monarch's successor and on his people, but under circumstances calculated to increase the sense of failure and humiliation. These warlike armies have been beaten not alone by the conjoined prowess of the strongest nations in Europe—a calamity that the nicest military honour might bear without much personal sensitiveness—but they have been beaten by the "effeminate" Turk himself, wherever they came into contact with him under Omer Pacha. We see the whole people retiring as it were into their dreary and frozen wastes, with their dreams of ambition rudely broken; while their Emperor, made wise by calamity, sees that in the shock between free nations and those who are not free the former must win; and he, too, retires into his solitude to deal with the fact as he may, and to re-emerge with the charter of serf-emancipation in his hands.

But it is in Russia as elsewhere—reforms delayed too long, and only made when they can be no longer resisted, carry with them their own punishment, even if they produce their expected fruit. So we see in our picture a disturbed, clamorous people, who are more determined upon obtaining possession of their new rights than willing, or perhaps able, to fulfil their new duties, or to make allowance for the difficulties that lie in the way. We see an upper class who are half frenzied at the loss that threatens them—reducing men of great wealth to a mere competence, and those of moderate means to sheer poverty—and all this, as they think and cry, without any kind of compensation, either in money, after the English fashion, or in political power; which if not directly a source of wealth to them would be so indirectly, by giving them control over the costs of government; and by enabling them, if they were so minded, to inaugurate changes of internal and especially of commercial policy which might develop the natural resources of the country and

PROGRESS OF THE INTERNATIONAL EXHIBITION BUILDING: PORTION OF THE NAVE.—SEE NEXT PAGE.

add indefinitely to her wealth. But these are only portions of the picture. The more deeply we can penetrate through the haze that covers it the more alarming are the things we see. The selfish resistance of the nobles to serf-emancipation was, doubtless, calculated on and provided for. But what is this terrible and portentous phenomenon that startles the gaze of the Czar?—the students of his universities, the Russia of the future, indulging in freedom of thought; and when that is sternly forbidden passing on to freedom in action, organising incipient rebellion, daring to speak, to remonstrate, to warn, almost to threaten! Not Pemkonenkin himself could have been more appalled by the actions of the monster he had created than must the Russian Government be by this conduct of the students that owe their very being, educationally, to it. Peace at all these attention to the moral development, has for vanity, it is certainly not to the progress of civilisation, has for vanity, which produces only idleness and vacuity of mind, to the want of real instruction, that we must attribute the *licentiousness of thought*, these unbridled passions, that confused and fatal half-knowledge, that tendency to extreme theories and *political relations*, which begin with demoralising and end by destroying their victims." What would the author of this say if he could now look with us into the future of the present, and see his nobles and middle classes assembling to demand a Constitution, and his own hopeful students accepting without shame, but rather with something that looks like a feeling of honour, all the consequences of the very "licentiousness of thought" he so dreaded; alternately, at the risk of their freedom, their personal dignity, and assertion, at the risk of their freedom, their personal dignity, and possibly their lives, their faith in the "political visions" against which he so eloquently warned them all! And we have yet to add certain darker elements to the already sombre picture. While the country is torn by internal dissensions, and kept down, and by the breath of a nobler life that comes wafted to them with every breeze from the freer countries of Europe; while Mr. Herzten, the Russian exile, sends his weekly sheet by thousands from London, and laughs at all the obstacles put in the way of their diffusion; while the terrible alternative begins to rise before all thoughtful men of Constantion or of a new and sanguinary revolution; while the opportunity of being shot down? What of Turkey, who for us, if she were not too full of national complications, to retort with terrible meaning the old cry, that the "sick man"? What of Germany, over which Russia was wont to enjoy that pleasant kind of rule over your neighbours which consists in making them do what you like, but saves you all trouble, and in which the case permits, all responsibility in the doing? The Colossus may still have its head of brass, but is feeling only too painfully that its legs are of clay. No more danger now of a Russian influence is for the moment complete.

Compare these two pictures, and how hard it seems to realise the fact (which we nevertheless know to be true) that they are both in effect one, that they represent the same country here and subsequent to the Crimean War.

And how will the struggle end? That is the question we must ask ourselves, even in the view to our own interests. We know now that, apart from mere commercial relations, there is no such thing as isolation, except under the most peculiar circumstances, and then only while the same conditions last. If any country could have relied on the permanent exclusion of foreign ideas, surely it was China, where experience and history either instituted to the possibility if not to the wisdom of the policy. Yet see how, even in China, at the first shock, the whole system breaks down, and how weak the once-strong Power stands confessed before its intruding assailants! And now Russia comes to be trying a system of the same kind, even while inconsistently pursuing a different policy in regard to commerce. Our trade goes on as usual with the great cities of Russia; but how is it that we have so little of what is passing on all other countries in that most interesting country at so critical a time? It is because the Russian Government is doing its best to seal up its territory, and to let no facts and no ideas pass. The events in American alone surpass in intrinsic importance those in Russia; yet compare our respective means of knowledge about them: many columns, almost daily, in our newspapers about the one; a paragraph, a solitary letter, or a stray leader, now and then, about the other. The few facts and ideas that do ooze out seem to show that there is a concern, and steadiness of purpose, and a noble political aim rising among the people;—a tranquil adherence to the old ways of thinking and acting upon the part of the military authorities;—and a wavering, hesitating, feeble policy in the minds of the Czar and of his Ministers, who, while they cling with a blind constancy to the glorious measure of serf-emancipation they have inaugurated, seem to be perilling not only that but all the institutions of the empire by their refusal to see that so great a change was one of the necessitate other changes; that, when the serf was made socially free, all other men almost him who had to hear the cost would naturally expect that they should at least be made politically free. But to this end it must come. The rich man may be willing to concur in a movement that raises all classes, and so makes the Emperor at the top pay, by a loss of his personal power, for the expenses originated by his desire to benefit those at the bottom; but the rich man objects to be the only sufferer. And how much more he is likely to be influenced by questions of power than by questions of the purse we see in the anecdote of the Russian Prince who resisted all pecuniary offers to sell to his serf the right to be free, when the latter wanted to marry his son into a free family, but who granted it voluntarily in a moment of caprice when the serf brought to him a barrel of oysters that he happened to want very much. The Czar is disregarding this feeling as though he did not value it or did not know that it; and yet it is precisely the sentiment that actuates himself when he refuses compliance with it. He is as willing to risk rebellion in order to keep his power as they are in order to keep a part of it from him. Which will be the victor? The Czar has the army, the officials, and the men of the old school who are always to be found in every country. The Reformers who demand a Constitution have, or will speedily have, the nobility, the middle classes, and all the young, intellectual blood of the empire. But what of the emancipated serfs, who have to be counted by millions? Will they trouble their heads about a political power that is not asked for for them, and when their whole souls are engrossed in thinking how they are to assert and to maintain the social rights that have been accorded already and so recently? Will they not be likely to cling with grateful affection to the Czar who has bestowed on them so priceless a gift, and be ready to do battle in his cause against their recent lords? Such are the complicated facts, which those masters have all to answer. These masters, and all with whom those masters have alliance. These are serious questions, and time alone can answer them. At present our English sympathies are with the Czar for his one present one English sympathies are with the Czar for his one present one English sympathies are with the Czar for his one present one

AUSTRIA.

M. Pratobevera, the Minister of Justice, has given in his resignation, which has been accepted.

Count Belcredi, the ex-Minister of Justice, has been appointed Minister without portfolio and Aulic Chancellor for Transylvania.

The speech of General Pálffy, on assuming his office as Lieutenant of Hungary, is only noticeable for its mildness, and the expression of a hope that the existing difficulties will soon be removed, and the wishes of the Emperor relative to the constitutional question realised.

The Emperor has written a letter to General Forgach, in which his Majesty gives his reasons for adopting as a rule of conduct in Croatia towards his Hungarian subjects. The measures in question are expressly declared to be temporary, to be taken solely with a view to establish "order," and not to bind the Austrian Government any hereafter "by concessions" it may be induced to grant to the leaders of existing aristocratical tendencies. The Emperor declares that he is fully resolved to maintain inviolably and without restriction in future the concessions granted to Hungary.

The election of Deputies to the Diet commenced on the 5th. The Ban was assisted with enthusiasm, and his opening speech received with much applause. The Imperial rescript, in reply to the address of the Croatian Diet, was communicated on Wednesday to both Houses of the Reichsrath. The rescript expresses a regret that Croatia should have forgotten that when the Emperor granted her those constitutional institutions which circumstances rendered necessary, it was with the reservation that the unity of the monarchy should be maintained, and for this reason, continues the rescript, the Croatian Diet must now be dissolved. It will be summoned hereafter on the basis of the diploma of October and February. A special Aulic Chancery for Croatia has been established at Vienna.

PRUSSIA.

After a postponement of some days, variously attributed to the indisposition of the Crown Princess and to a fear that the Berlin students intended a demonstration indicating displeasure at the issue of the coronation speeches, the King, Queen, and the Crown Prince left for the Rhine destination on Monday—the Crown Prince by advice of her physicians, remaining at home. The position of this illustrious lady is stated to have caused the abandonment of a portion of a visit by the Royal family to Stettin, Stralsund, Cologne, and Coblenz.

The long-promised reform in the Prussian Upper Chamber has been announced. It amounts to a reduction in the number of the representatives of the landed interest from ninety to forty-one, being five for each of the provinces of Prussia, seven for Silesia, and four for Westphalia.

RUSSIA AND POLAND.

The improvements introduced into the condition of the Company of Russian Railways have been finally approved by the Emperor Alexander. The new regulations have been signed by the Minister of Public Works.

On Sunday the Chief Rabbi and other leading men of the Jewish community were arrested in Warsaw. The reason for these extraordinary arrests is not known. It is said in Warsaw that amongst the persons arrested in the houses on the 14th of October last there are those condemned to serve in the regiments in Siberia.

If we are to give full credit to a piece of intelligence published in the *Przeworsk Gazette of Berlin*, there is reason to suppose that something like a general rising in Poland had been planned. The journal in question reports that recently 13,000 muskets and a large sum of money in convent on the estate of Count Zamoyski, but without the knowledge of that nobleman, are destined by his steward when arrested. Similar seizures in other places are spoken of.

AUSTRALIA.

The new Parliament of Victoria assembled on the 30th of August, barely a week after the conclusion of the general elections. Moderate hostile to the Ministry made by Mr. O'Shanassy and Mr. Duffy fell to the ground after a debate of several days.

The second Session of the fourth Parliament of New South Wales since the introduction of responsible government was opened on the 3rd of September by his Excellency Sir John Young, the first time that the present Governor has officiated at such a ceremony.

NEW ZEALAND

The *Melbourne Herald*, commenting on the New Zealand news, says:—"Things have greatly changed in this direction. All interest about the war at Taranaki, and the threatened war in the neighbourhood of Auckland, have sunk in the discovery of gold at Otago. The Fox Ministry has succeeded in establishing itself pretty much in public favour, and the old feeling of jealousy and distrust with regard to the natives is giving more satisfaction than was at one time expected."

Prince Napoleon has subscribed 2000 francs and the Princess Clothilde 200 towards the monument of Count Cavour. Her Royal Highness writes, "In becoming a Frenchwoman by my marriage, my heart has become profoundly devoted to Italy. I am happy to show this feeling in uniting my name to any homage to bring honour to the memory of Count Cavour."

Since the establishment of the present Spanish dynasty in 1834 there have been forty-seven Constitutional Cortes, and there have been in the same period forty-seven Prime Ministers, one hundred and twenty-nine Ministers, and seventy-eight Ministers of the Interior alone.

The *Gaceta de l'Oise* states that a discovery very interesting to numismatists has just been made in the forest of Compiègne. Some workmen employed in the excavation directed by M. Alfred de Rougé, near the spot called the Bruntout, found an old conveyance of the shape of a large elongated pound, and enclosed more than 800 silver coins, representing the effigies of the Roman Emperors and Empresses, from Nero to the last Gordian, and many are in fine preservation.

THE RED SEA.—A German journal, the *Mittheilungen*, says:—"The Red Sea, to a practical observer, is a long valley extending from Suez to Babel-Mandeb, but in reality it consists of three valleys parallel to each other. It is to the polypus that the configuration is owing, as it has encircled it, in some distance from the shore, two reefs that run parallel to the coast and form the three valleys or channels spoken of. The middle channel is the deepest, and deeper; the other two are only deep, and can only be navigated by coasting-vessels. The greatest depth of the Red Sea is 2000 fathoms (12,000 ft.), and in the central valley it is never less than 1100 metres."

THE WEST COAST OF AFRICA.—By the arrival of the West African mail we are gratified to learn that intelligence has been received at Dr. Baikie, the indefatigable traveller. For two years and six months he lived among the natives without any means of communication with Europeans; and for upwards of that period considered it unsafe to travel in the river. Another iddence massacre was about to be perpetrated at Dahomey. "The new yam moon" was to be celebrated by "a grand custom," at which 500 human beings were to be beheaded. A native plot has been discovered, and frustrated, for poisoning the ruling Governor of Lagos and a number of merchants. The dispute between the King of Bonny and his subjects has not been settled, and the country was in a very disturbed state.

LETTERS FOR NORWAY.—The following notice has just been issued by order of the Postmaster-General:—"Information having been received that letters addressed to persons in Norway have frequently been ensured for the winter, the sum for delivery will be forwarded through Sweden until further notice. During the period of the severance of the mail service with Sweden, the rate of postage upon letters addressed to Norway will be 1s. 8d. per half ounce, and not exceeding that weight, and proportionately for heavier letters. This rate must be paid with the British and foreign postage on letters addressed to Norway, and constitutes the whole charge to the end of the destination, and it may be prepaid in advance at the letter rate for the United Kingdom, at the option of the sender; except, however, in the case of registered letters, the postage upon which, as well as the registration fee, must be paid in advance."

THE AMERICAN NATIONAL HYMN.—It will be remembered, perhaps, that Francis Scott Key, author of "The Star-spangled Banner," and "The Star-spangled Banner," offered a prize of 100 dollars for a new national hymn. Twelve hundred "copies of verses" were received by the committee appointed for selection and judgment, who, being men of some sense and taste, came to the decision—which might have been anticipated—that not one out of the twelve hundred was worthy the prize of £100. The labour of the committee, however, did not end here. They resolved to offer a dollar volume out of the rejected hymns, and committed the arrangement to Mr. Richard Grant White, who has published it in New York. The Atlantic in a painstaking article and commentator in Shakspeare. This book of hymns is dedicated, we are informed in New York, printed on tinted paper, with an essay by Mr. White on "National Hymns, how they are written, and how they are not written," illustrated by the words and music of the most popular patriotic European hymns. Then follows a selection of the best and the worst of the rejected twelve hundred. The worst, of course, are expected to be the most entertaining, as Mr. White points them out with a critique of historical and rhetorical infelicity.—*Globe*.

THE CIVIL WAR IN AMERICA.

By the Canard steamer Arabia we have Boston journals to the 30th ult. and a telegram via Halifax to the 31st. Owing to the stormy weather on the Atlantic, the weekly steamer of the Canadian line has not yet arrived.

BELLIGERENT OPERATIONS BY SEA AND LAND.

The great naval expedition sailed from Hampton Roads on the 29th ult. The naval armament is under the command of Captain Dupont, and the troops under that of Brigadier-General Sherman, an old and experienced officer. The troops number about 20,000 men, mostly from New England. They are said to be in excellent health and spirits. The armament is of corresponding magnitude. There are boats enough to haul a division at a time. There are army-stores and horses in abundance. Carpenters, masons, and labourers, with stone and other building materials, accompany the troops. It is the largest and best appointed naval force which ever left a United States' port. Secretary Cameron instructs the commanders to hold strictly to the Conservative course hitherto pursued by the Federal Government, and to avoid the advantages of the place where the expedition will land.

With reference to the Federal gunboat Pensacola, now definitively called the battle of Ball's Bluff, we learn nothing by the telegraph, as the Federal commanders showed no desire to publish their disasters to the world. Private letters to the newspapers revealed the truth. In one regiment there were only two swords and no firelocks left; all the others were lost, captured, or thrown away. The scramble for the river is described as frightful—another Bersalua—masses of drowning men. If the Confederates had been provided with artillery there would have been a pitiable massacre. The report of Colonel Hinks, of the Massachusetts Fifteenth Regiment, now on the list as 709 out of 1100 engaged. Of these 500 are reckoned as prisoners. He also reports that a New York regiment (the 42nd) deserted in a panic. It put in the untenchments on an island in the Potomac, and crossed over to the Maryland shore in disobedience of orders. He says the means of communication between the Federal troops on the Virginia shore were unfortunately selected, while within half a mile on either side there were communications by land and water.

The grand army of the Potomac is doing nothing more heroic than devastating the small counties in the State of Virginia which they hold. In Western Virginia the Confederates have been surprised in and dislodged from Romney. In Kentucky the skirmishes have resulted in the defeat of the Federals, with considerable loss of life.

In Missouri General Fremont has been at length superseded by the President. General Hunter succeeds him in the command of the army of the West. General Henderson has capitulated with 400 Confederates. Many persons think that the removal of Fremont will have an injurious effect on recruiting in the Western States.

WASHINGTON.

Judge Merrick has been put under arrest for issuing writs of habeas corpus in behalf of misers who have enlisted without their parents' consent, and for issuing warrants against the military authorities who disobeyed the writs. The Government considers the conduct of the court that he had suspended the privilege of the writ in regard to the army, and the dispute ends with the victory of the military over the civil authorities.

General Baker's remains were honoured with public obsequies, which, however, passed off without any display of military pageantry. The President was much affected by the event. He paced up and down his study for hours. The whole country mourns the loss. Lord Lyons would have attended the funeral, but the invitation did not reach him in time.

WESTERN VIRGINIA.

The people of this region have ratified the action of their Legislature, and voted in favour of separation from the rest of the State by large majorities. The march of the Federal troops from Romney, begun on the 26th inst., to frame a Constitution for the new State, named Kanawha, from the river of the same which traverses it. Thirty-nine counties participated in this vote.

GARIBALDI'S SYMPATHIES.

The following, addressed to the United States Consul at Antwerp, has been published in Belgium:—

CAPRERA, Sept. 19, 1861.

My dear Sir,—I saw Mr. Sandford, and regret to be obliged to inform you that I shall not be able to go to the United States at present. I do not doubt of the success of the North, but I am afraid that the war will assume the unfortunate contains in your beautiful country. I shall overcome all obstacles which detain me from the embrace of a people who are dear to me.

Yours, &c. GARIBALDI.

To Mr. Quigale, United States' Consul at Antwerp.

THE CONFEDERATE STATES.

Mr. Memminger, the Secretary of the Treasury, has issued a circular, dated Richmond, Oct. 17, relative to the produce loan and the application of the proceeds of the same. Mr. Memminger, who is one of the heroes of the Cabinet, declines to grant any relief, either by the purchase of the produce or by the issue of notes, to the Confederate planters. He advises the planters to apply to the bankers for relief, and to "take counsel together as to the best means of meeting the emergency in their individual positions. He then proceed to divert part of their labour from cotton, and make their own clothing and supplies."

At the commencement of the war in Mexico, Georgia, some resolutions conceived in a spirit hostile to the future resumption of commercial relations with the North. They were toned down on the motion of General Duff Green, who declared that the adoption of these resolutions would make it impossible for the Federal Government to prevent any reconstruction of the commercial and financial relations between the North and the South. This is now the case. The South, as a sign that the Southerners are not bent on resisting to the extremity.

Some citizens of Hyde County, North Carolina—a county in which Hatteras Inlet is situated—have voted down on the majority of the Federal forces, and affirmed their unshaken loyalty to the Union. The Government has rewarded them with thanks and arms.

M. Antonio Costa, of New Orleans, has reopened connection by mail between the Southern States and Europe, which has been closed since August. The mail is a monthly one, and goes by way of Mexico and the English steamers to the West Indies. The first post contained 1213 letters. Mails for the European ports will be sent to Cuba, 75 cents; to Europe, 1 dollar.

CALIFORNIA.

The vote at the late State election for the two "at war" candidates for Governor was 86,000; for the peace candidate less than 33,000.

The following telegram from the Pacific to the Atlantic was sent by Chief Justice Field, of California, to the President. It was as follows:—

SACRAMENTO, Oct. 24.

In the temporary absence of the Governor of the State, I am requested to inform you that the first message ever transmitted over the wires of the telegraph line which connects the Pacific with the Atlantic States. You people of California are now indissolubly united to the people of the East by the iron way. They believe that it will be the means of strengthening the attachment which binds both. In the East and in the West we have but one flag, and I am glad in the first message across the Continent to express their loyalty to that Union and their determination to stand by that Government in the day of trial. They regard that Government with affection, and will adhere to it under all fortunes.

The European news which starts from Newfoundland at, say, 4 p.m. would reach San Francisco at 11.30 a.m., or four hours and a half ahead of time.

THE PRIVATEERSMEN ON TRIAL.

The case of the captain of the privateer Savannah at New York, after a trial of three days' duration, ended in the discharge of the jury, they being unable to agree on a verdict. In Philadelphia a jury have found a privateersman "Guilty." The Judge has not yet pronounced sentence.

In the State of Kentucky at the present time it is estimated there are nearly 2,700,000 horses and in Missouri nearly 2,000,000. In the whole of the United States about 34,000,000 head are put annually, of which more than one-half are raised in the Southern States. During the working year 1860 (ch. 1,377,346 bushels of grain and 19,024 barrels of flour were exported from New York to Europe. The value of these exports was about £450,000.

COUNTRY NEWS.

The Victoria-street Theatre, Belfast, a wooden erection, has been completely destroyed by a fire.

Mr. H. J. Adeane, M.P., has been appointed Custos Rotulorum of the Isle of Ely, in the room of the Duke of Somerset.

A Missionary Conference is to be held in Edinburgh on the 20th and 21st of November. This movement is being made by the Free Church with the view of bringing the minds of her ministers and members to bear on her Indian missions.

The London and North-Western Company have made a successful trial at Wolverhampton of the French invention of issuing railway tickets by means of inspections of metals, and they will in future all be so issued, without any distinction of class.

The Brighton and Sussex Museum was inaugurated with much éclat on Tuesday week. The inaugural discourse was delivered by Professor Owen, F.R.S., in the music-room at the Pavilion, which was crowded to excess by a distinguished and fashionable audience.

It is proposed to erect a new building at the Four Courts, Dublin, 360ft. long by 120ft. wide, for the reception of the records now accumulated in such an act the courts, especially in Chancery, that a general record-office for all the courts has been determined upon.

The distribution of the titles and certificates to the successful candidates at the recent Oxford University examination, held in Birmingham, took place on Thursday week in the room over the Midland Institution, under the presidency of the Right Hon. C. B. Adderley, M.P.

The annual meeting of the Worcestershire Union of Educational Institutions was held on Tuesday at Great Malvern, and was attended by Lord Lyttelton, Sir J. Pakington, Bart., Sir Stafford H. Northcote, M.P., and other men of station in connection with the education question.

Some thieves broke into the vestry of Christ Church, Salford, last Saturday night, and attempted to carry off what they could not safely carry away. Fortunately the communion plate is not kept in the church, and the only silver articles they could carry were the tops of the communion cruets.

Mr. Seeley was returned for Lincoln on Saturday (in the room of Major Stafford, deceased) without opposition, Mr. Bromley-Moore having withdrawn. In Parliament he will support the Ministry. Lincolnshire is a succession of the feudatries, vote by ballot, abolition of church rates, and non-intervention in foreign affairs.

An iron ship, the City of Agra, with 5000 tons of Surat cotton on board, took fire in Liverpool Docks on the morning of yesterday week, and the flames were not extinguished for a long time. It is supposed that the cotton came twenty persons narrowly escaped suffocation, and one, the third mate, a fine young fellow, named Wilson, lost his life.

The Right Rev. Dr. Robert Cornthwaite (formerly of Darlington), the newly-elected Roman Catholic Bishop of Beverley, was consecrated, on Sunday last, by Cardinal Wiseman. On Monday last the Right Rev. Dr. Cornthwaite took possession of his see, which comprises the whole of Yorkshire, he was installed at the pro-Cathedral Church of St. George.

The winter circuits of the Judges have been arranged as follows:—Baron Martin and Mr. Justice Keating, Lancashire and Chester—Mr. Justice Compton and Mr. Baron Channell, Monmouth, Glamorgan, Brecknock, Worcester, and Hereford—Mr. Justice Willes and Mr. Baron Pigott, and Somerset—Mr. James Williams, Lincoln, Norfolk, Suffolk, Northampton, Huntingdon, and Cambridge—Mr. Baron Bramwell.

A silver tea and coffee service and other articles to the value of £80, have been presented to Mr. W. Fothergill, who was for many years connected with the Bolton Iron Company, and who has established, and is now the manager of, the Bolton Iron Company, which has been registered under the Limited Liability Act. The subscription for the testimonial was mainly brought up among the workmen of the Shifnal Company.

It is stated that the paralysis of trade in the manufacturing districts, owing to the scarcity of American cotton, is becoming more visible day by day. Each successive week adds to the number of mills which are being reduced in the hours of working, some that were working six days in the week have reduced it to four, and others to half up in the country, and in some that were working four days hung reduced to three, and some being closed altogether.

A lamentable instance of the evil effects resulting from ignorance of the most common operation of certain gases took place at Cardiff on Saturday last. Some miners went to clean up their shaft on the night was cold they took paused burning coals with them, fastened down the bratticed, and then retired for the night. The fire imprisoned in the shaft began to develop itself, and, before the rest of the crew could come to their assistance, two of their number were dead.

The remains of T. B. M'Manus, the Irish exile, which have recently been brought from Sydney, have been interred on a plot set by Glasnevin Cemetery. The procession which followed the hearse included deputations from American and Continental societies, the members of the trades and the Irish brigade, and an immense number of private citizens. Funeral orations were delivered over the grave by Father Lavelle, of Upton Basin, of New York. The Roman Catholic clergy appear, for the most part, to have held aloof from the demonstration.

Sir Robert Peel, who has been transacting the districts in the west of Ireland which are represented to be suffering most from the failure of the potato crop, arrived at Limerick on Monday, when he received an address from the Corporation of that town. The Right Hon. Baronet, in acknowledging the address, said that he had visited the whole of the districts through which he had passed undoubted evidence of suffering, he believed there was no occasion for a repetition of the horrors of 1846-47. At the same time, he added, "whatever may deceives on the Executive of the country fairly and honestly to do its duty." Sir Robert was accompanied by Mr. Bagwell, M.P. Subsequently Sir Robert was presented with an address and the freedom of the city by the corporation of Londonderry.

On Tuesday the annual general meeting of the Royal Scottish Society of Arts was held in the Hall, George-street, Edinburgh. Professor Fleeming Jenkin, secretary to the Society, and the chair was occupied by the President, Professor Maclagan, F.R.S.E. The President delivered the usual valedictory address, on the motion of Dr. Newbigging, seconded by Mr. John Stevenson, a vote of thanks was given to the president for his address, and it was resolved that the address should be printed in the Transactions of the Society. The number of papers and contributing transactions of other societies, scientific journals, reports, &c., were laid on the table. The report of the prize committee was then read, and the prizes therein awarded were presented.

The number of emigrants into Buenos Ayres during the first seven months of the present year was upwards of 4000.

The Mersey Dock Board has decided to lease a site on the Birkenhead North Wales Pier for the erection of a shed, the cost of which will be £3000, and the annual charge for maintenance £300.

Mr. James Bruce says:—"Lay a line from the mouth of the Darro to Khartoum, and you have the terrestrial globe; and coal is to be found everywhere near that line, and scarcely anywhere else."

Three young ladies—Misses Cordial, Dunbar, and Bagdanow—have been elected the lectures at the University of St. Petersburg, have been invested, and it is asserted that the pupils of them, Mlle. Bagdanow, has been employed at the close of the secret police.

A deputation upon the subject of the revised education code has had an interview with Lord Granville. The deputation before him the objectionable features of the scheme, and Mr. Lowthip presented that they complained should be withdrawn. Lord Granville received a speech on the same question at Bradford on the same day. He did not think that the new code was open to the objections which had been expressed. He came time thought that the certificated teachers had just ground of complaint, and that the question in some shape or other must be considered.

THE "COLLEEN BAWN" AND "LE LAC DE GLENASTON."—Mr. Dion Boucicault, in a letter in the *Times* of this day, announces that he has not published, as he intended, a pamphlet containing the correspondence between the popular Adelphi drama and the similar theatre proposed to be produced at the Princess's. Mr. Boucicault, under the name of Lucy Agnes Darley, has published a pamphlet, and calls on Mr. Dion Boucicault to play my collection. I cheerfully availed myself of this opportunity of letting

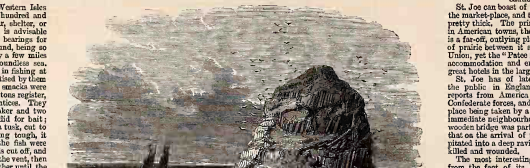
BEAUREGARD'S HEAD-QUARTERS.

Our Special Artist in America writes as follows from the Federal camp respecting the accompanying Illustration:—"This is from a sketch which I made during the time that Fairfax was in possession of the Federal forces. At present the advance of the Confederate army hold it, but in a short time they will, in all probability, be driven out again, as the Federalists are advancing."

THE ROCKALL FISHERY.

Mr. F. Dawson having been frequently asked for information relating to the fishing-grounds on Rockall, upon which Messrs. Rhodes, Gardener, and other masters of cod-fishing smacks met with such extraordinary success in August last, and discovered such vast shoals of large, beautiful white cod, and numerous other fish, publishes the following account of it:—"It is a sandbank in the North Atlantic Ocean, of nearly one hundred miles in length and forty in breadth. The rock which gives it a local habitation and a name is situated in 57 deg. 35 min. north latitude, 13 deg. 40 min. west longitude, and is of a rounded form, rising about 18 or 20ft. above the sea. When viewed from a quarter of a mile distant it has all the appearance in size of a round cornstack. The top is nearly flat, and was quite white with the offal of the numerous seabirds that hatch upon it in summer. There is no other rock visible above water, but I understood that there is a reef of five or six miles in length covered by from two to five fathoms of water. The nearest land to Rockall is the small island of St. Kilda, one of the outermost of the Hebrides, or Western Isles of Scotland, and it is distant one hundred and thirty-six miles. There is no harbour, shelter, or business carried on in St. Kilda; but it is advisable for ships going to Rockall to take their bearings for it, otherwise the rock is not easily found, being so small an object. It appears, when only a few miles from it, as a barrel floating in that boundless sea. The method pursued by the smacksmen in fishing at Rockall was the same as is usually practised by them in the North Sea during summer. The smacks were stout, welled ships of from forty to fifty tons register, with a crew of five men and four apprentices. They used hand lines only, with a leaden sinker and two hooks on each man's line. Any offal did for bait; the best was a piece of the back fin of a tusk, cut to resemble a small fish. This bait being tough, it lasted for days on the hook. After the fish were caught they were gutted, split, the heads cut off, and the backbone taken out as far down as the vent, then salted, and laid in layers one above another until the space in the ship was filled up. They returned to Westray, and delivered them to the merchants, who have long been the purchasers of their fish in that state, by the ton or score. Some of the smacks were out twelve days from Westray to Rockall, but only five days on the fishing-ground, four days having been occupied in going and three in returning. They had fourteen tons of cod each, for which they received £10 per ton (£140 worth of fish caught in five days)."

THE CIVIL WAR IN AMERICA: FAIRFAX COURTHOUSE; THE HEAD-QUARTERS OF GENERAL BEAUREGARD.



ROCKALL FISHING-GROUND IN THE NORTH ATLANTIC OCEAN.

ST. JOSEPH, ON THE MISSOURI.

In a recent Number we gave an Illustration and some account of the American Pony Express, the means by which rapid communication is maintained between the far-divided territories of the United States situated on each side of the Rocky Mountains. We this week give a View of the town of St. Joseph, the eastern terminus of the various overland expresses, and one of the principal points of arrival and departure of the great overland traffic to and from the eastern and western territories.

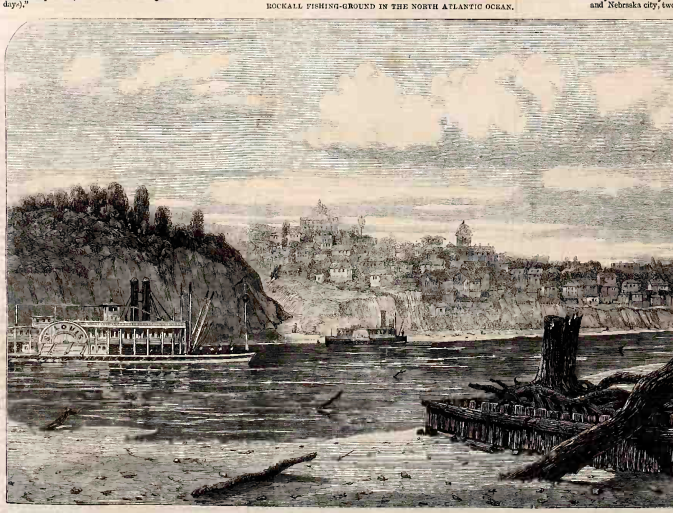
The Sketch from which our Illustration is engraved is taken from the landing-place on the Kansas shore, near the town of Pennkoke, where a steam-ferry exists, by which means the coaches, waggons, &c., are carried across the turbid waters of the Missouri.

St. Joseph, always irreverently called St. Joe in the States, is a quaint and curious town, though as new, yet full of interest; like all newly-born American cities, it has commenced its growth in a number of different places at the same time. The land, being laid out in square blocks and lots, is purchased sometimes by people who speculate in a rise in the price and do not intend to build; consequently those who do often find themselves without neighbours for some years after they have erected their houses, and a great street that is to be, may for some time have only one house in it. "Town lots" are "favourite items" with the speculators, and no end of money has been made by the judicious and farseeing, and large sums have been as frequently lost by the over-sanguine and incautious.

St. Joe can boast of some good shops round about the market-place, and the houses in that locality lie pretty thick. The principal buildings are, as usual in American towns, the hotels, and although St. Joe is a far-off, outlying place, with many a long stretch of prairie between it and the populous cities of the Union, yet the "Patee House" affords as comfortable accommodation and entertainment as many of the great hotels in the large cities.

St. Joe has of late been brought much before the public in England in the constantly-arriving reports from America; it is now threatened by the Confederate forces, and we may hear any day of the place being taken by a coup de main. It was in the immediate neighbourhood of this city that the great wooden bridge was partly destroyed by the enemy, so that on the arrival of the train the whole was precipitated into a deep ravine, and a number of persons killed and wounded.

The most interesting feature about St. Joe arises from the fact of its being the principal point of departure and arrival for the trains of waggons going or returning from the overland passage to California or Oregon. In our account of the pony express we mentioned the firm of Russell, Major, and Co., as being the proprietors of it; that is, however, but a small part of their business, for they are the most extensive carriers of goods and passengers in the Union, excepting, of course, the railway companies. They started last year from St. Joe, Leavenworth, and Nebraska city, two hundred and eighteen trains



VIEW OF ST. JOE, MISSOURI, FROM THE KANSAS SIDE.

of waggons, each train consisting of twenty-six waggons, making in all five thousand six hundred and sixty-eight waggons, each drawn by twelve bullocks, consequently requiring in all between sixty and seventy thousand bullocks, besides relays and substitutes for those which break down. This firm exercise large transportation contracts for the United States' Government; their business with them in 1858 amounted to five million dollars. They employ in all about five thousand men.

Near the foot of the Rocky Mountains is a place called Denver City. Large deposits of gold and silver exist in its neighbourhood, and, as several thousand persons have there to produce nothing but the precious metals, the whole of the supplies have to be drawn in three waggon-trains. This is a large portion of the business during the summer, as they are usually sent off from Atchison, appropriately during the winter. The United States' mail is carried twice a month from the city of Salt Lake City, the abode of the Mormons, and on to Placerville, California.

For mutual protection the waggons travel in trains across the plains; from sixteen to twenty-six making up a train. Each large waggon carries about 6000lb.: they are drawn by oxen or horses; they start early in the morning, and travel until midday; they encamp, usually on the plains in charge of a herdsman, while the voyageurs hunt and shoot, plenty of game being found on the prairies, as well as buffaloes, deer, elks, and antelopes. At night the waggons are placed together so as to form a square or a triangle, the cooking being placed within the inclosure, the camp fires are lighted, and the men sleep on the ground wrapped in their blankets. Great caution is necessary when travelling on the plains, as tribes of wild Indians roam there, who steal and kill when they dare; they are, however, afraid of white men and the terrible weapons they carry, and will only attack when immeasurably superior in numbers. These are Comanches, Pawnees, Crows, Blackfeet, Assiniboines, Sioux, and others; occasionally they fight great battles with each other. At one place on the route of the trains is a spot called the Battle Ground: it consists of about six acres of land, filled with, it is said, about 20,000 bones and elk, deer, and buffalo.

Some of the Indian tribes have become friendly, and the Poncas, a tribe of Indians who themselves so that, when their opponents camped in the neighbourhood, they were unobserved, and, choosing a fitting time, they rushed down upon the unsuspecting enemy, and slaughtered and scalped the greater part of them.

CALENDAR FOR THE WEEK.

SUNDAY, November 17.—25th Sunday after Trinity. Full moon, 1h. 7m.
MONDAY, 18.—Great Bell at Westminster first rung, 1858. [10.m.
TUESDAY, 19.—Regt. died, 1858.
WEDNESDAY, 20.—Edmund, King and Martyr.
THURSDAY, 21.—Princess Royal born, 1840.
FRIDAY, 22.—Insurrection in Sicily, 1856.
SATURDAY, 23.—Clarendon died.

TIMES OF HIGH WATER AT LONDON-BRIDGE, FOR THE WEEK ENDING NOVEMBER 23, 1861.

Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saturday.
M. A.	M. A.	M. A.	M. A.	M. A.	M. A.	M. A.
0 30	1 0	1 30	2 0	2 30	3 0	3 30
12 50	1 20	1 50	2 20	2 50	3 20	3 50

DEPARTURE OF THE EMPRESS OF AUSTRIA FROM CORFU.

THE Empress of Austria has recently been sojourning for some months at Corfu for the benefit of her health. During her Majesty's stay in that island she occupied the country house, called the Casina, of the Lord High Commissioner. Wednesday, the 23rd ult., the day on which her Majesty left Corfu for Venice, was a beautiful one, with a cloudless blue sky, and the sea lay as calm as a mirror, scarcely fanned by even the gentlest breeze, as the Austrian war-steamer Greif left her moorings and proceeded to bear away the Imperial lady from the villa where she had sojourned for so many months. As it was known that the Empress's departure was to take place at twelve o'clock, and that she proposed taking a farewell look at the town by passing inside the island of Vido and skirting the harbour, great crowds were assembled

THE FIRST INVESTITURE AT THE NEW ORDER OF KNIGHTHOOD OF SAINT MICHAEL AND SAINT GEORGE: THE QUEEN GIVING THE INSIGNIA OF THE ORDER TO THE PRINCE OF WALES.—SEE PAGE 496.

along the walls, and the troops were spread along the harbours and outworks to cheer her Majesty as she passed. As the steamer rounded Cape Kidero a Royal salute was fired from the saluting battery on the citadel. Her Majesty's ship Queen manned yards and fired her broadsides, while the regimental band struck up the Austrian National Hymn, and three hearty cheers from the troops lining the outworks told the Imperial lady farewell from an island where her presence was much cherished, and from which her departure is universally regretted. The cherished, and from which her departure is universally regretted. The Emperor, who had paid a brief visit to Corfu, and who left on the previous Monday, distributed, in consultation with the admiral shown to her Majesty, a good many crosses and decorations to some of the principal persons in the island, and the Emperor disposed of Corfonot in the shape of rings, breastpins, and gold snuffboxes, besides donations to the poor, to some Greek convents, and to the Roman Catholic church of Corfu.

Our Illustration of the Princess of Austria's departure from Corfu is from a drawing by Captain Maynard Wolfe, R.A.

MUSIC.

The novelties promised by the management of the ROYAL ENGLISH OPERA are not yet forthcoming. But Balfe's new opera, "The Puritan's Daughter," was performed, in its much altered form, on Monday in that its production may be expected to take the lead before the end of this month. Macfarren's "Robin Hood" was mentioned last week as being performed for the first time at this theatre on Friday, the 8th of this month. It was carefully and splendidly put upon the stage, and well performed, and received with great favour. Mr. Henry Hallé, in the character of the hero of the piece, sang with remarkable power and displayed in his singing more than his usual force and vigour. Miss Guerrabella, as Maid Marian, achieved a brilliant triumph. The lady is young, handsome, an admirable actress, and an accomplished singer. Her performance was famous because, not as a country girl, but as a lady of rank and station, the daughter of a nobleman, and the object of the hero's ambitious love, and, in so doing, was evidently in the right. Her action, dress, voice, rich, sounding to the utmost extremities of the tone, and her deportment was marked with correspondingly grace and dignity. With the sapphire voice and splendid style of Miss Guerrabella, justice to Macfarren's beautiful music. Mr. Santley resumed his old part of the Sheriff of Nottingham, and Mr. Henry Hallé as Sir Somerton, which he was equally well sustained as ever. The whole performance, in short, was excellent, and deserved the applause it received.

True to their plan of giving variety, the managers have reproduced one of the most successful pieces in their repertory, "The Lily of Leithie," which for two previous seasons has been a favourite at this theatre, was performed on Tuesday, in the same manner as formerly, with only two differences.—Mr. Corrie Pounds, who was absent in consequence of the temporary indisposition of Mr. Santley performed the part of Lieutenant Hall, and the character of Gilsa, a gipsy girl, Miss Pilkine, was now assigned to the new comer, Miss Essie M'Lean, to be sung to her ballad "Troubadour enchanting" so well that she obtained an encore.

A juvenile opera and ballet company has appeared at DRURY LANE, whose performances are certainly worthy of notice. The company, says the playbill, "consists of fifty members, brought to this country from Spain, where, and throughout the Continent of Europe, the combined company of artists have achieved immense success. Their first performance took place on Wednesday, beginning at two o'clock. It consisted of a one-act opera, by Bonicelli, entitled "Il Campanello," followed by a ballet called "Coppelia, or La Fille du Rauhit." The opera is a little one-act piece—a mere musical farce of the slightest description; but it is lively and pleasant, and was performed with a spirit and vim by all the principal performers being apparently eleven or twelve years old. The ballet was still better. The leading dancers, Mdlle. Marianna Flori, a child said to be fifteen, which is incredible, and Signor Cecchetti, are really a charming little artists, who would be admired on any stage in Europe, but the whole performance, ballet, and corps de ballet, showed what surprising effects may be produced by careful training in the development of naturally promising talent. Notwithstanding the dismal state of the weather the audience was large, and the Lilliputian performers were warmly applauded.

ST. JAMES'S HALL.—Mr. George Hodson, the Irish comedian, has transferred his entertainment with pianoforte to this new locale, and which from its cleverness deserves public patronage. It is appropriately entitled "Pat's Curiosity Shop," and in its elements is purely Irish and partly dramatic. His stage are exceedingly comic, and his talent for imitation is decided, his mimicry of Irish and rustic pupils of Mr. Lever and of the manner of Mr. Stone Revere is wonderful and facile. Mr. Henry Russell and Mr. Weekin, with others, have also their portraits taken with exactness and spirit. He likewise imitates Power in his Irish characters, and tells an Hibernian joke with the true and genuine humour. Mr. Hodson is a fellow-actor in a day, who, in his way, is quite an artist, so well has he been taught to simulate being shut up in a dockyard, and to take a chair or table for one of soldiers, over which he gambols and jumps with sweating alacrity. The entertainment has been very well patronised, and, indeed, on the occasion of the British volunteers and the Queen's Westminster Rifles, so also by Lord Lonsdale and other noblemen. The audience on Saturday night sadly conclude at the end of the present month, owing to the bad living otherwise engaged.

THE THEATRES.

LYCEUM.—A new drama, in four acts, by Mr. Falconer, was produced on Saturday. It was entitled "Peep of Day; or, Sunshine and Dudlish." The author has been indebted to one of the "Tales of the O'Hara Family" for his material, but the form in the piece is that of adaptation rather than of. Falconer has made in this instance is not to be confounded with the ordinary stage renderings of romance, in which the outlines of dialogue are taken and padded out for the stage. Mr. Falconer has simply done what Shakespeare and the Elizabethans did—availed himself of the plot of a story current in popular story, and then treated it in his own way. The stage has laws of its own, and, as every one's story lacks, so it was to be cut down into theatrical dialect, and made conformable to the limits and conveniences of the stage. The present is a drama of extraordinary mark as well as length. In fact he undoes alive and kicking when he leaves the tall twelve o'clock—five mortal hours. The first act opened with a beautiful picture painted by Mr. Hamilton Emmett, of Glen Dingle among the Green Hills and the Wren's Nest under the White Storm and the Sunset and the Sunset." Here, all hues and tints of bad man, Stephen Purcell, the squire (Mr. G. Spenser), plots against the peace of families, in order to gratify his own lusts and appetites. He first tries the love of Kathleen Kavanagh (Miss M. Talbot), and, having effected a fictitious marriage with her, afterwards plans an abduction of the young heiress Mary Meredith (Miss Ellis Jeffreys), which he almost accomplishes. He has stirred his servants in the cash of Peep o' Day Boys; but he is defeated by the Peep o' Day Boys, who, with their leader, Harry Kavanagh (Mr. Hermann Vezin), take him in his own house. Actual transgression he has not, but he is in defence of Harry, by an humble friend, Barney O'Toole (Mr. Falconer), who pretends to further the villain's plans all through the piece in order ultimately to subject them. Before this we must say we have already mentioned there are others equally beautiful in painting and more "natural" in their effect. The second act could not be called a fair, in which occur national songs, dances, and a faction-fight. The last is put in order by the influence of the benevolent Father O'Leary, a wise priest, admirably played by Mr. Addison. But the great scene is that of the Oil Quarry in the Red Dike, at Dark Valley. Here Kathleen Kavanagh into consider to meet her brother, but is actually to be murdered by a villain hired by Purcell. For this part Mr. Silver was engaged, and looked the fierce and picturesque assassin to the life. The heroine is in extreme danger, for the brute has already dug her grave and prevented her escape by cutting away the bridge that had been flung over the chasm; but Harry Kavanah and Barney O'Toole arrive in time at the spot; and the former, flinging himself on a tree that reaches to the edge of a precipice, hows its branches to the ground, on which he enabled to rescue the victim from the murderer's clutch. This scene excited great sensation, and was received with immense applause. The reader will perceive that the new drama depends greatly on mechanical effects, but the author has not been satisfied with these. His dialogue is carefully constructed, and some passages rise into eloquence. In a word, the piece deserves the success which it is likely to command.

HAYMARKET.—One of the most extraordinary pieces of sensation-ality we ever witnessed was performed here on Monday, under the title of "Our American Cousin," a comedy in three acts. It is stated that it has been performed in the United States eight hundred nights, and as an author's work of Mr. Tom Taylor, who wrote for Mr. Sothern, who has introduced it to the English boards. It is likely to have a great success here, but such success will be due, not to the merit of the piece as a whole, but to the extraordinary acting of Mr. Sothern in one of the characters. Probably no more unsatisfactory work for this and another character that no detail of the plot is necessary; one would not be profitable, as probably uninteresting. The characters are the incidents. The character of which so much is made by Mr. Sothern is that of Lord Dundreary, a noble exquisite on a visit at Sir Edward Trenchard's, who brings with him his valet, Binny Hallday, and regards as a lunatic every person who exhibits the least energy. His lordship's ignorance of everything is intense, and his intellect superb. He is the butt of every one, but is not in the least affected by ridicule, for he is the most self-satisfied person that ever was the object. With a superior indifference, as in a dream, he moves among his fellow-men, and fancies that he has command of every position. He is for antagonising the Yankee ranks. Asa Trenchard, who is impersonated by Mr. Buckstone, and who, finally, is only overcome his supernatural lucidity, but actually attorney, Richard Coyle (Mr. Rogers). The plain, outspoken Yankee, though unsuspected of any connection with the plot, is a character of great ingenuity, and destroys a will made in his own favour for the benefit of a pretty darkmaid, Mary Meredith (Miss Oliver), who loves him, notwithstanding his unmitigated assurance. In the course and working of these two eccentric characters lies whatever art pertains to the structure of the piece. Mr. Buckstone as good as Mr. Sothern as much as Mr. Sothern is in the English part. Neither is like the real thing is actual life. Asa Trenchard is a gentleman of the old-fashioned type. His fellow muscles, and provoked on the first night inextinguishable laughter. The house was literally convulsed, and with it the actors, through every fit of spectators curious to witness such amusing caricatures, which, though false to fact, are not so to the imagination of their creators. It is a pity that Mr. Buckstone and Mr. Sothern's characters have not better surroundings; but this will not affect a joy in popularity of the two remarkable impersonations.

PRINCESS'.—In another part of our Paper we have given an illustration of the manner in which "Othello" is at this house casually arranged. But as necessity is the mother of invention, so it has also unchallenged. There are minds dissatisfied that a foreigner should claim the prefect of Shakespeare's Moor, and that he is to be seen on the stage, and who likewise feel, more properly, that Mr. Fechter has in some places misunderstood our great poet. Among these objectors are Mr. Herny Irving and Mr. Barnard Partridge, who have read both points with considerable eloquence. As to the first, we have already Desdemona in the person of Ternissa, and as to the second, there is none who would be more jealous than ourselves of our country's great poet. Mr. Fechter is not to be seen often in society, and are thus able to smile complacently as errors which Mr. Fechter has of necessity fallen into. The more fact of his not being an Englishman. But, when we recollect the great benefit which English scholars have derived from German criticism on Shakespeare, which has opened out to us many beauties of the bard that any intelligent man, whatever his country, may feel himself impelled to render to Shakespeare's memory, we think that Mr. Fechter's book of "Fechter's Version of Othello Critically Analysed; with Prefatory Observations on Stage, the Actor, and the Public," will be found to be a work that here in many points are cleverly pertinent some needless innovations. It is, however, certain that actors in England's elder drama have not been sufficiently attentive to a great deal of the business during the performance of a play. This has long been felt, even in the green-room, and the necessity of a new edition of the text-book have been accordingly solicitous to correct it. They have not left it to the actor to decide. Mr. Fechter has settled upon every movement where he is to sit and where to stand. Mr. Oakley seems to prefer the standing position on most occasions, and the contrary practice he thinks leads to a monotony on the stage. Mr. Fechter, in his book, he prescribe the same rule for other pictures, and compel the artist to compose his subject after a particular position." We think that we can decide this question for him; and that, as a man of taste, he would grant even more than a great artistic could possibly demand, and permit him to represent his figures standing, sitting, or reclining, according to the nature of the subject and the propriety of the position. Mr. Fechter has also, in his book, a chapter that is suggestive; and we would recommend it particularly to M. Fechter's gracious personage. What he says of the dress of the period is good, and we wish that M. Fechter had attended to the fact which Mr. Pilbrow has carried out in the scenic arrangement would have been the better for it in all respects.

LORD MAYOR'S DAY.

The annual ceremony of the Lord Mayor's Day was attended on Saturday with all the geographicalia that have come through time hallowed customs to be considered with the first rank. The civic functionaries met at the Mansion House to do honour to the twice-chosen Lord Mayor; heralds and pursuivants, men in armour, and a procession of the different companies of the City, with the more sober and homely appearances of our everyday life. The weather was fine, and consequently were the roads and streets thronged with people.

The receiving-in of the Lord Mayor before the Bores of the Recorder was followed by the usual banquet, at which the Recorder proposed the health of the Queen. Before the Chief Baron delivered a somewhat lengthy oration, which we give in full.

In the evening there was the usual banquet at the Mansion House and at the Guildhall. Among the speakers after dinner were the Duke of Cambridge, Lord Salisbury, Lord Roberts, and Mr. Chamberlain. The Duke of Cambridge made a straightforward and manly speech on the situation of the Army. Lord Salisbury, in a more than ordinarily pleasant vein, gravity on the satisfactory state of the revenue, and spoke of the present epoch of activity and enterprise, and of different matters of public or permanent good. "We shall find," he said, "in various quarters of the globe a vast, a certain, and an unexpected supply, which will be of great benefit on one source of production." Referring to European affairs, he remarked that there were many questions which were not ripe for solution, but which to local disturbances; but he trusted that we should not be brought within their range. Lord Salisbury also referred to the civic hospitality, and viewed the conflict with an affliction which no words could express; but it was not for us to pass judgment on those who had to bear the brunt of it themselves in the mother country, and made the troubles which distract his country temporary by the absence of the Colonial troops from the field. The speeches of the Lord Mayor in proposing the various toasts showed in such good addresses.

Whilst Mr. Adams was being feted at the Mansion House, Mr. Dudley Mann and Mr. Yeneg, the Plenipotentiaries of the Confederate States, were visiting and receiving hospitality at the house of Mr. Slidell, in Paris, when Prince Woulkn expressed his sentiment hope that the conflict which is now raging in the United States would terminate in the field and not in the Senate. His sentiment, he said, there was no prospect of such a result as long as the Federal Government should be in power. Mr. Slidell replied that he would reconcile them and Lincoln, and that the Confederate Government would receive them in a manner worthy of its honour and independence. Further great interests of peace and humanity it would yield much that is merely material or of secondary importance. The Southerners," he continued, "are fighting for their liberty as our forefathers did in 1776, and they will succeed in the end, though they are cut off from foreign trade, they are still in a position to hold out against the North in the field and navy. If they succeed not, they perish, and they do not desire, foreign intervention; for they are united, and can hold their own bottom. They are not to be impressed by the European Powers, but they have no reason to complain, nor do they feel aggrieved, therefore they are not willing on the part of Europe to defer their formal recognition and reception into the family of nations." The report states that Mr. Yeneg resumed his seat amid loud and continued cheering.

There is now living in Paris a venerable centenarian named M. Ignace Gallot, who was born at Villers St. Marcellin (Haute-Marne), in 1799. M. Gallot served twenty-two years in the army, took part in many battles, and was present at the disastrous retreat from Moscow. Having invested money in an unfortunate enterprise for the navigation of the Seine, he made a journey to the Haute-Saone last month to acquire the sad certainty that he had lost 40,000f. M. Gallot is still strong and hearty. The Emperor has granted him a pension of 1200f. a year.

METROPOLITAN NEWS.

The Queen has approved of Mr. Anders Westenholz as Consul-General in London for the King of Denmark.

The preparations for holding the Smithfield Cattle Club Show are being presented with great vigour.

On Sunday forenoon the metropolis was visited by a severe storm of lightning, thunder, and hail, which did serious mischief to property in various parts.

In recognition of the services rendered by Mr. F. P. Low and Mr. G. A. S. Goodman, at the Mansion House, on occasion of the Indian Famine Fund, these gentlemen have been presented by the committee with handsome candlesticks of the value of £250 each.

The session of the Royal Geographical Society opened on Monday night. The papers read, and also the discussions, had reference, in the one instance, to the explorations of the Upper Yang-Tse-Kiang, and in the other to the exhaustion and resources of the Congo.

The Insolvency Court was occupied on Tuesday with the case of a lady who filed the same petition after cancelling before. In her examination she stated that her profession was a governess, having been one for six months some years ago, and twenty guineas for operating on a singer.

The first of the winter series of lectures provided for the Young Men's Christian Association was delivered on Tuesday evening by Mr. Jane Taylor, in the large room of the Exeter Hall, on a subject entitled "The Origin and Meaning of Some of our Geographical Names." The lecturer will take place by the Queen in Council in January.

There is a paper appended to the Registrar-General's weekly report, containing the results of a statistical inquiry into the marriages under by Dr. Lethby during the year 1900, it appears the analyst finds that the Thames has a purifying effect.

Sir Roundell Palmer on Tuesday presided at the first general meeting of the Law Association for the year. Without pretending that Government would introduce such measures, the Solicitor-General promised to aid in simplifying the law of bankruptcy. The matter of bonds and of land, among the persons admitted to membership was Mr. Norton, Registrar-General, Somerset.

The births of 840 boys and 870 girls were registered in London last week. In the corresponding period of the years 1891-0 the average number was 1647.—The deaths which were less than 1,103 in each of the last three weeks of October, rose to 1,204 in the week ending November 2, but week they exceeded by forty-one the number which would have been returned if the average of the last ten years had been exceeded.

At the Middlesex Sessions on Thursday week a woman named Harriet Mather was convicted of stealing two sixpences out of the Offertory plate as it passed by her at the service at St. Andrew's, Wells-street, on the 20th ult. The money was laid in the indictment as the property of Mr. F. Wyatt, the gentleman who was present. The prisoner, having been previously found guilty of felony, was sentenced to twelve months' hard labour.

The first report of the new Bankruptcy Act was to effect a sort of general gall delivery of persons who had for debts of small amounts, up to fifty pounds in the cases of their detention, and, if possible, to set them at liberty. Many cases have been disposed of, and with the exception of the whole number has been gone through. Some interesting cases are reported, as there are many of a sad character. The result is a great number of releases.

A robbery of a very extraordinary character has been recently committed in Beethorough-gardens, Pimlico. A female servant of a gentleman living in that neighbourhood has made away with a large amount, and then decamped; but before doing so she cut a hole in the back door, broke a window, and put everything in confusion, and left the house with a view to create the impression that the house had been entered by a burglar and that a fearful struggle had taken place. The ruse was a successful one, however, to escape detection, and the consequence was that the police soon got upon the scent of the right person. The defendant, who is already known at Lewes Yarmouth, dressed in male attire, and living in quite a fast style. She was on Tuesday examined at the Westminster Police Court, and appeared to be considerably abashed by her position. The case was remanded till Tuesday next.

The following is a copy of the dinner bill of fare at the Lord Mayor's banquet at Guildhall on Saturday last:—250 tureens of real turtle, 1 standing fine-cooked sirloin of beef, 1 ditto of venison, 1 ditto of mutton, 6 boiled turkeys and oysters, 60 roast pullets, 30 dishes of fowls, 16 dishes of pigeons, 12 dishes of tongues, 12 dishes of ham, 12 dishes of lamb, 2 quarters of home lamb, 2 haunch of beef, 2 crowds of beef, 2 crowds of mutton, 12 dishes, rumps, and 12 dishes of aspargus, 60 dishes of mashed and other potatoes, 24 dishes of shellfish, 4 dishes of prawns, 140 dishes of jellies, 100 dishes of blancmange, 60 dishes of almond pastry, 30 dishes of oranges and other fruits, 20 Chantilly baskets, 60 dishes of iced pine apples, 80 salads, 20 dishes of pickles, 60 dishes of cheese, 24 ices, 24 ices, 60 dishes of partridges, 15 dishes of wild fowl, 3 pea fowl, 3 geese, 100 plumpuddings, from 25lb. to 40lb. each, 200 dishes of Bohemian grapes, 200 ice creams, 30 dishes of apples, 100 dishes of pears, 60 ornamented Savoy cakes, 75 plates of walnuts, 80 plates of iced fruit, 60 dishes of dessert, 1 large preserved ginger, 60 plates of roast cakes and chips, 60 plates of brandy cherries.

An important judgment has been given in the Courts of Queen's Bench. Mr. Francis, of Mr. Francis, had, it appeared, refused to pay a cheque rate at Auckland; and, although on the hearing of the summons before the magistrates he had promised to give notice of his intention to prove the validity of the rate, they had issued a distress warrant, and a seizure of his goods had taken place. The Judges decided at once that the magistrates had acted illegally.

THE WEATHER.

RESULTS OF METEOROLOGICAL OBSERVATIONS AT THE
KEW OBSERVATORY OF THE BRITISH ASSOCIATION.
Lat. 51° 29' 0" N. Long. 0° 18' 0" W. Height above sea, 91 feet

Direction of Wind ... SSW. SSW. W. S. ESE. SW.

Snow has fallen rather heavily in the Pyrénées, particularly in the neighbourhood of Bare Bonnet.

It is reported that the Russians have taken possession of the island of Iden Shiki, after a short engagement with the Japanese. This island is about 200 miles to the north of the Japanese group vide, lying midway in the Straits of Corea, and forming the key of the Japan Sea.

The Council-General of Corea, in France, in accordance with a proposal made by the Prefect of that department, has voted a sum of 40,000f. as a premium to be awarded to the author of the most discovery an artificial remedy for the disease which has of late proved so fatal to silkworms.

"It is in contemplation," says the *Temps*, "to enlarge the Jardin des Plantes, Paris, by adding to it the area of on which the Halle aux Vins now stands, which would make the garden one of the largest of its kind in the world. As to the Halle aux Vins, it will probably be rein-ved to Bercy, according to the new plan which is in the course of execution in the old part of M. Bercy.

A Berlin letter says that the squabbles as to whether the statues of Schiller or of Goethe should have most prominence have been decided by a compromise. After a good deal of negotiation among all the persons concerned the question is now finally settled, and Schiller, who is to keep his vested interest in the old place, will be flanked on each side by the bronze statues of Goethe and Lessing.

THE FARM.

THE want of wet, which rendered many forthcoming counties so dangerous that the hideon men hardly liked to ride, and prevented many of the cold clay lands from being thoroughly ploughed and harrowed, exists no longer, at least in most counties, after the thirty consecutive hours of rain which marked the beginning of this week. The wheat market seems to harden, and the averages show that on 66,621 qrs. more than at the corresponding period of 1869 there is only a fall of 6d.

Bayley opens the fat-stock shows on Thursday week with her prize of £15 open to all England, and then come Birmingham and Baker-street. The entries of cattle (104) at Birmingham seem to belong last year, while those of sheep (95) are fully a third more; pigs (72) are about the same, and roots, poultry, and agricultural implements (including, the same, and roots, poultry, and agricultural implements (including, the dog show, which will be held in the same week, has a most liberal prize list, and about 400 entries, against 267 in 1869.

The York show, which is on the same week as the Smithfield, so that no sheet can run on the "grand tour" as Beauty's Butterfly and Sir Bee Tyrwhitt did in 1861. This last event has just produced a foal by Freedom; and a white heifer by Frederick's Grandson from White Butterfly, and a roan heifer by Royal Butterfly from Young Bampton Rose, are also among the Townley arrivals. The latter is a half sister to Rose of Lancashire, and own sister to Young Butterfly and Royal Butterfly 4th. The grandsons, granddaughter, and daughter of old Frederick, to which we recently alluded, have sailed from Liverpool for Australia. The Rendcomb sale in Aldine, for which we were destined, is strongly calculated for its good sheep farms, and the present consignment is the first attempt by a Manchester company to introduce Durhams there. Old Frederick, the great hero of the Townley herd, has been killed, and his head is now at a London staff's.

Assuming Lincoln to be available sign of being in trouble. The habit becomes chronic at last, and hence as a spirit-rapping experiment engaged with a "Baker Redivivus" in our eye, is remarkable as it might tell the same tale about "An Admirer of the Duchesses" and "Vindex." Dropping is quite equivalent to actual retiring in all these cases, and it is quite a secondary consideration whose "card and remains" are inclosed. It was she, they say, and not he, who was the real chairman of the Bath Association, and it is not unlikely that the same cause will shortly dismiss Mr. Hall from the Lincoln Committee. Still this reckless use of names does not tend to harden confidence in a young breeder who prematurely aspires to be thought a leader of Durham fashion. Action has necessarily crude information and decided bias (to use the mildest term) quite disqualify him for this position. He may think himself perfectly competent to form an opinion of the merits of Mr. Stephenson's Ladds, and Thompson on the proper touch of a shorthorn; but the matter-of-fact world does not acknowledge his belief, and only laughs at his fussy lecture. It may be strong proof of a profound, we may say profound-rooted, principle of fidelity (principle, indeed, for Burmese Burmoil, or to make Soldier's Bride the text for an essay on Bottlehandling; but, unfortunately, the great mass of mankind broadens (and sometimes shallows) among this world, and view differently on both these points, and, when they find their physiologist elevating himself with a mysterious hatchet of his magnificent size a Count of Lever over their highly experienced judges, their minds very naturally recur not only to Bottle and Bone" and "Bone and Bottle," but to Bottle and Leeds rosettes, but to the exalted bull-frog in the fable as well.

We are glad to find that the Leeds committee would not thus spirited have allowed the expertise by the services which come with the first-prize animals, and allowed these five per cent out of their surplus funds on the chance of such gain, either in money or in honour. Many men preferred the medals, which are exceedingly nicely done; to the money, and the plan seems worthy of much more general adoption.

NATIONAL SPORTS.

RACES are to us such dreary affairs in November that we have no patience to follow them. We turn for relief to the mass of entries on the first Tuesday, which show that the Turf is as heartily alive as ever. For the Two Thousand of '63, which bids fair to be worth some five thousand to the winner, there are eighty-six entries, or sixteen more than it ever had. Lord Stamford contributes seven, Mr. Ten Brook six, and Lord Glasgow five. The London Thousand has sixty-eight entries, about the majority over any previous year.

Shooting Meetings on Tuesday; and, seeing that extempore days are the fashion, we have the Ring "Roper, right left to depart." It will last, including the steeplechases, four, or it may be five, days.

Mr. Fisher Gould, of Boston, has sold the Lovell Yelcopiade to Mr. Gant, of Leicester, and Anger has taken his place by the side of Father of the Turf, who was at the same sale bought by Mr. Ellis, and 100 foals sold him from 114 mares. Seeing what the grey "Nock or Nothing" at Leeds and many others of his hunting stock have proved themselves, the fee of old Touch-and-Go is far to be most ably filled.

Some very characteristic photographs of the late Tom Sebright have just been published by his son, Mr. George Sebright, an artist at Lindsdo, near Leighton Buzzard. They represent him in his hunting and every-day dress, and are at four different periods from 24s. to 5s.

The four-mile race between Mills and Brighton at Hackney-wick on Monday was a most dashing affair. Brighton led by a yard at the end of the first mile (5-40), 64 yds. at the end of the second (11-20), (9-31m. 52sec.) he was thirty yards behind, but had decreased the distance to ten yards at the end of three miles (18-min. 22 sec.). He then made a last desperate effort, and got the lead once more, but stopped at the end of a quarter (the completion of the mile), and stated that this terrific style at which Mills forced the pace gave him the stitch at the end of the first mile, and that he had no hope after. The whole distance was completed in 23-min. 13-sec. Mr. Crossman was the heavy pocketer, Dorfort, Mills, Brighton, and Howard could not run their ten miles at Hackney on Wednesday.

Coursing goes on remarkably briskly, all the meetings for next week are the North of England Club (Belsay), on Monday; Burham Club, on Tuesday; Malton Union Club and Spofforne, on Tuesday, Wednesday, and the latter on Thursday as well; Tyneside Club (Ouston), on Wednesday; Hunter St. Leger (O), on Wednesday, &c.; Carleton (Penrith), on Wednesday and Thursday; the Altear and Marham Clubs, on Wednesday, Thursday, and Friday; and the Huntingdonshire Club, on Friday and Saturday.

HEREFORD RACES.—MONDAY.

Town Plate—Mr. Jones's b. c. Rochdown, 3
Herefordshire Stakes—Mr. Bevan's b. f. Ripon, 2
Handicap Hunt Steeplechase—Mr. Gwyn Gwyn's b. g. Rhos, 3
Hunt Cup Steeplechase.—Pilgrim, 5. Ailsworth Lass, 2
Trial Stakes.—Mr. J. Joy's f. —
Aristocratic Handicap.—Wordsam, 1. The Don, 2.

TUESDAY.

Corporation Plate.—Orion, 1. Confusion, 2.
Hunters' Stakes.—Wordsam, 1. Rhodan, 2.
Nursery Handicap.—Mr. Busk's b. c. Arrow, 3.
Herefordshire Grand Annual Steeplechase.—Bantam, 1. Modora, 2.
City Stakes.—Mr. Joy's b. f. Cinderella, 3.
Hunt Steeplechase.—Martin, 1. Baron, 2.

LIVERPOOL AUTUMN MEETING.—WEDNESDAY.

Hurdling Race of 40 sovs.—Prize of Aprehall, 1. Remus, 2.
All-aged Selling Stakes.—Pupil, 1. Midsummer p. f. 2.
Knowsley Nursery Handicap Stakes.—Mr Mary, 1. Lonora, 2.
Alstree Plate.—Rien, 1. Maid of Clonmel, 2.
Prize Handicap.—Gunrick, 1. Queen of Spain, 2.
Juvenile Stakes.—Iod f, 1. Staple Cob, 2.

THURSDAY.

Surrey Nursery Handicap.—Pasto, 1. Bellevenz, 2.
Heber Selling Stakes.—Leander, 1. Kate, 2.
Sefton Cup.—Zodiac, 1. Mazurka, 2.
Steeplechase.—Yorkshire Boy, 1. Ben Roe, 2.
Seaforde Handicap.—Vultures, 1. Spicebox, 2.
Tyro Stakes.—Melancoly, 1. Arcadia, 2.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

THE advices from Paris before us of a more favourable character than those at hand for some time past—the drain of bullion from the Bank of France having almost wholly ceased—and the supply of unemployed capital, as well as the large, increased purchases of money stock have been made in the market, have imparted a healthy tone to the Stock Exchange, and the settlement of the heavy Account has been effected with greater facility than was looked for with reference to the usual operators for a rise in the quotations.

Compared with several previous weeks, the demand for accommodation has certainly been more active, but as yet the supply of good commercial paper in the hands of the leading houses has not been subjected to any extent. In the open market the best bills are readily discounted as follows:—

Per cent.		Per cent.
Thirty days' bills ..... 2½ to 2	Four months' bills ... 2½ to 3	
Sixty days' bills ..... 2½ to 2	Six months' bills ..... 3 to 3½	
Three months' bills ..... 2½ to 2		

In the Stock Exchange money is worth only from 1½ to 2 per cent.

Money has become somewhat easier in Paris, the rate of discount in the open market having declined from 3½ per cent. to 3 per cent. The demand is active. On other parts of the Continent capital is in fair request, at full rates. We annex the quotations in the leading cities:—

Bank Rate	Open Market per cent.	Bank Rate	Open Market per cent.
Paris 3	3	Berlin 4	3½
Vienna 4	3½	Brussels 3	2½
Trieste 4	3½	Amsterdam 3	2½
Frankfort 4	3½	St. Petersburg 6	6
Hamburg 4	3½		

We have to notice a slight fall in some of the Continental exchanges; but Amsterdam, New York, and Lisbon are 1/16 to 1/8 per cent. higher. Private quotations show no perils on shipments of bullion from this side, the last return having been for £788 in specie.

The total imports of the precious metals have amounted to about £140,000, the greater portion of which has been shipped to the East. The value of the former for both has taken out £122,000, chiefly in silver.

The East India Railway Company have concluded a rising the whole of the £1,000,000 required for the completion of the line.

The report which was in circulation that the Finance Minister in France has been received here with much satisfaction; a certain portion of it is, we believe, true, and the remainder will be known in a few days, as the meeting will be shortly announced.

On Friday the closing prices for money were given, but the business transacted was very limited. Consols left off on Friday 92¼ ¾ for Money, and 92¾ ¼ for Account. New Three per Cents left off on Friday at 101¾ 102 for Money, and 102 for Account. Bank Stock, 10s. to 18s.; Ditto, June, 17s. to 20s. prem.; Bank Rest. last sold 25s. to 30s. prem.; £7,893 in specie. Exchequer Bills, 2s. to 5s. pm. and 10s. to 5s. dis.; Exchequer Bonds, 12s. to 14s. prem. The market was less buoyant on the following day, and the quotations were a shade lower—Consols, Money, closed at 92¼ ¾; Ditto, for December, 92⅜ ½; Bank Stock, 229 to 231; Reduced and New Three per Cents, 101¾ to 102; India Stock, 250 to 252; India Bonds, 96¾ and 103; India Bonds 12s. to 16s. prem.; Exchequer Bills, 10s. to 21s. pm. The transactions in railway securities were steady on Monday, but the business in them were not to say extensive—Consols left off at 92¾ ¾ for Transfer, and 92⅞ for December. Bank Stock, 229 to 231; Reduced and New Three per Cents, Stock, 228 to 228; Ditto New, 104¾; Rupee Paper, 98¾ and 103¾; India Stock, 250 to 252; India Bonds, 96 and 103; Ditto, 5 per Cent., 104 to 105; Exchequer Bills, March, 10s. to 18s.; Ditto, June, 17s. to 20s. prem.; Bank Rest., New, 25¾ to 30¾ prem.; Ditto, Old, 24 to 27; Dublin and Wicklow, 104 to 106; Leeds and Thirsk, 72 to 75; Lancashire and Yorkshire, 102 to 104; London and North-Western, 124 to 126; Ditto New Lines, 120 to 122; Midland, 122 to 124; Ditto, New, 120 to 122; North British, 78 to 80; Scottish Central, 120 to 122; Ditto, New, 118 to 120; South-Eastern—Dover Stock, 98 to 100; Shropshire Union, 45; South Eastern, 107 to 109; Ditto, New, 105.

LIKE LEASED AT A FIXED RENTAL.—Colchester—Stour Valley, 65.

PREFERENCE STOCKS.—Caledonian, 1862, 104; Great Northern, 1862, 98; Ditto, Five per Cent., 1862; Lancashire and Yorkshire Four-and-a-Half per Cent., 1862, 104; Ditto, Five per Cent., 1862, 106; London, Brighton, and South Coast, 95; Ditto, Metropolitan Extension, B, 3; Midland Four-and-a-Half per Cent., 1862, 104; North-Eastern—Berwick, 1862, 104; Ditto, Five per Cent., 1862; North Staffordshire, 7½; West Midland—Oxford, 66, Guarantee, 1862, 104; Ditto, Four-and-a-Half per Cent., 1862, 104; Ditto, Five per Cent., 1862, 107; Grand Trunk of Canada, 20; Great Western, 1862, 104; Ditto, Four per Cent., 1862, 103; Great Western of Canada, 103; Ditto, Five per Cent., 1862, 106.

FOREIGN.—Buhia and San Francisco, 15½; Dutch Rhenish, 16; Great Western to Aulas, 3½; Hudson's Bay, 15½; Ditto, Five-and-a-Half per Cent. Preference, 5.

THE Bank of England for the week ending Oct. 13 shows the following results, when compared with the previous week:—

Increase of circulation of	£97,000	Decrease of deposits of	£3,712
Increase of bullion of	97,712	Decrease of notes of bullion of	99,712
Increase of Government Securities	900,000	Decrease of private securities of	100,000
		An increase of reserve of	102,000

The total circulation is now £21,319,723. Public deposits amount to £3,000,000, and other deposits to £11,146,005. Securities are £17,916,767; and the stock of bullion is £14,362,495.

THE MARKETS.

CORN EXCHANGE, Nov. 11.—Our market to-day was smartly supplied with English wheat, and as fresh means of dwelling, at in some instances, a further advance in the quotations of last week, the trade was very dull, and prices were barely supported. Foreign wheat in dull inquiry, at late rates. Floating cargoes of grain commanded full prices. There was an average supply of barley on sale, and the trade was steady, at full rates. Malt was in good demand, and 1s. per qr. dearer. Beans and peas were in fair request, at full prices. Oats and oatmeal were dull, and 6d. per qr. lower. The flour trade was in a healthy state, at previous rates.

Nov. 12.—The supplies of produce on offer to-day were only moderate, and a fair average business was done in wheat, at full prices. Barley was in good request, at 6d. per qr. more money. Beans and peas were 6d. per qr. dearer. Oats, rye, and maize were in limited demand, at former rates. Flour was 6d. per bbl. dearer.

ENGLISH CATTLE MARKET, Monday.—Only a moderate supply of beasts, but a large number of sheep, lambs, calves, and pigs. Prices of beasts, 4s. to 5s.; sheep, 4s. to 5s.; lambs, 6s. to 6s.; calves, 4s. to 4s.; pigs, 3s. to 4s. per 8lbs. sinking offal.

NEWGATE AND LEADENHALL.—The supplies of meat are small, and the demand rules steady, at the following quotations:—Inferior beef, 3s. to 3s. 4d.; middling, 3s. 6d. to 4s.; prime large oxen, 4s. 2d. to 4s. 4d.; prime small, 4s. 4d. to 4s. 6d.; large coarse calves, 3s. 8d. to 4s.; prime, 4s. 2d. to 4s. 4d.; middling sheep, 4s. 2d. to 4s. 4d.; prime large, 4s. 6d. to 4s. 8d.; small ditto, 4s. 6d. to 4s. 8d.; large coarse lambs, 5s. to 5s. 4d.; prime ditto, 5s. 4d. to 5s. 6d.; large coarse pigs, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 6d. to 3s. 8d.; prime small ditto, 3s. 8d. to 4s.; suckling calves, 4s. to 5s.; and quartered-joint pigs, 4s. to 5s. per 8lbs. by the carcass.

NEWGATE AND LEADENHALL.—The supplies of meat are good, and the demand rules steady, at from the following quotations:—Inferior beef, 3s. to 3s. 4d.; middling, 3s. 6d. to 4s.; prime large oxen, 4s. 2d. to 4s. 4d.; prime small, 4s. 4d. to 4s. 6d.; large coarse calves, 3s. 8d. to 4s.; prime, 4s. 2d. to 4s. 4d.; middling sheep, 4s. 2d. to 4s. 4d.; prime large, 4s. 6d. to 4s. 8d.; small ditto, 4s. 6d. to 4s. 8d.; large coarse lambs, 5s. to 5s. 4d.; prime ditto, 5s. 4d. to 5s. 6d.; large coarse pigs, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 6d. to 3s. 8d.; prime small ditto, 3s. 8d. to 4s.; suckling calves, 4s. 2s. 5s.; and quartered-joint pigs, 4s. to 5s. per 8lbs. by the carcass.

NEWGATE AND LEADENHALL.—The supplies of meat are moderate, and the demand rules steady, at from the following quotations:—Inferior beef, 3s. to 3s. 4d.; middling, 3s. 6d. to 4s.; prime large oxen, 4s. 2d. to 4s. 4d.; prime small, 4s. 4d. to 4s. 6d.; large coarse calves, 3s. 8d. to 4s.; prime, 4s. 2d. to 4s. 4d.; middling sheep, 4s. 2d. to 4s. 4d.; prime large, 4s. 6d. to 4s. 8d.; small ditto, 4s. 6d. to 4s. 8d.; large coarse lambs, 5s. to 5s. 4d.; prime ditto, 5s. 4d. to 5s. 6d.; large coarse pigs, 3s. 4d. to 3s. 6d.; middling ditto, 3s. 6d. to 3s. 8d.; prime small ditto, 3s. 8d. to 4s.; suckling calves, 4s. 2s. 5s.; and quartered-joint pigs, 4s. to 5s. per 8lbs. by the carcass.

ROBERT HERAPATH.

FRIDAY, NOV. 8.

BANKRUPTCY ANNULLED.

T. LOUD, Vale Mill, Tolworthon, cotton spinner.

BANKRUPTS.

W. E. HARRIS, Notley, Bucks, thread manufacturer. C. CHURCHER, North Stoneham, Hants, cattle-dealer. J. and T. BOUTWOOD, Luton, Beds, straw hat manufacturers. S. F. GOODWIN, Bristol, tailor. J. HOLLAND, Bristol, builder. J. HOLLAND, Bristol, builder. W. GOODYEAR, Bristol, tailor and draper. J. and J. MARSH, Bristol, tin-plate workers. J. and R. CLARK, Cambridge-terrace, Hyde-park, and Bristol, chemists. J. DAVIES, Swansea, grocer. C. H. MORGAN, Swansea, ship broker. J. and T. HOWARTH, Bolton-le-Moors, cotton spinners. HOLLINGSHEAD, Yorkshire, grocer. J. H. MILLS, Norwich, draper. W. HIGGINS, St. Helen's, Lancashire, licensed victualler. J. HOLDEN, Liverpool, commission agent. J. WOOLFE, Bolton, fruit merchant. J. MARSH, Manchester, fish salesman. J. and J. HEAP, Rochdale, flannel manufacturers. J. and J. HEAP, Rochdale, flannel manufacturers. J. and J. HEAP, Rochdale, flannel manufacturers. J. HOLDEN, Liverpool, stationer. J. MITCHELL, Sculthorpe, Lincolnshire, farmer. H. DEAN, Sheffield, horse painter. J. and J. HEAP, Rochdale, flannel manufacturers. J. and J. HEAP, Rochdale, flannel manufacturers. W. POLLINGHAM, Lime Regis, Dorsetshire, ship owner. J. and J. HEAP, Rochdale, flannel manufacturers. J. and J. HEAP, Rochdale, flannel manufacturers. J. and J. HEAP, Rochdale, flannel manufacturers

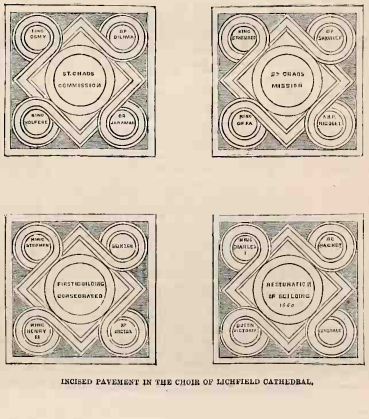
INCISED PAVEMENT IN LICHFIELD CATHEDRAL.

Amongst the many noteworthy works comprised in the recent restorations, under G. G. Scott, R.A., Esq., in the choir of Lichfield Cathedral, is conspicuous the elaborately-wrought pavement of which we subjoin an Engraving. This work is principally remarkable from its representation of a process which has scarcely been recognised in our late revival of ancient art. We allude to the encaustic or "stained" pavements, which, at St. Omer, Rheims, Sienna, and other places on the Continent, are rich with illustrations of sacred history and significance. These works are wrought on the surface of stone slabs by engraving or "incising" a species of stone—"niello," in fact—and one capable of very fine effects, the incised portions being filled with black or red cements, which are mostly used in the backgrounds, where they throw out and give force to the design. In England there are no examples remaining to us of works of this nature, unless, indeed, we accept as such the few sepulchral slabs upon which incised work is found.

The pavement to which we would draw attention is, as will be seen by our small diagram, square in form. This has been subdivided quarterly. In each division is a circular slab, upwards of 3ft. in diameter, of a peculiarly hard stone, obtained from Hopton Wood. Around each of these principal medallions are four smaller ones of some 2ft. in diameter. By reference to our Engraving it will be seen that the large medallions are illustrative of incidents connected especially with the diocese, and that the smaller ones contain busts of eight of those prelates who were benefactors to the building. The same number of Royal personages are also represented.

The designing and execution of the series of incised medallions was intrusted to Messrs. Clayton and Bell, of Regent-street, who to their practice in stained glass have added that of works such as we describe.

From the rich and enduring effect of incised work we can but conclude that its revival will in future be more often seen on vertical surfaces. We understand Messrs. Clayton and Bell are applying it to fonts, pulpits, and reredos panels.



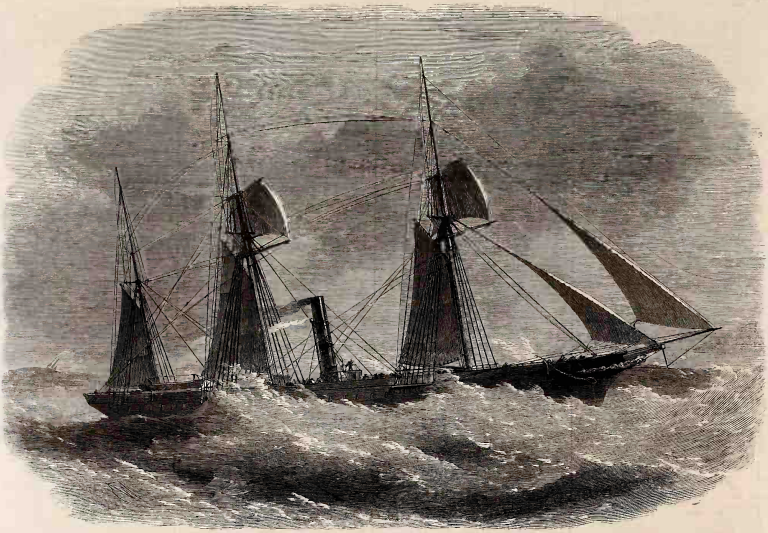
INCISED PAVEMENT IN THE CHOIR OF LICHFIELD CATHEDRAL.

The elaborate mosaic of encaustic tiles, tesseræ, and marbles was executed by Messrs. Minton from the design of the architect.

THE STORM OF SATURDAY WEEK.

Some interesting particulars have been given by Admiral Fitzroy relating to the hurricane which on Saturday week burst on our north-east coast. "The storm," he says, "was remarkably local and circumscribed, but, as usual, violent proportionally to its smaller extent between two strong contrary currents. While blowing hard from the north, with a low thermometer (30 to 40 deg.) across Scotland, England, and the western side of the North Sea, there was a southerly gale over Holland, and at Paris the thermometer showed 60 deg., while across France there was only wind from south-east to south-west. The weather reports of Friday morning showed notable differences of pressure and temperature—startling when compared with the general uniformity or gradual changes so prevalent (except in two weeks) during the last seven months. Places usually corresponding closely in barometer and temperature numbers differed nearly half an inch and nearly twenty degrees. The sure indications of a northerly gale, in addition to these warning signs, were a low thermometer and a highly electrical state of atmosphere, with a low barometer, which had been falling for some days, but fell rapidly on Friday. At Lynn it was below twenty-nine inches; at Yarmouth and at Scarborough scarcely above that point, which before a northerly wind is equivalent, as a warning, to 28½ inches before a southerly gale. The storm of Saturday was circuitous or cyclonic; its centrical area was in the North Sea, off Yorkshire, round which, along the coast, it blew hardest from Northumberland to Norfolk. Off Flamborough Head it was sudden and most severe. There was no wind to speak of in the west of Ireland. On the north-east coast and in the Irish Sea there was a short gale. This cyclone was local, and did not travel far."

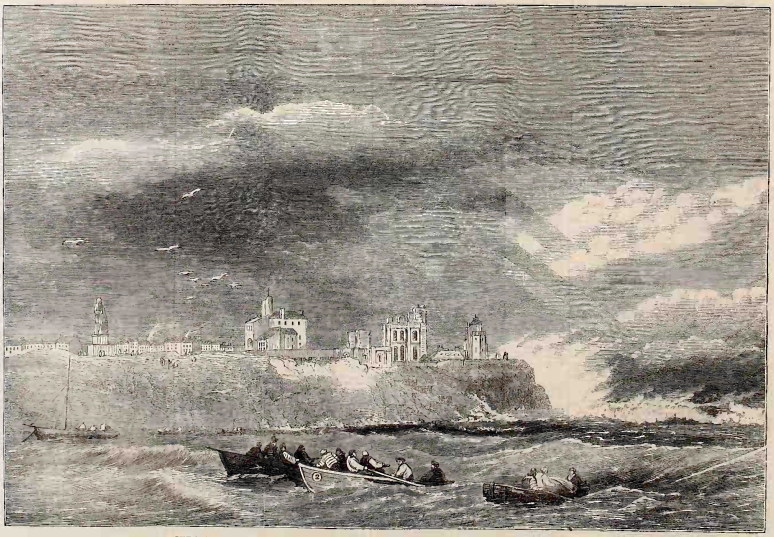
The coasts of Northumberland and Durham felt the force of the storm on Friday night. Thus a letter from Shields, written on Saturday, says:—"Last night a fearful gale of wind, accompanied



THE UNION STEAM-SHIP COMPANY'S CAPE MAIL STEAMER BRITON.—SEE SUPPLEMENT, PAGE 503.

by blinding showers of rain and sleet and lightning, broke over the Northumberland coast from the north-east, and raged with awful fury until long past daylight this morning. The sea also rose with the gale, and at daybreak was white with foam as far as the eye could reach. It was an anxious night in our seaports. A large fleet of deeply-laden colliers sailed from the Tyne and other ports yesterday afternoon, and if the gale had got more round to the eastward a repetition of the horrors of the 9th of last February would have been inevitable. Fortunately the wind continued to blow from the northward, and the fleet is clear of the coast. The sea, which has broken with awful fury over the piers, has done a very considerable amount of damage to the works and has destroyed several goliah cranes."

We give below an Illustration of the gale at Tynemouth, from a sketch taken on the deck of the Lifeguard, westerbound in Shields harbour.



THE SEA BREAKING OVER THE CLIFF AT TYNEMOUTH DURING THE GALE ON SATURDAY, THE 9TH INST.

*** *The charge for the insertion of Births, Marriages, and Deaths is Five Shillings for each announcement.*

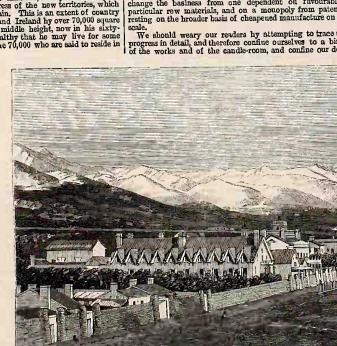
BRIGHAM YOUNG.

BRIGHAM YOUNG, the President and Chief Prophet of the Church of the Latter Day Saints, or Mormons, was born about the year 1800. Very little is known of his early life. It is generally supposed that he is a native of the State of Ohio; and it is said that his brothers engaged in the ministry in the Methodist Church. In connection with the Mormons he first appeared in a prominent position in August, 1844, soon after the murder of Joseph Smith, the founder of the sect. Young was then President of the Twelve Apostles, and in that capacity signed a letter addressed "To the Church of Jesus Christ of Latter Day Saints in Nauvoo (Illinois) and all the World." One of the principal men in the community, Sydney Rigdon, sought to succeed Smith; but charges of heresy and improper conduct were urged against him by Young and others: he was excommunicated, and Young was appointed the successor of Smith. By his shrewdness and natural ability he has shown the wisdom of the choice. Perceiving that the illusions were hostile to his people, he planned and carried out an exodus unparalleled in history for the sufferings of the people who accomplished it. They resolved to place the Rocky Mountains between them and persecuting Christendom. Cold and hunger killed many on the road; but, after a year and a half of inconceivable hardships, the pioneers reached the Valley of the Great Salt Lake, in July, 1847, and founded a settlement. The mass of the people followed in the next year, and in the thirteen years which have succeeded, under the guidance and government of Brigham Young, they have converted a bare valley into a lovely region of cultivated fields, rich orchards, flower-filled gardens, and pleasant residences. They have brought the water from the hills in sparkling rivulets through every street. They have erected mills for grinding the grain of their own growth, and sawing the wood that their own energy has felled. They manufacture their own paper, and spin and weave their own fabrics; and when articles are wanted from the outer world they are carried across the great desert in waggons, sometimes numbering over fifty in a single train. In all these works "the President," as the people call him, or "Brother Brigham," as he styles himself, has been the directing and influencing power. He has forbidden the establishment of beerhouses, and there is only one place in Salt Lake City where liquor in quantities can be obtained. Soon after sunset the streets are as quiet as during this Decalogue Village, for the citizens remain in their homes, except when in the winter they attend the ball or theatrical entertainments, which are frequent, or exercise their voices in their musical parties. A trustworthy account of their practice of polygamy would say from the appearance of things that a more industrious and better-conducted community is not to be found. They consider polygamy, to the extent of having five wives or least, an essential of respectability; but the practice is rather by a unanimous vivâ voce confirmation by the people assembled in the Bowery. He rules, as head of the Church and of the Government of the territory of Utah, over a region containing more than 180,000 square miles, prior to the formation of the last Congress of the new territories, which have slightly infringed upon his domain. This is an extent of country exceeding the size of Great Britain and Ireland by more than 60,000 square miles. Brigham is a burly man of middle height, now in his sixty-second year, and apparently so healthy that he may live for some years yet to direct the destinies of the 70,000 who are said to reside in Utah.

BRIGHAM YOUNG, PRESIDENT AND CHIEF PROPHET OF THE MORMON CHURCH.



THE RESIDENCE OF BRIGHAM YOUNG AT THE GREAT SALT LAKE CITY, UTAH.

BRIGHAM YOUNG'S RESIDENCE.

The residence of Brigham Young is on the northern side of Salt Lake City, on a declivity above which the foothills of the Wahsatch Mountains rise. In the View his house is nearly in the centre, and is surrounded by a small square tower with a golden beehive on the top, the emblem of the city. In this building, which is of timber, his first wife and family reside. The low building on the left contains offices of the church. Next on the left, the principal object in the picture, is the Zion House, where the remainder of his wives reside. Some say there are twenty of these spiritual wives, others say sixty-one, one for each year of his life. A smaller (round) tower to the left of the latter, on the house surmounts the schoolhouse, a neat edifice, in which the children only of Brigham Young and Heber Kimball are educated. The white house on the right of Brigham's was the first erected for him in Salt Lake City, and is now the home of his eldest son and designated successor, Joseph Young. The buildings on the extreme left in the View are garden houses, offices, and residences of some of the wives. A wall of earth and stones encloses a large piece of ground, and surrounds Young's and Kimball's houses and gardens. In the lower corner of the Engraving, on the right, is a portion of the residence of Bishop Wells.

The View and the Portrait are from photographs taken recently by C. R. Savage, late of Southampton, and sent through Panama to Salt Lake City by a gentleman who spent several days there early in September.

SHERWOOD WORKS, BATTERSEA.

IN 1849 an engraved PRINT Patent Candle Company's Works at Vauxhall, and in 1854 those near Battersea. We now, as illustrating the growth of purely chemical manufactures in this country, give an Engraving in connection with the recently-completed works of this firm at Battersea.

The main object in the great part of these works was in 1853 a beautiful garden, with a terrace on the bank of the Thames where George IV. and Mrs. Fitzherbert used formerly to walk. A letter written by the managing director, who showed us over the works, to a brother in India, dated December, 1853, gives the estimate for putting up the new factory as £500, and of set hands as being required to work it. Now the works extend over about eleven acres, of which some six are roofed over; the capital invested in apparatus and buildings is about £200,000, and, in spite of every effort to work by means of machinery, about 800 people are employed. In 1849 the price of tallow, which generally regulates that of other fats, was £41 10s. per ton, and the price of the company's now principal raw material—palm oil—under £20 per ton, while the price of composite candles was 1s. per pound. In the early part of this year (1861) the price of tallow was £59 per ton, and of palm oil £45, while that of composite candles, not, indeed, of the best quality, but equal to the composite candles of 1849, was 9d. per pound.

This change in external circumstances which has gradually taken place has been met by internal change in the shape of concentration of innumerable contrivances for saving loss of material in process, for saving in labour, and for improvement in products, so as to change the business from one dependent on favourable prices of particular raw materials, and on a monopoly from patents, into one resting on the broader basis of cheapened manufacture on an immense scale.

We should weary our readers by attempting to trace the steps of progress in detail, and therefore confine ourselves to a birdseye view of the works and of the candle-room, and confine our description to the greatest novelties, the new arrangements for candle-moulding, and the new manufactures from Burmese petroleum.

The candle-room, of which we give an Engraving, is 160ft. long by 100ft. wide, in which upwards of 100 tons of candles are made weekly during the busy season. The new candle-machine consists of a long row of moulds, over which a filler runs on a railway: this filler supplies the melted candle material into the moulds one after the other as it reaches them. After a sufficient time has been allowed for solidifying and cooling, a number of boys move rapidly down the frames, and the candles seem to jump from their bed as if by magic, the fact being that each mould is connected to a reservoir of high-pressure air, and, on the boys turning cocks attached to the moulds, the candles are ejected. Innumerable contrivances for "drawing" candles had been attempted, as our conductor informed us, at home and abroad, but none has equalled the power of high-pressure air, which, great at it is, is so gentle as not to injure the fine polish on the moulds. We were struck by the healthy, hearty appearance of the young lads, who appear to do almost all the work of the room, and were informed that one good deed of the new machine was to abolish the necessity for night work, which under the old system could not be avoided, when making soft candles through a large part of the year, and which is for boys most objectionable. Formerly seven candle-rooms were kept working night and day, now there is but one, and that working only in the day. The new machine, however, like most great improvements, had at first its drawbacks: the boys required to work it coming from a new neighbourhood and with less power of action. In pointing these out Ike is entitled to the gratitude of the boys, but without the unpleasant smell. This is used for cleaning dresses and furniture from stains of grease. A less volatile fluid, Belmontine, is next separated: this is used for lighting, but is somewhat heavier oil, which enters largely into the composition of a lubricating oil, sent out in large quantities for the spindles of the great cotton-factory mills, and for use in general machinery. Last of all comes the beautiful candle material Belmontine. These petroleum products are, of course, extensively now and very important part of the company's trade.

It is curious to trace the changes in sources of light. First there were almost exclusively tallow candles and southern whale oil for our lamps, and spermaceti for candles. Then came a vegetable epoch. Palm oil and cocoanut oil were mainly used for candles, and great quantities of rape or colza oil were used in lamps. Recently we appear to have entered on the mineral era—Belmontine and paraffin oils. These last, from various sources, are manufactured on an immense scale for lamps; and the manufacture of candles from Belmontine and paraffin is a very rapidly increasing one.

M. FECHTER'S OTHELLO.

THE scenic arrangements at the Princess' that so picturesquely illustrate the version of Othello furnished by M. Fechter to the English stage have not become such topics of criticism, curiosity, and attention as we might imply a reasonably-implied public demand by enabling our readers to look for themselves on one of the scenes that have excited most approbation.

We select the opening of the second act, which represents Cyprus under the effects of a gradually abating storm, as viewed by the spectator, as it were, on a platforms before the town, looking upon the harbour. Never were Mr. Telbin's skill and taste more beautifully shown than in this well-disposed pictorial set. Lesser arrangements the observer will find in it, which come into great use during the performance—such as a large arcade at the back of the scene, a gate on the right, and a capstan at the left corner, surrounded with bales of merchandise. These elements enable the actors to shift from place to place, from the interior of the fortress, and from a sitting to an erect position, according to the proprieties of action. In pointing these out Ike is entitled to the especial merit of M. Fechter's edition.

Attention to these small particulars, too much in general neglected on the English stage, connects to a pleasing variety in the business of the scene. Iago sometimes sits on the platform, sometimes on the capstan, conversing familiarly with Desdemona and Emilia, base so many points of exhibition, and every change produces a different picture. Othello's dress is also very effective, being embroidered with the Lion of St. Mark. A page, also, is charged with the helmet, the gauntlets, and the truncheon, which are put on a velvet cushion.

Such adjuncts as these make the scene a pictorial composition. Such scenes, too, have another advantage—they are moving pictures. The scene, too, have another advantage—they are moving pictures. The scene is whole getting-up may be accepted as dramatic illustration. It is no remarkably beautiful and elegant that, whatever minute censure may be extended by captious critics to particular portions, or whatever jealousy may be indulged in by professional rivals, there can be no doubt that the English public owe a debt of thankfulness to M. Fechter for the care and attention which he has displayed in the practical application of the specific improvements in the acting of Shakspearean drama, and which have been suggested to his creative and active intelligence by a long study of the subject. It affords us pleasure, indeed, to find that our neighbours have at length appreciated the genius of our unrivalled dramatists, and we shall not too closely examine the services they are willing to render. They see precious gifts from one people to another

ORPHAN WORKING SCHOOL, HAVERSTOCK HILL.

IT is now more than one hundred and three years ago since the City parishioners met at a tavern in Bunnsgate-lane for the purpose of founding the first orphan school for boys in London. It is evident there had been some quiet meetings elsewhere, for they came prepared to say there was a sufficient sum promised or in hand (about £700) to begin the undertaking, and they at once appointed a treasurer, and requested the other gentlemen present to assist him in collecting the money received. This was the origin of the Orphan Working School for twenty boys. Soon, however, the funds came in so plentifully that twenty girls were added, and the forty orphans were at once lodged, boarded, and provided for at a small house in Hatton-wall, Holborn, in a pleasant suburb of London. This school continued there until 1775, when, some land having been given to the City authorities in Haverstock road, a new school was erected for seventy children, and the remainder of the land let on building leases, which have since become a source of the key to the prosperity of the charity, for when these leases had fallen in, instead of the ground rent of £14 then received, the sum of £2228 is now derived from that source. In 1813 the number of the school was more than filled, as above 100 orphans were there for many years. As the site was well built in, it was found necessary to remove to make another, more especially in contemplation of an increased income. Land was sought for and obtained at Haverstock-hill, near Hampstead, and a third school established there, with accommodation for 240 children. After a banner had been held aloft from 1826, the site was outstanded, under the patronage of our Most Gracious Queen, by the ladies of England (for the stalls had representatives from most of the principal towns), and produced a net profit of £9000, by which 200 children were removed to their new habitation in July of that year. The building was out of debt in 1833, thanks to a generous gift of property has so well attended this enlarged effort that, for a long period, not only has 280 and upwards have been under the fostering care of this charity.

It was determined that the centenary of the charity should be celebrated by a special effort to increase the funds, and to provide for 400 instead of 240 orphans; and in about three years upwards of £11,000 was received, which gave a handsome profit over the cost of enlargement—a noble gift from the friends of the orphan poor, and proving how large is the generosity of the benevolent when the call is heard.

Arising out of the building enlargement there have, however, been many expenses. For instance, the playgrounds were cut up, and all the gravel and the drainage spoiled. This has involved an expense of above £600; and for extra fitting and other expenses the debt has been another £500, or thereabouts: so that £1000 is about the sum still required, and they have appealed to the public for it, and public are sure to give it. We shall be glad to find that the reading of this notice has been the means of accomplishing it.

The Governors receive a most liberal education adapted to the class which receive the protection of the charity. They are received from seven years and remain until four or five years after that age, when they are classed and entirely provided for. When they leave, situations, as far as possible, are obtained for them in the country at the value of £9 3s. to each girl, and of £5 to each boy, and for seven years following they receive a pecuniary bonus in addition to their wages. This year upwards of £500 have been given in outfits and annual rewards to those who have left the school. The old scholars are grateful, for within the last few years they have contributed a large sum to the funds; and the name of one is perpetuated in the Ivy Scholarship, which gives a silver medal and an annual sum of £10 for eight years.

All the accounts of the charity are open to public inspection. The institution may be visited by any governor when he pleases, and he can give an order to any of his friends for this purpose. During the present year sixty children have been admitted by election; and since the removal to Haverstock-hill, in 1847, nearly 1000 have been received.

Her Most Gracious Majesty the Queen and her Royal Highness the Prince of Wales have largely aided the funds of the Jubilee Institution, and have three orphans presented by them, in virtue of their donations, now under its care.

On page 490 we present the View of the school as it is now enlarged to accommodate 400 orphans, and are sure the committee will gladly receive 12 guineas duly filled up as one of the votes of friends will admit of their doing so without incurring debt, which very wisely they strongly object to.

WILLS AND BEQUESTS.

THE will of Charles Prater, Esq., of 71, Portland-place, was proved in the London Gazette by the sole executors, the Right Hon. Sir Farrer Herschell, M.P., the Rev. Thomas Prater, M.A., the sons of the testator. The personalty was sworn under £40,000. There are also two trusts, one commencing with James Leach Ridgway, Esq., of Piccadilly, and George Taylor, Esq., Scotland-yard, each of them to have £1 a legacy of £500, and legacy duty paid. The will bears date the 14th of August, 1886, and was attested by Stephen Garratt, Esq., solicitor, Bedford-row, Falkland, and another solicitor, his clerk. The testator died at his residence on the 3rd ultimo. The will is of considerable length, being somewhat in the form and nature of the directions contained in it. Amongst the specific bequests are the following:—To his son, Charles Prater, Esq., he bequeaths the freehold property at Surbiton; to his son the Rev. Thomas Prater, Vicar of Leighton, Salop, he has left certain leasehold estate and the silverware of Leighton. To his executors he bequeaths the furniture and household furniture, jewellery, ornaments, carriages, &c.; and to two granddaughters equally (whom there is the name of) £5000. To his butler £500, and legacies varying in amount, according to length of service, to all his domestic servants. £4000, to be repaid him by his executors by his son, Herbert Prater, he has directed to be divided into five equal parts, leaving to his two sons and three daughters one-fifth each.

THE will of John William Storgess, Esq., of Doncaster, York, was proved in London on the 11th ult., by his widow, Mrs. Ellen Storgess, and Mr. Joseph Storgess, the personal property being sworn under £19,000. The will bears date July 31, 1882, and the testator died on the 4th of August, 1886, at his residence, Doncaster, in opposition to the will. The testator left the residue of his property to his wife for her life, and at her death to the children of his late brother Joseph Storgess, and to his late brother William Storgess, jeweller, ornamental carriages, &c., and to two granddaughters equally between them the sum of £1

LITERATURE.

THE LIFE AND CORRESPONDENCE OF ADMIRAL SIR CHARLES NAPIER, K.C.B. FROM PERSONAL RECOLLECTIONS, LETTERS, AND OFFICIAL DOCUMENTS. By Major-General Elers Napier. Hurst and Blackett.

As soon the type of a race of seamen now passed away and a prominent member of a family which has for many years been distinguished in the eyes of the British nation, Sir Charles Napier, of the Royal Navy, is amply entitled to a biography. That a narrative of his life should be compiled, or, unless on the present occasion, that the necessary materials should be collected for the authentic difficulty did not exist, elapsed to afford opportunities for the required assistance from a worthy relative of the deceased admiral, and many friends have assisted him with information, letters, and other documents, as to his personal adventures, which, though not always of a public character, were of considerable importance in the performance of his duty as a naval officer. It is also to be encouraged in the production of this work by the fact that his services, although not of such a character as to have placed him on the roads or journal focal and letters of the late Lady Napier for the incidents of the journal of the late Lady Napier for the correspondence was so voluminous that the labour of selection was necessary in order to condense it into the required limits of the memoir in the present work. The author has, however, effected the task of compiling the work the author has produced several offices who rendered particulars as to his professional achievements. The chief difficulty which General Napier experienced in the performance of his task was owing to the circumstance that, although the public services of Sir Charles's papers were placed at his disposal, the fact of his not having habitually kept any memoranda

THE ORDER OF THE STAR OF INDIA.

On the 1st inst. her Majesty the Queen held in Windsor Castle her first investiture of the Most Exalted Order of the Star of India. The day was the anniversary of the day on which her Majesty's proclamation was promulgated whereby her resolution to take upon herself the government of India was notified to the Queen's Indian subjects. The Right Hon. Sir Charles Wood, Bart., G.C.B., the Queen's Secretary of State for India, was invited to witness the august ceremony; and a numerous Court, comprising the great officers of State and other officers of the Royal household, attended upon the occasion. Their Royal Highnesses Princesses Alice, Helena, Louise, and Beatrice, Princes Arthur and Leopold, and the Princess of Hohenlohe, witnessed the ceremony, which took place in the throne-room.

At the west end was placed a chair of state, to which the Queen was conducted by the Lord Chamberlain and Lord Steward at three o'clock. The Prince Consort and Prince of Wales having been first nominated extra knights, the following were then invested:—Viscount Gough, Lord Harris, the Maharajah Dhuleep Singh, Lord Clyde, Sir John Lawrence, and Sir George Pollock. Sir James Outram and Viscount Combermere were not able to be present to receive their honours, the former being out of England, and the latter unwell.

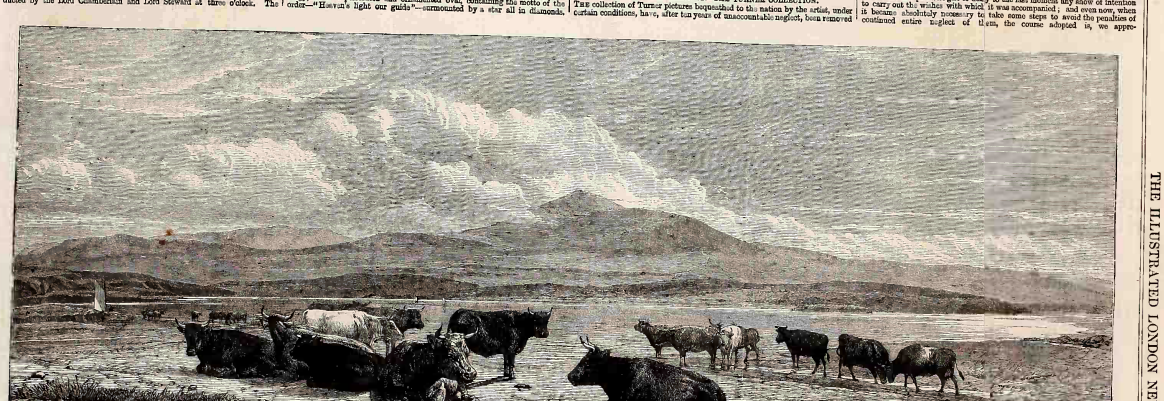
As Sovereign of the Most Exalted Order the Queen wore the mantle, which is of light blue satin, lined with white satin, and fastened with a cordon of white silk, with blue and silver bullion. On the left side was the star of the order. Over the mantle her Majesty wore the collar of gold and enamel, composed of the lotos of India, of palm branches, and of the united white and red roses. In the centre of the collar was an Imperial crown. All were richly diamonded in their proper colours. From the middle of the front of the collar hung suspended the badge, which consists of an onyx cameo of her Majesty's effigy, set in a perforated and ornamented oval, containing the motto of the order—"Heaven's light our guide"—surmounted by a star all in diamonds. The star is formed of rays of gold issuing from a centre, having thereon a star in diamonds resting upon a light blue circular ribbon, tied at the ends, and inscribed with the motto in diamonds. The badge is the same as that attached to the collar of the order, and is suspended from a ribbon of light blue with a narrow white stripe near each edge.

The Queen gave in the evening a dinner, to which the Knights of the Indian order of knighthood, the Secretary of State for India, and the great officers of State attending her Majesty's Court were honoured with invitations.

FINE ARTS.

THE NATIONAL GALLERY.—THE TURNER COLLECTION.

The collection of Turner pictures bequeathed to the nation by the artist, under certain conditions, have, after ten years of unaccountable neglect, been removed in hot haste from the South Kensington Museum to the National Gallery, where they occupy the great west room. This arrangement, in itself far from satisfactory on account of the crowding of the pictures into an apartment not half large enough to hold them and inadequately lighted as respects all on the upper range, has been made just in time to meet the letter, though not the spirit, of the disposition of the testator, which provided that, if the trustees of the National Gallery should not, within the space of ten years, "have provided and constructed a room or rooms to be added to the National Gallery, that part thereof to be called 'Turner's Gallery,'" the gift or offer of the said pictures to the nation should be of none effect, and the pictures themselves be munificent and patriotic gift to delay to the last moment any show of intention to carry out the wishes with which it was accompanied; and even now, when it became absolutely necessary to take some steps to avoid the penalties of continued entire neglect of them, the course adopted is, we appre-



"CATTLE ON THE SANDS, NEAR PORT MADOC, NORTH WALES," BY H. B. WILLIS, IN MR. PLATOU'S COLLECTION.—SEE PAGE 508.

hend, very different from that contemplated by poor Turner, who distinctly required that "a room or rooms" should be "provided and constructed," the said rooms "to be added to the National Gallery, and that part thereof to be called Turner's Gallery." The great English artist had no intention to drive out any portion of the National Collection to make room for his own in premises already lamentably deficient in space. Most men did he look to seeing his pictures huddled, one on top of the other, into one room, where not one-third of them might be seen to advantage. Whether, however, upon the mere wording of the will the trustees have tardily done that which will legally secure the pictures to the nation is not for us to discuss or determine; but we must express a very strong opinion that they have not acted in the matter in a manner that was due to the testator nor to the arts of the country. His munificence effect in discouraging others from similar acts of generosity time alone can show, and will show, we fear, conclusively. But, granting that during the prescribed interval of ten years the trustees, or, to go to the fountain-head, the Government, were not bound to "provide and construct" the necessary rooms for the Turner pictures as an addition to the National Gallery, what justification or pretence was there for building rooms for them at South Kensington, and keeping them there, contrary to the obvious wishes of the testator? The intention with which this was done is, unfortunately, not to be doubted, and involves a long-contested question, which should never be lost sight of, nor its true bearings blinked for a single instant—namely, that of the projected removal of the National Gallery to the little amateur allotment in the above locality, purchased partly out of the surplus funds of the Great Exhibition of 1851 and partly out of funds, in more than equal proportions, contributed by Parliament out of the public purse. During ten years has that most absurd and objectionable proposition been urged by certain interested parties, who still hold to it and are prepared to move heaven and earth to accomplish their selfish designs, regardless of the public opprobrium with which they have been all along visited. Whilst the exhibition of the Turner pictures was for the time an additional and profitable attraction to the "Brompton Bedlam" (as they are familiarly known) their retention there, "dotted about" as a sort of plaster for the removal thither, one day, of the rest of the public collection. If the Turner Collection, it was thought, would not go to the National Gallery, the National Gallery must, perforce, go to the Turner pictures. Now, however—but only, we fear, for a time—the "move" has been defeated; and Turner's bequest is now sent to the place for which he destined it, but at the same time thrust in with an amount of continuity and disregard of the decent requirements of the case which it is positively shocking to reflect upon. The neglect, still persisted in, to provide any sort of special accommodation in connection with the National Gallery for the Turner pictures is most significant, and strongly indicative, as we apprehend, of an intention to force the public into submission to a "foregone conclusion" by a passive policy. The report of the committee which sat last year upon the subject states that Mr. Funerthorne offered to build a gallery adequate for the fit accommodation of the Turner Collection in addition to the National Gallery, and as part of an entire or permanent scheme for the enlargement of the latter, for £20,000, and to complete it within nine months. This offer was, however, whether from motives of economy or otherwise, not acted upon. On the other hand, in turning to the accounts of the South Kensington Museum, we find under the building account an item of £10,000 for the Vernon and Turner Galleries, and another under sundry heads of sundries (between 1863 and 1869) of £6,000 for the same, which, apportioning the gross amount equally between them, would show a sum of about £10,000 outlayed upon the temporary accommodation of the Turner Collection for seven years; to which should be added the share of expense of removal from Marlborough House to South Kensington in 1856-7 (total amount £10,000), and the removal back, lately, of the collection from South Kensington to Trafalgar-square. In short, for ten years vicarious and uncertain keep, attended by all sorts of hazard, inseparable from all temporary and makeshift arrangements, it would not be too much to say that the Turner Collection has cost the public as much as would have provided for it decently under a permanent arrangement.

Passing from these considerations, however, let us take the Turner collection as we find it, and which in its present mode will be found much more accessible to the every-day public than in the western suburb where it has so long been located. We would that those who go to see this interesting collection for the first time would be guided by a single hand, one of the ablest and most inspired that ever wrought within the limit of our shores, would do so with a view of discriminating between what was innate and essential, what extrinsic and adventitious, in his method of performance; for Turner was but man, and, like almost all artists that ever lived, was to a great extent a child of accident, and more or less influenced by example. Turner's natural gifts, and his fine appreciation of nature and of the picturesque, were manifested when a mere boy, and when only fourteen years of age he was admitted a student of the Royal Academy. It may be a question whether he gained anything by the introduction to the rules and conventionalities of art thus offered to him; whether, on the contrary, fruitful vein, wandering along the shores and amongst the boats of his darling Thames, thus clouded up in the dreamy school of the *Academy* in Somerset House, guided by prescription in the practice of landscape-painting, derived from Claude, Poussin, and other classic authorities. Mr. Ruskin, with whom we do not in general agree, speaks on this subject with every appearance of truth and sound judgment when he says—"The Academy taught Turner nothing, not even the one thing it might have done—the mechanical process of safe oil-painting, sure vehicles, and permanent colours. Turner, from the beginning, was led into conventional and unnatural error. Diligently debarred from every ordinary help to success, the one thing which the academy ought to have taught him (barring the simple and safe use of oil-colours) it never taught him; but it carefully repressed his perceptions of truth, his

SCENE FROM "OTHELLO," AT THE PRINCESS'S THEATRE: THE TOWN AND HARBOUR OF CYPRUS.—SEE PAGE 506.

capacities of invention, and his tendencies of choice. For him it was impossible to do right, but in a spirit of defiance; and the first condition of his progress in learning was the power to forget;" and, further on, "Turner had been forced to pay early attention to whatever of good and right there was in things naturally distasteful to him. The chain of early association had been cast around much that to other men would have been tame; while making drawings of flower-gardens and Palladian mansions, he had been taught sympathy with whatever grace or enhancement the garden or mansion could display, and to the close of life could enjoy the delicacy of the trellis and parterre, as well as the wildness of the heath and the moorland, with which the staying of the silver fountain at its appointed height in the sky will as little interfere as earnest. If we add to this, that while he followed the crash of the Alpine cataract into its clouds of wayward race." He then charges as one result of the artificial training Turner had received, "the devotion of his utmost strength in later years to meaningless classical compositions, such as The Fall and Rise of Carthage, Dido and Æneas, Daphne and Leucippus, and such others, which, with infinite accumulation of material, are yet utterly barren and valueless, dead to the very root of interest, and incapable of producing wholesome or useful effect on any human mind, except only as exhibitions of technical skill and graceful arrangement." There is much truth, though perhaps a little exaggeration, in this, and we quote it as it will serve the spectator very well as a sort of guide or touchstone when viewing Turner's pictures, painted at different periods or under different influences, so dissimilar are they in purpose and character.

Of his natural English landscape-painting, for example, what can be selected more charming, more persuasive to the contemplative, than "Frosty Morning Sunrise" (No. 492), with its broad cold sky, against which the figures stand out boldly, the air circulating round them, and every detail so sharp and clear as the frost itself. This work was painted in 1813. Another result of truly native inspiration is the "Buckingham Seat, at Stillness" (No. 450), exhibiting pastoral English nature, in 1797, a work of more than ordinary interest, from the fact that a very little to the west of the spot from which the artist has chosen to situated the cottage in which the great painter died. Of the same class is "View on Clapham Common" (408—as a study of trees with a man fishing in the foreground, painted about the year 1802; "London seen from Greenwich" (483), painted in 1809; "Abingdon, Berkshire, with a View of the Thames—Summer" (485), 1810; "Windsor" (486) with the castle in the distance and a west meadow with farmer and cattle in the foreground; the last two, painted in 1819, are other specimens of his genuine unsophisticated style, painted under the impulse of genius and the inspiration of nature alone. Another work illustrative of the domestic and realistic feeling which actuated the artist in the earlier period of his career is "The Blacksmith's Shop" (No. 474), painted in 1807, in imitation, if we recollect rightly, of Wilkie's "Village Politicians." The truly English character of every part of this composition, figures, attitudes, dress, and all, is plainly apparent; and the painting throughout is of that honest, solid kind which should be bestowed upon such a subject.

It was, however, whilst Turner indulged his natural bent in such homely subjects as the above that he thought it necessary to pay some attention to fancies of scriptural and classic lore, in the treatment of some of which he evinced agencies at once highly poetic and original; while to others he was submerged by the learning and topographic materials he had to deal with. "The Tenth Plague of Egypt" (No. 479) is painted (1802) in the cold classic style of Poussin; the colour dark, but with a straight for more warmth than that master was wont to show. "Jason in Search of the Golden Fleece" (No. 471), painted in the same year, is of a mystic character, more after Salvator Rosa, and is treated in a rich chiaroscuro, which progressives command of colour and aerial medium which the master was destined after-wards to accomplish. Still grander than either of the above, and exhibiting the early energy of the artist in its highest development, is "Apollo Killing the Python" (No. 488), a truly grand conception (exhibited in 1811), based upon the passage in "Callimachus," thus rendered in English :—

Resounded by the forks, the monster coil'd,
Pantomore, horrible, and vast, his snakelike form;
Then the tip-points of the mighty dog-fox,
And in the throes of death he tore
His sandy mouth in rage, and with
Absorbing, blackest with his gore.

The sterile aspect of the landscape, as if nothing of animal or vegetable life could thrive within the ranges of the mighty scourge, gives at once the keynote to the subject. On the left is the figure of Apollo, perfect in form, in a pose light; on the right hand, but in a mean but a huge knotted fold of the serpent, which in its agony has clung to a stunted tree, which has snapped under its pressure. "Polo and Æneas Leaving Carthage on the Burning of the Fleet" (494) is less Turner's own, and by far less estimable. The idea of competing with Claude is here, thus early (1815), apparent, but not with the full meed of success which the painter afterwards attained. There is still less approach, however, that disinterest of color and freedom of brush which in later years he gave up for a more flashy suggestive style. "Apollo in Search of Apollonia" (503), an exclusive light and wooded landscape with figures, painted in the same year as the last, is of a higher order of composition, and of greater merit in the execution. There is here considerable advance in the style and achievement of the effect of distance, and in the disposal, without scattering, of the light and shades. Some dashes/touches, especially with glances of sunlight, at the bottom of the picture towards the right, stand out with valuable effect from the dark shade of the trees above.

Turner's love of the sea and of all that pertained to shipping and sailor-life is one of his characteristics more abundantly and distinctly manifested by him than perhaps any other. His shipping pieces are to the full as truthful as Vandervelde's, but more varied in sentiment, and infinitely more poetic. His "Battle of Trafalgar" (No. 475), French fishermen preparing for sea, and the English packet arriving with a steam raging under a threatening storm sky, is a masterly production in this line, and is probably a reminiscence of what the artist saw on his first visit to the Continent after the peace of Amiens. "The Shipwreck"—Fishing-boats endeavouring to Rescue the Crew" (476), which was painted in 1805, but never exhibited, is even an improvement upon the last—both in drawing and in the general truth and keeping of the lights and shades, the principal warmth arising from the yellow-cinnabar sail of the fishing-boats which are trying to rescue the shipwrecked sailors. Of the sea in both these pieces are represented with weight and motive power sufficient to lift them out of the canvas. "The Death of Nelson" at the battle of Trafalgar (No. 480) is fine as regards the wild havoc and confusion attendant upon a naval action, but the figures are not sufficiently drawn and defined, and, indeed, the grand, abstract solemnity which would otherwise have attached to the picture. Majesty in its stern simplicity is wanting. "Rotterdam Leaving the Anchor" (No. 481), which was painted in 1809, and of which an engraving has been given in this journal.

In all these works, which in our opinion are of Turner's best time, we remark the wonder the grand breadth and richness of pencil with which every part is executed; marvellous handling indeed when we consider it to be the work of one who in earlier years produced water-color drawings with such microscopic detail that they put to the test the powers of the most powerful microscope to realise their spider-web tracery.

Of the late performances of Turner, produced under the influence of visions of atmospheric colour, we have not room to speak at present. We shall return to this interesting exhibition of native-born genius on a future occasion.

"CATTLE ON THE SANDS NEAR PORT MADOC."

BY H. B. WILLIS.

MR. WILLIS has in this little picture made a very interesting subject of a real scene, somewhat unusual in character, which has been realised through individual ingenuity and enterprise, in North Wales. It was the late Mr. W. A. Maclean, for many years a member of the House of Commons, who projected a plan for recovering from the sea a large portion of the land on the western side of the sandy estuary called Traeth Mawr; and in the course of years, at a cost of upwards of £100,000, seven thousand acres of fertile land were recovered from the sea and converted into fertile and beautiful meadows. He also built the town which bears his name, with all necessary wharves and quays for an important shipping trade. Mr. Willis's picture represents these newly-recovered meads, tenanted by cattle, with lingering patches of sea in the mid-distance, and, far away behind, the mountain range of the southern Snowdonian Basin. This is every respect pleasing picture was exhibited at the Royal Academy last year, and now forms part of Mr. Flaton's collection, which is on view at Messrs. Hayward and Leggatt's City Gallery, Cornhill.

CHESS.

TO CORRESPONDENTS.

A. B. E.—The last subject is not a two-mover, although it has apparently one. The good reply lost is defective, for mate can be effected by moving the Kt to Q 8 3rd, as well as by placing it to Q 3rd. We have taken steps to have a more reliable and suitable problem sent to you.

Problems with the bishop or Pawn only.—No. 3 is incorrect, there White may continue 2. P takes P, and mate next play; and 3. P to K 4th or Q 4th, or Kt to Q 4th, will be mate.

C. E. C.—Both much below the mark, but still showing indications of your being capable of better things.

J. C. Hall, Wigan.—Thanks for your correct solution of a double solution.

Correct solutions are defective.—The one diagrammed answered on any mate in three moves.—1. K to K 6th, 2. Q to R 4th, to be 3 Qm. mate. The other is also unsurprised of a shorter solution than yours.

Correct solutions of Problem No. 923 (solution shall meet with an early response).

C. J. Ashley, is correct only as to fair play, since, as you will probably know that it might have involved his future ere squares before.

W. H. A.—In the Grosvenor Game between Anderssen and Steinitz, published in our Number for Nov. 2, some of the moves appear to have been transposed in the notation. After move 10, on each side, the game proceeded thus:—

WHITE.	BLACK.
11. Q takes K P	11. P takes Q P
12. Q to K 3rd	12. Q to Q 2nd
13. P takes B	13. K to K 2nd

What was the nature of the other moves and notes to which you refer?

Problem No. 926.—By Mr. Healey, Mr. W. G. Rumble, Mr. R. B. G. P. C. Rea and Capt. John G. Wilde, R.A., Mr. W. Ranken, Mr. W. Ranken, Jun., Mr. W. Ranken, Jun., Mr. W. Ranken, Jun.,

A A are the parts in which, if the bottom of the vessel be torn out, the water will take the place of ballast, the ship being as safe as before.

PLAN OF ONE OF LUNGLEY'S UNSINKABLE SHIPS.

THE UNION STEAM-SHIP COMPANY'S MAIL STEAMER BRITON.

THE subject of our Engraving on page 499, intended for the conveyance of the Cape mails, is the first vessel built on the newly-patented principle of Mr. Charles Langley, of Deptford, for the construction of inattackable and incombustible ships, and which has recently excited considerable attention both of private shipowners and of the Government, in consequence of the importance of the results which are expected from the carrying out of the principle to its full extent.

During the process of construction the vessel has been inspected by numerous shipbuilders and others interested, who all concur in expressing their admiration of the invention, and their confident expectation, should it be vested by experiment, that it will inaugurate an entirely new era in shipbuilding. The invention is of such enormous national importance at the present moment, when so many millions of money are being expended in the reconstruction of our Navy, that it is not surprising that the vessel, being the first which has been built upon the principle, has created much sensation; and the Admiralty authorities, without giving any decided opinion as to the merit of the invention, are anxiously watching its development.

The great advantage which is obtained by the invention is the beneficial effect of safety and facility of remedy, wherever injury may be inflicted. The principle is simply to divide each deck from the other by a watertight flooring of iron, so that, in effect, whether the vessel be composed of one, two, three, or more decks, each becomes a distinct hull of itself, unaffected by any injury which in any happen to either of the others, and by the equalisation of the weight of water which may have obtained egress, keeping the vessel in a level position, or what is technically termed "an even keel." Each compartment of each deck has its own distinct communication with the upper-deck, and the upper-deck alone, by means of a watertight hatchway so that, in the event of a leak occurring sufficient to fill either of the decks, not only would the water spread itself over the whole on its surface, and thus maintain the trim of the ship, but it could only rise in the main trunk hatchway of that compartment to the level of the surrounding waves. It is obvious, also, that the same arrangement will afford facility for the application of fire in any of the compartments, for not only might the hatchways be closed until ventilation stopped, leaving the fire to extinguish itself, but the compartment might be almost immediately flooded with water. Inasmuch as it is a trunk hatchway which has to be formed as a general hatchway for the lower part of the vessel, as is usually the case, power will be given for ventilation than at present exists, which in the case of troop-ships, or the like, has retained any length of time in hot climates, and where there is liability to fever, is most objectionable. The plan of construction also renders the engine room is completely isolated from every other part of the ship, being inclosed in it were in four solid walls of iron, excepting, of course, the communication with the flash-deck, so that unless the ship sank bodily down underneath the water it would be impossible for it to penetrate to the fires, or in any way interfere with the working of the screw. The Briton is a noble and handsome ship, of 1092 tons builders' measurement, and 932 tons register, propelled by engines of 120 horse-power by Messrs. Day and Co., on the horizontal principle, and averaging a speed under steam alone of eleven knots per hour, by the Admiralty test. Her dimensions are as follow:—Length over all, 264ft.; length between perpendiculars, 250ft.; breadth extreme, 33ft. 8in.; depth of hold, 24ft. 11in.; depth extreme, 26ft.

SCIENTIFIC NEWS.

ROYAL INSTITUTION OF GREAT BRITAIN.—In addition to the lectures arrangements announced last week we can now state that the subject of Professor Tyndall's Christmas lectures will be "Light," which admits of varied and beautiful illustration. The subject of his Friday evening courses of twelve lectures will be "Heat."

THE FRIDAY EVENING DISCOURSES will probably be given by Professors Tyndall, Faraday, Rogers, Odling, and Huxley: Messrs. James Glaisher, A. B. Dobson, W. Savory, and J. A. Froude; Dr. W. Odling, Commissioner Hill, and the Astronomer Royal.

MUSICAL SOUND RESULTING FROM ECHOES.—In the *Cosmos* is a notice of some experiments showing that it is possible to produce a musical tone by echoes which succeed each other very rapidly. Two walls situated in two walls parallel with each other and distant about eight yards, and producing any sound at distinct intervals, will cause a sound that the echoings or successive echoes of this first sound, alternately from the walls, or sent from one wall to the other, gave rise to a musical tone, and a regular tone, too. Knowing the velocity of the sonorous waves, he was able to calculate the number of vibrations which corresponded to this sound, and he found an agreement between the result of this calculation and the direct observation. The fact is curious enough, because the intensity of individual sounds, which, by their frequent addition, produce the musical sound, becoming more and more weak, it was hardly to be expected that they could combine into and the same sound.

OXYGENATED WATER is the term given by Dr. Ozanam (in his paper read to the French Academy of Sciences) to distilled water charged with oxygen by means of high pressure; and this same water, deprived of the water in which it has been combined chemically. Dr. Ozanam informs the Academy that he has employed oxygenated water with success in the treatment of asthma, and, lastly, that the blood of the heart, in croup is called the dyspnœa, but increases fever. This water is perfectly harmless in almost tasteless, and contains the simple element of air.

NEBULÆ.—The Earl of Rosse has communicated to the Royal Society some observations on the Nebulæ, with practical details on the construction of large telescopes. The principal result of the observations seems to be to add another to the list of nebulæ with curved or spiral branches, and many new and remarkable nebulæ, some of oblong form, some annular, pointed out, upon which he lays the nebulæ observer, the interior of a central aperture with a similar nebula, even in this climate, will be found.

PHOSPHORESCENCE OF THE DIAMOND.—Dr. Emerson some time ago published a statement that the diamond possessed in a high quality of the diamond as producing light after friction in a dark room. When diamond is rubbed, even the surface of a polished metallic surface, it gives it emits a phosphorescent light. In the case of a large diamond, Emerson found four carats, the largest diamond ever found in Brazil. Another diamond from a book of drift near Richmond, Virginia, and now in the possession of Professor Rowney, this phosphorescent light was found on occasional, but not with a quite satisfaction.

THE RAPID COILING OF THE TENDRILS OF THE AMERICAN WINTER SQUASH has been accurately examined by Professor W. B. Rogers, of Boston, U.S. We give a note of one of his experiments. A slender, four-inches long, which had been laid into a wide hook at the freezed, was brought into contact by its concave surface with a smooth round stake, leaving about three-fourths of an inch of the outer part of the hook projecting on one side. The coiling action began at once, and could be easily followed by the eye. In fifteen minutes the other part of the hook had worked through half a circle, and the stake was clasped in a close coil.

METEOROLOGY OF SWITZERLAND.—In 1860 the Helvetic Society of Natural Sciences, at the instigation of the Federal Government, appointed a commission of three members to consider the possibility of establishing through all Switzerland a network of meteorological stations, with a uniform system of observations. In the new number of the *Bibliothèque de Genève* will be found the report of the commission, read by Professor Mousson at the last annual meeting of the society, at Lausanne, in August last. Besides two or three stations where observations can be made in summer only, eighty-three stations are proposed, varying in heights of 200 metres and more. A list of the requisite instruments is given. The observations will suffice to show the simplest of special questions which will arise of deep interest to science. The chain of the Alps, as Professor Mousson observes, cannot be overlooked, for as the geography and hydrography, a central knot of the European continent, whence diverge and where converge powerful local actions. Atmospheric currents, charged with humidity calculated from the ocean, strike against the snowy summits, are thereby cooled, and deposit a large part of their water; so that alpine and sub-alpine countries collect more rain than even the shores of the Atlantic. With regard to geographical parallels, the Alps separate in a decided manner the south from the north of Europe; and all nature participates in this climatic separation, which is wanting in the North American continent. The course of the winds, according as they blow parallel to the chains or in directions more or less oblique, are changed, and penetrate differently into the interior of the valleys, and thus modify their meteorological characters; and these changes, although hurting directly only on the lower circuits of the air, will not be without reaction on the more regular currents which pass above the highest mountain summits. Finally, the absolute or relative elevations and positions of the stations must be predictive of a number of elements of the highest meteorological importance. The report received the approval of M. Kaemtz, the learned meteorologist of Dorpat. He made a few observations which were the modification of the Grand St. Bernard to a station in the city of Montreal. The society has appointed a commission of eight members to arrange with the Government with respect to the organisation of the observations.

THE SENSIBILITY OF THE HAND AND FOOT in different parts of their surface has been tested by Mr. Harry Leith by means of a certain galvanic current. He excited a sixty-element Bunsen's battery with ordinary vinegar and suspended it freely in the air. Conducting-wires were attached to the terminal hooks, and to the wire from the copper or positive pole was connected a moistened sponge conductor, which was held upon the nerve of the experimenter, so that the sponge might rest on the thin over the middle cervical vertebræ. To the wire from the zinc end a conductor of platinum metal was attached. When this conductor was placed upon the skin of the arm or back of the hand the heat was unbearable for a single moment, but when upon any portion of the skin of the palm or under the surface of the fingers it was easily endured. There is, however, says Mr. Leith, "a fine running down the side of the fingers which is very sensitive, and which causes when pressed a peculiar sensation. This line is also to be traced round between the thumb and first finger, along the back surface of the thumb and the limit between the skin of the palm and the wrist." This line can be easily detected by the eye; the smooth papillary skin of the palm being much like, whereas the hairy polygonally-reticulated skin of the back of the hand and wrist is actually sensible. The skin on the back of the first phalanges is insensible, and also a part of the way down the second, varying in different persons. If the conductor be placed on the nails of the palm of the hand, and held there with gentle pressure for a minute or two, when conveyed is that of gently increasing pressure, as if the instrument was being thrust through the palm until the pain becomes unbearable; but there is no sensation of burning, pricking, or stinging. The same laws are discovered to hold good in respect to the foot."

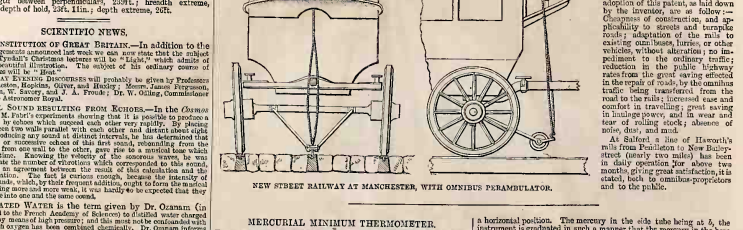
HABITS OF THE WREN.—From Mr. Brockholes's interesting paper on the birds which nest in the neighbourhood of Liverpool, printed in the *Proceedings* of the Literary and Philosophical Society of that town, we extract the following details, derived from actual observation:—The wren, as is well known, sings invariably throughout the year. Though loud, the song of the cock-wren is pleasing. In habits the wren is restless and active, bold, and cheerful. Its constructing nests, hedgerows, belated banks, and open commons especially, are favourite resorts. The nest is built by the cock-bird. It creeps quickly and mouselike through holes, hollow trees, and over the surface of the ground, and indulges frequently in short flights, in which it feeds extensively on moth, extremely rare from the ability in an ingenious manner. When a snail is found it is conveyed to a selected stone and tapped upon until the shell breaks, or the animal otherwise becomes forced. It is then easily taken out and devoured. The same stone will often be resorted to for a long time, so that a considerable number of shells will frequently be accumulated. These remains may often be noticed, and as often, perhaps, have puzzled the beholder. In winter, also, wrens collect in numbers at warm, favourite resting-places. At dusk the observer, by remaining quiet, may see them coming singly from all directions to a favourite spot. On arrival they locate themselves in holes previously made round the sides by their own species or other small birds. By going after dusk the observer may sometimes take them by the dozen in a handful from one hole. Old or unfinished nests are often chosen as dormitories, and sometimes imbued even are bulky enough for that purpose. The sites selected for these, and those required as cradles for their young, are as varied as the haunts—low branches, sprays growing from the trunks of trees, and bare roots of trees under hollow banker holes in walls, banks or hedgerows are the most common. Mr. Brockholes has frequently met at an elevation of about fifteen feet; but such instances are rare. Great skill is shown in the construction, and the nests are rarely found out in the concealment is generally successful. The situation composed generally of dead leaves and moss, the latter predominating, and the former forming the shape which are neat. If in a bank, for instance, it is formed chiefly of moss; when in a wall or stack hay is the principal material, and dead leaves are often the main component of both. The lining is of feathers, and there has the entrance on one side. The eggs are white, dotted or spotted with reddish brown, and commonly seven in number.

HAWORTH'S PATENT PERAMBULATOR AND STREET RAILWAY.

THIS patent consists in the laying down of three lines of rails, the centre one having a groove, in which the perambulator attached to the vehicle revolves, and thereby is sustained while wheels upon the rails. The rails, being laid perfectly level with the roadway, present no obstruction to the ordinary traffic. The perambulating wheel, which works in the grooved rail, is centered n a bar hinged to the fore axle of the perambulator, and squares to it on both sides so that as the wheel passes the groove the axle is necessarily at right angles to the rails. The perambulator is suspended by a chain attached to a lever fixed on the footboard, which the driver lifts by the foot when he wishes to stop or pass place, and thereby either keep or leave the rails. This facility of running off the rails renders the system free from the danger of running off the rails renders the system free from the danger of one very extensive traffic) to have a double line, on a single one can be left and then rejoined at any point. In quick curves, or junctions of streets, they may even be dispensed with altogether, the vehicles taking the ordinary line.

The advantages proposed by the adoption of this patent, as laid down by the inventor, are as follow:—Cheapness of construction, and applicability to streets and turnpike roads; adaptation of the rails to existing omnibuses, lurries, or other vehicles, without alteration; no impediment to the ordinary traffic; reduction in the public highway rates from the great saving effected in the repair of roads; by the omnibus traffic being transferred from the road to the rails; increased ease and comfort in travelling; great saving in haulage power, and in wear and tear of rolling stock; absence of noise, dust, and mud.

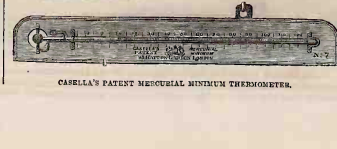
The subject a line of Haworth's rails from Pendleton to New Bailey-street (about five miles) has been in daily operation for above two months, giving great satisfaction, it is stated, both to omnibus-proprietors and to the public.



NEW STREET RAILWAY AT MANCHESTER, WITH OMNIBUS PERAMBULATOR.

MERCURIAL MINIMUM THERMOMETER.

THE following description of a new species of thermometer lately invented by Mr. L. Casella, Hatton-garden, and of which we give a representation, is from the pen of Professor Tyndall. The instrument professes to be a mercurial minimum thermometer, and appears to be very serviceable in practice as well as faultless in principle. By means of the annexed sketch the theory of the instrument may be very easily explained. Its peculiarity consists in a small side tube (a b c), of somewhat wide bore, which is connected with the capillary tube of the thermometer. This side tube breaks off abruptly into a smaller-sized tube at b, and soon afterwards terminates in a bulb. In order to set the instrument it is slightly inclined until the mercury in the side tube be brought to b, where the abrupt change of diameter takes place. This operation may, if necessary, be facilitated by tapping, and when it is finished the instrument must be placed in a horizontal position. The mercury in the side tube being at b, the instrument is graduated in such a manner that the mercury in the bore will now denote the present temperature. Let this be 50 deg. Fahr.; should it afterwards increase to 70 deg. Fahr., the mercury in the capillary will not move, but that in the side chamber will rise and fill the small bulb (the latter motion being attended with less resistance than the former). Should the temperature now fall from 70 deg. back to 50 deg. Fahr., there will be no diminution of the column in the capillary tube, but the mercury which had previously flowed into the small bulb will now again flow out of it, and be found at the end of the column, now reached 60 deg. Fahr., the point at which the instrument was set; should it fall below this point the mercury of the thermometer comes at once into play. It will now be found that the abrupt surface at b has a sufficient power over the mercury in contact with it to retain it there in spite of its endency to recede to a, owing to the diminution of temperature. If, therefore, the temperature become 50 deg. Fahr., as there is no fall in the side tube below 60 deg. Fahr., this must necessarily take place in the capillary tube, the mercury of which will now be found at 50 deg. Fahr. Lastly, should the temperature again rise to 70 deg. Fahr., the mercury will not alter its position at 50 deg. Fahr. in the capillary tube, but will rather flow from the side chamber at b into the small bulb. We are thus furnished with a minimum thermometer in which the liquid employed is mercury, and in which no separate index is necessary.



CASELLA'S PATENT MERCURIAL MINIMUM THERMOMETER.

From a short trial which has been given at Kew Observatory to one of these instruments, there appears to be no practical objection to its arrangement, and it seems worthy of a place amongst minimum thermometers similar to that occupied amongst maximum thermometers by the instrument of Professor Phillips.

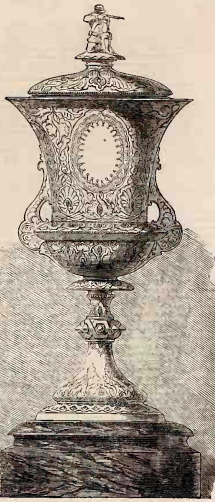
CHALLENGE CUP OF THE COUNTY OF LANCASTER RIFLE ASSOCIATION.

This handsome piece of plate was manufactured by Messrs. Dismore, of Liverpool, for the County of Lancaster Rifle Association, and was one of the numerous prizes offered by them for competition at their late meeting at Altcar, near Liverpool. The cup is of silver, partly gilt, and richly embossed, and is of the nominal value of one hundred guineas. It is surmounted by a trophy of colours, rifles, drums, &c., and upon each side is the figure, in frosted silver, of a rifleman kneeling in the Blythe position. To become the property of any person it must be won by him three times consecutively, and he competed for with the Rexield rifle. No person can compete for it who has not previously won a prize at the same meeting, and who is not also an effective volunteer of the county. Mr. Handley, the first successful competitor for it (having previously won the prize given by Mr. Barnes, of Liverpool), is Lieutenant in the 17th Lancashire Rifles, whose head-quarters are at Burnley, Lancashire. Our Engraving is from a photo-graph taken by Captain Dwyer, of the 5th Royal Lancashire Militia.

CUP PRESENTED BY THE PRINCE OF WALES TO THE CAMBRIDGE UNIVERSITY RIFLE CORPS.

The Prince of Wales recently opened the new practising-ground for the Cambridge University Rifle Corps, of which he is honorary Colonel, and at the same time his Royal Highness presented a silver cup to be competed for by the corps. On the conclusion of the ceremony the ex-champion, Mr. Rose, was called from the ranks to try a few shots at the new electric targets presented, on behalf of the ladies of Cambridge, by the Hon. Mrs. Neville, wife of the Vice-Chancellor, when he made five shots at 800 yards, scoring three "centres," a "below," and a "right." The Prince, after congratulating Mr. Rose, quitted the ground.

The cup presented by his Royal Highness, of which we give an Engraving, is a parcel-gilt silver cup, nearly 2ft. high, richly chased in the Moresque or Saracenic style, with jewelled bosses at the base. His Royal Highness's arms enriched are on one side, and the other side bears the following inscription:—"Challenge cup presented by his Royal Highness the Prince of Wales to the Cambridge University Rifle Volunteers, 1861."



CHALLENGE CUP PRESENTED BY THE PRINCE OF WALES TO THE CAMBRIDGE UNIVERSITY RIFLE CORPS.

THE AGRICULTURAL HALL, ISLINGTON.

On Tuesday week Lord Berners laid, with the customary ceremonial, the foundation-stone of the Agricultural Hall, which is in future to take the place of the Baker-street Bazaar for the Christmas exhibition of the Smithfield Cattle Club, and for meetings and other purposes connected with the promotion of agricultural improvement. In the evening the shareholders and visitors dined together at the London Tavern in celebration of the event of the day—Mr. Jonas Webb presiding. Lord Berners gave "Prosperity to the Agricultural Hall Company." No one, he said, had felt more strongly than he had the necessity of increasing the accommodation for the annual exhi-bition of the Smithfield Club, and he rejoiced that that necessity was now about to be met by the erection of a building which would afford ample convenience for every class of exhibitors, and at the same time a place of reunion for exhibitors and agriculturists generally. He was happy to learn that the shares in the Hall Company had been all taken up, and that two-thirds of them in number, and four-fifths of the capital in amount, were held by members of the Smithfield Club.

The building will occupy an extensive area in Liverpool-road, but a few hundred yards from the Angel at Islington. Its capacity will be very much greater than that of the Baker-street Bazaar, and it will contain the most ample accommodation for the exhibition of cattle, sheep, hogs, agricultural implements, and roots. The building will be composed chiefly of brick, iron, and glass. The principal front will be in Liverpool-road, and its most striking features will be two towers, one on each side, each 95ft. in height. The space between will be partially occupied by the spring of the roof, the arch being filled in with wrought-iron foliage and glass. On one side of the main entrance there will be a police-office, and a parcel-and cloak room; on the other side there will be an inquiry-office, a post-office, and a telegraph-office. The body of the building will be fitted up for the exhibition of cattle. A space of 384ft. in length and 217ft. in width will be covered by an arched roof of iron and glass, and will be surrounded by a gallery 36ft. in breadth, supported by iron columns 24ft. apart. The span of the roof will be 130 feet. Behind the cattle show there will be a place for the exhibition of pigs. This division will be 150ft. square, and will have a ridge-and-furrow roof of wrought iron. In addition to the glass in the roof the walls will be pierced by numerous windows. The plans also include first and second class refreshment-rooms. The entire length of the building will be 500ft.; the breadth, 220ft.; and the superficial area, 110,000ft.

LORD BERNERS LAYING THE FOUNDATION-STONE OF THE AGRICULTURAL HALL, ISLINGTON.

LONDON: Printed and Published at the Office, 198 Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by GEORGE O. LUGHTON, 198, Strand, aforesaid.—SATURDAY, NOVEMBER 16, 1861.

THE ILLUSTRATED LONDON NEWS.

No. 1118.—VOL. XXXIX.] SATURDAY, NOVEMBER 23, 1861. [WITH A SUPPLEMENT, FIVEPENCE

M. FOULD AND FRENCH FINANCE.

ANOTHER decided move towards constitutional government has just been made by Imperial France, one the full importance of which it would be difficult to over-estimate. It has not been forced upon the Emperor from without; it is not, properly speaking, the result of public opinion, but it comes as the inevitable consequence of the self-exhausting tendency of those principles of government which have been in unchecked operation for the last ten years in the French empire, and hence it may fairly be regarded as permanent. The power which is cast down by external agency may, under altered conditions, rise up again and reassert its supremacy; but the power which, unassailed and almost unchallenged, falls to pieces owing to its own inherent vices of constitution can seldom, if ever, be reconstituted. Napoleon III. has parted with the main prerogative of Imperialism because he found that he could not much longer retain it with safety to himself and his dynasty. But let us do him the justice to remark that he has parted with it gracefully; that he has bowed to necessity with a frankness and dignity of manner well calculated to conceal from the world the humiliation of the act: and that no exercise of his prerogative over the realms of finance has become him half so well as that by which he has finally surrendered it.

The supremacy of the purse is just now asserting itself with extraordinary vigour against the oldest, most compact, and most formidable of the despotisms of Europe. In Russia and Austria it is still resisted, but only, as it seems certain, to achieve for itself a more crushing triumph at last. The sagacious ruler of the French people has foreseen in time—for we hope that his prescience is not too late—the uselessness of struggling with what, in the end, would strangle the empire, and, holding out his hand to it, he says, "We will be friends." In fact, it has recently become too evident, not merely for denial but for reasonable dispute, that despotism, whether founded upon hereditary claims or upon universal suffrage, carries within its bosom the active causes of its own dissolution. The Sovereign who says of himself, "I am the nation crowned," whencesoever he may profess to derive his title and his authority, occupies an unsafe position, because it is a position which demands inexhaustible resources. In the case of the French Emperor it was doubly hazardous. The *parvenu* Monarch who has vaulted into his throne over the mangled remains of a former Constitution, and who holds in his sole keeping the purse of the nation, has already put it out of his own power to defend that purse against ruinous demands. When a people resign into the hands of a single chief all the symbols and safeguards of their political liberty, they look to he repaid in some form or another. Their expectations grow in proportion as they are fed. The authority which should control their public finance is too weak to cope with the ever-increasing crowd of clamouring suitors. National extravagance begets and is stimulated by private extravagance. In hundreds of quarters simultaneously expenditure leaves income so far behind it as to cease taking account of the distance between them; and then, when the abyss of insolvency visibly yawns before it, there remains no alternative to financial ruin and its concomitant revolution but a speedy return to those wholesome restraints which nothing but constitutional authority can exert over national finance.

Such has been the natural, we might almost he justified in saying the inevitable, course of affairs in France, originated by the fact that the power of the purse was in the hands of the Emperor. His outgoings became first extravagant, then frightful, and now, at least, impossible of continuance. We know not how far his judgment and his will went with his profusion, but it is extremely questionable whether, if his own desires had been as economical as they are supposed to have been unsparing, he could very materially have stayed the advancing tide of expense. The Emperor felt himself obliged to keep the vanity and excessive egotism of France fully gratified as a sufficient compensation for the political freedom of which he had deprived her. It became necessary to trick her out in new robes of glory, to surround her with proofs of her own majestic position, to soothe the poverty of her poor with largesses, to be a munificent patron in all that concerned her comfort or refinement. But France could not rejoice in herself as the earthly Providence that regulates the destinies of other nations, always ready to intervene

THE CIVIL WAR IN AMERICA: THE FIGHT AT BALL'S BLUFF, UPPER POTOMAC—DESPERATE EFFORT MADE BY THE 15TH MASSACHUSETTS REGIMENT TO CLEAR THE WOODS BY A BAYONET CHARGE.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE PAGE 514.

and always powerful to make her intervention decisive, without having on foot an immense and thoroughly-equipped army, nor without expanding far beyond the exigencies of self-defence her naval power, while, on the other hand, the very existence and the immense strength of her army and navy created the necessity of giving them some occupation. The first false step involves all the rest. The seizure and monopoly by one man of all political rights, including the rights of the purse, precluded the practicability thenceforth of a duly-regulated finance. The Emperor, popularly imagined to be the master of boundless national wealth, and to be irresponsible in regard to his distribution of it, felt himself constrained to transgress all the known laws by which money comes and goes in order to meet the expectations of his subjects, and in less than ten years the stern teaching of events has convinced him that the Government which, on account of its own origin and constitution, has brought itself under obligation to purchase glory, predominance, splendour, labour, bread, and amusements for its subjects may have unlimited authority, but to very little purpose or duration unless it have also unlimited funds.

The Nemesis has come upon the Emperor and his Government in the shape of a bad harvest; the conscience which reproaches it in the shape of M. Fould. It is to the credit of that statesman that, though devotedly attached to the Emperor, and a friend, ostensibly at least, to Imperialism, he has unceasingly protested against the system of reckless expenditure, and, about eighteen months ago, threw up his high and lucrative position because he found himself unable to control the extravagance of the Court. But, in once more accepting responsibility, he has wisely secured for himself beforehand the conditions necessary to its free exercise. In his memorial to the Emperor he lays open to the light the financial chasm in which France is in danger of being engulfed. Within ten years he tells his Imperial master, gently, indeed, but firmly, that, without taking into account the additions made to the funded debt of the country, the loaning debt, or aggregate amount, during that short period, of the annual excess of expenditure over income has reached the alarming height of forty millions sterling. He has not even included liabilities in this calculation. With the courage of true fidelity he puts his finger upon the cause of this evil—namely, the supplementary and extraordinary credits which Napoleon III. has been in the habit of opening, in the absence of the Legislative Chamber, on the report of any Minister of a Department; and, in very few words, he points out the only means of radical cure. "The real danger for our finances," he says, "lies in the power of the Government to decree expenditure without the control of the legislative power."

The reply of the Emperor to this memorial is as satisfactory as it is characteristic. He frankly admits that M. Fould has hit upon the only efficacious mode of reducing within limits the present financial confusion. He resolutely abandons the power which appertains to him of opening a fresh credit in the absence of the Chamber. He engages to carry the resolution into effect by presenting to the Senate on the 1st of December next a Senatus Consultum making provision for the change. He expresses his hope that, in renouncing a right which equally belonged to the Sovereigns, even constitutional ones who preceded him, he may be doing a useful thing towards ensuring a right distribution of the finances; and he concludes with the following pregnant sentences:—"Faithful to my origin, I neither regard my prerogatives as a sacred deposit which cannot be touched nor as a heritage from my ancestors which must be transmitted to my son. Elected by the people, and directly representing their interests, I shall always abandon without regret every prerogative useless for the good of the public, as I shall likewise preserve unshaken in my hands all power which is indispensable for the tranquillity and prosperity of the country." These are noble words, and have justly excited the admiration of Europe. May they be followed and illustrated, as we are willing to believe they will be, by corresponding deeds!

Last year the Emperor spontaneously accorded to his Legislative Chamber the right of free discussion; this year he graciously surrenders to them the power of the purse. It is true that, for the most part, the members of that body owe their seats to the intervening influence of the Executive in the provinces, but it is the less certain that many of them will not have the courage to forget the source from which they have derived their honours. They made good use of the privilege of free speech last Session, and were not interrupted. They will probably avail themselves to a like extent, and with the like freedom, next Session, of their newly-restored power over the public purse. The lever of government will be in their hands, and there is nothing reasonable which, by means of it, they will not be able to secure. Despotism, in fact, has quietly passed away, and Constitutionalism, before its appearance, receives from its hands the key of supreme authority. Cæsar without the purse is but a limited Monarch. We heartily congratulate France on her prospects, and trust that she will this time know both how to enjoy and to improve them.

But we have hardly less reason to congratulate Europe and ourselves. The main cause of her and our disquietude, the chief pretext, if not justification, of our immense and abnormal expenditure, suddenly vanishes and is gone. The foreign policy of France, so far at least as it will need arms to give it effect, can no longer be matured and directed in secrecy. Whenever it requires money it will be discussed in the Legislative Chamber. The reign of uneasiness and suspicion may now come to an end. The New Year's address to the diplomatic body will not hereafter reveal to the nations of Europe the fate in store for them. M. Fould, at whose back stood national bankruptcy, has convinced France and her Emperor that mystery and silence inflict upon the Power that resorts to them penalties much more to be dreaded than advantages to be desired. We may now at last look forward to a settled peace, and, surely, to a sensible diminution of our fiscal burdens. The troubled dream of a feverish night gives place to the cheerful realities of returning dawn. The nightmare has faded into nothingness, and we awake to find our limbs once more free. Let us accept the blessing with thankfulness, and let us see to it that we allow no waking fancy to rob us of our returning conviction of security.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The *Constitutionnel* of Tuesday announces that the Emperor will pay on Queen Victoria the International Royal Salute of 101 guns.

Prince Napoleon is expected to leave shortly for England, to preside at the French Commission of the Universal Exhibition. On Saturday the Prince entertained M. Fould at dinner. It is said that the latter desires to see his Highness placed at the head of the Privy Council.

The decree for convoking the Senate on the 2nd of December has appeared in the *Moniteur* of Monday morning.

The Paris journals have been occupied with speculations on the measures that M. Fould will resort to in order to meet the great financial deficiency. As the war expenditure has been clearly the prime cause of the deficit, attention is naturally directed to it in the quarter in which the greatest economy could be effected, and accordingly we have the *Pays* and the *Constitutionnel* hinting at a reduction in the forces, the latter journal asserting that M. de Persigny has submitted to the Emperor a project for disarmament, but which would maintain the actual organisation. The only two new taxes pointed out are one on theatres and another on lucifer matches.

M. Thiers, it is said, is tired of retirement, and has made a bid for public employment in a letter to the Emperor on the present financial and political situation. The *Moniteur* contradicts a story which had received general circulation about M. Thiers having written a letter strongly condemning the reception of M. Fould and the French Ministry.

At the trial of Mirès it will be remembered that among his partners who were pleased at the bar at the same time was Count Portalis, but who was acquitted of the criminal charge of swindling, of which Mirès was found guilty. Subsequently the managers of Mirès' estate brought an action against the Count for the restitution of the sum of 1,700,000f. which constituted Mirès' share in the profits of the loan, for which their services said to be rendered to the bank. The Tribunal of Commerce on Tuesday gave judgment, and ordered Count Portalis to repay the above sum to the shareholders, and condemned him in costs.

The *Moniteur* publishes an Imperial decree promulgating the Additional Act of Seventeen articles, dated on the 2nd of July last, between France and England for facilitating the conveyance by post of printed papers, manuscripts, and patterns of commerce, and fixing the list of January next for the convention to take effect.

SPAIN.

The Queen is enceinte. Senor Rios Orosco has been sent on an extraordinary mission to Portugal, bearing O'Donnell's embroidered. The address of the Congress has been read: it approves all the points of the Queen's speech.

PORTUGAL.

The new King arrived at Lisbon on the 14th inst., and took the oath to the Constitution, in the presence of the Cortes, of State and of the Regent, on the following day. [A Portrait of his Majesty is given in the accompanying Supplement.]

The utmost tranquillity prevails throughout the country.

SWITZERLAND.

In the elections at Berne for the Council of State, which took place on the 16th, M. Fazy was defeated, and replaced by M. Dumpere, on what is called the Fusion party. The *Temps* of Paris says that this election is looked upon as a victory for the Federal party in Switzerlaud here without him, and several of them have announced that they will refuse to serve in his absence.

The Federal Councillors have returned to the Valley of Dappes, in order to complete their protocol on the recent violation of Swiss territory here by the Imperial troops in the late operations.

The Federal Council has taken peace measures with Geneva.

PRUSSIA.

King William has conferred the cross of Commander of the Order of the House of Hohenzollern on the Grand Duke of Saxe, on the Grand Duke of Baden, and on Prince Frederick of the Netherlands. His Majesty has also conferred the Grand Cross of the Black Eagle on the Duke of Mecklenburg-Schwerin.

The rejection, elections, or choice of the persons who are to have votes for the return of members to Parliament, took place in Prussia on Wednesday. The result in Berlin is decidedly in favour of the Liberals and Progress received a signal from the provinces soon to indicate a result generally similar throughout the country.

In the diet at Frankfort, on the 14th, at Frankfort, on Monday week, Prussia declared against the offer of Hanover to build a certain number of gun-boats for the defence of the German coasts, on the ground that it was a question exclusively for the Federal Diet, and called on that body to come to an early decision on her proposal for the creation of a Federal Fleet.

AUSTRIA AND HUNGARY.

The Austrian Government has officially informed all foreign Courts that the accession of Hungary has been proclaimed, and will duly country consents to accept the privileges granted by the Crown, instead of claiming those it possessed before the revolution of 1848.

The *Gazette d'Augsbourg* says that the Counties of the high nobility of Hungary appear determined to live in retirement. They seem resolved to meet the measures of the Government by passive resistance, and this, it is thought, will embarrass Government much more than active opposition, or possibly both.

According to a letter from Trieste, dated the 12th inst., there has been assembled a complete Austrian squadron in the Adriatic under the command of Vice-Admiral Maximilian, Count de Lord High Admiral, consisting of fifty vessels. The crews are chiefly Sclaves, Dalmatians, and Germans. The Admiral has left Trieste quadrilateral for Ancona; it is added, "the Austrian Government is now constructing ten ships of war, among which are two armed frigates, and six sailing-vessels are being transformed into steamers."

RUSSIA AND POLAND.

The astronomer Otto Struve has received from the Emperor Alexander the sum of 125,000 francs to enable him to establish a complete observatory on Mount Ararat.

A telegram from St. Petersburg, dated Nov. 13, reports the navigation closed—12 degrees frost (*Réaumur*).

The Russian authorities at Warsaw, not satisfied with the effect of the declaration of martial law, which is openly derided by the people, are said to intend proclaiming "a special and formal state of siege."

The shortage and sale of bread, the administrator of the vacant archiepiscopic of Warsaw has been arrested because he permits a refusing to cede Church property, because he has written a letter deemed disrespectful by General Liders.

TURKEY.

The Marquis de Moustier, the new French Ambassador, has arrived at Constantinople.

We read in the *Patrie* that during the 8th and 9th of the present month 340 ships of commerce passed the port of Constantinople, the largest result that has been obtained for fifty years. A great number of the ships came from the Black Sea, from the Sea of Azoff, or from the Danube, and were laden with wheat.

The Sultan has nominated Nakim Pacha, formerly Minister of War, to be Governor-General of the Province of Bagdad. He will unite with that office the duties of Commander-in-Chief of the army of Irak and of Hedjaz.

Riza Pacha has been removed from Smyrna to the inferior government of Candia.

The Armenian Patriarch has resigned. A commission has been appointed to settle the affairs of the community.

The insurgents in the Herzegovina have cut off all communication between Trebigne and Ragusa. Every day the struggle is assuming more formidable proportions. The Turkish army has been largely reinforced; and the insurgents are receiving constant accessions to their strength. A sudden visitation of snowy weather is said, however, to have driven Omer Pacha already into winter quarters.

INDIA.

The Bombay mail brings scanty intelligence to the 28th ult.

Lord Canning has published resolutions permitting the absolute sale of waste lands and the redemption of the land revenue on the conditions of clearance and cultivation. The price of unassessed lands is not to exceed five shillings per acre, and that of cleared lands is not to be more ten shillings per acre. These rates are to rule for five years.

Colonel Baird, in a report on the Andaman Islands, recommends the permanent settlement of the land and water revenue in the north-west provinces.

NEW ZEALAND.

The intelligence conveyed by the last mail from New Zealand is more satisfactory in its nature than that which of late has too frequently reached us from the colony. The peace which some six months since was concluded between the Governor and the native chiefs remains undisturbed, though its long continuance cannot be predicted with any certainty. When the mail left the Governor had just prorogued the General Assembly, and had an opportunity at the same time of hearing from the native Parliament an expression of the estimation in which his views and his policy were held, and of having before them letters which he had received from the Imperial Government conveying assurances to the same effect.

THE CIVIL WAR IN AMERICA.

By the arrival of the Cunard steamer Arles we have news from New York to the 6th inst.

SETTLEMENT OPERATIONS ON SEA AND LAND.

The expeditionary fleet had weathered the fierce gale which beset it, only one tug-boat, one ferry-boat, one gun-boat, and a steam-transport laden with horses and stores, having got back disabled. On Saturday night, the 2nd inst., the fleet was seen, in fine order, within thirty miles of Bull's Bay, on the coast of South Carolina. Bull's Bay is twenty-five miles north of Charleston. It is generally supposed that Captain Dupont will effect a landing at this spot. His instructions, it is said, are very general, and leave him free to act as he may find at such and such points of the Southern coast as he may see fit.

The blockading squadron continues to report the capture of English vessels trying to run into the forbidden ports.

The Potomac is still commanded by Confederate batteries, and the "grand army" in the neighbourhood of Washington still maintains its inactive attitude.

In Western Virginia General Floyd had attacked General Rosencranz (Federal) at Gauley Bridge without success. Two brigades were sent to cut off the retreat of Floyd, whose forces numbered about 5000, and hopes were entertained at Washington that the movement would be successful.

In Kentucky a Federal General captured Prestonburg, in the extreme western part of the State. The Confederate General retreated six miles further up the country to make a stand.

In Missouri the Confederate Generals Price and M'Culloch had united their forces, numbering 20,000 men, at Neosho, in the south-western angle of the State. General Fremont's head-quarters were at Springfield when the news of the junction of the two chiefs reached. The intelligence created great indignation through the camp; many officers signified their intention to resign, whole companies laid down their arms. General Fremont expostulated with both officers and men, and brought them not to abandon their posts. He issued a farewell address to the "Missouri army," calling upon them to continue to manifest the same cordial and enthusiastic support which had been accorded to him, and promising that he would lead them on with Freedom to Arms. Fremont's successor is General Hunter, his former second in command—a name which was received throughout the telegraph as "Hanks."

THE ADJUTANT-GENERAL'S REPORT.

In order to satisfy public opinion that the action of the Administration was justifiable in reference to Fremont, the Cabinet has given to the public the report of the Adjutant-General on which they acted. It is a tissue of invectives against the General, and charges him with Hunter and the Quartermaster and Paymaster-General figure as prominent accusers. The following sentence will give the reader a fair idea of the general tone and style of this remarkable document:

The opinion entertained by gentlemen of position and intelligence who have separated and associated with General Fremont is that he is more fond of the pomp than of the stern realities of war; that his mind is incapable of fixed attention or strong concentration; that by his misconceptions and delays since his arrival in Missouri the State has almost been lost; and that if he is continued in command the worst results may be anticipated.

THE RETIREMENT OF GENERAL SCOTT.

On the 31st ult. General Winfield Scott withdrew from active service on the ground of his physical infirmities. "I am old, and have, for three years," he says, "I have been unable to mount a horse or to walk more than a few paces at a time, and that with much pain, debt and new infirmities—dropsy and vertigo—admonish me that repose of mind and body are necessary to add a little more to a life already protracted much beyond the usual span of man." The resignation was regretfully accepted, but his full pay and allowances are continued to him during life. The Cabinet were divided on General Scott's residence to bid him farewell. An affecting scene took place, in which General Scott could not make a speech, and shook hands with every member of the Cabinet in succession. General Scott was born in Eastern Virginia on the 10th of June, 1786, and is consequently now in his seventy-sixth year. He served in the war of 1812. He was taken prisoner by the British at the battle of Queenstown, and was severely wounded at Lundy's Lane. He was Chief in the Mexican War, as is well known. In 1852 he was the Whig candidate for the Presidency, but was defeated by Franklin Pierce, the present Ambassador at Rome for the stronger party. Since the revolution commenced it is unnecessary to say that he has repudiated all notion of allegiance to his native State, and devoted his life and his sword to the cause of the Union. General Scott, accompanied by several members of his family, is now on his way to Europe.

THE NEW COMMANDER-IN-CHIEF.

General M'Clellan received the post vacated by the veteran Scott. He was born in the city of Philadelphia on the 25th of December, 1826, and is therefore not yet thirty-five years of age. In the general order to the army announcing his promotion he says:—"Reposing trust in the district may well accompany the assumption of so vast a responsibility; but, confiding in the excellent qualities of his troops and the favour of Providence to the just cause, the result of success." Several municipal authorities of his native city having presented him with a sword, he replied very modestly:—

Nothing that I have yet accomplished would warrant this high compliment: it is for the future to determine whether I shall realise the expectations and hopes which are now centred in me. I trust and feel that the day may not be distant when I shall return to the plain dress of civil life, and to the enjoyment of the balance of my life among the people from whom I have received this splendid gift. The war must be carried on with the energy now in the future forbearance, patience, and confidence. With these we can accomplish all.

THE CONFEDERATE STATES.

The Southern journals continue to urge on the planters the necessity of abandoning the cultivation of cotton and tobacco, and the dedication of the land to the production of cereals and meat. The New Orleans *Delta* remarks that prices of breadstuffs had advanced to most exorbitant prices.

JEWISH DISABILITIES.

A cavalry regiment having been raised in New York city, of which the majority were of the Jewish faith, a Rabbi had applied for the chaplaincy. The Secretary for War replied that the Act of Congress only allowed the appointment of chaplains who belonged to "some Christian denomination." The restriction is generally condemned, and public opinion demands that at the coming Session of Congress the Act be modified in a liberal sense.

METROPOLITAN NEWS.

Four lives were saved by an escape-man at a fire in Commercial-road East on Wednesday evening.

The Worshipful Company of Mercers have voted a donation of fifty guineas to the National Life-boat Institution.

A dental hospital has been opened in Great Portland-street. It is established for the purpose of attending to the poorer classes gratuitously in case of necessary surgical and make a moderate addition for the comforts.

Sir Dominick Daly, the newly-appointed Governor of South Australia, was entertained at a dinner at the Reform Club on Saturday last, previous to his departure for the colony.

At the Greenwich civil-sittings, in the Isle of Dogs, the flooring of a large room gave way a few days ago under the weight of the old-men with which it was filled, and the next general room upon these persons who were in the apartment below, four of whom were seriously injured.

The Rotunda at Woolwich, appropriated for the preservation and display of models and ancient military trophies, has been ordered to be closed to the inspection of the public until after Christmas, in order to carry on some necessary repairs and make a considerable addition to the contents.

The annual festival in aid of the City Orthopedic Hospital was held on Wednesday, at the Albion Tavern. A considerable number of gentlemen sat down to dinner, under the presidency of Mr. J. Dodd, M.P. The list of subscriptions amounted to £500. His Royal Highness the Duke of Cambridge has intimated his willingness to preside at the next anniversary festival.

The births of 876 boys and 808 girls were registered last week in London. In the ten corresponding weeks of the years 1851-60 the average number was 917. ... The births in London in 1861 were the last week of October; they rose to 1291 in the following week, and to 1288 in the week that ended on Saturday last. The estimated average number of deaths for the weeks in the ten years 1851-60, corresponding with that for which the present return is made, is 1224.

The Ethnological Society commenced its sessions on last Wednesday evening under the presidency of Mr. J. Crawfurd, who read a highly interesting paper "On the Ancient Inhabitants of Britain, in relation to Geography," in which he pointed out the constant relation which exists between the physical character of the soil and the kind of people supported by the quality of the race and physical character of the country to which the inhabitants have exercised considerable discussion.

As a proof of the severity of the frost during the past week it may be mentioned that a flock of sheep were driven across Westminster Bridge on Wednesday morning, the river between Hungerford and Westminster Bridges being completely frozen over. A number of persons on the Metropolitan Railway Bridge, carried on at about 150 feet above the bed of the river, proceeded to the centre of the bridge, and there, with a pickaxe and hammer, whole flock frequently hovering immediately above the man's heads, as though in consultation with their companions below.

At a recent sitting of the Court of Commons Council the report of a committee was presented in the shape of an amendment to a former matter to be held on the vacant ground of smithfield, instead of, as now, in Newgate-street and Giltspur-street. Speaking on this report, Mr. Deputy Saward said the change requires that a new street should be made from Farringdon-street to the new market, but as the owners of the property in Farringdon-street were neither therefore recommend that a fresh Act should be applied for, either to be passed this session or next, to enable the Council to carry out the works that are necessary roads for the purpose. This report was agreed to, though not without a sharp opposition.

An influential deputation, representing several metropolitan parishes, waited upon Lord Palmerston on Wednesday to urge upon his lordship the necessity of constructing a new embankment on the north side of the Thames. The gentlemen stated that if this were not done, the embankment would be rendered useless, and the sewage of the north side would be carried to the other side of the river, and thus be brought back with the tide. Lord Palmerston, in reply, said the subject was attended by a great deal of difficulty, and was one which was intimately connected with the Thames Embankment Bill empowering the Metropolitan Board of Works to construct the new embankment. The original plan of the embankment was submitted to his Lordship by Mr. Williams, M.P., Dr. Brady, M.P., Mr. Ayrton, and other gentlemen. Lord Palmerston promised the deputation his influence to secure to the application of the memorialists, and promised to recommend the matter to the Board of Works.

The fifteenth annual conference of the Evangelical Alliance was opened at Freemasons' Hall on Wednesday morning. In the absence of the Earl of Shaftesbury, Mr. Alderman Salomons presided. The latter gentleman, in his conviction that the Alliance was accomplishing a great work, inaugurating in a great degree the principles which they had adopted in effecting in the ecclesiastical laws of Sweden. He described the "Rosary and Reviews," and explained that practically that confederation was "Protestant" but that to the rest of their common Christianity." Extensive arrangements, he said, had been made for the reception of delegates, for which purpose the Council of London during the exhibition year. The "practical resolutions" were read by the secretary, the Rev. Dr. Steane, and were of a purely denominational character. Among the subjects proposed for consideration were "The present Duty of Religious Persons in Spain," "Rome and Protestantism," and "Sunday Desecration." Religious persecution

THE CIVIL WAR IN AMERICA: RETREAT OF THE FEDERALISTS AFTER THE FIGHT AT BALL'S BLUFF, UPPER POTOMAC, VIRGINIA.—FROM A SKETCH BY OUR SPECIAL ARTIST.

ILLUSTRATIONS OF THE WAR IN AMERICA.

PREVIOUS Numbers of this Journal have contained some particulars of the unsuccessful attempt of Stone's and Bank's columns to effect a landing on the 21st ult. on the Virginian shore of the Upper Potomac, near Leesburg; and we now give two Illustrations, from Sketches by our Special Artist, in connection with this seemingly rash enterprise on the part of the Federal forces. The whole affair appears to have been ill-planned, and adds another to the grievous blunders committed by the Federal commanders. It is hardly credible that 1800 men should have been sent across a river in the face of an enemy most strongly posted, and left unsupported when 30,000 of the division to which they belonged were within sound of their rifles. The small body, however, fought gallantly throughout the day against three times their number. One incident of the fight—a desperate effort made by the 15th Massachusetts Regiment to clear the woods by a bayonet charge—is illustrated on our first page. This is believed to be the only instance in which a bayonet charge has been attempted by a regiment in the Federal army. The 15th Massachusetts fought most gallantly throughout the whole affair, although they knew the odds to be greatly against them; and the example set by their officers, mostly students from Harvard College, Cambridge, was most praiseworthy. Their efforts, however, were not crowned with success, as the deadly fire of the Mississippi riflemen drove them back each time; and, as evening drew on, seeing the utter uselessness of contending against their powerful enemy, the few surviving combatants slowly fell back to the river-side with but two line officers remaining. In the endeavour to recross to the island, midway between the Maryland and Virginian shores, from which they had started, the general organisation of the force was quite abandoned, each company acting separately. The officers and men who could swim started, half naked, over the river, and the boats were kept awhile for the wounded. This, however, lasted but a little time. All order was quickly lost. A large flat boat was sunk by overcrowding, and scores of men perished, some by drowning and some by the fire of the Confederates, who now crowded the high bank and poured an incessant fire upon the scattering fugitives. The river channel was thickly strewed with the dead and dying, but the bearing of the survivors is reported to have been strangely quiet—the bewilderment, perhaps, of desperate hopelessness. Hundreds, probably, were here sacrificed. This much is certain, that out of the 1800 who landed scarcely 600 returned. The retreat of the Federalists forms the subject of the accompanying Engraving.

THE OLD FOREIGN OFFICE.

THE accompanying Engraving represents that which was the front view of the Foreign Office in Downing-street, now in process of demolition. Like the rest of the history of that dark narrow street, in which, in a series of unsightly, not to say mean, houses the public business of this country has been for many years carried on, the annals of the old Foreign Office are somewhat obscure. The numerous ancient and modern historians of the buildings of London have not thought it worth a notice, the probability being that there was really no story attached to it. All that is certainly known of it is that as it recently stood, in its confessed ugliness and inconvenience in an angle of Downing-street, it was composed of four private houses, which were gradually purchased on each side of a centre one. Two of these houses looked into St. James's Park, and two of them fronted Downing-street, and the back of the whole pile looked into Fludyer-street. The room in which the Foreign Secretary "received," and in which sometimes Cabinet Councils were held, was, on the whole, a good one, having a bay window looking into the park, and being hung with old tapestry. So long ago as the period when Carlton House was pulled down and Buckingham Palace in progress of erection, a Royal Commission sat to take into consideration the state of the public offices, and an elaborate report was presented, containing recommendations for the erection of a block of buildings, on a uniform plan, for the accommodation of Ministers in the transaction of the business of the State. Nothing, however, came of it; and, although the subject was from time to time mooted in Parliament, and inquiries made and plans suggested, nothing was done except the extension and decoration of the Whitehall front of the Treasury buildings by Sir Charles Barry. In the meantime the question was in the way of one settlement by the fact that some of the old barns in Downing-street, and the Foreign Office specially, were on the eve of tumbling down. By the elegant and decorative aid of beams and girders the walls were secured for a time; but at length even this standfast system was found insufficient to prevent the crumbling to pieces of the mortar and brickwork and in the course of this year the head-quarters of our diplomacy were transferred to Pembroke House, in Whitehall Gardens. As soon as the old building has been levelled with the ground a new range will be commenced, a vote having been taken for that purpose in the last Session of Parliament. It is not necessary here to refer to the famous "battles of the styles" which took place in the House of Commons from time to time, and in which Lord Palmerston so vigorously defended the Italian or Palladian (we never understood exactly which) against the advocates of the Gothic. As matters now stand, we believe that the building to be erected will belong to a style which is essentially "Palmerstonian," Mr. George Scott, the celebrated Gothic architect, having, with a grim humour, concocted a plan which, it is said, owes a good deal to the suggestions of the Premier, and which will be broadly Italian with an occasional infusion of Gothic.

At any rate, our Foreign Minister will at length be enabled to conduct the affairs of his department without going in fear of his life.

THE OLD FOREIGN OFFICE, DOWNING-STREET.

THE RUSSIAN UNIVERSITIES.

PARTICULARS of the disturbances among the students in the Universities of St. Petersburg and Moscow have recently been given in this Journal. With the little information which we receive from Russia, derived as it principally is from Russian sources, and further distorted in its roundabout passage to us, it is difficult to arrive at the truth in this matter, or to know definitely what are the grounds of contention. It is, therefore, with especial pleasure that we transfer to our columns the following account of the state of affairs in the Russian Universities by an accomplished Englishman residing at St. Petersburg, and intimately acquainted with the details of Russian life:—"The universities are the best institutions—almost the only really good ones—which exist in Russia; for which reason the retrograde party, dreading the dissemination of sound liberal ideas through the teaching of the University professors, are now making the most strenuous efforts to limit their influence to the narrowest possible sphere. The annual payment for students at the Universities of St. Petersburg, Moscow, Kieff, Kharkoff, Kazan, and Dorpat, was fixed during the reign of the Emperor Nicholas at fifty roubles (about eight pounds a year); but it was at the same time arranged that under their names on the books and those persons who did not wish to enter their names on the books and to submit themselves to the University regulations might attend the lectures without any payment at all. Young men whose parents certified that they could not afford the expense of a University education for their children were also allowed to become students, to make use of the University library, &c., without contributing a farthing towards the support of the establishment. Moreover, those who were not in a position even to pay for their ordinary expenses of living were aided and sometimes entirely maintained by their fellow-students, who kept up a fund for that especial purpose. It was proposed a short time since, indeed a positive order was issued, that students, and all persons attending the lectures of the Russian Universi-

The ILLUSTRATED LONDON NEWS of next Saturday, Nov. 30, will consist of TWO WHOLE SHEETS, containing a profusion of Fine Art and News Illustrations.

Price Fivepence; Stamped, Sixpence.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, NOVEMBER 29, 1862.

THE fearful storms which have raged on the eastern coast of North America have acquired a strange and almost ghastly interest in the North and South. The magnificent Federal Armada that had sailed to deal the accumulated vengeance of the Federalists upon the Confederates had, it was thought, steered into the very heart of the tempest. The most opposite passions were aroused, and while the Northerners were praying that the armament to which the honour of the Union had been so solemnly confided might escape the fury of the elements the fiercer prayers of the South went up for its destruction—a result which the terrible character of the storms made painfully probable. We are told that a part of the fleet under Admiral Du Pont has been preserved: and we may hear at once that it has not only been saved, but has delivered its blows at Charleston or elsewhere. Meantime affairs on land have assumed a perplexing, not to say menacing character. It was finally decided to remove General Fremont from his command, and the order came suddenly down to him camp, together with the journals which made the fact public. A mutiny of the gravest kind instantly showed itself. So say of the gravest kind because the principal actors were not from the rank and file, but from the officers, those on duty next subordination, and who set the fatal example of declaring that they would not serve except under the General whose somewhat melodramatic faults seem to have endeared him to the forces lately under his command. General Fremont himself had to appeal to their sense of duty to the Republic; and it would appear that a sullen acquiescence was obtained, and that they will condescend to fight under the new leader appointed by the authorities. This may all augur ill for operations in that quarter. An American writer who has been narrowly inspecting the army of the North draws so unfavourable a picture of its discipline, cleanliness, and soldierly bearing as makes the English reports appear almost complimentary. But, in the face of all, Secretary Cameron announces to the nation that the day of reverses is over, and that the Union is now about to proceed from triumph to triumph. More to the purpose, it is distinctly stated that not only will the battalions of Southern slavery certainly cut of the plans of the North, but that slaves who may be used by the army of the Federalists shall, if they belong to loyal owners, be paid for just as if they had been mules or any other article required for the campaign. This may be a rudimentary appreciation of the breach held out to smooth matters in the event of a Northern success making a compromise possible. The Abolition party are enraged beyond measure, and their demonstrations are formidable. Meantime the usual raving of the rabid press is launched against England: and we are told that our case is "Puritan and blackleg Cabinet," that the *Daily News* is the accepted organ of the English Tories (which may be news to our contemporary), and that as soon as ever the war is over "such a train of disasters" shall be inflicted upon England as shall make her the day when she declared that ten millions of Americans were belligerents instead of rebels. It is impossible to believe that such rabid rant and utter nonsense can have weight with educated Americans; but why is it tolerated by authorities that have and use power to suppress a journal for only expressing a wish for peace?

From Russian Poland the news is very melancholy. It is stated that arrests, executions, imprisonments, floggings, and forcible impressment into the army, are taking place in all parts of that unhappy country with a frequency and a severity which are only equalled in the time of the Emperor Nicholas. Nor is this painful intelligence compensated for—could that be possible?—by any information from St. Petersburg that under the Emperor's own eye, and in presence of his entourage, a trial has been conducted safe to allow the University students to emerge from their prison. We do not, however, hear that up to the latest dates any more ladies had been flogged at the police-office. The Americans, who profess themselves so enchanted at the sympathies of the Czar, and who will menace us with a fleet and army with a Russo-American crusade, will have some few sacrifices to make in the matter of civilisation when the proposed coalition takes place. They open private letters, imprison suspected persons, put down anarchy and clamour for hanging again, but they have not attained the point of tying up women and flogging them for Southern proclivities, though, if it be true, as stated, that "the ladies of the North are all for the Southrons," there is no saying what the New York press may not recommend as "vigour of action."

Since Mr. Disraeli's Aylesbury oration, in which he assailed with much truth and power the "Essays and Reviews," and gave the Church of England the worst counsel it has heard since the days of Sacheverel, there has not been any English demonstration of interest. But the meeting which Sir Robert Peel, M.P., has, as Irish Secretary, determined to see things for himself, has turned upon Dr. Cullen and lashed that furious ecclesiastic in his own style—but to far better effect—amid the applauding laughter of Ireland, has afforded much excitement on the other side of the Channel. Even were a priest who pronounced that official decorum would make him safe in the omission of Billingsgate so cruelly and completely deceived. Sir Robert took him at once in hand, convicted him of misrepresentations of truth, and then entered him in the Red Book of three or four years of succession, to the delight of the Roman Catholics no less than to that of the Protestants. It may be all highly irregular in a Secretary, and highly impolitic in a politician; but in the meantime Paul Cullen has been delightfully well castigated, and every body is pleased except himself. Before Parliament rises Leeds has been remarkable chiefly for the absence of every notoriety whom it was sought to get upon the platform, and for Lord Londesborough sending *his* excuse with an extra "h" beyond the exact proportion of the verb: he meant to use one.

Finsbury has a vacant seat. The witty, high-spirited, gentlemanly "dandy" (the term belongs to the time when he was town-talk), Mr. Thomas Duncombe, is no more. The borough will look in vain for another member who will represent its radicalism as it meant its rapidity. Mr. Foley's death occasions a vacancy for East Worcestershire.

The formidable list of "Bankrupts," under which head all insolvents now come, is a new sign of the times. The clearing out of debtors' prisons is another. A social question has been raised upon the working of the new Act which, we think, according to the *New-York Tribune*, was the last act of Mr. Edwin James before leaving England), and it may deserve consideration. The Act confers very great powers upon a malicious creditor, and he can so easily force a careless or absent man into a awkward position before the Court, that it is suggested that society, hitherto severe upon a man branded as an "insolvent," must learn to draw a line between the seamy and the possibly hardly-used victim of some Shylock. The clubs might not unreasonably revise the rule which at once expels the insolvent, and might ordain that it should be competent to a sub-committee to hear the case of an unlucky member, and, if he appeared to be honest, to leave him in possession of his club rights. This would be a wise injustice, and would disarm many a vindictive usurer or college trader who had lured a young fellow into debt, but, at the same time, would ensure a due examination of the case.

The subscriptions to the Shakspeare Fund up to Wednesday evening, including £100 just subscribed by his Royal Highness the Prince Consort, amounted to £1,171.

TERMINATION OF THE CHESS MATCH BETWEEN MESSRS. PAULSEN AND KOLISCH.—This protracted contest, which has now lasted, without cessation of play, for nearly six weeks, was brought to an unexpected and a not very satisfactory conclusion on Monday last. The combatants met on that day, and, after making another drawn game, they mutually agreed that, as the struggle appeared to be interminable, they would call it a drawn battle. The score at the end was: Paulsen, 7; Kolisch, 6; drawn, 17.

THE COURT.

The Queen rode out on horseback on Saturday in the Home Park. The Right Rev. Dr. Baring had an audience of her Majesty to the homage on being translated to the see of Durham. The Bishop was introduced by the Right Hon. Sir George Grey, Secretary of State for the Home Department. Mr. Colquhoun was introduced by Secretary Sir George Grey and received the honour of knighthood from the Queen.

On Sunday, the Queen and Prince Consort, Princess Alice, Prince Arthur, Princess Helena, and Princess Louise, the ladies and gentlemen of the Court, and the domestic household, attended Divine service in the private chapel. The Hon. and Very Rev. the Dean of Windsor officiated.

On Monday the Queen and the Prince Consort walked in the Home Park. Prince Arthur, attended by Major Teesdale, and Prince Leopold took a carriage drive. The Queen and the Prince Consort, accompanied by Princess Alice, drove out in the afternoon, and honoured the Belgian Minister and Madame, van de Weyer with a visit at New Lodge, Windsor Forest.

On Tuesday the Queen walked in the grounds of the castle, attended by Lady Augusta Bruce. The Prince Consort went out shooting, attended by Colonel the Hon. Sir C. Phipps, Colonel Purvoway, and Colonel the Hon. A. Hardinge. Princess Alice drove to Watford in a carriage and four, and honoured the Countess of Clarendon with a visit at the Grove.

On Wednesday the Queen held a Privy Council at Buckingham Palace. Present—The Prince Consort, Earl Granville, the Duke of Argyll, Viscount Palmerston, the Duke of Newcastle, the Right Hon. Sir G. C. Lewis, the Duke of Somerset, the Right Hon. T. Milner Gibson, and the Right Hon. C. P. Villiers. Her Majesty having been pleased to appoint the Most Noble Edward Duke of Somerset to be Lord Lieutenant of the county of Devon, his Grace took the customary oaths. Earl Cowper was sworn Lord Lieutenant of the county of Herts, and Lord Llanover was sworn Lord Lieutenant of the county of Monmouth. Earl Fortescue and Lord Lyttelton and the Queen and delivered to her Majesty the insignia of the Order of the Garter worn by his late father.

On Thursday the birthday of the Princess Royal (Crown Princess of Prussia) was observed as usual in the Royal borough, and no festivities took place at the castle in consequence of the Court mourning for the King of Portugal.

The Duchess of Atholl has succeeded the Marchioness of Ely as Lady in Waiting to her Majesty.

Mr. Thomas Battle has been honoured with a sitting by her Majesty the Queen, to enable him to complete his marble statue for the People's Park, Kingston-upon-Hull.

The Grand Duke and Duchess Constantine of Russia and Princess Olga, with the Grand Duke Nicholas and Suite, were received by his Excellency Baron Brunnow, for Gravesend, to embark on board her Majesty's yacht Osborne for Holland.

The Duchess of Cumbridge and Princess Mary come to town on Monday next, from Brighton.

The Marquis and Marchioness of Normanby have returned to Hamilton Lodge, Kensington, from visiting the Earl and Countess of Derby at Knowsley Park, Lancashire.

The Marchioness of Salisbury has issued cards for the annual conny ball at Hatfield House, which will take place on Thursday, the 24th inst.

The Countess Russell and Lady Gwendoline Russell and Lady Gwendoleena Anson have arrived in Hill-street from a tour of visits.

Viscount and Viscountess Palmerston entertained a select party at dinner on Saturday evening at Cambridge House. Later in the evening her Ladyship received the members of the diplomatic corps and the members of the aristocracy in private circles.

Lord Yelverton has left town, charged with a mission from the Queen and the Prince Consort to visit the reigning King of Portugal.

Mr. and Lady Isabella Schuster have passed through town, en route for Ventnor, in the Isle of Wight, where her Ladyship has been ordered for change of air after her confinement.

The Chancellor of the Exchequer, with Mrs. and Miss Gladstone, has left town on a visit to the Duke of Devonshire at Chatsworth.

CHURCH AND UNIVERSITIES.

The new free church, dedicated to St. Timothy, now building at Liverpool, is to be similar, in its internal fittings, to one which will be retained if the experiment be successful.

The fourth of the bishops sent to New Zealand, which Colonel Palmer, of Reading (one of the founders of that colony in 1840) gave over sometime since to the Bishops of New Zealand and Wellington for the use of the Church, is likely to prove auriferous.

On Thursday week a new mission chapel and school were opened in Bethnal-green, in connection with the parish of St. Matthias, by the Bishop of London. The chapel and school are under one roof, the chapel being on the ground floor.

At a pension of the Honourable Society of Gray's Inn held on Wednesday last, the Rev. Charles Kemble, A.M., Fellow of Queen's College, Cambridge, was elected to the office of Chapel Reader and Afternoon Preacher of the society, vacated by the decease of the Rev. W. H. Hurt.

Wellingborough Church, which has lately been most beautifully restored, was reopened on Tuesday. The church was temporarily required in 1853, but in 1859 the restorations were commenced the work of restoration under the advice and direction of Mr. G. Gilbert Scott.

An address signed by the Dean and twenty-two clergymen has been presented to the Ven. H. O. Jones, late Archdeacon of Essex, on his retirement from that office; and a subscription has been entered into for the purpose of erecting a special fund attached to the Essex Clergy Charity, and to be called by his name.

A testimonial to the memory of the late Lord Hatherley is to be just been erected in St. Philip's Church, Bath-court, Kensington. The principal subject introduced is the Saviour blessing little children, occupying the greater portion of the centre section, and surrounded by a series of figures representing the Apostles.

The consecration of Christ Church, Shield-field, Newcastle-on-Tyne, which had been unhappily delayed in consequence of the illness and death of the Rev. Hilkiah Bedford Nicholson, one of the Hon. Canons of Durham, appointed Bishop of Durham thus making his first appearance in the principal town of his diocese, took place on Thursday.

The Bishop of Calcutta, on his late visit to Cachar—which with all its natural beauty he describes as "a complete paugolin" after rain—told the first stone of the new church of St. Andrew's, at Silchar, where the superintendent and the majority of the neighbouring tea-planters are Presbyterians. He visited Sylhet and Cherra Poonjee, and found that in every small opportunity which the residents seemed inclined to give for any intercourse or logical discussion on the merits of the Bishop's position, he soon able to recommend the appointment of one chaplain for the three stations of Sylhet, Cachar, and Cherra Poonjee. In his visitation of Cachar the steamer was half filled with the somewhat "unpleasant cargo of opium."

For several years past a memorial has been sent out for the bishop to sign and to be the first name on a long roll of churches within the precincts of the City. An Act of Parliament authorising the proposed new site is obtained, and subscriptions have appeared under it for carrying out the scheme. The Union commissioners of the metropolitan district have offered to the corporation a scheme by which fourteen old churches will be erased from the map of the City, and the funds for the purchase of the freehold to the sites will be in a corresponding degree benefit by having the means of religious instruction brought home to the people. The corporation appear to have taken the matter in their own hands, and to have carried out their sentences of destruction with a little unchecked zeal.

PREFERMENTS AND APPOINTMENTS.—*Rectories:* The Rev. G. Carter to Fullbridgham, with the vicarage of Lanuffon, Lincolnshire; Rev. W. Gill to Sandon, Staffordshire; Rev. G. D. Haslam to Scott Willoughby, Lincolnshire; Rev. W. M. Leir to Datchett, Somerset; Rev. J. J. Stanley to Colwich, Herts. *Vicarages:* The Rev. G. Hunter to Newcastle, Northampton; Rev. W. F. White to Stonehouse, Gloucestershire. *Incumbencies:* The Rev. W. J. Hall, jun., to Holy Trinity, Batcombe; Rev. J. Moorhouse to St. John's, Pitsea-square. *Perpetual Curacies:* The Rev. B. Aumbler to Saint Hutton, Yorkshire; Rev. E. Lee to Hook, Lincolnshire; Rev. J. F. Porter; Rev. J. R. Eyre to Denbridge; Rev. J. Rider; Rev. H. A. Gilbert to Sandon; Rev. J. Hall to Holy Trinity, Batcombe, Dublin; Rev. A. Sanderson to Ainsdale, Lancashire. *Chaplaincies:* The appointment of Mr. Rose's prisoners to the Reformed Convoy of St. John, Worthington, Cumberland, was announced. *Curacies:* The Rev. O. J. Aubrey to Seal, Kent; Rev. H. W. Butler to Lympsfield; Rev. W. L. Clay to Holy Trinity, Coventry; Rev. J. T. Harding to Stratton, Gloucestershire; Rev. G. H. Hoskins to Bishop's Middleham, Durham; Rev. W. Jago to St. Mark, Surbiton, Surrey; Rev. W. Woods to St. Mary Dublin.—*Gazettes.*

The Secretary for War has presented £50 to the fund raised for the restoration of the round church of the Holy Sepulchre at Northampton.

The Incorporated Society for Promoting the Enlargement, Building, and Repairing of Churches and Chapels held its first meeting for the present session on Monday—the first of Session in the chair. Grants of money were made in aid of the following objects:—Building churches at Bangor-hill, in the parishes of Clayton and Keymer, near Hurstpierpoint, Sussex, and St. Philip's Church, Lambeth; rebuilding the churches at Broadwoodwidger, Devon, and Llandrygarn, near Holyhead; and for other otherwise increasing the accommodation in the churches at Ashtead, near Epsom; Bulmer, near Sudbury, Suffolk; Harvel, near Meopham; and Much-wenlock, Salop; and for the enlargement of the chapels of Ease at Upper Colchesworth, Bromley, near North Walsham; and Tickenham, near Clevedon, Somerset. Additional grants were also voted to the churches at Mid-Lavant, Sussex, in the parish of Harton, near Mossley, and Broadmoor, near Bury, Lancashire; and Broadwell, Gloucestershire; and to the churches at Dursley, near Bristol; Limerick, near Bromley, Kent; Pendlebury, near Swinton, Lancashire; and Sutton-in-the-Isle of Ely, Cambs. A grant was also made from the School, Chapels, and Mission Fund for building a school-chapel at Lower Ince, Wigan. The society accepted the trust of a sum of money to be laid out in the purchase of a site for a church at Bishop's Hatfield.

THE UNIVERSITIES AND PUBLIC SCHOOLS.—Oxford: In a convocation on Thursday week, the names of Mr. G. V. Harcourt, M.A., Christ Church, as Examiner in Classical Honours, and Mr. Arthur J. Mc-Intire, M.A., Christ Church, as Moderator in the Mathematical School, were approved. Mr. Roy, B.D., Rawlinson, Lady elected Camden Professor of Ancient History, took the oaths, and was admitted to office. The Chancellor's Prize for Latin Hexameters was adjudged to Mr. Robert Bickersteth Holmes, Scholar of Balliol College, for his poem on the Queen's visit to the Duke of Cleveland's seat, Raby Castle. Lord Stanley, now Secretary for the Colonial Department, in consequence of the late lamented Mr. Gladstone's resignation of the Chancellorship for "Hong Kong Cadetships," will be happy to nominate to three of the candidates, who are to undergo a competitive examination before the 8th of December. The Vice-Chancellor will then nominate the two first gentlemen who shall be in his judgment most likely to succeed. Mr. R. B. Sanderson has been nominated by Mr. Woodard, the Provost, to the post of Rector of Lancing College, Sussex. In a congregation held on Wednesday the two forms of statute on the subject of the Bodleian Library and Radcliffe Library, with certain amendments, which had been duly submitted to the House, and approved unanimously. A form of statute was then passed, empowering the Bursar and the eldest senior Student (after the ordinary academical dues until the time of taking the first degree without remainder) for their privileges, and accepting the proposer name of Mr. Gaisford, the obligation of wearing a peculiar costume altogether.

Cambridge: The following prize has been awarded on the following subject has been adjudged to George Frederic Maclear, M.A., of Trinity College:—"The control exercised by the Middle Ages in regard to property in land, considered with reference to the external and internal condition of the Church." The examiners for the Chancellor's medals for proficiency in Classics are George Forrest Browne, M.A., of Trinity College. The Professorship of Chemistry having become vacant by the death of Dr. Alexander Wood, M.D., the election of a new Professor of Chemistry will take place on Friday, the 6th of December.

The new schoolroom in connection with the Grammar School, at the Cross corner of the Market-ground, nearly opposite the bank of the Head Master's house. They will contain 300 fourteen inches apart from each, opening into a quadrangle which will run round the interior of the quadrangle.

NAVAL AND MILITARY INTELLIGENCE

Six Woolwich cadets have been rusticated, for disobedience to the standing orders of the Academy, in taking discovered playing cards, smoking, &c., and drinking.

There is a vacancy at Christ's Hospital for the sons of naval Lieutenants here in Scotland, and between the ages of seven and nine. Applications to be made to the Secretary of the Admiralty.

A court-martial at Halifax has sentenced Commander Nelson and Mr. Fraser, R.N., to be severely reprimanded, and the latter to two months' imprisonment, in consequence of the recent loss of H.M.S. *Bruce* on one of the Bahama Banks.

A party of officers and men of the Army last week commenced the long course of musketry instruction at Hythe. Captain Boxer, R.A., will last about ten weeks, and will be followed (about the commencement of February) by a course of similar duration for officers only. About 140 officers altogether now undergo instruction at the school, of whom 12 belong to the Militia and 14 to the Volunteer Brigades.

The text of the convention which has been entered into between Great Britain and France for the purpose of regulating the interference with the internal government of the country; that a commission of three persons be appointed to determine all questions relative to the distribution of the money which may be obtained from Mexico; and that the co-operation of the United States Government shall be invited.

The iron-cased frigate the Black Prince, which possesses the strength of the Warrior and is but little inferior to her in armament or steam-power, was launched at Blackwall on Tuesday. She is 380 feet long, she was built, and which she has actually surpassed on the Measured Mile. She is expected to be ready for sea in January. The Black Prince's engines are of 1,250-horse power nominal, and are supplied with four steam boilers. The result of the trial was in every respect satisfactory, and believe would be equal, if not superior, to the four runs at the mile, and realised a speed of 14½0. This can only be regarded as a most favourable result, and not indicative of the speed of the ship, inasmuch as there were many things which combined to retard her speed. Her bottom, however, is in a very foul state, and this alone would appear to be every reason to suppose that the Black Prince, when fitted out for sea with her bottom in good trim, will equal, if not surpass, that of the Warrior.

The official reports to the Lords of the Admiralty respecting the trial-trip of the new iron-plated frigate Warrior have been circulated from Plymouth to the Admiralty and to the Horse-guards. The general and most positive results is apparent that, when under full steam, the mean rate at which she was impelled by the Warrior exceeded 14 knots, or nearly sixteen statute miles. In sailing, the ship has considerable advantage over the fastest. The forward draft is 26 feet 6 inches, which gives the latter an excellent her great length and the insufficient supply of canvas forward, requires nine-teen sail, to carry her steam-sloop superior speed. Her ship is very sufficiently heavy to test the extent of the Warrior's sailing, which attained a mean of 8½ knots on the Measured Mile Course. The pressure of the steam, a range of 4½ deg., those in the frigate 12 deg. Bearing headsails the Revenge and Warrior 4 deg. The Warrior did not, in fact, use her auxiliary machinery, worked by one boiler, save where the space between decks from smoke; she was, therefore, without supplies with fresh air, which is a great tribute to the beneficial condition of the ship. In respect to ventilation she reflects great credit on the contractors, Messrs. Penn and Son. The ship requires a powerful pump of men to steer her. It is stated that there is too much stability in the ship, which are unquestionably very high. In the case of comparative results, it should not be forgotten that the Warrior's superior speed was attained with a foul bottom, which has since been cleaned.

The official trial of the Octavia, 31, screw, took place at Portsmouth on Wednesday week, under the superintendence of Mr. Barnaby, from the designs of Mr. William Symonds, the then Surveyor of the Navy, and sailing qualities, and to have every confidence in her. The Octavia was constructed for the navy of Messrs. Penn and Son, Rotherhith and Esher, and Blackwall, Penn and Son, contracted to produce only the best of materials without limit to cost of manufacture or of design, that should be, as far as they could go, perfect. Recommended in their working, each to be of 300-horse power, nominal. The Octavia's engines have been designed, and their principles carried out, by Mr. Penn's draughtsman Messrs. Maudslay, Sons, and Field, and contain all the latest improvements, with surface condensers, and vee air-pumps. The cylinders are 63 inches in diameter, with 3 ft. 6 in. stroke. The screwpropeller, by the Messrs. Penn, is of variable motion to the draft. The boilers are tubular, and as nearly as possible on the principle of those in the same proportion to the engines as their ships. From initial steps taken it has been satisfactorily proved that the consumption of coal in working the Octavia's engines will not exceed 2½ pounds per hour per indicated horse-power. The boilers are fitted with Mr. Field's patent superheating apparatus, which on Wednesday acted exceedingly well, giving a temperature of steam of about 320 deg. When tried at the measured mile the ship ran at an average speed of 13½ knots, and the results were considered satisfactory. The vacuum obtained was 25½in.

THE VOLUNTEER MOVEMENT.

The annual inspection of the Inns of Court Volunteers will take place on Saturday next by Colonel M'Murdo, C.B., and it is expected that after the inspection they will be entertained by the non-commissioned officers at Hall.

Last Saturday afternoon the members of the second company of the 29th (North West) Middlesex Rifle Volunteers competed for their annual prize shot at Willesden. The prize consisted of a valuable cup. Ranked rifle, the gift of Lieutenant Brewster, a money prize, and two sweepstakes. The Enfield rifle was won by Private Colson.

A rifle contest took place on the 8th inst. at the Tottenham range between ten men of the 31st and ten of the 4th Middlesex, resulting in the victory of the 31st (Tottenham Corps).

A rifle-shooting contest took place at Wormwood Scrubbs last Saturday between the members of the University College company, West Middlesex Rifle, for a silver cup, value £10 10s., presented by Messrs. H. and E. Lopez. The prize was won by Sergeant Ee Mendes.

The competition of the 1st Surrey Rifles for prize at long ranges, consisting of the challenge cup, a ladies' challenge cup, and a Wimbourn prize, took place on Tuesday week, at Plumstead, in consequence of the range at Peckham-rye being closed. The competitors numbered 120, and the weather was favourable, but a heavy fog prevailed during the latter part of the day. Captain Knowles and A. H. Twentyman made seven points severally, but on the shoot-off Captain Knowles became the winner. Another shoot-off for the ring was suspended till Saturday, when it was resumed at Plumstead. The challenge cup, value 20 guineas, was won by Sergeant Fenlon, and E. Wilsmerit rifle, the gift of Mr. J. Knowles, by Private J. C. Hewitt.

In an official return of the Volunteer Force now in the strength of the Rear Volunteer Corps is 237 consolidated officers, 379 non-commissioned officers, 3,000 privates, giving a total of 3,616, including 1,000 Artillery-men, containing 600 members, but exclusive of 665 honorary members. The 5th Corps (Wiltshire), 1,000 strong, had a meeting for a harmonic meeting, presided by Captain Cavill. The prize was carried off by Private Ruffell.

The Royal Victoria Rifle Volunteers have had a busy week for a silver tankard, presented by the members for the corps—Mr. E. Warner and Sir W. Call, Bart. The first was by Sergeant Hutchinson, 1st Kent, the second by Private Hutchinson, 1st Kent, the third by Private Hutchinson, 1st Kent, the fourth by Private Hutchinson, 1st Kent, the fifth by Private Hutchinson, 1st Kent, the sixth by Private Hutchinson, 1st Kent, the seventh by Private Hutchinson, 1st Kent, the eighth by Private Hutchinson, 1st Kent, the ninth by Private Hutchinson, 1st Kent, the tenth by Private Hutchinson, 1st Kent, the eleventh by Private Hutchinson, 1st Kent, the twelfth by Private Hutchinson, 1st Kent, the thirteenth by Private Hutchinson, 1st Kent, the fourteenth by Private Hutchinson, 1st Kent, the fifteenth by Private Hutchinson, 1st Kent, the sixteenth by Private Hutchinson, 1st Kent, the seventeenth by Private Hutchinson, 1st Kent, the eighteenth by Private Hutchinson, 1st Kent, the nineteenth by Private Hutchinson, 1st Kent, the twentieth by Private Hutchinson, 1st Kent, the twenty-first by Private Hutchinson, 1st Kent, the twenty-second by Private Hutchinson, 1st Kent, the twenty-third by Private Hutchinson, 1st Kent, the twenty-fourth by Private Hutchinson, 1st Kent, the twenty-fifth by Private Hutchinson, 1st Kent, the twenty-sixth by Private Hutchinson, 1st Kent, the twenty-seventh by Private Hutchinson, 1st Kent, the twenty-eighth by Private Hutchinson, 1st Kent, the twenty-ninth by Private Hutchinson, 1st Kent, the thirtieth by Private Hutchinson, 1st Kent, the thirty-first by Private Hutchinson, 1st Kent, the thirty-second by Private Hutchinson, 1st Kent, the thirty-third by Private Hutchinson, 1st Kent, the thirty-fourth by Private Hutchinson, 1st Kent, the thirty-fifth by Private Hutchinson, 1st Kent, the thirty-sixth by Private Hutchinson, 1st Kent, the thirty-seventh by Private Hutchinson, 1st Kent, the thirty-eighth by Private Hutchinson, 1st Kent, the thirty-ninth by Private Hutchinson, 1st Kent, the fortieth by Private Hutchinson, 1st Kent, the forty-first by Private Hutchinson, 1st Kent, the forty-second by Private Hutchinson, 1st Kent, the forty-third by Private Hutchinson, 1st Kent, the forty-fourth by Private Hutchinson, 1st Kent, the forty-fifth by Private Hutchinson, 1st Kent, the forty-sixth by Private Hutchinson, 1st Kent, the forty-seventh by Private Hutchinson, 1st Kent, the forty-eighth by Private Hutchinson, 1st Kent, the forty-ninth by Private Hutchinson, 1st Kent, the fiftieth by Private Hutchinson, 1st Kent, the fifty-first by Private Hutchinson, 1st Kent, the fifty-second by Private Hutchinson, 1st Kent, the fifty-third by Private Hutchinson, 1st Kent, the fifty-fourth by Private Hutchinson, 1st Kent, the fifty-fifth by Private Hutchinson, 1st Kent, the fifty-sixth by Private Hutchinson, 1st Kent, the fifty-seventh by Private Hutchinson, 1st Kent, the fifty-eighth by Private Hutchinson, 1st Kent, the fifty-ninth by Private Hutchinson, 1st Kent, the sixtieth by Private Hutchinson, 1st Kent, the sixty-first by Private Hutchinson, 1st Kent, the sixty-second by Private Hutchinson, 1st Kent, the sixty-third by Private Hutchinson, 1st Kent, the sixty-fourth by Private Hutchinson, 1st Kent, the sixty-fifth by Private Hutchinson, 1st Kent, the sixty-sixth by Private Hutchinson, 1st Kent, the sixty-seventh by Private Hutchinson, 1st Kent, the sixty-eighth by Private Hutchinson, 1st Kent, the sixty-ninth by Private Hutchinson, 1st Kent, the seventieth by Private Hutchinson, 1st Kent, the seventy-first by Private Hutchinson, 1st Kent, the seventy-second by Private Hutchinson, 1st Kent, the seventy-third by Private Hutchinson, 1st Kent, the seventy-fourth by Private Hutchinson, 1st Kent, the seventy-fifth by Private Hutchinson, 1st Kent, the seventy-sixth by Private Hutchinson, 1st Kent, the seventy-seventh by Private Hutchinson, 1st Kent, the seventy-eighth by Private Hutchinson, 1st Kent, the seventy-ninth by Private Hutchinson, 1st Kent, the eightieth by Private Hutchinson, 1st Kent, the eighty-first by Private Hutchinson, 1st Kent, the eighty-second by Private Hutchinson, 1st Kent, the eighty-third by Private Hutchinson, 1st Kent, the eighty-fourth by Private Hutchinson, 1st Kent, the eighty-fifth by Private Hutchinson, 1st Kent, the eighty-sixth by Private Hutchinson, 1st Kent, the eighty-seventh by Private Hutchinson, 1st Kent, the eighty-eighth by Private Hutchinson, 1st Kent, the eighty-ninth by Private Hutchinson, 1st Kent, the ninetieth by Private Hutchinson, 1st Kent, the ninety-first by Private Hutchinson, 1st Kent, the ninety-second by Private Hutchinson, 1st Kent, the ninety-third by Private Hutchinson, 1st Kent, the ninety-fourth by Private Hutchinson, 1st Kent, the ninety-fifth by Private Hutchinson, 1st Kent, the ninety-sixth by Private Hutchinson, 1st Kent, the ninety-seventh by Private Hutchinson, 1st Kent, the ninety-eighth by Private Hutchinson, 1st Kent, the ninety-ninth by Private Hutchinson, 1st Kent, the hundredth by Private Hutchinson, 1st Kent.

NATIONAL SPORTS.

THE frost brought about a twenty-four hours' adjournment at Newmarket, "a lovely mild and clear day" succeeded. The French division were dispersed to the last with their Gabrielle d'Estrées in the Somerset Cup, and Nothnik gave Galadrine 5lb., and overthrew all Mr. Payne's calculations by beating him cleverly in a half-mile match. No doubt whether even Vulture could have defeated this flying granddaughter of Lanercost at that distance. Wellington (Sabon) has its stanchions on Monday; and on Tuesday there will be a good "mixed day" at Leadenham. Forty are handicapped for the Great Annual Steeplechase, and Cosmopolite leads them at 12st., while Jessie, 11st. 2lb., stands fourth on the list, and level with the too illustrious Bastian. Racing men will then have to fall back upon their "dog-books" and no doubt a few will be found to make a match in the Warwick Plate if not on "the Derby-day" (as poor Bill Scott used to call it) next Thursday night.

Mr. M'Grogor has been, we are glad to say, remanded starter to the Jockey Club; and Lord Portsmouth, the third Jockey Club steward, is expected back from the Continent in a fortnight, when a meeting will be waiting till the next number of the sheet *Racing Calendar* came out to declare his dissent from his colleagues, but of intimating it through "Argus" in the *Morning Post*. We believe that the complainants against this official are most strongly exaggerated. His appointment was "a snap decision" to back Lord Zetland (although it was stated neither of Lord Portsmouth's dissent), and, consequently, many who felt aggrieved have "pocketed their wrath" against him, and feel faster and jockey satisfactory which might gradually grow up out of fixus. We only go to racecourses on very picked days; still, except during Doncaster week, we prefer the starter to the winning post, and we are bound to bear our testimony, so far as we have seen, to the uniform tact and patience of Mr. M'Grogor when under very deep aggravation. Those who have been near him at *those* times have universally stated that they were struck with the calmness at the other end of the course there and get a faint notion of what the young rebels are whose cause they espouse. He is described as being a man of the strictest practice makes perfect; and we are glad to see that the majority of the stewards, now that the appointment is made, will not consent to sacrifice their eleventh commandment. We believe that the blame rests very much with the Jockey Club themselves, and that two Doncaster stewards prefer the starter to the jockeys behind whom, when Mr. M'Grogor "might as well speak to as many stones," are most really needful.

The Chumpagne Stakes has closed with forty-five subscribers, and Charles Marlowe is now installed as owner of the pace and mate to Mr. Payne, who has still a good string to ride for, viz. Lancaster, Lecknow, Wing, Mountain Deer, Ethelbert, and poor old Sweetmeat, who has been laid up for Doncaster to be sadly worried. Little Hell a few days since on their way to Baron Maltchaus'. Ethelbert is a very great horse, and seems to make light of his work.

Alfred Mynn was buried on Wednesday week at Thanahan. The body was preceded to the grave by a number of the leads and Hambledown Volunteers of which corps he was a member, followed by Major Mortlock, late M.P. for West Kent. The hand played "The Dead March in Saul," and when the last sad rites had been performed three volleys over its grave. The most striking copy of criticism verses that we ever remember to have seen is the following 200 memory, speaking thus in one stanza of the great cricket days of Kent:—

When the great old Kent Eleven, full of pluck and hope began
The battle with All England, single handed, man to man,
How the bowlers were watched by the anxious crowd, and, call,
As he moved among the players like a king amongst them all,
Till we came to Alfred Mynn, and then how he was a terror to
To decide their country's triumph when led on by Alfred Mynn.

The great sweepstakes of Wednesday ended in favour of Deerfoot, who, after a splendid effort of throw and muscle, which completely overcame Sandiacre's last, won by two inches. Deerfoot is described than the Mills tactics. His speed is the finer of the two, and yet he makes the most of his stamina. He runs mile, and quite eight yards ahead, and then, when he is caught, he keeps making a succession of spurts, just as Jones did in his four-mile race at Brompton, and was regularly exhausted when he (Jones) ceased them. As long as Sandiacre will revene jockeys' tactics we shall never get the Indian beat over a long distance of ground. He will not run fast enough, and when he spurts make very little matter to him; but his pace is very second-class. Perhaps Deerfoot is about the same, but he is a horse that really such fools as they seem, and that they will to prolong the *furore* which the Indian has excited. His mentor, George Martin, has pasted £100 with the *Sporting Life*, and intended to run him against the Mills within the hour (within the American Door did cleverly in his heyday), in one set day one week to Lord's, the next to the Oval, and then to the top of the Snipe clan of the Senecas, on Cattaraugus Reservation, and has a quarter of a million of people all present applied with the news from him through Mr. Wright, the subsidiary of the decider, to whom Derfoot regularly forwards the records of his English progress, and who will vouch that he is not "a mere trotting horse," "a dodger" or "gag" in any other shape. He runs ten miles on Monday for £20 a side and the Champion's Belt, at Barnes, with Mr. Burton, of Hackney-wick.

Bell Dunn, a daughter of Effoe, divided the Hedley Cup at Hampton Court with Arthur, by Sunbeam, from Fleet and a brother to Aldesbury; and Adam Bede won the All-aged Cup. Five years ago Mr. Dunn won this cup with Adam Bede as a colt, and he once looked very formidable for it. Perseve and Penny, one an own and the other a half sister to Bell Dunn, by Sunbeam, and Lord Lyon, by Ainderby, are to be entered for the Ladies' Plate, when Rose Cox was also to be a starter for the Ladies' Purse at Shrewsbury Club. It seems early of the latter meeting that two of the large stakes were each divided between two sisters of the same litter. In the Lytham Cup, Atterstone was beaten by his first cousin, and in the Liverpool Autumn, the South Lancashire and Ribble Stakes Mr. Campbell's Bacon and Scotland Yet litter did something of the same. Tony Day was beaten by Romping Girl in the second ties for the cup at Cirencester, and Mr. King Hall's Mr. Margetson's Ashmeadow with Bellerophon, Rosalind, Rosina, and Rowden. The Meadows, Cantab, Sackcloth, and Bright Steel Mould all ran well, and Rosalind, by a brother to Honeycomb, Lord Boaring divided a stake with his Brand and Burlesque at Barton Agnes; and, at Coupetelon, Mr. Gavin's Sixty-One, one of his famous Reginald and Sorcerer's Daughter, beat a stake with Dr. J. Campbell's Rees of Liddle by Lanrston. Frost has produced "the real jam" in the Cambridgeshire Handicap, and has got a lot in for the Derby, the Scots Luneba

FINE ARTS.

"THE STORM AT SEA," BY J. MORGAN, IN WALLIS'S COLLECTION AT THE FRENCH GALLERY.

THE FRENCH GALLERY.

THE "Winter Exhibition" of cabinet pictures by British artists, which for some years maintained a certain position before the public, has lately fallen into comparative neglect, and would probably have been discontinued but for an alliance formed with it by Mr. H. Wallis, the extensive picture-dealer, who this year adds a new collection of works painted expressly for himself. What pertain to the "Winter Exhibition" proper and what to Mr. Wallis in the joint collection now opened to public view is not specified, but the exhibition as a whole is a very creditable and very pleasing one, comprising many well-selected efforts from the easels of some of our leading masters, besides others of great promise from those of the young men of the day.

Among the more important works in the room is the celebrated picture of "The Goths in Italy," painted by F. P. Poole, R.A., in 1851, and admirably illustrative of the passage from Gibbon:—"And the principal warriors insulted the villas and gardens once inhabited by Lucullus and Cicero along the beauteous coast of Campania. Their trembling captives, the sons and daughters of Roman senators, presented, in goblets of gold and gems, large draughts of Falernian wine to the haughty victors, who stretched their huge limbs under the shade of plane-trees, artificially disposed to exclude the scorching rays, and to admit the genial warmth, of the sun. These delights were enhanced by the memory of past hardships: the comparison of their native soil, the bleak and barren hills of Scythia, and the frozen banks of the Elbe and Danube, added new charms to the felicity of the Italian climate." The character of the barbarian conquerors, sinking, after the savage atrocities of invasive war, into indulgence in all the enervating luxuries of a high civilisation, is most skilfully preserved; and the fine orange hue which covers the canvas (so much a favourite with Mr. Poole) is here most appropriate.

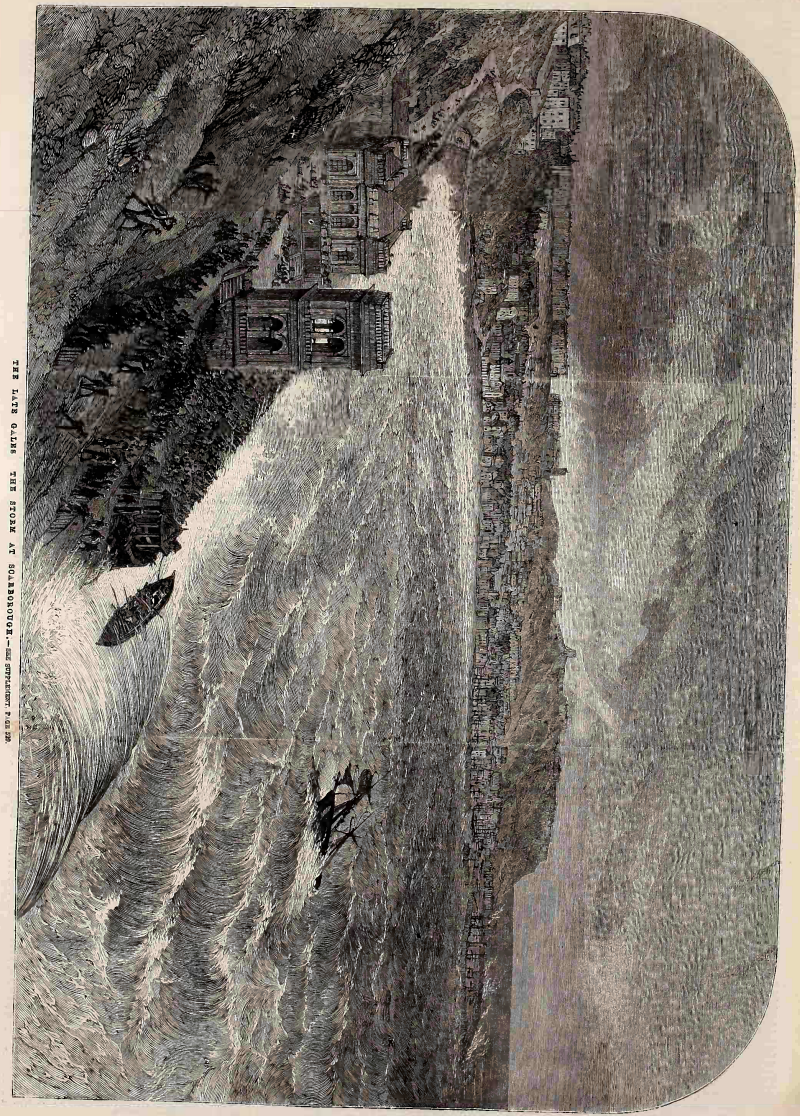
By the late F. Stone, A.R.A., is a work which we do not recollect having seen before, representing Christ with Martha and Mary, to the former of whom Christ utters the celebrated admonition, "Martha, Martha, thou art troubled about many things," &c. It was not often that this artist, amongst various other subjects, attempted Scripture. In the present instance he shows an eye for the solemnity of the incident, which he treats with sufficient modesty and simplicity; but, whilst the face of the Saviour is tolerably successful, according to the traditional ideal, those of the females, particularly that of Martha, are of modern commonplace. The execution is careful but tame, the colouring thin and ineffective.

A very creditable picture is that by Mrs. Hay, which was exhibited last season at the Royal Academy, representing Tobias Curing the Blindness of his Father:—"And he strake off the gall on his father's eyes, saying, 'Be of good hope, my father.'" Tobit xi., 11th verse. The figures are ranged on one plane, in attitudes of great solemnity and dignity, an expression of great earnestness pervading all their faces. In the distance is a simple landscape, somewhat severely treated, after the manner of the early Italian masters. The colouring, though contesting of secondary and tertiary colours, is harmonious and effective.

Miss Solomon displays considerable intelligence in her picture of "A Young Teacher," which represents a young girl pointing out the pictures in a book to her younger sister, a child in the lap of her ayah. The animation and curiosity depicted in the faces of the juveniles is very pretty, and contrasts with the gravity of the mahogany-coloured nurse, but, in point of complexion, the former, particularly the elder of the two, might have been improved. With such a foil as the Indian face presented the little fairer haired European ought not to look sickly and muddy. The same lady has a more ambitiously-constructed picture, "The Appointment," in which we see a young lady in a white chip bonnet standing by the fireplace, with an open letter in her hand, expecting the arrival of a gentleman, who—a perfect "dick," with magnificent whiskers, and the most ardent of smiles—is discovered reflected in the chimneyglass as just entering the door. This is one of those things which in the present state of art-patronage are sure to find admirers, and we hope purchasers.

Mrs. Ward contributes a single and rather slight sketch, "Fetch It," representing a lady on the seashore with a pet spaniel, whom she is urging to leap into the water. This lady's works would be improved by a little more attention to finish and a purer and more harmonious treatment of colours.

R. Ansdell, A.R.A., has some "Pet Calves," capitally painted in a cool landscape, but the dairymaid is too much after the drawing-room cut. A similar remark applies to the same artist's figures in the "Harvesting," which is probably an early work, painted before he found where lay his strength. The surface is too uniformly smooth and yellow; very different from the rough bold touching and the deep and strongly-contrasted hues with which he has latterly dealt in,



THE LATE STORM AT SCARBOROUGH.—SEE PAGE 526.

C. Stanfield exhibits three little landscapes in a single frame, painted with a minute detail and firmness of touch which are not usual with him. They represent, respectively, "Benchey Head from Northaven," "Picking up a Lame Duck off Hurst Castle," and "In the Mid—t of the Ocean." The warmth and richness of tone and the successful character are displayed in those entitle them to rank amongst the chief gems of the collection. "The Boy of Basle," painted upon a large scale, though still of cabinet size, does not so much please us. It is too mechanically cold in colour and the southern clime it assumes to represent; uniformly cold in tone for the sunlight of the open air; the figure being and the execution is careless and feeble, the paint on the canvas having had no attention that sculptor and living manipulation which such subjects require, and at the hand of a master jealous of his fame usually exercises.

W. C. Dobson, A.R.A., displays his most amiable sentiment in a little child-subject. "How Pretty!" a young girl stops a hawker-child to admire a younger brother's head, in the midst of one of those chief results of the younger brother's head, in the midst of one of those chief results of the younger brother's head, in the midst of one of those chief results of the

THE WEATHER.

RESULTS OF METEOROLOGICAL OBSERVATIONS AT THE KEW OBSERVATORY OF THE BRITISH ASSOCIATION.

Bixio has fought a duel in which, it is said, he was wounded in the hand by a pistol-shot.

The Italian Government has granted the concession for the construction of a railway from Turin to Savona to an English company.

George William Frederick Freytag, the celebrated Oriental scholar, died on the 16th inst., at Bonnendorf, near Bonn.

A box of gunpowder exploded on Tuesday on the rail way works near Ostwick, Italy, killing seven persons and wounding five others.

The Guernsey & Jersey Advertiser states that there has lately been discovered near St. Maurice, in that department, under a small exploded as nine of the ancient pile. It is of great architectural interest, and in perfect preservation.

An extraordinary number of tourists have this year visited Chamounix. From the official lists it exceeds 3000: among whom there were 440 English, 140 Americans, 1051 French, 712 Germans, 356 Russians, 56 Spaniards, and 7 Turks.

The *Glasgow Gazette* says:—"The 'Bank' of Homburg has recovered its losses, and is now free from its gaming connection. The latter has just let, in June, 2,000,000*l.*, and has retained house as poor as it was when it fell."

On Saturday last the first tree—a fine Wellingtonia gigantia—was planted in the grounds of the new Royal Normal College by the Master, Mr. Benjamin Webster, and a number of the council.

At the opening of a congregational place of worship at Stowmarket, the Rev. Mr. Binney condemned the "low-falutin' system of public into platforms by Dissenters, and said "he never could see the use of setting a man up to sweat a priest all place. Ministers and members of Parliament did not speak over pillows, and why in the world should preachers have to do so?"

DE LA RUE'S DIARIES AND POCKET BOOKS FOR 1862.—These useful diaries, in their delicately beautiful pearine and turquoise blue papers, are now as well and widely known as to need no more than the passing notice that they are now ready for the season. Of the Royal Diaries, it is pictured by a perfect almanack and calendar, crowded with useful information, for reference, and in the margins in the business and the state diaries. The Times of high water, tables of interest and wages, and notice of the sittings, lists of clubs, and statistics of importance, are all given in their proper situations, and the thousand and one useful things in such a desk-book, are found herein. The Court Diary still lingers at the weeks and months. The pocket-books are of two sizes and descriptions—the one a steel, handsome, elaborately executed, of the best and most finished workmanship, and convenient receptacles in the finishes of a portmanteau, containing, like the former desk-book, all that can be required in a diary and demanded by a monster form; the other is a more petite purse-book, of brilliant morocco morocco, full gilt, and with all the conveniences of the larger book, reduced to two sixteens.

EXTRAORDINARY ACCURACY AT SEA.—The following strange story was telegraphed from Southampton, through Mr. Reuter's office:—"Southampton, Tuesday.—A large paddle-steamer, the Nashville, fled the Confederate flag, has just arrived in our river and landed the captain and crew of the American ship Harvey Birch. Captain Nelson, of the Harvey Birch, reports having left Havre on Saturday last, the 17th inst., bound for New York. At 9h. 30m. On the 19th inst., when in lat. 49 deg. 30 m. N., long. 9 deg. 52 m.W., he was brought to by the Confederate steamer Nashville, Semmes, Captain, late of the United States Navy. The Harvey Birch was immediately boarded by the officers and crew of the Nashville, who at once ordered the captain and crew on board the steamer, allowing them to take a few of their effects and fresh provisions. Captain Semmes then ordered the Harvey Birch to be fired, and half-an-hour after she was burnt to the water's edge. Captain Nelson is just landed with his crew and officers, having been told that he was immediately placed himself in communication with Captain Britton, the United States Consul at this port. We believe he is still lying in the river, flying the Confederate or federate flag. Captain Nelson says that Commander Fengrim states he has no commission from the Southern Government to issue letters-of-marque, and pro-fesses he is not a privateer. No Southern Commissioners have arrived by the Nashville. There are, however, on board a Colonel Forbes and Lieut. Maffitt. Forbes appears to have some commission to execute, as he proceeds to London immediately on his arrival. The Nashville is a screw steamer of 1,500 tons, and is heavily armed. She has a crew consisting of English, as well as Southern seamen. Her crew consists of English, and on the arrival of the last shipment, were compelled to sign other articles. The whole of the crew of the Harvey Birch, with the exception of Captain Nelson and his officers, were placed in irons until arriving here. Captain Fengrim endeavoured to make Captain Nelson sign a bill of sale as sole owner of the ship to the federate Government. Captain Fengrim has communicated with Mr. Yancey."

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent)

NOTWITHSTANDING that the Minister of Finance has intimated that there is an unreasonable sufficiency in the Revenue of the present year to meet the expenditure, of 4,250,000 sterling, and that there is every prospect of a new French loan of 4,000,000 being shortly announced, Paris is still excited, and has been passing in the market for Home Securities this week, as exhausted quotations.

The demand for accommodation in all quarters has slightly improved; but, owing to the absence of coupons, no advance has taken place in the rate demanded. In the open market they rule as under for the best commercial paper:—

Percent.	
Thirty days' bills ..... 2½ to ...	Four months' bills ..... 3 to 3½
Sixty days' bills ..... 2½ to 3	Six months' bills ..... 3½ to 4
Three months' bills ..... 3 to 3	

Money is almost a drug in the Stock Exchange, and advances can be obtained at from 1½ to 2 per cent.

Some of the Continental Exchanges show rather more firmness, and, in some quarters, money has advanced in price. We annex present quotations in the leading cities:—

	Bank rate.	Open market.		Bank rate.	Open market.
Paris	3	2½ to ...	Hamburg	4	3 to 3½
Vienna	6	5 ... 6	Brussels	4	... to 3½
Berlin	5	4½ ... 5	Frankfort	4	... to 4
Frankfort	4	3½ ... 4	St. Petersburg..	7	... to ...
Amsterdam	4	3½ ... 4			

About 1,000,000 in bullion has arrived, chiefly from Australia, via Suez, and nearly the whole of the gold at hand has passed into the Bank of England. The New York exchanges for bankers' bills are 107½ to 108, being against this country. However, the last steamer took only 650,000*l.*, being against about 1,200,000*l.* by the previous steamer via the Cape.

About 450,000 in bullion was forwarded to the East, principally in silver. The demand for that metal is steady, at 61d. per ounce for cash and 61¼d. for delivery.

The advices at hand from the manufacturing districts are still unfavourable. Bale for home consumption is the only demand for goods in any quarter.

A slight advance took place in the value of English Stocks on Monday, but the improvement was chiefly—Consols for Account, 93¼ to 94½; Ditto for Account, 92⅞ ex div.; Reduced and New Three per Cents were 92 to 94½; Exchequer Bills, March, 4s. to 10s.; Ditto, June, 12s. to 15s. pm.; Bank Stock was 209 to 212; India Stock sixties 224 to 226; Ditto, Five per Cents, 103½; Ditto, Paper, 99 and 101½; and the Bonds, 11s. to 16s. pm.; Exchequer Bills advance took place in the quotations on the following day:—Consols left off at 93½; Bank Stock, 209 to 212; Reduced and New Three per Cents, 92½; India Stock, 224 to 226; India Five per Cents, 104½; Ditto, Paper, 99½; India Stock, 224 to 226; India Five per Cents, 104½; Ditto, Paper, 99½; India Bonds, 11s. to 16s. pm.; and Exchequer Bills, 7s. to 10s. pm. On Thursday there was less firmness in the market, and prices were rather lower:—Consols for Money marked 93⅞; for the Account, 93⅝ ex div.; the Reduced Three per Cents, 92¾ to 94½; the New Three per Cents, 92¾ to ⅞; March Exchequer Bills, 7s. to 10s. pm.; June Ditto, 12s. to 15s. pm.; and Bank Stock, 209½ to 212.

The market for Foreign Bonds has been rather active; and, in some instances, an advance has taken place in the quotations. Turkish, Mexican, Spanish, and Venezuela Stocks, especially, have been very firm: Brazilian Four-and-a-Half per Cents (Rothschild), 99½; Ditto Four per Cents, 96½; Ditto Five per Cents (Deferred, 98½; Chilian Four-and-a-Half per Cents, 86½; Spanish New Consolidated Three per Cent. Certificates, 46½; Ditto Passive Certificates, 5-Half per Cents (Coupons), 86½; Peruvian Three per Cents, 61½; Portuguese Four per Cents, 43½; Russian Four-and-a-Half per Cents, 91½; Spanish Three per Cents, 52½; Ditto, New Deferred, 43; Ditto, Certificates, 41; Spanish Coupons, 20 per Cents, 5½; Turkish Six per Cents, 1858, 87½; Ditto, 1858, Bonds, 4½; Ditto, 1860 Bonds, 71; Venezuela Three per Cents, 24½; Dutch Two-and-a-Half per Cents, 63½; and Ditto Four per Cents, 94½.

The dealings in Joint-stock Bank Shares have been numerous, and prices have ruled firm:—Australia, 5 new shares, 5*l.* paid, 5½ to ⅝ pm.; Australasia, 40*l.* paid, 42½; Chartered of India, Australia, and China, 20; Chartered Mercantile of India, London, and China, 20*l.* paid, 20½; City of Glasgow, 100*l.* paid, 110 to 112; London Chartered of Australia, 20; Ditto, New, 2½; London and County, 17½; London Joint-Stock, 20*l.* paid, 19½; London and South Africa, 10; Oriental, 6½; Ottoman, 17½; Union of Australia, 30*l.*; and Union of London, 6½ pm.

The trading quotations for shares in new undertakings are as follows:—Great Marlow Railway, 2½ to 3 pm.; Thames and Medway Canal, 1 to 1¼ pm.; Universal Marine, 15s to 1*l.* 1s to 1*l.* 1s 6d.; London and Provincial Marine, 1*l.* 1s to 1*l.* 1s 6d.; and General Marine, 1*l.* 1s to 1*l.* 1s 6d. Canada 6 per cents, 1873, 2 pm.; Commercial Union Fire, 2 pds. to par.; Hudson Carrying Company, 1*l.* to 1*l.* 1s; and Universal Shipbuilding Company, 1 to 1¼ pm.

In Colonial Government Securities only a moderate business has been transacted:—Canada Five per Cents have sold at 101½; Ditto, Six per Cents, 1868 and upwards, 20; Nova Scotia Six per Cents, 1869; and Ditto, Six per Cents, 1870, 112.

The Miscellaneous Market has been steady:—Australian Agricultural have changed hands at 2½; Australian Land, 1½; Crystal Palace, 3½ ex div.; Electric Telegraph, 86; Oriental Gas, 1½; Oriental Inland Steam, 6½; Peninsular and Oriental Steam, 71; Royal Mail Steam, 47; Victoria Graving Dock, 8½.

In railway Share Market has been less active than in the previous week, and the following quotations have not been supported. The following are the closing prices of the leading lines:—

Caledonian, 87½; Chester and Holyhead, 12½; Eastern Counties, 7½; Great Northern, 104½; Ditto, A Stock, 120; Ditto, B Stock, 120; Ditto, C Stock, 120; Ditto, D Stock, 120; Ditto, Extension, 20; Great Southern and Western, 108; Lancashire and Yorkshire, 107½; London and Brighton, 117½; London and North-Western, 96½; London and North-Western, Lancashire Extension, 20; Manchester, Sheffield, and Lincolnshire, 53½; Ditto, New Shares, 20; North British, 63; North-Eastern—Berwick, 101½; Ditto, Leeds, 101½; Ditto, Newcastle, 101½; Ditto, York, 101½; North Staffordshire, 13; Nottingham and Grantham Railway and Canal Companies, 77½; Scottish Central, 107½; Scottish North-Eastern, 107½; Shrewsbury and Wolverhampton, 17½; Vale of Neath, 96½; West Hartlepool Harbour and Railway, 84½.

LOANS LEASED AS FIXED RENTALS.—Chester and Holyhead, 50*l.*; Ditto Consolidated Stock, 100*l.*; Ditto, 125*l.*; Caledonian, Stour Valley, Clarence, Hitchin, and Shepreth, 100*l.*; Wilts and Somerset, 91.

RAILWAY SHARES.—Hillingdon and Uxbridge, 10*l.* Dundee, 81½; Great Northern Five per Cents, 1863; Great Western Four per Cent, 103; Ditto Five per Cents, 1864, 113; Lancashire and Yorkshire, 1865, 109; Ditto, Four-and-a-Half per Cents, 1903; London, Chatham, and Dover, Metropolitan Extension, 3*l.*; North Staffordshire, 10*l.*; Nottingham and Grantham, 10*l.*; Scottish Central, 107½; Scottish North-Eastern, 107½.

The total circulation is now £21,289,440. Public deposits amount to £4,134,901, and private deposits to £11,379,277. Securities are £17,098,518, and the stock of bullion is £16,718,987.

The market for Home Securities is dull to-day, and prices have a drooping tendency. Consols for Money marked 93⅞; for the Account, 93⅝ ex div.; the Reduced Three per Cents, 92½ to ⅝; the New Three per Cents, 92⅞ to ⅞; and Bank Stock, 209½ to 212. In the value of Foreign Bonds very little change has occurred. The Five per Cent Stock is 103 to ⅝. In the value of Foreign Bonds very little change has occurred. The Five per Cent Stock is 103 to ⅝. In the value of Foreign Bonds very little change has occurred. Advices from Paris are to the effect that the Bank have relieved the rate of discount to five per cent.

THE MARKETS.

CORN EXCHANGE (Friday).—Fresh up to this morning's market the arrivals of English wheat have been moderate, and of foreign extremely small. The trade has been very dull throughout the week. The show of feeling wheat was tolerably satisfactory. The sales of flour were limited, and prices were barely supported. Barley was in fair request, and prices were fully maintained. Malt was dull, and the quotations were nominally unchanged, yet no chances took place in the value. Malt with the exception of fine corn, was in good request, at previous quotations. Beans and peas were in limited demand, at late rates; but inferior parcels were a slow inquiry, though not cheaper. The show of oats was moderate, and the trade was in a sluggish state, at late rates.

ENGLISH WHEAT, per imperial quarter, 40s. to 44s.; Essex, Kent, and Suffolk (new), 40s. to 44s.; Scotch, 40s. to 44s.; Irish, 40s. to 44s.; foreign, 40s. to 44s.; Barley, 30s. to 32s.; malting ditto, 32s. to 34s.; Chevalier and Scotch malt, 50s. to 52s.; pale malt, 44s. to 46s.; Essex, Kent, and Suffolk ditto, 44s. to 46s.; Norfolk and Lincolnshire ditto, 42s. to 44s.; Oxford, Cambridge, and Northampton ditto, 42s. to 44s.; Yorkshire ditto, 42s. to 44s.; Scotch ditto, 42s. to 44s.; Irish ditto, 42s. to 44s.; Beans, 36s. to 38s.; Harrow ditto, 40s. to 42s.; Pigeon ditto, 40s. to 42s.; Winchester ditto, 40s. to 42s.; Egyptian ditto, 36s. to 38s.; Peas, 36s. to 38s.; grey peas, 34s. to 36s.; maple, 36s. to 38s.; white, 36s. to 38s.; boilers, 36s. to 38s.; Tick beans, 36s. to 38s.; Indian corn, 30s. to 32s.; oats, 20s. to 22s.; Scotch feed, 22s. to 24s.; Irish ditto, 20s. to 22s.; potato ditto, 22s. to 24s.; Irish potatoes, 90s. to 95s.; Egyptian ditto, 90s. to 95s.; Spanish ditto, 90s. to 95s.; Jersey ditto, 90s. to 95s.; Madeira ditto, 90s. to 95s.; Canada ditto, 90s. to 95s.; American ditto, 90s. to 95s.; per cwt.; country meal, 32s. to 34s. per 280 lbs.; French flour, 40s. to 42s. per 280 lbs.; country ditto, 32s. to 34s. per 280 lbs.; Hertz marine, 44s. per sack.

ENGLISH FLOUR, per sack of 280 lbs., 40s. to 44s.; Calcutta, 42s. to 44s.; Stockport, 42s. to 44s.; Norfolk, 42s. to 44s.; Suffolk, 42s. to 44s.; Essex, 42s. to 44s.; Kent, 42s. to 44s.; Irish, 42s. to 44s.; Scotch, 42s. to 44s.; foreign, 40s. to 42s.; Hertz marine, 44s. per sack.

Foreign.—Wheat, Ghee and Kent, red, 40s. to 42s.; ditto white, 42s. to 44s.; Nortolk and Lincolnshire, red, 40s. to 42s.; ditto white, 42s. to 44s.; Scotch, 40s. to 42s.; Irish, 40s. to 42s.; malting ditto, 32s. to 34s.; Chevalier and Scotch malt, 50s. to 52s.; brewers' ditto, 44s. to 46s.; Essex, Kent, and Suffolk ditto, 44s. to 46s.; Norfolk and Lincolnshire ditto, 42s. to 44s.; Oxford, Cambridge, and Northampton ditto, 42s. to 44s.; Yorkshire ditto, 42s. to 44s.; Scotch ditto, 42s. to 44s.; Irish ditto, 42s. to 44s.; Beans, 36s. to 38s.; Harrow ditto, 40s. to 42s.; Pigeon ditto, 40s. to 42s.; Winchester ditto, 40s. to 42s.; Egyptian ditto, 36s. to 38s.; Peas, 36s. to 38s.; grey peas, 34s. to 36s.; maple, 36s. to 38s.; white ditto, 36s. to 38s.; boilers, 36s. to 38s.; Tick beans, 36s. to 38s.; Indian corn, 30s. to 32s.; oats, 20s. to 22s.; Scotch feed, 22s. to 24s.; Irish ditto, 20s. to 22s.; potato ditto, 22s. to 24s.; Irish potatoes, 90s. to 95s.; Egyptian ditto, 90s. to 95s.; Spanish ditto, 90s. to 95s.; Jersey ditto, 90s. to 95s.; Madeira ditto, 90s. to 95s.; Canada ditto, 90s. to 95s.; American ditto, 90s. to 95s.; per cwt.; country meal, 32s. to 34s. per 280 lbs.; French flour, 40s. to 42s. per 280 lbs.; country ditto, 32s. to 34s. per 280 lbs.; Hertz marine, 44s. per sack.

ENGLISH FLOUR, per sack of 280 lbs., 40s. to 44s.; Calcutta, 42s. to 44s.; Stockport, 42s. to 44s.; Norfolk, 42s. to 44s.; Suffolk, 42s. to 44s.; Essex, 42s. to 44s.; Kent, 42s. to 44s.; Irish, 42s. to 44s.; Scotch, 42s. to 44s.; foreign, 40s. to 42s.; Hertz marine, 44s. per sack.

Liverpool Corn and Provision Market.—Fresh up to this morning's market the arrivals of wheat from Wednesday last have been moderate, and of flour extremely small. The trade has been very dull throughout the week. The show of feeling wheat was tolerably satisfactory. The sales of flour were limited, and prices were barely supported. Barley was in fair request, and prices were fully maintained. Malt was dull, and the quotations were nominally unchanged, yet no chances took place in the value. Malt with the exception of fine corn, was in good request, at previous quotations. Beans and peas were in limited demand, at late rates; but inferior parcels were a slow inquiry, though not cheaper. The show of oats was moderate, and the trade was in a sluggish state, at late rates.

ENGLISH WHEAT, per imperial quarter, 40s. to 44s.; Essex, Kent, and Suffolk (new), 40s. to 44s.; Scotch, 40s. to 44s.; Irish, 40s. to 44s.; foreign, 40s. to 44s.; Barley, 30s. to 32s.; malting ditto, 32s. to 34s.; Chevalier and Scotch malt, 50s. to 52s.; pale malt, 44s. to 46s.; Essex, Kent, and Suffolk ditto, 44s. to 46s.; Norfolk and Lincolnshire ditto, 42s. to 44s.; Oxford, Cambridge, and Northampton ditto, 42s. to 44s.; Yorkshire ditto, 42s. to 44s.; Scotch ditto, 42s. to 44s.; Irish ditto, 42s. to 44s.; Beans, 36s. to 38s.; Harrow ditto, 40s. to 42s.; Pigeon ditto, 40s. to 42s.; Winchester ditto, 40s. to 42s.; Egyptian ditto, 36s. to 38s.; Peas, 36s. to 38s.; grey peas, 34s. to 36s.; maple, 36s. to 38s.; white ditto, 36s. to 38s.; boilers, 36s. to 38s.; Tick beans, 36s. to 38s.; Indian corn, 30s. to 32s.; oats, 20s. to 22s.; Scotch feed, 22s. to 24s.; Irish ditto, 20s. to 22s.; potato ditto, 22s. to 24s.; Irish potatoes, 90s. to 95s.; Egyptian ditto, 90s. to 95s.; Spanish ditto, 90s. to 95s.; Jersey ditto, 90s. to 95s.; Madeira ditto, 90s. to 95s.; Canada ditto, 90s. to 95s.; American ditto, 90s. to 95s.; per cwt.; country meal, 32s. to 34s. per 280 lbs.; French flour, 40s. to 42s. per 280 lbs.; country ditto, 32s. to 34s. per 280 lbs.; Hertz marine, 44s. per sack.

English Grain Sold last Week.—Wheat, 107,412; barley, 113,281; oats, 13,020; rye, 731; beans, 2,000; peas, 1,000.

Average Prices of Corn in England and Wales for the Week ending Nov. 9.—Wheat—The market has pulsatory but and very few buyers have come forward, at Monday's quotations. Barley—Fine malting qualities have been in request, and have to-day realised full prices; inferior ditto have taken place in prices; but the market generally has been quiet. Oats—The demand is chiefly confined to small parcels on the spot; nevertheless, prices have undergone no change.

Provisions.—Good and fine qualities of butter are in moderate request, at full quotations; but inferior sorts are dull, and 2s. per cwt. cheaper. Bacon—The demand is steady, at full prices. Hams—Are in good request, at 2s. per cwt. more money. Lard—Is in fair request, at 1s. per cwt. higher. Cheese—Fine, rich qualities are in steady request, at full prices; but the demand for inferior sorts is dull, at 1s. per cwt. less money.

Tallow.—Fine P.Y.C. on the spot, has sold at 41s. for new; 41s. 3d. for old. At these rates the market is firm.

Oils.—Linseed is in good request, at full prices. Rapeseed is dull, at 1s. per cwt. lower. Cocoa-nut Cylon is in request at from £37 to £38. Palm is dull, at 1s. per cwt. lower. Sperm is in fair request, at £87 10s. for pale. Seal Greenland is dull, at £36 10s. for pale. Cod is dull, at £35 for pale. Linseed is dull, at £29 10s. for pale. Rapeseed is dull, at £34 10s. for pale. Turpentine is dull, at 1s. per cwt. lower.

Hops.—Fine qualities are in improving request, at a decline of from 2s. to 4s. per lb. Generally, next to nothing is doing.

Wool.—Fine descriptions are in steady request, at full prices; but the demand is slow, at from 0½d. to 1d. per lb. lower.

Coals.—Market—Best house coals, 19s. 6d. to 20s. 6d.; seconds, 17s. 6d. to 18s. 6d.; steam coals, 17s. 6d. to 18s. 6d.; Wallsend, 19s. 6d. to 20s. 6d.

Sugar (Friday).—Good and fine new sugars remain in demand, at very full prices. Other kinds are dull, and 6d. to 1s. per cwt. lower. Refined goods are in fair request, at 1s. per cwt. higher. Crushed, 3s. 6d. to 4s.; Bastard, 3s. 6d. to 4s.; grocery lumps, 4s. 6d. to 5s.; fine ditto, 5s. to 5s. 6d.; double refined, 5s. 6d. to 6s.; pale ditto, 6s. to 6s. 6d.; extra ditto, 6s. 6d. to 7s.

Coffee (Friday).—Fine qualities are in steady request, at full prices. Other kinds are dull, and 1s. per cwt. lower. Ordinary, 44s. to 46s.; middling, 47s. to 48s.; fine, 49s. to 50s.; superior, 51s. to 52s.; Mocha, 53s. to 54s.; Java, 50s. to 54s.; Ceylon, 50s. to 54s.; Plantation, 50s. to 54s.; Costa Rica, 50s. to 54s.; Cuba, 50s. to 54s.; Brazil, 50s. to 54s.; Jamaica, 50s. to 54s.; Trinidad, 50s. to 54s.; Honduras, 50s. to 54s.; Haiti, 50s. to 54s.; Manilla, 50s. to 54s.; Sumatra, 50

THE PRIME MINISTER OF THE NEW ZEALAND ADMINISTRATION.

WILLIAM FOX, Esq., of Westoe, Rangitiki, New Zealand, is the third son of the late George Townshend Fox, Esq. Magistrate and Deputy-Lieutenant for the county of Durham, and brother of the Rev. G. T. Fox, of Durham. He was born at Westoe, in that county, on the 20th of January, 1812. He graduated at Oxford in 1835, after which he entered Lincoln's Inn, and was called to the Bar about the year 1839. In 1842 he married Sarah, daughter of William Halcomb, Esq., of Poulton, near Marlborough, Wilts, and shortly after emigrated to New Zealand. For nine years he resided in Wellington, but, having purchased an extensive tract of land in the Rangitiki district, he has since then resided on his own estate, except when absent on public duty in Auckland.

From his first entrance into the colony Mr. Fox always took a lively interest in politics, representing popular principles, and was a zealous advocate for self-government in the colony. In the year 1852 he visited England, with a view to obtaining those political privileges for New Zealand which were afterwards accorded to it, and which have at length resulted in his obtaining the reins of government at a crisis of unparalleled importance and anxiety in the colony. He has always been a friend of the natives, who repose unbounded confidence in him; so that it may be regarded as a most fortunate circumstance that the "war party," who have involved the country in its present difficulties, are to be followed by one to well calculated to pour oil on the troubled waters, and of all other men in the colony perhaps the best fitted to aid Governor Grey in his laudable efforts to restore peace and regain the confidence of the natives. As a public speaker Mr. Fox is fluent and ready in debate, his speaking being characterised by the honest straightforwardness with which he advocates his principles, and the plain common sense which commends itself so strongly to an English audience. The uniform consistency of his political career, and his thorough independence of character, have gained for him that weight and influence in the colony which have placed him in his present commanding position. Having no selfish ends in view, and aiming only at the public good, for which he has sacrificed both time and money, he has given the best proofs of his attachment to the country of his adoption, which have gained for him the fullest confidence of his fellow-colonists.

W. FOX, ESQ., COLONIAL SECRETARY AND PRIME MINISTER OF NEW ZEALAND.

ST. MARK'S, VENICE.

St. Mark yet near his lion shines he stood
Stand, but in mockery of his withered power,
Over the proud Place where an Emperor sued,
And monarchs gazed and envied in the hour
When Venice was a queen with an unequall'd dower.

* * * * *

Before St. Mark still glow his steeds of brass,
Their gilded collars glittering in the sun;
But is not Doria's menace come to pass?
Are they not *bridled?*—Venice, lost and won,
Her thirteen hundred years of freedom done,
Sinks, like a seaweed, into whence she rose!
Better be whelm'd beneath the waves, and shun,
Even in Destruction's depth, her foreign foes,
Than view thus slumberless yonder failing repose.

Childe Harold, canto iv.

So wrote Byron more than forty years ago, when Venice, although greatly decayed, was not such a shadow of her former self as she is at present; then she boasted 120,000 inhabitants, now barely 70,000; and, if the horses might be said to be bridled in 1818, what shall be said of them in 1861?

The Church of St. Mark occupies the eastern side of the great square bearing the same name; a little more to the right than is shown in the Engraving is the celebrated Campanile, and to the left is the Orologio, or clock tower, both of which may be considered appendages of the cathedral. The present church was commenced in 977 (one year after the destruction of another church on the same site by fire (likewise dedicated to St. Mark), but was not completed till nearly a century afterwards, in 1071, the mosaics and interior decorations occupying twenty years still further. The general form of it is a cross, surmounted by five domes of nearlyequal size, one of them being placed at the intersection of the arms and the others at the extremities. "The building then completed," says Fergusson, "was probably only the cross surmounted by the five domes; the portices which surround three sides of the nave were added afterwards; the cupe canopies, the foliage, and pinnacles all belong to the fourteenth century." In the centre of the building are the celebrated horses referred to by Byron their antiquity is very great, and their origin is absolutely lost in the mist of ages. It is known that they were brought from the Hippodrome at Constantinople in 1260, but their history anterior to that date is very uncertain. Napoleon, according to his usual practice, removed them to Paris; but they were not long afterwards restored to their original position. Above them is the Lion of St. Mark's, of which it was remarked by a gondolier, when the French erased the scriptural precept inscribed on the Gospel it holds, and in its place put their cant phrase of "the rights of man and of citizenship," that "the Lion, for the first time, had turned over a new leaf."

All writers on Venice vie with each other in praises of St. Mark's, but of the whole of them perhaps Ruskin has done the church most justice. In his "Stones of Venice," after having described the approach to it in his own peculiar manner, he says, the first view strikes the beholder as "a multitude of pillars and white domes, clustered with a long, low pyramid of coloured light—a treasure-heap, it seems, partly of gold and partly of opal and mother-of-pearl, hollowed beneath into five great vaulted porches, ended with fair mosaic and beset with sculpture of alabaster, clear as amber and delicate as ivory; sculptures, fantastic and involved, of palm-leaves and lilies, and grapes and pomegranates, and birds fluttering among the branches, all twined together with an endless network of leaves and plumes, and in the midst of it the solemn forms of angels sceptered and robed to the feet, and leaning to each other across the gates, their figures indistinct among the gleaming of the golden ground through the leaves beside them, interrupted and dim like the morning light as it faded back among the branches of Eden when first its gates were angel-guarded long ago. And round the walls of the porches are set pillars of variegated stones, jasper and porphyry, and deep green serpentine spotted with flakes of snow, and marbles that half refuse and half yield to the smallest, Cleopatra-like, 'their bluest veins to kiss,' the shadow, as it steals back from them, revealing line after line of azure undulation, as a receding tide leaves the waved sand. Their capitals, rich with interwoven tracery, rooted knots of herbage, and drifting leaves of acanthus and vine, and mystical signs, all beginning and ending in the cross; and above them, in the broad archivolts, a continuous chain of language and of life—angels and the signs of Heaven, and the labours of men, each in its appointed season upon the earth; and above these another range of glittering pinnacles, mixed with white arches edged with scarlet flowers, a confusion of delight, amidst which the heroes of the Greek horses are seen blazing in their breadth of golden strength, and the St. Mark's Lion lifted on a blue ground covered with stars, until at last, as if in ecstasy, the crests of the arches break into a marble foam, and toss themselves far into the blue sky in flashes and wreaths of sculptured spray."

LONDON STREET ARCHITECTURE.

THE accompanying elevation of Messrs. W. and A. Gilbey's offices in Oxford-street exhibits a novelty in street architecture. The architect, Mr. Thomas Harris, author of a pamphlet on what he styles "Victorian Architecture," has here found scope for illustrating some of his peculiar views on that subject.

The distinctive feature principally sought to be kept in view has

THE CHURCH OF ST. MARK, VENICE.

been to secure the largest amount of accommodation combined with ample light and ventilation. The interior consists of one large room, 115ft. by 17ft., and 18ft. high, all the fittings of which have been designed by the architect, the woodwork being unpainted stained deal varnished. The lower part of the front is executed in stone, of plain, bold design, the predominating idea being, according to the architect's theory, "angularity." The upper portion consists of ornamental brickwork, of an entirely new and chaste character, and harmonising with the stone portion below. The doorway admits to a commodious lobby, in the construction of which considerable originality has been displayed, above the entrance the hyetagre has the trade mark of the firm carved in bold relief. The builder is Mr. John Hale, Queen Anne-street.

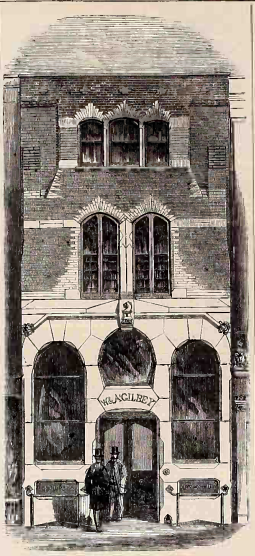
These premises are connected by telegraph with the stores of the establishment in Titchfield-street (about 160 yards apart), and which we may describe as "cellars above ground," the old plan of dark ill-

DRINKING-VESSELS: "THE LUCK OF EDEN HALL," WITH LEATHER CASE FOR SAME, AND A PEG TANKARD OF WOOD.—SEE SUPPLEMENT, PAGE 502.

ventilated, underground cellars being here exchanged for convenient departments for the separate wines of the different countries, the temperature of the whole being duly regulated in the winter by heated steam, and in summer by currents of pure air. The departments in question are vaulted and fireproof, and form three sides of a court in which the packing is carried on.

Everything here, from the packing-case (which was designed and introduced by the firm some four years ago, and has since been generally adopted by the trade in place of the old-fashioned hamper) to the three-wheeled truck, used for collecting the wines from the different floors when bottled, is subordinated to save time and secure rapidity of dispatch.

The extent of the entire store comprises 480,000 cubic feet, with accommodation for 1400 to 1500 hogsheads of wine on the scantling



MESSRS. GILBEY'S WINE OFFICE, OXFORD-STREET.

in condition for bottling, and (as was being done at the time of our visit) facilities for packing and forwarding to all parts of the kingdom upwards of 300 dozen of wine a day.

We have before referred in these pages to the impetus given to the consumption of light French and German wines by the alterations inaugurated this year by the Chancellor of the Exchequer; and although during the last seven months the returns show no less a con-

IVORY GRACE CUP OF THOMAS A'BECKET, SET IN GOLD. SEE SUPPLEMENT, PAGE 502.

sumption than 1,530,410 gallons against a consumption in 1859 of 418,843, and in 1860 of 817,789 gallons, we believe this branch of trade is as yet comparatively in its infancy. These remarks are, however, only another illustration of our aptitude as a "nation of shopkeepers," showing as they do the amount of energy brought at once to bear to meet any requirements of the times.

MESSRS. GILBEY'S WINE STORES IN TITCHFIELD-STREET.

*** *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for every Ten Words.*

BIRTHS.

On the 18th inst., at Wickham, near Cheadle, Staffordshire, the wife of John Kay, Esq., of a son.

On the 14th inst., at Monk Hill, in the county of Devon, the wife of Reginald Tuke, Esq., of a son and heir.

On the 1st of August, the wife of the Rev. George F. Boyle, of Ardtrostan, in the county of Argyll, of a daughter.

At Fort House, Kildare, the Hon. Mrs. Colborne, of a daughter.

MARRIAGES.

On the 13th inst., at St. Jude's Episcopal Church, Glasgow, by the Rev. Gerhard K. Fridell, Incumbent, Henry Fridell, Esq., cotton-broker, Liverpool, to Henry Fridell, daughter of J. Fairfull Smith, Esq., Mary Bowman, eldest daughter of Maybole, Ayrshire, Wm. of Old Aberdeen, parish of Maybole, Ayrshire, and Ruth-crescent, Glasgow.

On the 15th inst., at Trinity Church, Dover, by the Rev. Charles Jenkinson, the Rev. Charles Wordsworth, father of the bridegroom, and the Rev. Charles Cornish, of Canterbury, Essex, son of the Rev. Charles Cornish, of Canterbury, Essex, Warwickshire, to Frances Elizabeth, youngest daughter of John Dixon, Esq., of Dunsley, Surrey, and the late Mrs. Dixon, of Great Yarmouth.

On the 15th inst., at Cuddington, Cheshire, by the Rev. Edmund Roberts Tarleton, Rector of Ince-in-Makerfield, Lancashire, brother of the bridegroom, Thomas Burton-Ley Tarleton, Esq., of Ince Hall, Wigan, Lancashire Lurcher, Esq., of Foo-Chow, China, to Sarah Elizabeth, youngest daughter of John Tennant, Esq., of Queensbury, Leeds.

DEATHS.

In Clarges-street, Lady Maria Saunderson, wife of Colonel H. R. Saunderson, and daughter of the late Earl of Caithness, aged 61.

On the 13th inst., at Victoria-street, Norwich, in his 22nd year, Joseph Edward Sloane, eldest son of the late Simon Joseph Sloane, M.R.C.S., of Great Yarmouth.

On the 16th inst., at Cadiz, in the 60th year of her age, Margaret Ann, wife of the William Lancaster, after an illness of only four days.

On Sept. 15, at Perth, Western Australia, in the 32nd year of his age, Alexander John Forrest, Esq., Surveyor-General of that colony, and Commissioner of Crown Lands, eldest son of the late Alexander Forrest, Esq., of Seafield, Ayrshire, and brother of Dugald Forrest, Esq., of Lisbon, Portugal, and the wife of Dr. Cowell, Physician-in-Ordinary to the King of Portugal, and the Algarves at the Palace of St. Ubes.

On the 14th inst., at Trinity Church, Dover, by the Rev. Charles Jenkinson, the Rev. Charles Wordsworth, father of the bridegroom, and the Rev. Charles Cornish, of Canterbury, Essex, son of the Rev. Charles Cornish, of Canterbury, Essex, Warwickshire, to Frances Elizabeth, youngest daughter of John Dixon, Esq., of Dunsley, Surrey, and the late Mrs. Dixon, of Great Yarmouth.

On the 15th inst., at Cuddington, Cheshire, by the Rev. Edmund Roberts Tarleton, Rector of Ince-in-Makerfield, Lancashire, brother of the bridegroom, Thomas Burton-Ley Tarleton, Esq., of Ince Hall, Wigan, Lancashire Lurcher, Esq., of Foo-Chow, China, to Sarah Elizabeth, youngest daughter of John Tennant, Esq., of Queensbury, Leeds.

PIANOFORTES BY THE BEST MAKERS, FOR SALE OR HIRE.
CRAMER, BEALE, and WOOD, 201, Regent-street, have for sale or Hire the best of PIANOFORTES, by BROADWOOD, COLLARD, ERARD, KIRKMAN, ALEXANDRE, COLLARD, and ERARD. The Warehouses of CRAMER and Co. afford the public an invaluable opportunity of testing the different qualities of the various pianofortes of each maker, placed as they are, side by side, in carpeted rooms of the ordinary size of a drawing-room, and not in the confined area of a warehouse, as is a private customer.

CRAMER, BEALE, and WOOD'S New MODEL COTTAGE PIANOFORTE, price 32 guineas. Every instrument fully in tune and well at the lowest terms. Should any instrument fail to give entire satisfaction, it may be exchanged any time within a month, or the sum of purchase if returned in Guinea and the cost of carriage.

PIANOFORTES
CRAMER, BEALE, and WOOD select TRIMNOTHYS from the factories of the eight makers, and allow the full price of the Hire to be paid if any of them be purchased, and the instrument in every way charged.
201, Regent-street, W.

CRAMER, BEALE, and WOOD execute all kinds of PIANOFORTE and HARMONIUM REPAIRS in the most highly-skilled workmen only employed.—201, Regent-st. W.

HARMONIUM.—CRAMER, BEALE, and WOOD have just RECEIVED A NEW INSTRUMENT, which they have much pleasure in calling attention to, from the fact of its being the only Harmonium in London for Hire and Purchase.—201, Regent-street.

PIANOFORTES and HARMONIUMS.—CRAMER, BEALE, and WOOD have always on hand a large assortment, forming the most reasonable lease in London for Hire and Purchase.—201, Regent-street.

PIANOS and HARMONIUMS, by GEVELAERT and FLOREN, 191, Regent-street, are now selling at the Manufacturers' reduced prices—from £16 and upwards. New Instruments for Hire.

OETZMANN and PLUMS have Grands of all the best makers always on hand, for Hire, from 20s. a month; also the small Study Piano, at 16s. No warerooms with any other house in London.—27, Baker-street, Portman-square.

BASS BANDS—DRUM-AND-FIFE BANDS.—Cavalry, Infantry, Circular Vibrating Brass, Bugles, Drums, Fifes, Clarionets, Cymbals, Tambourines, and all the articles for brass bands supplied at wholesale prices by BUTLER, 17, Grafton-street, Soho, London. Bandmasters, dealers, and shipowners supplied. Price-lists, with overtime free by post.

ENGLISH CONCERTINA, £1 11s. 6d.; £2, genuine, full sonorous, 48 keys, double action. Other qualities, from £1 to £6 6s. Illustrations and lists free by post.—Descriptive price-list post-free.—W. S. WHEATSTONE, 5, Ampton-street, W.C.

THE KING OF PORTUGAL.

By a succession of events which could hardly have been expected to have occurred in the course of nature the young Duke of Oporto has been called to fill the throne of Portugal. The death of his mother, Donna Maria da Gloria, may be said to have been premature, inasmuch as it took place at an age when in any ordinary calculation she might have been expected to have reigned many years; indeed, she was but six weeks older than the Queen of these realms. Her crown descended to her eldest son, then only sixteen years old, who in due season having married under what seemed the happiest auspices, there was every chance against such a contingency as the descent of the Crown on his next brother. But Death, in the instances of both the late King and his Queen, knocking at the door of the palace under circumstances strangely like those about which we are accustomed to associate with his advent to the humblest cottages, in the twentieth year of his age the second son of Donna Maria finds himself suddenly called on to assert his hereditary right to rule over the ancient kingdom of Portugal.

As usual in Spanish and Portuguese Royal and noble families, the new King was invested at his baptism with a long array of names. Dom Louis Philipe Maria Fernando Pedro d'Alcantara Antonio Miguel Raphael Gabriel Gonzaga Xavier Francisco d'Assise Jean Augusto Jules Yolfando de Braganza-Bourbon, the second son of Donna Maria II. da Gloria and Don Ferdinand Auguste Francois Antoine, Duke of Saxe, was born on the 31st of October, 1838. At an early age his Majesty, then Duke of Oporto, was enrolled in the maritime service of the kingdom of Portugal, and at the time of his accession held the rank of "Capitaine de Vaisseau." His education was, it is understood, as carefully guarded as that of his brother, the late King; and together they made that tour of Europe, embracing visits to England, France, Italy, Switzerland, and Belgium, in 1854, which brought their names somewhat prominently before Europe.

In the tranquil years of his brother's reign of course no opportunity was afforded the Duke of Oporto of distinguishing himself, even if his years had not precluded him from taking any part in the public life of Portugal. It is understood that his Majesty possesses all the qualities, both of intellect and disposition, which belonged to his brother, the late Sovereign.

The new King arrived in Lisbon on Saturday, and was saluted as Sovereign.

THE NEW KING OF PORTUGAL.

THE STORM AT SCARBOROUGH ON NOVEMBER 2.

ACCUSTOMED as are the dwellers in the coast towns of our island to scenes of disaster, and often of death, from the war of the elements and the raging of the tempests that occasionally prevail, we may unhesitatingly say that the awful events that transpired at Scarborough on Saturday, the 2nd inst., have rarely had a parallel, either there or elsewhere. Up to Friday night the weather remained calm and serene. Notwithstanding a depression of the mercury in the barometer an ordinary observer would have failed to perceive any indications of the really terrific hurricane which a few hours afterwards rose to its greatest strength, dealing death and desolation to families, and destroying property on land and sea to a deplorable extent.

At about one o'clock on the morning of Saturday the wind freshened, and it then rose so rapidly that by two o'clock it blew a strong gale from the N. or N.E., which increased in force until three or four o'clock, when it had reached its greatest degree of violence. It is stated by some persons that the occasional rapid veering of the wind gave it at times the character of a whirlwind, and some of the gusts about the hour last mentioned are said to have been actually from the opposite point to that of the prevailing storm. Throughout the town it has been commonly said that houses substantially built, and hemmed in on each side, really vibrated and shook under the pressure and force of the wind upon them. Sleep forsook full many an eyelid on that fearful morning, and many were the sad and anxious hearts that beat in fitful and sorrowing response to the voice of the tempest.

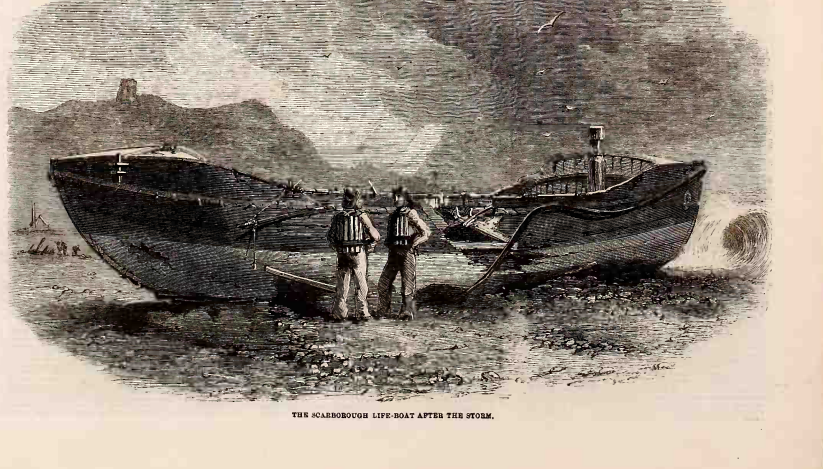
In nearly every street of the town the storm has injured dwelling-houses and other buildings. In New Queen-street the upper part of a house was blown away completely, including part of the outer walls. A photographic gallery in the same neighbourhood, belonging to Mr. John Inskip, is utterly destroyed, and a similar erection in the centre of the town is shattered to pieces. A new villa at Falsgrave is razed to the ground. The roof of St. Peter's Roman Catholic Church is seriously injured; and in every street at the north of the town the fragments of fallen buildings or roofs are to be met with.

The scene on the Sandside and in Quay-street, during the early part of the afternoon, was one of the greatest excitement. The tide, being at the spring, was forced to an extraordinary height by the wind. The spectacle of the waves dashing over the outer pier, at the end nearest the town, was one in itself of awful grandeur. Hundreds of tons weight of water were carried at intervals, with huge masses of foam and surf, across that part of the harbour, appearing for the moment of their being uplifted like inverted cataracts, bounding upwards against the laws of gravity. The sea rose to the level of the West Pier, and threatened destruction to many small craft, and danger to the shipping in the harbour. The heavy stonework on the parapet of the Spa Promenade was in several places dislodged by the force and weight of the water beating against it.

We must now refer to another class of lamentable disasters resulting from this distressing storm. Regularly as the wintry season commences the records of maritime disasters are looked for in the columns of the newspaper press; and as regularly we look for the recital of deeds of daring performed by our life-boat crews and others of our coast boatmen, in the endeavour to rescue their fellow-creatures from impending death. Happily, owing to the valuable properties of our life-boats and their generally skilful management, we have not often to record disasters to them. Yet ever and anon, as if to remind us of the hazardous character of those services, and to force upon us a due appreciation of them, we read of the appalling destruction of a life-boat and the loss of some or all of her crew.

The worst fears were entertained throughout the day for the safety of the fishing-boats, a numerous fleet of which were known to be at sea. The gale was now at its worst, and there being an unusually high spring tide, its effects were doubly destructive. A terrible disaster was about to befall, which we will relate as described in a local paper:

At four p.m. the schooner Coupland, laden with granite, from Aberdeen, attempted to enter the harbour, but, being taken aback on rounding the pier, her sails were disabled, and she rapidly drifted, and ultimately struck on the sand opposite the orchestra at the Spa, not twenty yards from the sea-wall of the promenade. In her passage between the pier and the Spa she drifted rapidly amid foaming billows that chased each other like so many huge cataracts until she struck. In the meantime the life-boat was manned and went out to the relief of the schooner's crew, whose danger, however, was not now so imminent. The sea broke upon the sea-wall of the Spa with such terrific violence that the stones of the parapet were dislodged, and the rebound of the waves caused such a sea as no small craft could live in, much less horse. Arrived at this point, where they were watched and even spoken to by the people on the Spa, amongst whom the most painful and agonising excitement prevailed, the crew of the life-boat appeared terror-stricken by their awful position. Suddenly a fearful birch of the boat pitched out the veteran boatman, Thomas Clayton, and the lad-man in the boat, and one of great experience and good judgment. He was quickly washed up to the Spa wall, and was saved by a life-buoy. Again the boat was dashed up to the wall, as though she were but the merest trifle. Her position was awful in the extreme. She was actually touched by a gentleman on the promenade; and down again she was precipitated into the foaming billows, her destruction and the loss of her unfortunate crew being apparently inevitable. James Banks, Thomas Brewster, and Isaac Morley were now thrown out by the violence of the tossing to which the boat was subjected. Banks, after a fearful struggle in the water, was rescued by the same means that had saved Clayton a few minutes previously. Morley was drawn into the boat by John Barton, who, as the sequel will show, perished in the subsequent attempt to land. The oars of some of the crew were



THE SCARBOROUGH LIFE-BOAT AFTER THE STORM.

now dashed out of their hands, and they were at once rendered powerless. The boat was washed heavily up against the wall, and the current, which was at that moment at its greatest fury, rushing her with great strength and excellent qualities preserved her from being instantly dashed to pieces. Hopes were thrown from the boat to the promenade, and she was drawn through the surf to a landing-place at the southern end of the wall. Having touched the ground, the men jumped out of the boat before the water had receded, and, seeing the danger they were in, a rush down the incline was made by a great number of men in search of safety. It was at this juncture that the dreadful spectacle of the destruction of human life was witnessed. In the momentary confusion that ensued another one of the boats, and nearly all the party were thrown from their feet, and were now scrambling to save their lives. Many succeeded in getting up, but another section of them were swept away below. Five or three times were they carried out and back again. Among these Lord Charles Beauclerk was prominent. His Lordship, with great pluck, after performing a rope round his body, on her release, it was found that a man, supposed to have been Thomas Brewster, one of the crew, having been between the boat and the wall, was killed by the collision. He instantly fell forward as one dead, and was washed out to sea. Lord Charles Beauclerk was similarly treated, though he was not killed on the spot. He was washed to the foot of the cliff, where Mr. Sarony, the photographic artist, seeing his Lordship's great peril, ran down the incline to his assistance. Mr. Sarony succeeded, single-handed, in fastening a rope round his Lordship's body, when Mr. Hutter, superintendent of the engineering department of the Shoreham railway station, also went to his aid. He was drawn up the incline, the lift just coming out of him. Two or three others were rescued in safety when she lifted with the waves. One of these was Mr. William Tindall, son of the late John Tindall, Esq., banker, of Hastings. This young gentleman was one of the first in the death-scene, and he fell a victim to his philanthropic exercises. The crew of the stranded vessel were saved by the rocket apparatus.

The life-boat, having broken away, drifted on the rocks under the cliff, a hole in the starboard of the bow, where the water rushed in, and rendered unfit for future use. This was her first experience, and is not one it pleases. It was only on the 28th of September last that she was placed here by the Royal National Life-boat Institution, and was launched amid the prayers and good wishes of the inhabitants and visitors assembled on the occasion. Her conduct on Saturday justified every good opinion that had been expressed on her qualities as a life-boat. She was the admiration of every spectator, and the well-being men of the place—seeing the endurance of the terrific test to which she was subjected, she heading backwards and forwards, shipping in every direction, and dashed up against the wall—have expressed the idea that she could not have been overturned. In all her performances she didn't lie the cold not have been overturned. In all her performances she didn't lie the cold not have been overturned. In all her performances she didn't lie the cold

OBITUARY OF EMINENT PERSONS.

SIR THOMAS BUTLER, BART.

Sir Thomas Butler, eighth Baronet, of Garryhundon, in the county of Carlow, was the eldest son of Sir Richard Butler, M.P. for Carlow, by his wife, Sarah Maria, only daughter of Thomas Worth, Newmarket, Esq., of Coolmore, in the county of Cork. He was born on the 21st of October, 1793, and succeeded his father, as eighth Baronet, on the 16th of January, 1817. He married, on the 30th of January, 1815, Frances, fourth daughter of John Graham Clarke, Esq., of Grotto, in the county of Cork, and by her, who survives him, had seven sons and five daughters, all of whom, except the youngest son, are living. Mrs. Graham Clarke, Mrs. Hanly, Colonel Butler, Captain Butler, Mrs. Hedley, Sir Thomas Butler (who on the 8th inst. succeeded to the title), and his son, now Sir Richard Power Butler, the ninth Baronet, who was born on the 29th of November, 1818, and married, in 1853, Matilda, second daughter of Thomas Cockburn, Esq., of Hendrington, Durham, and has a family of nine sons and daughters. The family of Butler is a branch of the great house of Ormonde, the first Baronet, so created in 1628, was Sir Edward Butler, second son of James, ninth Earl of Ormonde. This Sir Edward and his successors represented Carlow in the Irish Parliament for more than one hundred years: their representation ceased at the Union.

SIR J. CÆSAR HAWKINS, BART.

Sir John Cæsar Hawkins, third Baronet, of Kitcham, in the county of Somerset, was the second son of John Hawkins, Esq., by his wife Anne, daughter and coheir of Joseph Cæsarino, Esq., of Hardenhuish House, Wilts, and was the grandson of Cæsar Hawkins, the first Baronet, Serjeant-Surgeon to George III. He was born on the 23rd of February, 1797, and was educated at Eton and Christ Church, Oxford, where he graduated M.A. in 1819. He succeeded to the baronetcy on the demise, unmarried, of his elder brother, Sir Cæsar Hawkins, second Baronet. He married, on the 11th of August, 1824, Charlotte, eldest daughter of William Surtees, Esq., of Redworth, Northumberland, by whom (who died in 1865) he had thirteen children, of whom seven sons and two of the daughters survive him. The eldest son, John Cæsar, died in 1880. The second son, William Hawkins, is in the Navy. He is succeeded by his grandson, now Sir John Cæsar Hawkins, the fourth Baronet, the son of his eldest son, the late John Cæsar Hawkins, by his wife Georgiana Letitia, youngest daughter of Thomas Bourke Hickette, Esq., of Castle Hacketstown. This family of Hawkins, so distinguished in the surgical profession, is of old descent; and their ancestor, Colonel Hawkins, was a staunch Cavalier man. Charles I. and other royalists defended Greenland House, Bisley, against the Parliamentary forces. The uncle of the Baronet just dead was Sir Benjamin Hawkins, Serjeant-Surgeon to Queen Victoria, and his cousin is the present eminent Cæsar Hawkins, Esq., Surgeon Extraordinary to the Queen.

THOMAS S. DUNCOMBE, ESQ.

Thomas Slingsby Duncombe, Esq., M.P. for Finsbury, and a popular and well-known figure, was the eldest son of Thomas Duncombe, Esq., of Copgrove, Yorkshire, by his wife Emma, eldest daughter of the Right Rev. Dr. Hinchliffe, Bishop of Peterborough, and was a nephew of Lord Feversham, and first cousin of William, second and present Lord Feversham, who was born in 1798, and was formerly a captain in the 1st Regiment of Dragoon Guards, in which he was a Lieutenant. He was first returned to the House of Commons for Hertford, in 1826, and afterwards for the borough till 1832. He became member for Finsbury in 1834, and continued to represent it until his death. Throughout his parliamentary career Mr. Duncombe has shown himself an active, and sometimes Reformer, and was both in public and private much liked and esteemed. He died on the 14th inst., at Lancing, near Brighton.

SIR JOHN FURDES, M.D.

Sir John Furdes, M.D., D.C.L., F.R.S., was the fourth son of Alexander Furdes, Esq., of the Ends, Banffshire, and was born at Cuttlebrae, in that county, in the year of Culloden, 1787. He was educated at the Universities of Aberdeen and Edinburgh, and entered the Royal Navy as Assistant Surgeon in 1807, and, after a short service, was promoted to be Surgeon in 1809. He graduated as Doctor of Medicine in the University of Edinburgh, and accompanied Jenner as a physician at Berkeley, and was the first to call attention himself to endemic parotitis. In 1820 he married Eliza Mary, daughter of John Bendy, Esq., D.C.L., by whom, who died in 1871, he had one son, only child, Alexander Clark Furdes. Dr. Furdes obtained a large practice at Penzance, and afterwards at Clifton, where he was active and instrumental in establishing the infirmary in the latter town. His very great services were "The Contagionists' Vade Mecum" and "The Medicine" and "The British and Foreign Medical Review." In 1844 he published a work on the Climate of Penzance, and in 1851 another, still befalling health compelled him to retire from practice, and he then settled at Bath, where he died on the 17th inst., and where for the last few years he had been a frequent visitor. He was a learned man, most distinguished medical, scientific, and philanthropic societies in Madrid, Copenhagen, Stockholm, Vienna, Turin, Amsterdam, &c. He received the honour of Physician in Ordinary to her Majesty's Household and to the late Duke of Cambridge, and was Physician Extraordinary to the Queen Dowager. Sir John Furdes, as a medical lecturer and philosopher, has written many interesting and valuable papers connected with his profession.

The *Liverpool Mercury* announces the death of Mr. John Gray "who achieved a world-wide reputation by his professional abilities in adjusting the complicated affairs of Overend, Gurney, and Co."

Mr. J. R. Godley, Assistant Under-Secretary for War, died on Monday morning at his residence at Gloucester-place, Portman-square.

Mr. Clough, one of the examiners in the Educational Department of the Privy Council Office, died on the 9th inst. at Penzance.

Mr. G. W. Clement, one of the proprietors of the *Observer* and of *Bell's Life in London*, died on Saturday last at Hemyock Lodge, Clapham Park.

WILLS AND BEQUESTS.

The will and two codicils of the Right Hon. Sir James Robert George Graham, Bart., M.P., G.C.B., of Netherby Hall, Cumberland, and 6, Grosvenor-place, was proved in the principal Registry of the Probate Court by Sir Frederick Ulric Graham, the grandson, the testator's heir-at-law, and one of the executors, Lieutenant-Colonel Graham, the value of the effects being sworn under £35,000. This distinguished statesman has disposed of his property entirely amongst his family. Sir James says in his will in 1859, being the year following the decease of his wife, Lady Graham. In 1860 and 1861 two codicils to his will. Sir James has devised to his eldest son, Sir Frederick Ulric Graham, Bart., all his real estates, and has left him also the sum of £10,000 personal property. To his other sons and to his three daughters sums amounting to £40,000 are left by will and settlement, his eldest daughter also getting all furniture and some other articles at the town residence, Grosvenor-place. Sir James has empowered his trustees to present to a living, the Rev. Walter Reginald Farnham, the incumbent of the parish of Arthuret, Cumberland. These gentlemen are also requested to inspect all Sir James's paintings, correspondence, documents, &c., and to keep them, preserve, or publish any, according to their discretion. To the executors legacies of £500 are not bequeathed.

The will of George Henry Littledale, Esq., of Crick, Northamptonshire, was proved in London on the 8th inst., by the Rev. Charles Littledale, of Thrapston Road Rectory, Kettering, and C. H. Perceval, Esq., of Liverpool, merchants, the executors, the personalty being sworn under £140,000. The gentleman's will disposes of property of a mixed kind, in some instances settled upon trusts, and in others unsettled. The testator has made provision for his mother, his sisters, and his brothers, all his real and personal property, and also any funds considered necessary for the purchase of an annuity for Mrs. Joseph Littledale, and of the income of £10,000 for the time being constituting his mother residuary legatee. The testator bequeaths to his said brothers the sum of £1000 to purchase mourning rings, and a like amount would be entitled on the decease of his mother; and a further sum to which he is also entitled under marriage settlement on the decease in succession of the testator's father, Mr. George Henry Trench.

The will of Charles Reed, Q.C., of Framlingham Castle, Bayswater, which was proved in London by the executors, W. H. Dutton, George Gladstone, and the testator's son, Charles Reed, Q.C., M.P., is dated the 10th of October, 1882, and is very brief. It was a codicil of considerable prominence, and carried on an existing business for several years in Fleet-street. His widow enjoys a prior

Relics of the Past.

THE LUCK OF EDEN HALL.

THE very curious cup of Venetian glass represented on page 529 is supposed to be of great antiquity, and is preserved with scrupulous care in the mansion called Eden Hall, belonging to Sir G. Musgrave, near Penrith, in Cumberland. Its name and conservation are owing to a superstition that if ever this vessel is destroyed the good fortune of Eden Hall will surely depart. The cup in reality, was probably a sacred chalice, but the family tradition invests it with a more romantic interest. According to this legend, a servant of the proprietor of Eden Hall, many centuries ago, was sent to draw water from a famous spring in the garden, called St. Cuthbert's Well, and returned in hasty fairies who were disporting themselves upon the green hard by. Seeing a beautiful drinking-vessel upon the margin of the spring, he snatched it up, whereupon he was surrounded by the fairies, but with every effort to recapture their cup, had, after an ineffectual struggle, they gave up the attempt and flew away, crying out as they departed:

> If that glass shall break or fall,
> Farewell the luck of Eden Hall.

This interesting relic is alluded to in a ballad by Phillip, Duke of Wharton, a parody of "Cheery Chase," entitled "The Drinking Match of Edenhall," which opens thus:—

> To chase the spleen with cup and cann
> Is the delight of a merry man;
> Bates pet rupon shall never see
> The like of such a day.

PEG TANKARDS.

The remarkable old drinking-vessel, an Engraving of which accompanies "The Luck of Eden Hall," is in the possession of Mrs. Davidson, of Shipley Park, Yorkshire. It holds five pints of liquid, and is described as contained between each peg. This species of tankard originated, it is said, with King Edgar, who established at the great metropolitan monasteries the good rule had learned from the Danes, not only put down much the drinking, but to restrain immoderate potations, ordained that the same purpose that pins or nails should be fastened into the drinking cups and cans. These pins were fixed at regularly distances, and if any person drank beyond the limit marked in a single draught he was held liable to severe punishment. The effect of this ordinance, "according to Gordon," was the very reverse of that which it was intended to produce. The worthy lexicographer, under the word "to Pin-drinking," or to "Pin the Pin," tells us this was "to do as the head of "

THE ILLUSTRATED LONDON NEWS.

No. 1119.—VOL. XXXIX.] SATURDAY, NOVEMBER 30, 1861. [TWO SHEETS, FIVEPENCE

THE NASHVILLE AT SOUTHAMPTON.

It has become a question whether there is any design in both or either of the contending parties in the States of America to obtain from Great Britain, in a certain sense involuntarily, that which would amount to a violation of neutrality. It is well known that there has been, and probably there still is, an irritability among the more sensitive spirits of the Federal States against England on account of the decided principles of non-intervention in this terrible quarrel which have been laid down by our statesmen and universally acquiesced in by our people. What was expected of this country in such a juncture of American affairs as now exists does not very clearly appear; but of the fact that dissatisfaction with the conduct of England prevails to a considerable extent in the Northern States there is no doubt. Of the feeling towards this country in the Southern States we have little or no knowledge; but there have been rumours, the effect of which is that the Confederates believe that, in our secret hearts, our leaning is to

DESTRUCTION OF THE FEDERAL MERCHANTMAN HARVEY BIRCH BY THE CONFEDERATE WAR-SLOOP NASHVILLE.—SEE NEXT PAGE.

their side, and that our sympathies are, so to speak, wrapped up in cotton. So much of our prosperity, and of the welfare of a large part of our population, is supposed, not without reason, to depend on our import of an article of which in our markets the South has hitherto enjoyed a practical monopoly, that it has been whispered that the Confederate leaders had determined not to allow the export of any cotton to this country under any circumstances, and even apart from the restriction of a blockade, in the hope that England would yield to a commercial pressure, which might easily be converted into a social disturbance, and take such steps as would in effect constitute her to do something more than lean to the party of the Secessionists. It would scarcely be denied, even in America itself—certainly not in the Southern States—that even a show of pretext for such a charge of England would throw a heavy weight in the scale against the party which is the discontentenanced; and, however any such idea may be disavowed, it is more than probable that either section would be glad to test the real feeling of this country and the absolute soundness of her neutrality which she professes. Circumstances have just occurred which, as we conceive, will tend to bring about a settlement of any doubts which may exist in regard to this question. For be it from us to insinuate anything which can be construed into even a tendency to offence to either party in this unhappy contest, but we may be permitted to say that it has long been the boast of the Americans as a people that they are essentially what they call "smart;" and, among other additions to the language which is common to the Old and the New Country which they have succeeded in making is the word "dodge"—the significance of which is admitted. Of course, the word could not exist unless that which it signifies also existed; and that its application should creep into the conduct of the public affairs of the States, Federal or Confederate, at a critical moment, and when a great object was at stake, would not be in the least surprising.

These remarks have been elicited by the fact that armed vessels, both of the Federal and Confederate States, have made their appearance at one of our principal ports, and have their appearance at one of opportunities and facilities demanded that what, by the permission of the Sovereign, any for refitting, which, by the permission of the Sovereign, any State is accustomed to afford to the war-vessels of all nations. In the case of the Federal vessel, whatever may have been her objects or her destination, she bore with her no distinctive marks of those qualities which would have brought her within the terms of the declaration of neutrality which has been solemnly exacted of the contending parties in America by the Government of this country. In that declaration it is laid down that her Majesty and all her subjects will "hold a strict and impartial neutrality between the Government of the United States of America and certain States styling themselves the Confederate States of America." The subjects of this realm are warned against adding to the warlike force of any ship or vessel of war or other armed vessel belonging to either of the contending parties; and an interdict has been laid on the armed ships, and also the privateers of both parties, from carrying prizes made by them into the ports of the United Kingdom or of any of her Majesty's possessions. Sinning overtly Federalist—got what she required at Southampton, and at the same time departed from that port, neither and for what immediate purposes we were bound by the letter of international law not too curiously to inquire. Hardly had the Federal flag disappeared from our waters when the Confederate colours floated in the same harbour, also over an armed ship, coming, avowedly, for the purpose of refitting. But here the parallel ceases. Without any attempt at disguise, but, as far as we can judge, with ostentatious frankness, it is made known by the commander of the Nashville that almost, if not entirely, in British waters, he had captured and burnt a trading vessel belonging to adherents of the Federal party, made prisoners of the crew, and brought them to England in irons; this latter course having been taken because they declined to enter the Confederate service.

So much of the well-known facts connected with the Nashville as has been necessary to state in order to justify the supposition which we venture to lay down, that the object of receiving, from first to last, was carried on with the design of bringing to the test the question of British neutrality. It would seem as if this merchantman in ballast was taken and destroyed by a Confederate ship of war with the object of exhibiting in the character of the latter openly before the eyes of the English Government, and coming, as it were, red-handed, from the destruction of a Federal vessel, she enters an English port, and asks aid and assistance in rendering her complete and efficient, and enabled to proceed on a cruise in search of others she expects to meet with either under the flag belonging to her enemies and to deal with them in the same manner as she treated the Harvey Birch. It is true that she brought no prize into a British port; but she brought with her all the symbols and signs of a prize. Indeed, she retains property on board of her belonging to the captain and passengers of the captured, for the recovery of which these latter have endeavoured to invoke the help of English law. Can it be denied that, if permission were given to the Nashville to refit and repair, it would be a violation of the spirit, if not of the letter—and even this distinction is by no means clear—of that part of the Queen's declaration which forbids "the adding to the warlike force of any ship or vessel of war or other armed vessel belonging to either of the contending parties?" No doubt the technical answer to this assertion is that these words apply only to matters which are called contraband of war. But the real question is how would such an act as the aiding and comforting—to use an old legal word—of this Confederate vessel, fresh from the capture of a Federal vessel, be construed by the authorities and the people of the North; and, if the truth were known, does not the Captain of the Nashville know that it would be construed in a hostile sense; and is not that the very reason why he has brought his ship, with the crew of her prize, into Southampton harbour?

Something might be said of the "prononce" manner in which a Confederate agent who has come to England in the Nashville—of whom and of his mission we say nothing—has talked of the vast quantities of cotton which are lying ready for shipment in the Southern States, and which, of course, only await some contingency which would break up or render ineffective the Federal blockade. This matter, small in itself, is sufficiently suggestive, and is not without significance in arguing the view we have taken in reference to this transaction.

It should be clearly understood that we are discussing this question, not in any spirit of partisanship or with any tendency of feeling or opinion towards either party in the United States, but solely, as it stands, as a matter for the exercise of the discretion of the Government of this country in carrying out that principle of neutrality which has been laid down as our rule of action. In that sense, and considering the question only from that point of view in coming to a conclusion, it seems to me that the observance of perfect and unadulterated neutrality demands that no facilities should be given to the Nashville. Admitting that all which we have suggested of a cavilly device having been adopted in order to embroil this country with the Federal Government to be without foundation, and indeed we did not for a moment mean to insinuate that it should enter into the consideration of the Government in practically dealing with the matter, on the true construction of our declaration of rigid non-intervention, and, still more or on the principle of sound policy, the usual accommodation and appliances which are granted to ships of war in our ports ought to be withheld from the Confederate vessel of war presenting herself under her this Confederate vessel of war presenting herself under her peculiar circumstances to the notice of the English authorities.

We have waited in vain up to the moment at which we are writing for the decision of her Majesty's Government on this subject. Not that has hitherto appeared the affair of the Nashville remains unsettled. It is certain that some definite and unmistakable rule which would include just such an circumstances as those which surround the case of the Confederate ship ought to have been immediately promulgated by the Government, so that there might be no mistake as to the conditions on which armed vessels of either belligerent are henceforth to be allowed to enter British harbours, and as to the rights which they are to enjoy whilst they remain in harbour. It is certain that still more important event may bring the question of the relations which are to exist between this country and those of the Federal Government and of the San Jacinto to our mutual intercourse. They may not lead to hostilities between the two countries, and in that case the necessity for accurate and unmistakable rules of neutrality will be more than ever needed.

DESTRUCTION OF A FEDERAL AMERICAN SHIP BY A CONFEDERATE SLOOP OF WAR.

The greatest excitement prevailed at Southampton on Thursday week by the arrival in the harbour of a large paddle-steamer, crowded with persons, and flying the Confederate flag of America. She proved to be the Nashville, Captain Pegram, which ran the blockade at Charleston on the 28th ult., and, on her coming to anchor there, hauled down from her, with their personal effects, the crew (twenty-one in number) of the late American ship Harvey Birch. This latter was a fine-looking vessel of 1,100 tons burden, coal laden, and was on her way from Hayre to New York, but fell in with the Nashville on the morning of Tuesday, the 19th inst., and by her was boarded and destroyed by fire.

The following is the statement of her commander, Captain W. H. Lay, R.N.:—"The American ship Harvey Birch, of New York, left Havre for Nelson—The American ship Harvey Birch, of New York, left Havre for Nelson—The American ship Harvey Birch, of New York, left Havre for Nelson—

carried on. The last encounters appear to have been favourable to the Turks. On the 21st inst. Derwish Pacha, after a fight of four hours, defeated with great loss a body of 6000 insurgents near Piva, in Montenegro. Another body which attempted to invade Kolaschin was also repulsed after a bloody fight; and forty Montenegrin barges which attempted to capture a Turkish steamer on the Lake of Scutari were also repulsed with loss. Omer Pacha has received fresh reinforcements.

CANADA.

The prosecution against Colonel Hankin for his breach of the neutrality proclaimed in Canada during the late American war, for the arrest that, for offence being against an Imperial statute, he could only be tried in Westminster Hall.

The public buildings in course of erection at Ottawa, the new capital, have been stopped from want of funds. The sum of 900,000 dollars had been voted, and it is calculated that at least 2,000,000 dollars more will be needed to complete the plan.

The Canadian papers are discussing the project of the Intercolonial Railroad to connect Nova Scotia, New Brunswick, and Canada.

INDIA.

The news from Calcutta brought by the overland mail is nearly confined to speculations on the cotton cultivation and to the discussion of the Governor General's resolutions for the sale of waste lands and the redemption of land revenue. The latter measure has been warmly approved, and the greatest expectations are entertained of its valuable effects.

CHINA AND JAPAN.

We have telegraphic news from China to the 15th of October. The allied forces on that date were leaving Tien-Tsin and Canton. The rebels were troublesome at Ningpo and Hangchow, and the trade at these ports was much obstructed by them.

In Japan the state of affairs is said to be more favourable.

THE CIVIL WAR IN AMERICA.

By the arrival of the Europa we are in receipt of papers to the 13th and telegrams to the 15th, inst.

THE CAPTURE OF BEAUFORT.

Of the eighty-four transports and war-vessels which constituted the naval expedition when it set sail from Hampton Roads seventy-five arrived safely at Port Royal, on the coast of South Carolina, about midway between Charleston and Savannah. The embarkment commenced on the 7th inst., and, after a fight of four hours, the Confederates abandoned the forts at the entrance to the inlet, and retreated precipitately. The Federals captured forty guns, forty-two carriages, military equipments, stores, and other valuable papers. The Confederates complain that their artillery was badly served, while their officer enemies say they handled it well. The fleet in the attack lost only one gun-boat, whose hands were all saved. On the following day the Federal army, numbering 12,000 men, landed and established themselves at Beaufort, the seaside resort of the planters. The latter, together with the negro population, abandoned, had been totally destroyed by the Confederates. Large numbers of negroes came into the Federal camp. The loss of life seems to have been small. The Admiral set down the loss at eighty; that of the Confederates is loosely estimated at a hundred. The small fleet of the Confederates commanded by Commodore Tatnall fled at the sight of the action. Many of them escaped up the inlet leading to the Savannah river, others were run ashore, and the remainder were intercepted by the Federal vessels. Of the nine Federal vessels which were disabled on shore, seven returned to Fortress Monroe, and two were ordered to the coast of North Carolina. One of these contained ordnance stores, the other, troops to the number of 75 (who were taken prisoners) and horses, of which we have lost enough.

BELLIGERENT OPERATIONS ON LAND.

In Western Virginia the town of Guyandote, on the Ohio River, was attacked by 600 Confederates, and, out of 150 Union troops stationed there, 100 were either killed or taken prisoners. The Confederates then retreated. A Federal regiment reached the town and set fire to it, burning the greater part to ashes.

At Pikeville, the capital of Pike county, Kentucky, the easternmost county in the State, General Nelson (Federal) defeated General Williams's forces and took their busiest prisoners. The Secessionists lost 400 killed and a large number of prisoners.

A battle took place in Missouri on the 7th, of which the accounts are very contradictory. It appears that an expedition left the Federal camp at Cairo, Illinois, and landed at Belmont, in Missouri, nearly opposite Columbia. The expedition numbered about 3500 men, and set aside as attack on a Confederate camp, numbering, they say, 7000. The enemy got news out of their correspondence, and the camp was destroyed. As the Federals were retiring, heavy loads, they were taken in the rear by a body of Confederates and compelled to retreat to their boats, leaving their baggage to the enemy. The Federals admit a loss of from 300 to 500 in killed, wounded, and missing.

The army of the West has now advanced beyond Springfield. General Halleck, of California, has been appointed to command it. He is one of the ablest Generals of the regular army of the United States. He entered the army in 1839, and is now about forty-two years of age. His late writings on military matters, and till recently was practising law in San Francisco. General Halleck will his retire to St. Louis, received an ovation from the Germans of that city.

THE SOUTHERN COAST.

The late gale, in which the North Briton was lost, raged with almost unexampled severity at Hatteras Inlet, and the high tide had overflowed the coast outside the forts for miles, so that a wreck and a rescue was being formed between them. It was apprehended that the forts might then be rendered untenable. Some clothing and stores taken from the Confederate Monroe for the use of the Federal troops stationed there were washed away, after being landed, and lost. The camp of the Federals was submerged and everything in it more or less washed away. The regiment has since been brought back to Monroe. Much clothing was found among the property taken from Hatteras.

The Southern journals report the arrival of the Confederate steamer Theodora at Savannah with a valuable cargo of cotton.

The steamer Bermuda escaped from Wilmington with a cargo of rosin and turpentine and 2000 bales of cotton. She was permitted to take a cargo of cotton as a mark of gratitude for the valuable supply of coal and ammunition she had brought; but, as a general rule, ships running the blockade for Europe are not allowed by the people to take cotton.

THE CONFEDERATE STATES.

President Davis and Vice-President Stephens have been re-elected to the position they now severally occupy.

Judah P. Benjamin has been appointed Secretary for War.

THE REVENGE OF THE CHIEFS.

Governor Curtin, of Pennsylvania, has issued a caustic reply to Mr. Seward's circular letter. He objects to corresponding by slips cut from newspapers on the ground that the late Congress was not called for the base appropriation for this purpose if things were more meaning than than now. He says that he does not feel himself justified in calling a special Session of the State Legislature, while Congress may soon assemble a month before the regular Session of the former body. The whole subject of coast defences could only be dealt with by the general Government. Even if the States were to undertake the job, the competition in the purchase of materials for loans between the States and the States would be very injurious to both. Pennsylvania had already advanced considerable sums of money to volunteers and the Federal Government had thrown great difficulties in the way of repayment. On the whole, he suggests the abandonment of Mr. Seward's plan.

MISCELLANEOUS.

The captain of the slaver Erie had been convicted of the capital crime by a New York jury. This is remarkable as being the only conviction of the kind since 1820 when the traffic was declared piracy by Congress. Another trial for a similar crime is progressing in New Bedford.

In New Jersey the Democratic party had carried the State. In Maryland the Union interest prevailed. To this result the surveillance exercised over the polls by General Dix's troops greatly contributed.

A reciprocal war in circulation in St. Louis, aiming Congress to relieve Missouri from the national taxes, because her citizens have already suffered so seriously from the war.

LATEST NEWS FROM ABROAD.

The following telegrams were received through Mr. Reuter's office yesterday (Friday) :—

THE CIVIL WAR IN AMERICA.

By the steamer City of New York, which arrived at Queenstown on Thursday, we have intelligence from New York to the 14th inst. :—

There is no conclusive evidence of the occupation of Bainbridge by the Federals. The Charleston papers of the 12th inst. deny that the Federals have occupied the town, and state that reinforcements had been sent thither by the Confederates who were preparing to defend the town. The Federals, however, have seized Hilton Island, the cotton crop on which was found to have been fired by the residents before leaving. The *Charleston Courier* says that the Federal troops have crossed at Georgetown. The New York journals state that the Federal Government has not determined whether Beaufort shall be made a port of entry. The Southern journals state that black flags have been hoisted at Charleston and Savannah as an intimation that no quarter would be given and that no prisoners will be taken.

Eighteen Federal officers prisoners of war at Richmond, have been selected to be hung, should the Federal Government hang the crew of the privateer Savannah.

Confirmatory accounts have been received of bridge-burning on a recent extensive scale by the Union men of East Tennessee, Missouri.

The Federal army has evacuated Springfield, in Missouri, and moved to St. Louis.

It is reported that a United States' war-vessel has captured a large Bermuda steamer, supposed to be the Fingal, laden with arms, at Key West.

Colonel Cochrane, in addressing his regiment at Washington, urged the arming of the Southern slaves against their masters. The Secretary for War was present on the occasion, and appeared to have fully endorsed Colonel Cochrane's speech.

A despatch from Fortress Monroe reports the arrival of the United States' steam-sloop-of-war San Jacinto, with Messrs. Slidell and Mason on board.

The reported battle at Pikeville, Kentucky, was very much exaggerated. There were no killed, and the number of wounded and prisoners is reduced to 200 on each side.

The report of the capture of the Samter has not been confirmed.

OPINIONS OF THE FRENCH PRESS ON THE CAPTURE OF THE SOUTHERN COMMISSIONERS, MESSRS. MASON AND SLIDELL.

Standing news has been brought by the West Indian mail steamer La Plata, which arrived at Southampton on Saturday, of the capture of Messrs. Slidell, the accredited commissioner to France from the Southern States, and Mason, the accredited envoy to the same mission to France, with their respective secretaries, Messrs. Eustis and M'Farland—who had run the blockade at Charleston and arrived at Havannah on the 16th ult., were forcibly taken out of the British mail-steamer Trent by the commander of the American steam-frigate San Jacinto.

SEIZURE OF CONFEDERATE COMMISSIONERS.

Startling news has been brought by the West Indian mail steamer La Plata, which arrived at Southampton on Saturday morning. The fish inst. Mr. Slidell, the accredited commissioner to France from the Southern States, and Mr. Mason, accredited envoy to the same mission to France, with their respective secretaries, Messrs. Eustis and M'Farland—who had run the blockade at Charleston and arrived at Havannah on the 16th ult., were forcibly taken out of the British mail-steamer Trent by the commander of the American steam-frigate San Jacinto.

It appears that on the 7th inst. the Trent sailed in her regular course of service from Havannah for Vera Cruz and Jamaica. Early that day, while the Trent was approaching a narrow passage in the Bahama Channel, a large steam-ship of war, which showed no colours, was seen waiting for her. The Trent, having both British ensign, but elicited no responsive display of colours until she had approached within about half a pistol-shot of the vessel. Then a gun was fired across the Trent's bow, hoisted the United States' flag, and fired a shell to leeward of the Trent's stern. The Trent, on being thus brought to, hoisted the United States' steamer's captain, who replied that he wished to send a boat on board. A boat, containing two officers and ten men, accordingly left the San Jacinto, and the latter's commanding officer, Lieutenant Fairfax, demanded to inspect the passenger-list, but was refused permission. He then declared that his commander, Captain Wilkes, of the United States' steam-ship San Jacinto, had received information that Messrs. Slidell, Mason, Eustis, and M'Farland were among the passengers, and required that they should be given up to him. Captain Muir and Captain Moir, of the Trent, refused to comply with this demand, refused to comply with the requisition; and the Confederate Commissioners, who were standing near, claimed the protection of the British flag under which they were sailing. Lieutenant Fairfax said he would take charge of the Trent, and made a signal to the San Jacinto, which immediately lowered a boat, which advanced with seventeen men, 100 marines and seamen, who with drawn cutlasses boarded the Trent, arrested the Commissioners and their secretaries, and took them on board the San Jacinto. While this was doing, Commander Williams protested against the act in the following terms :—

In the name of the Government of her Majesty's Government, and I call upon the officers of the ship and passengers generally to mark my words when, in the name of the British Government, I protest against this outrage upon the flag as an illegal act, an act in violation of international law—an act, indeed, of serious character, which I am bound to report to my Government for their action.

Mr. Slidell, as he was forced into the boat, requested the Trent's Captain to report exactly what had occurred, and declared that he looked to the British Government for redress for the outrage committed upon him while he was under the protection of the British flag. The American steamer then proceeded on her course, and the Trent, with the Confederate Commissioners, their secretaries, and their followers, and asked for a supply for their prisoners, which was given by Captain Moir for the "exclusive use" of Messrs. Slidell, Mason, Eustis, and M'Farland. Captain Williams said that he would send a prize crew to take charge of the Trent, and make a signal to the San Jacinto, which immediately lowered a boat, which advanced with seventeen men and marines and seamen, who with drawn cutlasses boarded the Trent, arrested the Commissioners and their secretaries, and took them on board the San Jacinto. While this was doing, Commander Williams protested against the act in the following terms :—

In the name of the Government of her Majesty's Government, and I call upon the officers of the ship and passengers generally to mark my words when, in the name of the British Government, I protest against this outrage upon the flag as an illegal act, an act in violation of international law—an act, indeed, of serious character, which I am bound to report to my Government for their action.

Mr. Slidell, as he was forced into the boat, requested the Trent's Captain to report exactly what had occurred, and declared that he looked to the British Government for redress for the outrage committed upon him while he was under the protection of the British flag. The American steamer then proceeded on her course, and the Trent, with the Confederate Commissioners, their secretaries, and their followers, and asked for a supply for their prisoners, which was given by Captain Moir for the "exclusive use" of Messrs. Slidell, Mason, Eustis, and M'Farland. Captain Williams said that he would send a prize crew to take charge of the Trent, and make a signal to the San Jacinto; but Captain Moir and he papers on board the San Jacinto; but Captain Moir refused to allow the Trent to proceed to sea without a British officer on deck. Lieutenant Fairfax thereupon said Captain Moir that he wanted nothing further than to see the Trent under weigh, and then returned to the San Jacinto, leaving the Trent to prosecute her voyage.

The "Alamanach de Gotha" for 1863 gives to Victor Emmanuel the legitimacy of Napoleon I.

According to the *Trieste Gazette* M. Kossuth is seriously ill; it is said that he exhibits alarming consumptive symptoms.

The Rev. William Jacobson, D.D., Rector of St. Andrew's, Philadelphia, has been elected Assistant-Bishop of the Episcopal Church in Pennsylvania, in the room of Bishop Potter.

There is nothing striking in the news fromsthe West Indies. In Jamaica and the other islands trade was improving, and the crops looking well. Business was generally quiet in Europe.

The North Briton was wrecked on the coast of Labrador on the 6th inst., and out of 237 persons on board only seventy-two were saved.

Workmen have just completed the building at the Camp of Chalons of a Protestant chapel intended for the celebration of Divine service by the troops of the camp of Protestants. The building will be inaugurated next year.

The Municipality at Turin has ordered a slab of marble to be inserted in the wall of the palace in that town which was the residence of Cavour, bearing the following inscription :—"Count Camillo de Cavour was born in this house, August 10, 1810, and died in the same, June 6, 1861. A memorial placed by the Municipality."

The Cape of Good Hope.—The Cambrian arrived at Plymouth on Wednesday with the Cape mails. The state of affairs on the frontier is described as still very unsettled. In Kaffraria Proper, Kreli was threatening to attack the Tambookies; Pretorius was instigating for the possession of St. Lucia Bay, which is claimed by the English, and Panda and his son Ketchwayo still demand that the United Government should give up the latter's younger brothers and rivals, which the Lieutenant-Governor had refused to do. The agitation on the aggression movement had greatly diminished. The works on the Cape Town and Wellington Railway had been stopped in consequence of a dispute between the contractor and the company, which the Supreme Court had settled in favour of the latter. The town received of Dr. Mackenzie and Dr. Livingstone was good.

CHURCH AND UNIVERSITIES.

The Bishop of London resumed his weekly levées on Tuesday.

The Bishop of Durham has forwarded £20 to the Holy Island Church restoration committee.

Thursday week was the day fixed for the hearing, in the Court of Arches, of the suit commenced by the Bishop of Salisbury against Dr. Rowland Williams. The matter is postponed to the 20th of next month.

The Rev. J. Macnaught was presented last Saturday with a silver salver and a purse of £40, as tokens of the esteem of the congregation of St. Chrysostom's Church, Everton. The living of St. Chrysostom's has been conferred upon the Rev. Thomas G. Crowe, of St. Anthony's Church, Liverpool.

A memorial window has lately been presented to St. Thomas's Church, Whitechapel, by a parishioner. It has already been transferred to the adornment of this beautiful edifice. The new window consists of two lights enriched, "The Good Samaritan" and "Abraham entertaining the Three Angels."

On Sunday the Ven. Robert Lascelles, late Archdeacon of Nassau, was consecrated Bishop of Nassau, by the Archbishop of Canterbury, in Lambeth Palace Chapel. He was presented by the Bishops of London and Winchester, the former of whom read the Gospel and the Litany, and the latter the Epistle.

On Saturday last, at Little Horton-green, in the borough of Bradford, Mr. P. S. Powell, of Horton Hall, in the presence of a large assembly of clergy and laity, laid the foundation-stone of a new church, which, shortly it is indicated in the scheme of the Bradford Ten Church-Building Society, will be erected and endowed solely from his own munificence.

The ceremony of enthroning the new Bishop of Durham, Dr. Baring, took place last Wednesday week very quietly. The event was ushered in at an early hour in the morning by the cathedral bells ringing a merry peal. It was not expected that any large number of persons would witness the ceremony, notwithstanding the unfavourable nature of the weather.

On Wednesday the Bishop of Rochester presided over a conference at Chelmsford, in which the clergy and laity of that neighbourhood joined, on the present state of the laboring classes in regard to their moral, social, and religious condition, and their spiritual and religious condition generally, with the best means capable of being adopted for their improvement. The conference was one of a series which will be held in various parts of the diocese of Rochester.

The Society for the Propagation of the Gospel in Foreign Parts have determined to establish several new missions, or, for example, Roseboe and Pataa in the peninsula of Malacca, Rangoon in Burmah, Singapore in the Straits of Malacca. The society has also resolved to found a mission in the interest of Christ's religion among the natives beyond the sea support of a Bishop and cost of missionaries on the Orange River Free State, South Africa, and for the establishment of a mission in Caffraria Proper.

PREFERMENTS AND APPOINTMENTS.—Rev. R. E. Brooke to be Incumbent of Shadwell, Leeds; Rev. Richard Richardson, Rector, to be Rural Dean of Lindsey, Dorset; Rev. W. L. Buckley to Astbury, Devon; Rev. C. H. Dukes to Babbacombe, near Teignmouth; Rev. J. M. Porter to Broughton Poggs, Oxfordshire; Rev. W. H. Teale to Dewsbre; Rev. H. B. Wayte to St. Matthew's, Bethnal-green; Rev. Sir Alfred de Rodd Weldon, Baronet; Rev. T. Cowan to St. Chrysostom's, Liverpool. *Perpetual Curacies*: Rev. A. Case to St. Michael's, Westgate-common, Wakefield; Rev. M. S. Bidgett to Swanley, near Dartford, Kent; Rev. H. M'Gorley to St. Paul's, Tokenhouse Yard, London; Rev. J. Gilbert, Vicar, to Rye; Rev. R. Bond to St. Mary's, Longbredy, Dorset. *Consuls*: Rev. W. H. Corbould to Middleton, Lancashire; Rev. W. Foxton to Rochdale; Rev. G. Lee to Saint Simon's Green, Forest; Rev. G. Horn to Nash and Llanvetty, Monmouthshire; Rev. G. R. Wynne to Llanfrothen, Merioneth; Rev. F. P. Meldrum to Denbridge, Devizes; Rev. A. A. O'Neil to St. George's, Chorley; Rev. A. V. Walters to Wyke, Winchester, with the chapelry of Bentley; Rev. J. Wood to Ecclesfield, near Hindon, Wilts; Rev. J. Owen to Bowerchalke, Salisbury.—*Guardian*.

METROPOLITAN NEWS.

The annual ball in aid of the funds of the Royal Dramatic College is to take place at Willis's Rooms on Thursday next.

A memorial to the Court of Aldermen is in preparation on the part of members of the Stock Exchange for an abolition of the annual tax known as "Brokers' cover."

Formal notices have been issued by the Board of Works and Parish Committee of St. Bartholomew's Hospital to Parliament for a Bill *Act* enabling them to acquire the necessary space for enlarging the Admiralty and Methodist.

A number of Americans in London celebrated the recent success of the expedition to the Southern coast by a dinner on Monday night. "It was suggested, and heartily approved, that on General Scott's arrival to visit this country, he should be entertained at a banquet of loyal Americans and English sympathizers."

A public meeting was held on Thursday evening at 244, Marylebone-road, to consider a report of the Rev. Dr. Lees, Chaplain to London Sheltering Brigade, and to inaugurate the Home recently established for the reception of discharged soldiers from this institution, on the central west existing in the metropolis.

The enlargement of St. Bartholomew's Hospital, West Smithfield, is completed. The frontage of the hospital now covers the entire south side of West Smithfield, from Giltspur-street to Cloth-fair. Besides the entirely new surgery and operation-room, with all the modern improvements of light and ventilation, available to the visiting staff, are numerous wards to undergo operations will now be carried direct into the surgery.

The pupils of the schools of the Jews' Hospital, who opened the ordeal of their Oxford examinations in the London district, received their prizes and certificates of merit on Wednesday at the Mansion-house, presented by the Lord Mayor and Lady Mayoress. The Chancellor of the Exchequer presided on the occasion, and, in addressing the children, dwelt on the great benefit which these examinations gave to the scholastic of the country, and to the fresh stimulus to exertion which they encouraged by their effective working.

At the Bayswater Athenæum, on Wednesday evening, Mr. Henry Oatley gave a lecture "On a New Version of 'Othello' from a French Point of View" before a large audience, including many literary celebrities of eminence. The lecturer was with great minuteness into a critical examination of M. Alexandre Dumas's translation. The "admirable scenes and mutilations" of text, and the "extraordinary stage business" involved in it; and was listened to with great attention, and frequently applauded throughout to the close.

An inquest was holden Monday on an artificial flower maker, Matilda Schriever, who died from the effects of arsenic used in the green colouring matter employed in her business. Medical evidence showed that had been ill from the poison four times in eighteen months. Her employer, Mr. Frederick Cook, said that he had since changed the dye used in his warehouse, but although he had finished them with vanish masks they refused to wear them on account of the smell. He had known many females to be poisoned by it, but had been troubled for a fever, in ignorance of any knowledge of poison. The jury returned a verdict of accidental death.

The births of 932 boys and 941 girls—were registered last week in London. In the ten preceding weeks of 1863 the average number was 1647.—The mortality of London, which has been rising since the beginning of the present month, exhibits a very considerable increase for the week that ended last Saturday. The deaths were 1201 in the first week of November, 1198 in the second week, and they rose to 1349 in the week last shown by the present return to rather higher than it would have been if a rate equal to the average obtained during the first quarter of November in 1851-60 had prevailed.

A conference of delegates from the various dissenting bodies on the education question was held at the London Coffee-house on Wednesday, the chair was taken by Mr. Edward Miall, who was supported by a large and distinguished assemblage of the voluntary system. Sir S. M. Peto, M.P., Mr. Miall, Mr. S. Morley, the Rev. A. Mursell, Mr. Baines, M.P., and others took part in resolutions who took part in the proceedings. The resolutions declared that the national system was a failure, and had created a great demand for establishment which was unable to cope with the debris of the thousands of children brought to the metropolis by the emigrant ships for relief from the State, to the neglect of their own duties; and that the revenues from education endowments, if properly applied, would make grants of public money unnecessary.

LAW AND POLICE.—Mr. Justice Hill, who has long been suffering from ill health, has retired from the Bench.

The annual meeting in aid of the Court of Exchequer on Monday. Mr. Joseph Henley in the absence of Lord Westbury, who was engaged in trying prisoners collecting up on Mr. Henley's council in connection with the Society for Promoting National Education. A verdict was returned for the defendants.

Among the many passengers on the Brighton Railway who were killed by the melancholy accident in the Clayton Tunnel in August last the only case that has come before the Courts for compensation was that of Mr. Gardner, whose widow brought an action against the company, which was tried in the Court of Exchequer on Wednesday. The jury gave a verdict of damages to the amount of £500.

The November session of the Central Criminal Court was opened on Monday. The main case on that day was that of the Rev. Mr. Bellasyse, who was charged with several different instances of stealing from railway stations. He was found guilty on the first charge of stealing from a railway station, and sentenced to eighteen months' imprisonment with hard labour.

MISS EMILY FAITHFULL.

THIS lady, whose Portrait, engraved from a photograph by Mr. Herbert Watkins, we this week present to our readers, is the youngest daughter of the Rev. Ferdinand Faithfull, Rector of Headley, Surrey, where she was born, on the 27th of May, 1836. Although she is only in her 26th year, she has for some time led a life of active public usefulness, and has already had the foundation of an establishment the social importance of which it is difficult to overrate.

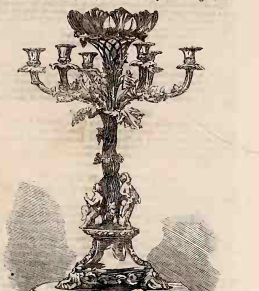
When the Society for Promoting the Employment of Women was established, in August, 1859, she became a member of the first committee, and she subsequently acted as secretary and superintended the practical working of the society. Early in the year 1860 the council of the National Association for the Promotion of Social Science appointed a committee to "consider and report to the council on the best means which the association could adopt to assist the present movement for increasing the industrial employment of women." The members of this committee were the Right Hon. the Earl of Shaftesbury, the Hon. A. Kinnaird, M.P., Mr. E. Akroyd, Mr. Hastings Mr. Horace Mann, Mr. W. S. Cookson, Mrs. Jameson, Miss Parker, Miss Adelaide Procter, Miss Bouchernett, Miss Craig, and Miss Emily Faithfull. As the labours of the committee proceeded it became evident to all the members, but especially to Miss Faithfull, that women wanted only training to become qualified to act as compositors for the press, and that, provided this training could be given, a new and extensive field for skilled female labour might be opened. Miss Faithfull, whose active and energetic mind delighted rather in the practical development than in the fruitful discussion of a theory, seized upon the idea thus presented to her, and at once proceeded to test its value by establishing a printing-press for the employment of women in Great Coram-street, on March 25, 1860. Her project was at first viewed with considerable distrust. The advocates of the "family principle" contended that the proper sphere of woman's usefulness was her home, and that her duty was the assistance to the comfort of her husband and children. Those who used this argument forgot, conveniently enough, that all women are not blessed with husbands and children; and that a large majority of those who are married must themselves labour constantly if they would preserve home in comfort for those who are dear to them. There were other opponents who did not deny that women must work, but objected to the occupation which Miss Faithfull had selected for them as being unfeminine. This objection, however, on being analysed, was found to mean merely that the occupation now provided for women had not previously been open to them. It could not be denied that women had been employed for many years on tasks little unsuited to them. There had long been a great and constant demand for unskilled female labour of all kinds, but the market for skilled labour had been closed to women. The novelty of Miss Faithfull's proceedings lay in her endeavour to open the market of skilled labour to her countrywomen, and to find for them an occupation which is in reality more feminine than many to which they had long been accustomed. After a little while public opinion, as reflected by the press, began to perceive the social importance of Miss Faithfull's undertaking; the objectors were silenced, offers of assistance were made, and work was freely given to her, and, in two or three months after the establishment of the press, met with the most decided and precious approval of the press which is called by her name. Difficulties of another kind, however, had yet to be overcome. Miss Faithfull had contended that women were fitted equally with men to undertake skilful compositors; but neither men nor women are instinctively compositors, and Miss Faithfull found herself compelled not to abandon her undertaking, or to employ persons unfamiliar with the work allotted to them, and thus to run the risk of ruin, but to overcome the jealous opposition of the trade. That these difficulties have been successfully overcome—that the press has been firmly established—that a number of women have become skilful compositors, and have performed a large amount of work to the entire satisfaction of their employers, are facts worthy of attentive consideration, even in this age of great undertakings. But that all this should have been done by a young lady bred up in the seclusion of a country vicarage, and not previously acquainted with the business, is a fact more noticeable still.

Having succeeded in establishing the Victoria Press, Miss Faithfull is now seeking to give it a special character, and to make it auxiliary to the National Association for the Promotion of Social Science, of which she is an active member, in the public proceedings of which she has frequently taken part, and in which her own undertaking had its origin. She proposes, by the issue of cheap and simple tracts, to call public attention from time to time to great social improvements. She has already published a tract on Post Office Savings-banks, of which more than 60,000 have been sold; and a tract entitled "Friendless Girls, and How to Help Them." To these she contemplates adding tracts on "Prison Discipline," on the "Poor Laws and Workhouses," on the "Emigration of Educated Women," and on "Life Insurance by Small Payments," all of which will be written by persons thoroughly acquainted with the subjects of which they treat. At present, however, she has in hand a work of more pretension. The "Victoria Regia," a Christmas book of prose and verse, will shortly be issued from her press. It will contain contributions from nearly all of the most eminent authors of our day, who, with generous willingness to aid the cause which she has at heart, have placed their time and their talent at her service. Amongst these contributors are the Poet Laureate, Mr. Thackeray, Mr. John Forster, Mr. Trollope, Miss Mulock, Mr. Henry Reeve, Mr. Chorley, Mr. Monckton Milnes, Gregory Fitzmore, Mr. Venables, Owen Meredith, Mr. Dobell, Miss Procter, and many others. The initial letters and the tailpieces to the articles have been designed and carved in wood by ladies, and the editorial superintendence has been undertaken by Miss Procter, who, with a talent which few possess, and a philanthropic heartiness of which even fewer persons can boast, has laboured unremittingly to make the work worthy of the cause it is intended to promote, and of the Sovereign who has already signified her approbation of its progress.

NEWLY-ORGANISED BURMESE POLICE RETURNING FROM NIGHT DUTY.

PRESENTATION TO MR. MELLY.

EARLY in this month Mr. Charles P. Melly, of Liverpool, was presented, in the Council Chamber of the Liverpool Townhall, with a handsome tribute in recognition of his origination of public drinking-fountains and his liberal gift of free playgrounds and wayside benches, for the use of the people. The testimonial, which was designed and manufactured by Messrs. Elkington and Co., of Liverpool, consists of a massive silver épergne and candelabrum, the design representing a vine, beautifully interplaced with the tendrils and offshoots of that tree. At the base are three delicately-chased figures, emblematical of the fine arts—Music, Sculpture, and Painting. On one side of the pedestal are the armorial bearings of Mr. Melly; on another a representation of one of the drinking-fountains at Geneva (from seeing which Mr. Melly is said to have taken the first idea of the establishment of public drinking-fountains); and on the third the following inscription:—"To Charles Pierre Melly, the originator of Public Drinking-fountains, a true practical reformer; who, instead of merely denouncing drunken-

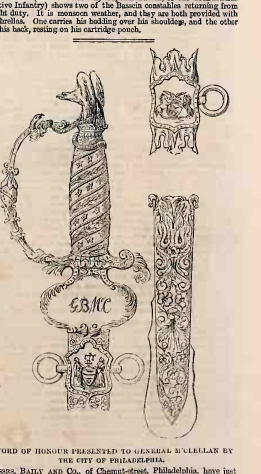


TESTIMONIAL RECENTLY PRESENTED TO MR. CHARLES MELLY, OF LIVERPOOL.

ness, has removed one of its causes by placing within reach of the thirsty wayfarer a draught of pure water, and who, by the gift of Free Playgrounds and Wayside Benches, has provided recreation for the active and rest for the weary, this testimonial is presented by his fellow-townsmen. Liverpool, Nov. 6, 1861." The Mayor (S. R. Graves, Esq.) presided; and amongst the gentlemen present were—the Rev. Rector Campbell, Rev. S. A. Steinthal, Alderman Bennett, J. G. Livingston, T. B. Anderson, Walter F. M'Gregor, C. B. Bowring, W. Earle, Jos. Rathbone, T. B. Job, J. W. Cropper, Alfred Jevons, and others of local note.

BURMESE POLICE.

A NEW system of police has recently been introduced into British Burmah, which has enabled the authorities to withdraw several of the Madras regiments of infantry. The police-force is being rapidly organised under the respective superintendents of districts. Our Illustration (from a sketch by Captain Batten, of the 18th Madras Native Infantry) shows two of the Bassein constables returning from night duty. It is monsoon weather, and they are both provided with umbrellas. One carries his bedding over his shoulders, and the other on his back, resting on his cartridge-pouch.



SWORD OF HONOUR PRESENTED TO GENERAL M'CLELLAN BY THE CITY OF PHILADELPHIA.

MESSRS. BAILY AND CO., of Chestnut-street, Philadelphia, have just completed a sword for General M'Clellan. The sword is the straight regulation Major-General's sword, the blade of fine Damascus steel, the scabbard and handle of silver, heavily gilt; the hilt is surmounted

STRASBOURG CATHEDRAL.—SEE SUPPLEMENT, PAGE 537.

by a bald-headed eagle crushing a serpent; the grip is entwined with alternate convolutions of stars and laurel-leaves formed of diamonds and pearls. On the guard, which works on a hinge, are the General's initials, richly chased. On the upper ring-strap are the arms of the city of Philadelphia, and on the lower one those of the State of Pennsylvania. Between them is a plate with this inscription:—"The City of Philadelphia to Major General George B. M'Clellan, by authority of a resolution of its Councils, approved July 31, 1861." The whole scabbard is covered with heavy chasing.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 1.—First Sunday in Advent.
MONDAY, 2.—Congr. of Inst. 2 & 61.
TUESDAY, 3.—Thames shut, 1642. [p.m.
WEDNESDAY, 4.—Richelieu died, 1642. Moon's last quarter, 6h. 59m.
THURSDAY, 5.—Mozart died, 1792. Moon's last quarter, 6h. 59m.
FRIDAY, 6.—St. Nicholas. John Milton born, 1608.
SATURDAY, 7.—Peter Martyr died, 1562.

the readiness to take the Government loan, has by no means equalled the super-abundant enthusiasm we are accustomed to witness in France on similar occasions, but seems to have exceeded the lagging offerings of the Italians for their late loan. American national sentiment, valued in dollars, stands midway between that of France and Italy. The immense quantities of grain and flour which the North has all this year been selling to British and French purchasers keep the exchange in favour of the Americans, and enable their banks, in spite of the stoppage of the usual export from the South, to retain the specie in their vaults. This confidence is maintained; the banks have not suspended specie payments since the understanding Mr. Seward's uncalled-for and reckless circulars, Government and railroad stocks of loyal States are higher now than they have been since the Presidential election.

In the mean time, among the mountains of Western Virginia a revolutionary movement has been progressing which is independent, to some extent, of both North and South. The people of thirty-nine contiguous counties of the trans-Alleghany section of Virginia, occupying an area about twice the size of Wales, and numbering 282,000, of whom only 100 are slaves, have declared their independence of the State of Virginia, and organised themselves, with great unanimity, into a new state, called Kanawha, from the river of that name, which traverses it. Although the Kanawhans occupy a territory of great value to the United States, and although its union has been liberated from Confederate armies by M'Clellan and Rosecrans, yet this demonstration meets with no favour from the Federal Government, which cannot now afford to countenance the idea of revolution, even when it is made in behalf of the Union and the old flag. Separated as these people are from Eastern Virginia by physical barriers similar to those which divide Savoy from Italy, and united to the adjacent free-labour States by similar pursuits and moral and political sympathies, it is very improbable that they will ever, in the old territorial arrangements will ever be restored. But the incident furnishes another proof that the air of America was charged with revolution, and that the time was ripe for a recombination of the heterogeneous elements of which the United States for the last forty years have been composed.

THE COURT.

The Queen continues to enjoy perfect health. On Saturday her Majesty, accompanied by Princess Alice, rode on horseback. The Prince Consort went out shooting. The Royal dinner-party in the evening included Princess Alice, the Prince and Princess of Leiningen, the Duke and Duchess of Somerset, the Right Hon. W. Cowper, and Major-General Phillips, C.B.

On Sunday Divine service was performed in the private chapel by the Rev. Canon Prothero, the Dean of Windsor, at which were present the Queen and Prince Consort, Princess Alice, Prince Arthur, Princesses Helena and Louise, the Prince and Princess of Leiningen, the ladies and gentlemen of the Court, the domestic household, and the visitors staying in the castle.

On Monday the Queen, accompanied by the Prince and Princess of Leiningen, drove out, attended by Major-General Seymour. The Prince Consort, attended by the Hon. Colonel A. Macdonald, left the castle for Madingley Hall to visit the Prince of Wales. The Royal dinner-party at Windsor included Prince Alice, the Prince of Leiningen, the Prince of Leiningen, Colonel the Hon. Sir Charles and Miss Phipps, Major Elphinstone, and Mr. Ross.

On Tuesday the Queen, accompanied by Princess Alice, walked in the grounds of the castle. The Prince Consort, attended by Colonel the Hon. A. Bruce, returned from Madingley Hall at half-past one o'clock.

On Wednesday the Queen, accompanied by the Prince and Princess of Leiningen, drove out in a carriage and four, attended by Major-General Seymour.

The Earl of Caithness and Lieutenant-Colonel Cavendish have succeeded Viscount Torrington and Colonel the Hon. A. Liddell as Lord and Groom in Waiting.

THE PRINCE OF WALES.

The Prince of Wales received a visit from his illustrious father on Monday last. The Prince Consort left Windsor Castle at 9 a.m., and was met by the Prince of Wales at the railway station, whence they drove to Madingley Hall. The Prince Consort returned to Windsor on Tuesday. On the same day the Prince of Wales left Madingley on a visit to the Duke and Duchess of Manchester at Kimbolton Castle, near Huntingdon. The Prince went out with the Pytchley on Wednesday, and, returning to Cambridge yesterday (Friday), honoured the Master of Trinity with his company at dinner in the evening.

THE PRINCE AND PRINCESS OF WALES.

His Royal Highness the Duke of Cambridge entertained a host of visitors at Barrack Square, Aldershot, on Monday and Tuesday evening at Gloucester Hoop. The Duchess and the Princess Mary arrived at the Camp on Tuesday from Brighton.

Their Serene Highnesses the Prince and Princess of Leiningen have left Rosebank's Hotel for Windsor Castle on a visit to the Queen.

His Excellency the Austrian Ambassador, Count Apponyi, has arrived at Chandos House from Vienna.

The Duchess of Hamilton and family left town on Saturday for Paris. The Duke will remain in Scotland till after Christmas.

The Earl and Countess of Derby are entertaining a succession of visitors at Knowsley Park, Lancashire.

Viscount and Viscountess Palmerston entertained a select party at dinner on Saturday evening at Cambridge House. Later in the evening her Ladyship had an assembly.

ST. PAUL'S CATHEDRAL.—(To the Editor).—I think it my duty to express my surprise that the new grapnels, from the want of funds, of the great work—the decoration of the Cathedral of London. Considering the vast wealth of London, the boundless expenditure on private works and on buildings for private use, it is surely to be lamented that the noblest modern edifice in the metropolis, the great work of our great architect, is confessed after the largest, wealthiest, in some respects most munificent, city in the world, should not as often as some general interest or call forth the generous support of the rich the world over. My God, and assist others in worshipping God, in the beauty of holiness. Nay, more, you, God I mean you, assisted me in my prayers that you, the noble mind of my creator which has tended, I trust, to keep back many from shrinking from the duty of worshipping God in His house, and who, in the midst of calamities not his own, by funds at their disposal, to accomplish what that is intended without extraneous aid. The Dean and Chapter command me to say that they have no contribution to offer, even with which to commence the work. I have expected, but though they are most grateful for the liberal aid which they have received from many, and they regret to say that they have not been supported to so great an extent as they had hoped; and when I add that there is a deficiency of nearly £1000, caused by unforeseen but inevitable circumstances, partly for works which could not be delayed without keeping the cathedral closed for an indefinite period, and partly for the new organ, which had been purchased and paid for, I trust that the public will see that if the fitting decoration of the interior of St. Paul's is to be accomplished it must depend not only upon the continued zeal of those who have already given us their kind assistance, but also upon more general contributions from others who have not as yet been induced to take an interest in this great national work. I have the honour to be, Sir, your humble servant, H. H. MILMAN, Dean.—P.S. The official desire for the proposed public-house may be seen at the cathedral surveyor's office, Chapter House, No. 68, St. Paul's churchyard, between the hours of two and five.

THE INTERNATIONAL EXHIBITION, 1862.

On visiting the Exhibition building last Saturday we found the ground in a condition which offered some very grave suggestions as to the nature of the site and its availability for building purposes. In every part, except where roofed over, the surface, saturated by the late rains, was a perfect puddle—to say saddle-deep would be no exaggeration—through which it was impossible to make one's way except in any direction except by the aid of planks, bricks, odd pieces of ironwork, or other substances which might happen to be handy for the purpose. This is a state of things which imperatively demands inquiry and remedy. The general surface of the district, as we all know, is low and marshy in the extreme, and when the buildings, some of which the level of the actual site of the building will be five feet below that of the surrounding roads, we cannot but have misgivings as to the inevitable result. Such a condition of site might suit very well for an industrial camp, but it is not suitable for a site which may be the usual height of embrasures in fortifications; but for a building intended to be the resort, and the scene of the pleasure of pleasure and for the storage and display of manufactures and works of art of every kind, it is singularly unfortunate. The official pamphlet of the commissioners, however, considers this condition of a shallow site to be rather a matter for congratulation, inasmuch as, "by a happy conception, Captain Fowke has used this condition of site to obtain a most picturesque feature at each end," inasmuch as, "instead of descending into the building upon reaching the visitor ascends two steps to a great platform or dais under each dome, and then may descend into the nave and transept by three noble flights of steps, each 20 feet wide, with *level landings to meet convenience arrangements*, or we may ascend into the galleries." Upon esthetic principles we will not investigate this unprecedented mode of arrangement at present; we will only point out the absolute necessity, in order to make the building available, even temporarily, for the purpose for which it is intended, to thoroughly drain the site. If this be not done, damp and rot will be the infallible consequences—destructive alike to the public health and property. We have been told that as late as 1851 was not inhaled drained, but the circumstances of that are very different to those of the present building. The site was at that time higher, and the materials were glass and iron, which would not retain the damp; whereas the "incrustation" building is to be of brick and stone. It remains, And, again, the '51 building was only put up for a temporary occasion; but that of '62 is intended to be permanent.

The question of the building toward which we appear to be satisfactory, with the exception of the domes, about which some little anxiety is felt, is progressing. The contractors have taken the contract for their erection, as well as for the supply of the materials, appear not to have been sufficiently aware of the nature and extent of punctuality in the performance of the work they had undertaken. This, however, will be easily understood when it is considered that a great portion of the work of the building is to be the completion on that of the domes, and that the scaffolding used for their erection will have to be taken down before the nave and other parts of the works in the vicinity can be proceeded with. Perhaps the Thames Iron Company may be able a little, and a little only, to assist in the nature of their responsibilities before it is too late. Meantime we are glad to find that Messrs. Kelk and Lucas, alarmed at the possible consequences of failure in this respect, have themselves commenced the erection of the western dome; and the progress already made, under the able direction of Mr. Aitken, the Head Foreman for the Great Exhibition Building of '51 and for the Sydenham Palace, is most satisfactory. The contract for the building of the eastern dome, in the hands of the Thames Iron Company, at the other end of the nave.

At present, however, there appears no chance of the domes being completed by the time originally contemplated—namely, the first week in January next, by which we have to follow that their completion will necessarily have to be pressed for early with increased force. At present, as we have pointed out, the principal feature in the entire of a utilitarian character should be thus imperilled by an individual feature, which, though, it is admitted, is of great importance, is mental tendency.

The principal part of the nave being now completed, we surveyed it with considerable interest and anxiety, in order to form an opinion as to its probable effect when aided by colour and other decorative appliances. At present—and, indeed, it will long remain so—the nave is by no means satisfactorily light. The roof is too low in pitch, and the combination of the transept and nave produces a sense of confinement. The arches themselves, structurally, are not sufficiently massive in appearance, and the general appearance of the roof, with its mullions is little, and unmeaning in character. The lighting, we have suggested, is insufficient: it is not so much insufficient in both as unfortunately it is unequally distributed, so low is the horizon of the windows being some 16ft. from the ground as regards the heads, that the light is thrown almost entirely upon the upper part of a broad one. The arrangement of the pillars, also, is open to great objection upon such grounds. The distance between the pillars being exactly the same as their height, the result is a square aperture, which is repeated in the arches of the nave and transept, and which appears very objectionable. How objectionable this is to the eye need hardly be urged.

Now what is to be done further in the interior of this portion of the building (and similar remarks will apply probably to the transepts) before the opening on the 1st of May next? The solid roofs will invite decoration within and without. Colour will, in our opinion, be the most effective and economical mode of decoration of the semblance of the nave, and, judiciously used, may perhaps have the effect of, to some extent, giving the appearance of greater height than it possesses. Light and delicate tints should generally prevail, with just sufficient of delicate warm colours to mark the leading constructive features. Whatever may be the style of the design be attempted it should be purely English in character, it should avoid imitation of Italian, Byzantine, or Moorish architecture. We understand that the Commissioners have determined, on behalf of the Commissioners a suggestion has been put out that artists should contribute designs for such decoration, and, to the decoration of the building, perhaps it would not be a bad plan to whitewash portions of the interior of the roof and other parts of the nave, in order to test the effect of colour. If this plan be adopted we come forward in the good cause to experimentalise upon it each day for a month, and will be happy to act as one of the artists who possibly may be deemed worthy of consideration, and be acted upon before it is too late.

The picture galleries along the Cromwell-road front are in a very forward state, that on the east being floored and its walls boarded and lathed. The floor of the western gallery is being laid, the gas light fixed, and the roofing of the corresponding ones at the other end are nearly completed. Both galleries, in their present unfinished state will here form an attic story, has been begun. We give an Engraving of this entrance, which will appear when completed, in effect in pretentions and showy, but heavy. The appearance of the blind window-spaces along the Cromwell-road front (only the lower portions have been glazed) is not improved upon when carefully and unexpected of it. Such a thing as heavy brickwork lying over glazed and lighter windows, is the most unpleasant sight that can meet the course intervening to give the appearance of support to the former, is, we believe, being carried out. The "architecture" till now and the attempt to give the appearance of lightness by means of success, arrangement of bands in red and colour, as shown in the working drawing in one of the window spaces, can only turn out a failure and make the absurdity of the design the more conspicuous.

We have not space to do more than allude to the exhibition of the exhibition. A new edition of the official pamphlet is spoken of, in which the names of contributors on the staff are inserted. Captain Fowke has now two assistants in the persons of Captain Philpotts, R.E., and Lieutenant Scott, R.E., the military element still preponderating in all the chief departments of management.

The photographic department of the exhibition is one about which much unpleasant feeling had existed between the "profession" and the commissioners, the latter having at first proposed to close it with "reactionary." This absurdity, however, has been avoided; and it is determined that photography shall form an international department. Mr. F. Le Neve Foster being appointed to the superintendence of it.

As in 1851, the first consignments for the exhibition which have arrived are from Russia. Necessity compels this alacrity on the part of this Northern Power, it being indispensable for her to clear out before the frost closes up her harbours and seas.

As the time draws near for the declaration of the contributions from various nations much anxiety begins to be felt as to the position which England, in her various branches of art and manufacture, will stand in with regard to her numerous foreign competitors. We do not wish to excite or satisfaction any feeling of apprehension or misgiving on this delicate subject, but certainly we do know that in France (and something very similar has been the case in other countries) the matter of organisation and selection has been taken up officially by the Government, with a fixed determination to meet as in a purely National contest, and when we know that the Imperial Commission has, after a first sifting, announced the names of 7000 producers as worthy to uphold the honour of French manufacture, a number since reduced by rejection to 5000, we must admit that the English producer, viewed individually, and as it were in the dark as to all that is being done around him, enters the lists with fearful odds against him. We know, however, recollecting the experience of 1851, we have no fears but that he will prove well able to defend his own in the general balance, and that, if he be fairly dealt by, he will reap his full share of the benefits to be derived from this great international movement.

Of course very much will depend upon the manner in which the committees of the various classes perform the duty of selection, and we sincerely trust that in the performance of this task they will be guided only by one consideration—that of doing the greatest amount of justice, not only to individual industry but the collective industry of the nation. We may here state, for the information of our readers, that space, that the allotment upon individual claims is expected to be made known in the course of the first week in December.

The municipal authorities of Vienna have set a good example by voting a sum of 10,000 florins to enable a certain number of indigent artisans of limited means to visit the International Exhibition of London in the coming year.

NATIONAL SPORTS.

THE appearance of the *Field* calendar, in whose pages next year the admirable list of masters and huntsmen might be very appropriately published, gives note that the sporting season is over. The last of the woods and hedges are fairly "stripped for business" once more. The former closed at Shrewsbury under the auspices of Mr. Frail, who has for twelve seasons "put the good old town" in requisition by a similar programme, be the season ever so far advanced. A jockey club resolution virtually cut the pudding out of his pocket, consequent on that he has to thank Lord Rodendale, who was, we trust, appeased by the promise that he should only have been made to satisfy Lordship that there was same anxiety at head-quarters to perpetuate "the sound and the stout" by not having less than four miles in January; but, seeing that they are held quite as soon, and that the distance is only a quarter of a mile, the issue was based rather on a distinction than a difference. The second meeting on the 5th of December, and the Two Thousand will not be run off until May 6, and the Derby on the 3rd of June. Goodwood, Ascot, and Doncaster preserve their old ones, and it is gratifying to hear that the present Duke of Richmond intends to give a 2000-gov. cup to the latter, and that there will be no more available up to this point, and yet no race-list has been as servilely supplied with added money.

The winning jockey-list in the *Sporting Life* places Fordham (105) at the head of the 190, who claim to be considered as such (although eighteen of the number have only won one race), with H. Grindrod (74), Edwards (69), L. Snowden (61), Challoner (49), Osborne (38), Custance (36), Midgley (34), Wells (33), and Wheeler (31), in the order; Bullock has scored 23 wins; Gorter, 22; Charlton, 20; S. Rogers, 19; E. Sharpe, 17; Wells, 16; J. D. Hughes, J. W. Rogers, L. Day, S. Hidden has prevented the list named from riding towards the close of the season; but still his victory on Alvediston at Lewes and Bramble on Gladsmuir at Goodwood, were two of the very finest and tenderest bits of horsemanship during the season. It is a most remarkable fact that the first and last race decided should precisely the same relative leading positions—to wit, Fordham (145), H. Grindrod (66), A. Edwards (62), and L. Snowden (61). It is said that Mr. Naylor is now Mr. Challoner's first master, and that Custance's connection with Mr. Merry has ceased.

Steeplechasing languishes, and is sadly unlike what it was short this time in 1848-9, and there seems but little likelihood of its being better.

Egbert, brother to Brown Duchess, is still in the market, and the Messrs. Richardson and Hardman's handsome mare Lucrezia for sale at Birmingham next Thursday. On Monday the eleven years' lease of the Daventry paddocks, which Lord George Bentinck helped to plan and lay down with his own hand, is to be sold at Tattersall's. There is accommodation for two or three sires and forty or fifty mares. Roy Middleton and Crucifix are the present three, in the Alcar Club and it is somewhat remarkable that one should have been the sire and the other the dam of the winners of the two great double events that only five horses have brought off in eighty-two years.

The Birmingham Dog Show opened on Monday and lasts for Tuesday and Wednesday; and the entries, which nearly reach 550, are especially strong in sporting dogs. Four out of Lord Scott's seven dog puppies got through in their first course for the Waterloo Stakes, but this was disposed of all of them, and Windermere won. Five out of nine of their dormice slipped through the same stakes for the Cricketh Stakes, Dryads ran up with Blemish by Beacon. Sea Foam (late Colocassido), one of that renowned Beacon and Waterwitch litter, won the Alcar Club Cup; and her sister Sea Pink the Alcar Stakes. Lord Scott's Sulphur ran up to Hanno by Judge for the Metropolitan Stakes; and Mr. Randell, whose dogs have done very differently last year over this ground, defeated Cluden, a daughter of Judge, with his Ross by Ragman. Almost all the Waterloo Stakes: Haverbrack on Monday and Wednesday; Ashdown Park for Tuesday, &c.; and Ridgway Club for Wednesday and Thursday.

Upwards of 10,000 people attended at Hackney-wick on Monday to see Bennett, 20 stone, Barker 19 stone, Barker, with the usual folly of English pedestrians, who like being cheered, led for the first two miles, and again and again kept exhausting himself by a succession of spurts till he got into the last mile, when the "go" was too much for, he fell into the arms of his friends and left the Indian to win at leisure. The nine miles were done in 1 hour 1 min. 5 sec. It is evident that the whole thing is fast becoming a farce, unless Mills on the 16th proximo should make an effort to run his eight-mile race like a sensible man, and thus restore confidence.

THE LEAMINGTON ANNUAL HUNT CLUB MEETING.—TUESDAY.

The Sheets Handicap.—Pupil, 1. Entomologist, 2.
The Water Cup.—Nero, 1. Schottisch, 2.
Free Handicap Hurdle-race.—Chester, 1. Dunleyton, 2.
Surrey Handicap.—Gunsmith, 1. Pupil, 2.
Leamington Grand Annual Steeplechase.—Wee Nell, 1. Madam, 2.
The Hunt Cup Steeplechase.—Pupil, 1. Entomologist, 2.
Coventry Handicap Steeplechase.—Farmer from Kerry, 1. Longford, 2.

SHREWSBURY RACES.—SATURDAY.

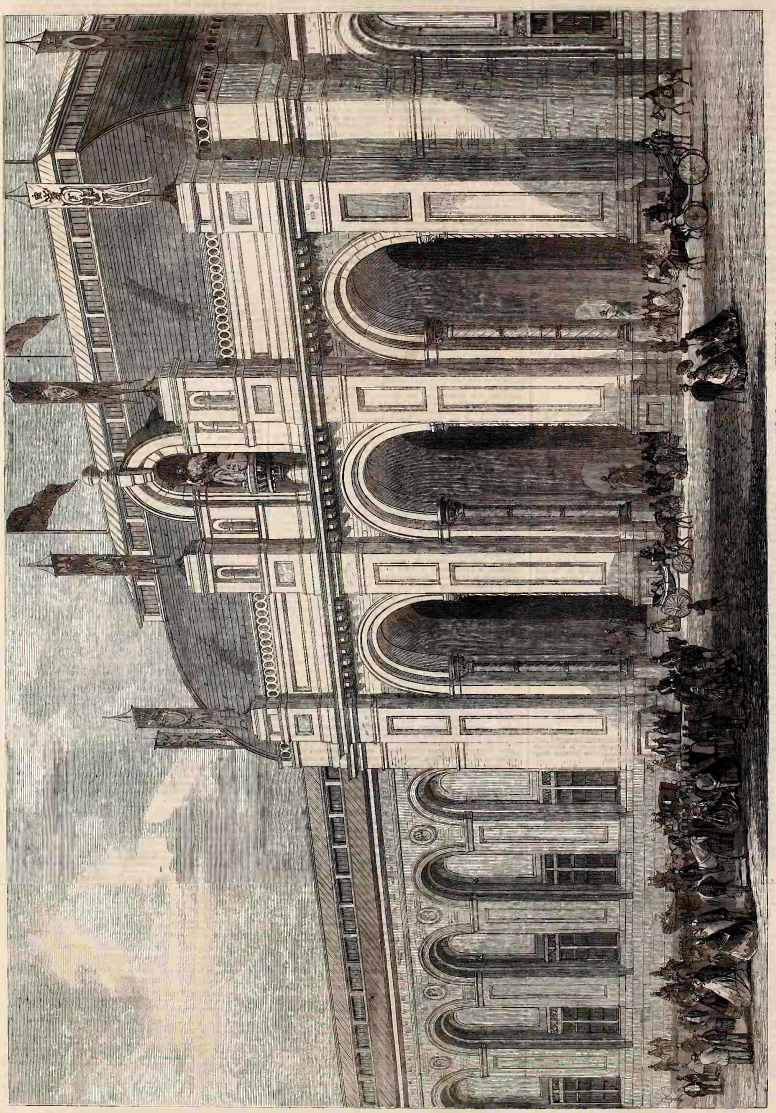
Handicap of 5 sovs.—Mr. Hall's Lily of the Forest, 3.
Handicap Plate of 20 sovs.—Lady Peel, 1. Gwaligan, 2.
Handicap Plate of 20 sovs.—Duplicity, 1. Orion, 2.
Nursery Plate.—Peeten, 1. Harmony, 2.
Handicap of 2 sovs.—Mr. Hall's Schottisch, 2.
Autumn Steeplechase.—Premier, 1. Yorkshire Grey, 2.
Selling Handicap Steeplechase.—Melrose, 1. Sir Joseph, 2.
Long-tor Steeplechase Handicap Plate.—Dunallen, 1. Sunbeam, 2.

WELLINGTON STEEPLECHASES.—MONDAY.

Apley Steeplechase.—Mr. Hall's Lily, 1.
Open Steeplechase.—Premier, 1. Pilfrait, 2.
Innkeepers' Stakes.—Shakeford, 1. Harriette, 2.

It appears from the report of the Postmaster-General that, excepting the Government subsidy with the number of letters, each letter forwarded to America via Galway packet involved a loss of about six shillings.

The bronze statue of Sir John Franklin, an Engraving of which appeared in No. 111 of this Journal, was inaugurated at Spilsby, his birthplace, on Lincolnshire, on Tuesday, amid much pageantry, and the leading crowd. There was a procession of riflemen, and the day was observed in the town as a holiday. The statue and pedestal, and the day was observed in the town as a general holiday. The honour of inaugurating the statue was intended to Sir John Richardson, the companion of Sir J. Franklin in two of his most arduous Arctic expeditions.



THE MAIN ENTRANCE OF THE INTERNATIONAL EXHIBITION BUILDING.—SEE PRECEDING PAGE.

M. FOULD.

Aux grands maux des grands remèdes, says a good French proverb, which received a practical application by the Emperor Napoleon when, on the 14th inst., he signed his Imperial decree containing the appointment of M. Fould to the post of Finance Minister. The crisis in the French finances (to which we alluded at length in our last Impression) required the employment of the most experienced talent available, and by none could be expected to manipulate the politico-commercial lancet with better chances of success than he who had fully explained the diagnosis of the malady and pointed out some of the remedies for immediate use to check its threatening fatal course. Under present circumstances a few biographical notes on the political and financial antecedents of the new Minister will not be read without interest.

M. Achille Fould was born in Paris on the 31st of October, 1800, and received his education at the Lycenm of Charlemagne, one of the most celebrated educational establishments of the French capital. The son of a rich Jewish banker who died in 1850, he had at an early period of life become initiated into the affairs of his father's establishment, at the same time that he studied the fine arts, of which he is a very able connoisseur, and went through a course of travel in the south of France, Italy, and in the East. In 1842 he entered upon his political career. Previously a member of the Council-General of the Upper Pyrenees, he was in that year elected Deputy for Tarbes, the chief-town of that department, and not long in justifying his claims to the honour conferred upon him by his constituents. In the Chamber of Deputies he handled questions of finance and political economy with such peculiar talent that he soon became an authority on all matters relating to custom dues, taxes, loans, and budgets. One of his favourite themes was the conversion of the national debt into one uniform inscription, a project which he subsequently assisted in carrying out partially, and which his present zeal to power is likely to see completed. In 1844 he was appointed reporter to the Commission on Stamps on Newspapers, and caused the amendment of the Opposition to be rejected. During this period he supported M. Guizot in his foreign policy, voting constantly with that Minister's majority. After the revolution of 1848, M. Fould accepted the new order of things with good grace, and offered the advantage of his advice and experience to the Provisional Government, many of whose members subsequently accused him in the National Assembly of having urged upon them the necessity of employing extreme and even desperate financial measures. Notwithstanding these discussions, on the election of the members of the Constituent Assembly in July, 1848, he was named Deputy for the Department of the Seine; and he is mentioned as having risked his life in the cause of order during the terrible days of the preceding month. At this critical period he published, under the titles of "No Assignats" and "Opinion of M. Fould on Assignats," two pamphlets in which he effectually pointed out the danger of the economical principles of which some of the leading men then in power proposed the application. By the sage observations he made in the Chamber on the subjects of savings-banks, exchequer bills, the taxes upon drinks, and the plan for completing the Louvre, he acquired the confidence and sympathy of the majority of the Assembly.

During the Presidency of Louis Napoleon M. Fould was four times Finance Minister, and laboured hard to restore confidence to the hesitating capitalists of that period of commercial uncertainty. By the weight of his opinion and arguments he caused several propositions relative to taxes on income, property, and wages duties to be withdrawn, insisting, at the same time, on the maintenance of the municipal dues and the tax upon alcoholic drinks. He it was who, for the agency of bankers, substituted with consummate ability that of receivers-general for paying off, by subscriptions opened in the department, some millions of rentes arising from various sources. The success of this measure proved to what advantage a similar operation might be turned for the purpose of raising loans, to which resources has been successfully had on several occasions since the second costly French Empire came into existence. We cannot stop to enumerate a number of other minor measures favourable to the Imperial régime in which M. Fould has taken part of late years. Suffice it to say that, faithful to the principles that had hitherto generally prevailed in France, and the abandonment of which by the Government of that country was principally owing to the energetic will of Napoleon III., Fould advocated the protective system in commercial matters, although admitting the utility of occasional modifications in the tariff to meet the necessities of the times.

The differences, for State reasons, which arose on divers occasions between M. Fould and the President of the Republic, and led to his repeated resignations, did not prevent him from being again appointed to office as Finance Minister on the occasion of the coup-d'état in December, 1851; but he once more resigned his position on the 25th of January following, in consequence of the decree concerning the property of the Orleans family. The same day he was named senator, and returned to power shortly afterwards as Minister of State of the Emperor's Household. In this capacity he superintended the progress of the Great French Exhibition of 1855, the reorganisation of the Opera, and the completion of the new Louvre, 1853-7; and remained one of the most confidential Ministers of Napoleon III. till December of last year, when some misunderstanding—to which, it is said, the Empress was not altogether a stranger—led to the nomination of his successor, Count Walewski, the present Minister d'Etat.

M. FOULD, THE NEW FINANCE MINISTER OF FRANCE.

M. Fould, although in his sixty-second year, does not bear on his countenance the traces of his age. Of an ordinary height, his thin pale features and somewhat sallow complexion bear but a very slight impress of his Hebrew origin: he has the appearance of a precocped, studious man, possessing all those exterior qualities of polish and refinement which characterise the French gentleman of high connections and liberal education. As to his boldness in exposing, in his celebrated letter to the Emperor, the rotten state of the French finances, there will but one opinion in England as in France; and if he succeed in finding an issue from the threatening complication brought about by the lavish expenditure of the Imperial Government he will earn a just title to the profound gratitude of his country, and will prove himself to have been one of the most faithful servants and assuredly the most useful ornament of the French empire in these its days of sore financial embarrassment.

Our Portrait of M. Fould is from a photograph by Mayer and Pierson.

THE NEW STORTHING HOUSE, CHRISTIANIA.

Few towns have undergone such rapid improvement of late years as the metropolis of Norway. The fire of 1858, by destroying many antiquated and irregularly-shaped buildings, opened a large field for the display of architectural taste, of which the authorities and the inhabitants generally have promptly availed themselves. Indeed, in proportion to its size, there are not many towns in Europe that can present a greater number of handsome buildings. And now a new Storthing House is in process of being built, which, when finished, will form a considerable addition to the growing beauties of Christiania.

The foundation-stone of the new Storthing House was laid on the 10th ult., just forty-seven years from the day on which Christian Frederick of Denmark abdicated the throne of Norway. The site chosen is on an eminence at the beginning of Carl-Johan-Gade, facing the new Palace. The previous days had been exceedingly rainy and unfavourable for any out-of-door demonstration, but a bright October morning never dawned than that which ushered in the 10th. When all were seated, Provost Jensen, who officiated for the Bishop of Christiania, amid a profound silence, stepped into the middle of the amphitheatre, whereon he delivered an eloquent and fervid address, briefly sketching the past history of Norway, the progress it stepe had made onwards in the march of civilisation, and concluding with the words "Here shall the nation dwell, here shall the nation work, here shall it write its history, here receive its guests; and these guests are the counsellors of the King—the King himself" and pointing to the palace, "Yonder is the King's palace, here the nation's house, facing each other, front to front, while midway lies the seat of learning and science, a bridge between the two," &c. After which he offered up a short prayer, when the whole assembly rose as one man, and with bared head and uplifted eye heartily responded "Amen." Thereupon the first Steward, who, with the other members of the council and presidents of the last Storthing, was seated on a dais elevated in front, stepped forward and read a telegram from the King containing expressions of regret at his absence, and good wishes and congratulations to his faithful subjects, and, descending from the platform and proceeding to the centre of the room, was met by the building commissioners, each bearing the usual implements. Then, having deposited a silver box containing coins in a cavity hewn in the block of granite, he adjusted the mortar and tapped the stone three times with the silver hammer, when, simultaneously, the fortress guns fired a salute. The other members of the Statsraad and high functionaries next approached the spot, and each struck the stone three times. The procession left as it had entered.

At two p.m. a procession, consisting of the various ecclesiastical, civil, naval, and military functionaries, together with the foreign consuls, and the chief officers of State, started from the University (midway between the Palace and the new Storthing House), and wended its way, to the enlivening strains of music, down Carl-Johansgade, a distance of perhaps 250 yards, the centre of the street having been boarded and covered with cloth from the University to the site of the Storthing. On entering the precincts of the site a band struck up the national anthem, "Gamle Norge." It was a picturesque and heartstirring sight to see the cortège entering the amphitheatre (which will be the Storthing room), their varied uniforms and waving plumes flashing and glittering in the sunshine, while outside were seated rows of elegantly-dressed ladies, adding a pleasant finish to the whole. From the plan or arrangement of laying the ground, one could form an excellent idea of what the dimensions of the grand room will be, while flags bearing the names of the different districts represented in the Storthing, tastefully arranged round the outskirts of the building, showed at a glance the shape of the projected edifice.

The accompanying Engraving is from a drawing by Mr. P. Barlag, of Christiania, and conveys a faithful representation of what the Storthing House will be when finished.

TYPES OF TUSCAN PEASANT-WOMEN.

We cannot tell what a few years' more international communication may bring about, but hitherto the peasantry of all countries seem to have clung pertinaciously to their primitive costumes, and to depict differing widely from their superiors in worldly station, who in all quarters of the globe are blindly falling into a sort of Parisian uniform that would greatly detract from the picturesque interest of travel if a similar monotony were unfortunately to extend to the agricultural portion of the world's populations. Even with ourselves the English ploughman, the Irish labourer, the Scotch mountaineer, and the Welsh market-woman remain indifferent or insensible to the inroads of modern fashion, and thereby show their real philosophy. At the Paris Exhibition of 1855 we remember having met a bold British tiller of the soil who ventured deliberately in full smockfrock amongst the French beau monde round the Palais d'Industrie, where he attracted universal attention without for a moment seeming conscious of the sensation he was creating, so little did he think that such a respect-

THE NEW STORTHING HOUSE, CHRISTIANIA, NORWAY.

able dark green overall could be the cause of it. It is true that his intelligence, and consequently his susceptibility, were not of the highest order; for when he was asked by a waif, while recruiting the Channel, what had attracted him to the most curious thing in Paris, he replied, "What, the bread, to be sure, 'cause the more ye friggle it on the bigger it gets." British male peasants still preserve their costumes of former date. British male peasants still preserve their costumes of former date. The Scotch Highlander, but among the female peasantry of our days to a great extent; but among the female peasantry of our islands there is little change in the way of costumes, whatever there may be in their generous natures. Continental peasant-costume, may be in their generous natures. Continental peasant-costume, on the contrary, have something about their dress which imparts a certain picturesqueness to the scenes in which they are presented. French, German, Spanish, Russian, Hungarian, Italian, have each their French, German, Spanish, Russian, Hungarian, Italian, have each their peculiar stamp indicating their nationality, and in Italy nearly every province may be distinguished from the other by peculiarities of dress province may be distinguished from the other by peculiarities of dress in the matter of costume. We have been led into these few remarks by in the matter of costume. We have been led into these few remarks by the consideration of the costumes of the Types of Human Industry now exhibiting in the Society's Impression, where we find remarkable the consideration of the costumes of the Types of Human Industry now exhibiting in the Society's Impression, where we find remarkable women appearing in the styles of dress worn by peasant-women from differences existing in the styles of dress worn by peasant-women from differences existing in the styles of dress worn by peasant-women from districts of the same province drawn after nature by Mr. Mould. districts of the same province drawn after nature by Mr. Mould. FALL OF A HOUSE IN EDINBURGH.—On Sunday morning, FALL OF A HOUSE IN EDINBURGH.—On Sunday morning, one o'clock, a building of seven stories in Edinburgh, known as Paton's land, chiefly populated by the working classes—suddenly fell, burying nearly the whole of the inmates in the ruins. The front wall and partitions gave way, and the timbers went decayed. The whole gave way at once, collapsing inwards, and leaving a portion of the gables standing. The cause of the fall has not been taken out dead, and about twelve injured. There were some extra ordinary escapes. The grandfather of Mrs. Bourke, who was killed, was saved by the steps of Mr. Cairns, grocer, and Messrs. Brown and Co., spirit dealers, on the ground floor, and Mr. M'Leish, grocer, on the first floor, descended the whole Mr. Bell, grocer, on the first floor, descended the whole Mr. Bell, grocer, on the first floor, descended the whole flat in safety. The remainder of the tenement, which consisted of twenty-six houses by working men and their families, nearly all of whom were inmates of houses by working men and their families, nearly all of whom were inmates of the house at the time, escaped with the loss of their furniture in connection with the house at the time, escaped with the loss of their furniture in connection with the property—the only injured days as a consequence of the accident. The property—the only injured days as a consequence of the accident. The frightful accident took well, till there was no more falling.

THREE COTTAGE AFFRAYS.—Three atrocious trade out-THREE COTTAGE AFFRAYS.—Three atrocious trade out-rage has been perpetrated in Sheffield, a town long notorious for such crimes, rage has been perpetrated in Sheffield, a town long notorious for such crimes, there called "affrays." The early on Saturday morning a cottage was attacked by there called "affrays." The early on Saturday morning a cottage was attacked by an infernal machine through the window of the second floor of a house in Acorn-street occupied by a man named Bourke, who is employed by a firm opposed to the workmen of Alexander Hoole, tanner-maker, who are on strike for wages. Whether this was the object of the attack does not appear immediately. Whether this was the object of the attack does not appear immediately. Whether this was the object of the attack does not appear immediately. Whether this was the object of the attack does not appear immediately. Whether this was the object of the attack does not appear immediately. above, a female lodger, Mrs. Rourke, being in bed at the time, was thrown. Mrs. Bourke was in the room at the time, and escaped unhurt. The infernal machine Bourke was in the room at the time, and escaped unhurt. The infernal machine Warehouse heard the smash of glass, and, running upstairs, found Mrs. Rourke Warehouse heard the smash of glass, and, running upstairs, found Mrs. Rourke lying on the floor. She is expected to her lands, inflicting dreadful lying on the floor. She is expected to her lands, inflicting dreadful internal injuries, and her arms, and neck, and scalp are severely cut. She is also internal injuries, and her arms, and neck, and scalp are severely cut. She is also severely scalded by the progress of some fluid around the fireplace. Mrs. Rourke severely scalded by the progress of some fluid around the fireplace. Mrs. Rourke was very seriously injured, and was carried to the Infirmary. The explosion was very seriously injured, and was carried to the Infirmary. The explosion was heard by the inmates of the house, and by persons in the street, and caused heard by the inmates of the house, and by persons in the street, and caused great alarm. The house is divided in two flats, one standing on the floor of the other, and the whole building rented by Mr. Bourke, who lives in the upper flat, and is looking for the edge of the ladder, after she had got over the sill of the window, she fell. Fortunately the ladder broke her fall. She was at once assisted by the neighbours. Watchlight followed. Mrs. Bourke was attempted to descend by the same ladder, but after going a few steps, he was almost suffocated by the smoke pouring in at the open window, and he fell. He did not sustain any injury in the fall, but was much alarmed by it. The house was entered by the window, as before described. In his house the police found a tin of perpetrating the detailed carriage, and plunged up, though for the purpose of another bottle filled with powder and plunged up, though for the purpose of another bottle filled with powder and plunged up, though for the purpose of another outrage, a pistol, a box containing caps, and a thick stick weighted as one end.

MUSIC.

Our winter musical season in London is much less active at present than it has been during the month of November for several years past. This week twelve months both our great opera-houses were in vigorous action. This season Her Majesty's Theatre is closed, without any prospect of being reopened; and the Royal English Opera, Covent-garden, goes on but languidly. We hope, however, that the season at the opera will be "brilliantly" positively announced for this evening, will revive the success which has generally attended the spirited and meritorious management of Miss Louisa Pyne and Mr. Harrison.

The MONDAY POPULAR CONCERTS form the only musical entertainment, beside the Royal English Opera, in London, at present, of any real artistic value. Last week we noticed the commencement of the series of these concerts for the present season, and on Monday evening last, was not less brilliant and successful than the first. Of the programme being selected exclusively from the works of Mozart. In what was what was called a "Mozart night," the instrumental selection of the programme being selected exclusively from the works of Mozart. In such a selection there could, of course, be no novelty; but it was not on such a selection there could, of course, be no novelty; but it was not on that account the less interesting.

Grisi's provincial tour goes on with undiminished éclat. During last week her last small but efficient operatic party have been performing in Yorkshire—at Bradford and Leeds. Their performances consisted of "Norma," "La Sonnambula," and "Don Giovanni," with selections from "Il Trovatore" and the "Barbiere." These have selections from "Il Trovatore" and the "Barbiere." These have been Grisi's last appearances on the stage in England, and in proceed thence to Dublin, where she will begin a short series of operas on Tuesday next.

Another British prima donna has appeared in Italy. A young Scotch lady, Miss Allan M'Lead, has made her début at the Teatro Nuovo, Florence, in the "Puritani" with brilliant success. The audience were enthusiastic in their applause, and the Florentine journals are warm in their eulogies of her talent and style. We can well journals are warm in their eulogies of her talent and style. We can well guess.

Gluck's "Iphigenia in Tauris" has been revived at Dresden under the direction of Herr Rietz, the distinguished conductor. Herr Julius Rietz, the direction of Herr Rietz, the distinguished conductor. Herr Julius Rietz, the late eminent musician, has established a name in every part of the civilised world as the grandson of the father of modern dramatic music has been the first-born of his genius. Gluck's operas a few years ago, when I first-born of his genius. Gluck's operas a few years ago, when I first-born of his genius. Gluck's operas a few years ago, when I

WILLS AND BEQUESTS.

The will of the Right Hon. Sidney Baron Herbert of Lea, P.C., of Wilton House, Salisbury, bearing date July 19, 1855, was proved in the principal registry on the 21st inst. by his Lordship's brother-in-law, the Right Hon. Thomas Viscount De Vesci, and Charles Wyndham Court Bruyeres, Esq., the executors, the personal property being sworn under £160,000. Lord Herbert duly possessed of very considerable personal property, both landed and personal; and that over which his Lordship had the power of disposition he has bequeathed chiefly thereth, his eldest, shoulder, whom he has also appointed residuary legatee. His Lordship has left a family of seven children—four sons and three daughters—all the latter unmarried; and as no provision is made for them in the will, it is to be inferred that they are otherwise amply provided for. He has left £1000 to the poor parishioners of Wilton, over and above his domestics. There is a legacy of £100 bequeathed to the Salisbury Infirmary; also £100 to the Wilton Infirmary, the dividends arising from which are from to be applied to repairing the chancel of the church at Wilton, which owes its existence to the munificence of the Earl Pembroke, ancestor of the late Lord Herbert, it is in his twelfth year, and is his presumptive to the earldom of Pembroke and the family estates.

The will of Judith Olivia, Dowager, Countess of Gloucester, late of Piccadilly, was proved on the 5th inst. by his daughter, Harriet Amelia, the wife of John Dennistoun, Esq., upon the appointed oath exhibited, the personalty being sworn under £40,000. The will bears date the 8th of September, 1854, and was executed by the T. B. This gentleman had left many legacies to relations and friends; but the principal part of his property is bequeathed to his daughter, who has to appoint residuary legatees. Mr. Dennistoun, late John Pynsheia, a legacy of £5000 is bequeathed; and to the children of his sister, Mrs. Pynsheia, of £4000 amongst them. There is no legacy to the steward of £600, with a comment somewhat peculiar. The testator says—"I leave to my friend Mr. India I was indebted to me (meaning myself) when I bequeath him £500, as a proof that I have not forgotten him."

The will of Major Roger Leigh, Esq., of Rushyford Hall, Monmouthshire, and Penarth, Glamorganshire, was proved in London on the 16th inst. The personal property was sworn under £140,000. The executors appointed are the widow and Lieutenant-Colonel George Grey Rose, Grenadier Guards, of Courtyards, Southall, and the Rev. George Gunn, Rector of Penarth, in the county of Somerset. The will bears date August 27, 1860, and the testator died on March 29 in the present year. He directs that his property shall be held in trust, independent of his wife, for the benefit of his children, on securing to her a yearly income of £2000; there are other gifts, of necklaces, &c., beyond those mentioned, for her sole use. John Capel Hanbury Leigh, Esq., of Pontypool, is also appointed residuary legatee of the personal estate. The testator directed that a few inquiries should be made respecting his ancestors, and legacies to his dependents and domestics have been liberal as well as his charitable intentions, one has left to the infant school, which he had established at Tyreguth for the instruction of the children of his workmen and labourers, a legacy of £1000. The Monmouth Infirmary and the Bristol Infirmary each £500, and a legacy of £200 to the Bristol Eye Infirmary.

MONETARY TRANSACTIONS OF THE WEEK.

From our City Correspondent.)

In the early part of the week considerable firmness was apparent in the market for all British Government securities, and the previous depression in the quotations was well supported. On the arrival of news, however, to the effect that the two Southern Commissioners on their way to England had been forcibly taken on board one of our international steamers by an American vessel of war, great excitement was manifested amongst the dealers in the Stock Exchange, and the value of Consols suddenly declined 1 per cent. A portion of the fall has since been recovered, but, of course, prices continue to fluctuate somewhat irregularly, although a war with the States is not considered probable as the result of the circumstance complained upon has first at this.

There is still a large supply of money in the hands of the leading bankers; but rates have risen, and for it is improving, at the seasonal quotation for the best commercial bills:—

	Per cent.		Per cent.
Three Days' Bills ...	1½ to —	Four Months' Bills ...	3 to 3½
Two Months' Bills ...	2½ to —	Six Months' Bills ...	3½ to 4
Three Months' Bills ...	3 to —		

In the Stock Exchange loans may be had, for short periods, as low as 1½ per cent; at which, however, the rate is somewhat above that of the Bank of England, which is declined to 3½ per cent at Hamburg. On other parts of the Continent, however, very little change has taken place. The following are the quotations at the leading cities:—

	Bank min.	Open market.		Bank min.	Open market.
	per cent.	per cent.		per cent.	per cent.
Paris ...	3	2½	Hamburg ...	3½	3½
Vienna ...	5	4	Brussels ...	3	3
Berlin ...	4	3½	Frankfort ...	3	3
Amsterdam ...	3	2½	Madrid ...	5	5

The Continental exchanges have become less favourable to this country; consequently the imports of gold from that quarter have fallen off. At New York the rate of exchange has declined to 94 per cent for bills on London, and upon bills on Boston, forwarded from Hamburg. The last advices brought £1000 in gold. The arrivals from Australia have amounted to £277,000; and from Chili, via the West Indies, &c., £460,000, chiefly in silver. The value of the gold sent into the Bank of England is nearly £600,000. The amount in the Bank has been £260,000, mostly in silver, for Bombay.

The stock of bullion in the Bank of France has increased during the last fortnight about £1,000,000 sterling. Included in that amount, however, is a loan of £400,000 received from Amsterdam.

The tenders for £200,000 Cape Government Six per Cent Debentures were sent in on Monday, when the whole amount applied for was £848,000, but £200,000 was at and above the minimum price of 107.

Several important failures have been announced, but none of them are for large amounts.

The publication of the report of the auditors appointed to investigate the affairs of the Deposit Bank, in Pall-mall, has been the topic of much discussion in City circles. The value of the capital paid in by the depositors has been lost, and, apparently, the dividend will be a very small one.

The dividend of the Royal Mail Steam Company is 7½; out of the Peninsular and Oriental House 7 per cent per annum, with a further sum of £1 per share to the Extraordinary account.

We learned that very large sums were in London on account of the dividend making fund of the Turkish Six per Cent Loan of 1858 amounts to £111,000.

A full average business was transacted in Home Stocks on Monday, at very little change in the quotations. There was a good demand from the Consols for Money were done at 94¼ ⅛ Ditto for Account, 93⅞ 93 ex div.; Bank Stock, 208 on 210 ex 210; Reduced and New Three per Cents, 93¾ ⅞; India Five per Cents, 106¾ ⅞ Ditto for Account, 107 ⅛

TYPES OF TUSCAN PEASANT-WOMEN.—SEE SUPPLEMENT, PAGE 543.

luxury and coquetry. The *pas de dessous* has taken possession of all the colours, of all the tissues, and of every variety of ornament consistent with good taste and elegance. Cashmere, taffety, and reps dispute the supremacy of public favour; they are either finely embroidered or enriched with velvet or other ornaments to the height of the knee; some are even flounced, but all attract the attention and criticism of both sexes for the nonce.

However, the principal serious matter for discussion just at present is that of bounets. Their form, it must be admitted, is far from gracious, and does not become the majority of ladies; yet what is to be done? When Fashion speaks, obedience becomes a duty. Fortunately, there is always an opening to escape her law, and clever modistes know well how to adapt the rule by making it sometimes savour of the exception so as to suit all tastes and faces. The autumn bonnets advance less in point, but rather square in the front, leaving the cheeks almost uncovered. White and black are the most fashionable colours; velvet the preferred material, ornamented with lace and blonde, feathers, but few flowers, except under the brim, where they are occasionally abundant. Another description of chapeau that has found much favour on account of its simplicity consists of a mixture of crape and velvet for the body, which form a very pleasing combination, even without the addition of any extraneous relief from ordinary ornament.

Artificial flowers are to have a great vogue for ball dresses this winter, but combined with every description of lace—Chantilly, Alençon, Honiton, gold and silver. Long garlands of beautiful bunches for the skirts, as well as some exquisite detached bouquets, have been already prepared by the most eminent artificial florists, and submitted with approbation to the haut ton of Parisian fashion.

THE ILLUSTRATIONS.

Fig. 1. *Dress for an Evening Party.*—White muslin robe, the skirt ornamented with flounces and bouillonnés disposed alternately. The corsage, rather longwaisted and very pointed, is lownecked and altogether of the Marie Antoinette style; its trimming is similar to that of the skirt. The headdress consists of the couronne Ceres, attached behind by a bow of dark blue ribbons, the prevailing colour of the coiffure.

Fig. 2. *The Etoile Montana.*—This elegant cloak is of black velvet. To the edge of the shoulder-piece is attached a very deep guipure, for which lace is sometimes substituted. Over the shoulder-piece itself, completed by a pair of tassels, are distributed a number of passementerie stars (whence the name of the mantean). The bonnet crowning this toilet is the most highly decorated of any we have yet had the courage to depict. Many such are to be seen just now in Paris.

Fig. 3. *Walking Dress.*—Pale blue silk robe, ornamented on the front of the corsage, round the sleeves, and on the skirt with a narrow cross-barred ribbon-velvet trimming; that on the skirt is put on festoonwise, and varied by the addition of a silk rosette high up on one side. The corsage is roundwaisted, and fastened by a buckled band, from which depend two long streamers with ends to match the rest of the trimming. The chapeau is in rice chip, with black rolling plume; the tour-de-tête being a combination of blonde below, with a rather large rose and a narrow pink feather above.

PARIS FASHIONS FOR DECEMBER.

** The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each Announcement.*

BIRTHS.

On the 23rd inst., at 5, Pembridge-gardens, Bayswater, Mrs. Casimir Pincel, of a son.

On Wednesday, Sept. 25, at Maplewood, Victoria, Vancouver Island, the wife of Frederick W. Wood, Esq., of the British North American Service, of a daughter.

On the 25th of October, at Dinapore, Bengal, the wife of the late Richard Bowlin, Esq., of a daughter.

On the 24th inst., at 1, Grafton-street, the Countess of Cork, of twins, a son and heir and a daughter.

MARRIAGES.

At St. John's, Paddington, Richard Chomeley, eldest son of Sir Edward Chomeley, Bart., to Vincentina Portia, eldest daughter of the Hon. Adolphus Cavell, and granddaughter of Viscount Maynard.

On the 26th inst., at St. Pancras Church, by the Rev. J. W. Reeve, Minister of Portman Chapel, Baker-street, George Moore, Esq., of Kensington Palace-gardens, and White Hall, Cumberland, to Agnes Jane, second daughter of the late Richard Bowlin, Esq., of Dinapore, Bengal.

On the 29th inst., at the [illegible], Bayonne, Paris, James Lenox, Esq., M.A., formerly of Glasgow, to Mollie, Marie Francoise Bourdonnais, of Chateau Gouffiac, and Odessa.

DEATHS.

On the 26th of September, 1861, in Port Townsend, north-west coast of the United States, Frederick William, the infant son of George and Emma Barthrop, aged 2 months and 29 days.

On the 24th inst., at Grendon Hall, Lady Charlotte Chetwynd, from injuries proceeding from a fall. Her loss is deeply felt by the neighbourhood.

At Lambeg, Upper Province of India, Sir Richard de Lautour St. George, Bart., in the 26th year of his age, beloved and lamented.

WANTED, a HEAD-MASTER for the MANCHESTER SCHOOL OF ART, who must have received a Certificate from the Government in Science. The salary is £250. He must devote the whole of his time to the duties of the School, and will be required to reside in every branch of art taught in the Institution.

Applications, with testimonials, to be forwarded to the Secretary on or before the 1st of January next.

RICHD. AYRTON, Secretary.

16, Mosley-street, Manchester.

CANCER HOSPITAL,

LONDON and BROMPTON.

President—The Right Hon. the Earl of Airlie.

Treasurer—Sir Antony Brabant Rayner, Bart., 54, Russell-square, and 3, Crosby-square.

Bankers—Messrs. Coutts and Co., Strand.

This institution was founded for the treatment of cancerous diseases in every form, and their amputation. Up to the present time nearly 8000 patients have come under treatment. The success attending the use of the Chloride of Zinc in the treatment of the deep-seated cancers of internal organs is unprecedented.

The Committee earnestly SOLICIT AID of the benevolent and wealthy. Its funds are being wholly expended on out-patient, medical and surgical aid.

W. J. COCKBURN, Sec.

MONEY on PERSONAL SECURITY may be obtained in addresses or assistance, on perfectly reliable estates, by way of mortgage on property derived under wills, and other family settlements, reversionary interests, &c., of any amount, and by HOWETT, 11, Bedford-buildings, Strand.

W. F. THOMAS and CO.'S PATENT SEWING-MACHINES.—In these machines are combined the most perfect mechanical construction, as shown by framing, tension, and the latest additions and improvements, for varying the position of the needle, and length of stitch, by which they are adapted for every description of work, from the finest cambric to the thickest cloth, leather, or even wood. The stitching produced is alike on both sides of the material, there is no seam or ridge, and the thread cannot be pulled out. Lists of prices, and specimens of work, may be had at 2, Newgate-street, City, and 15, Regent-street, Westminster.

SEWING and EMBROIDERING by MACHINERY.—The new Machine, and the only one that will do both kinds of work. A specimen sent, carriage free, on receipt of Postage Stamps to the Advertiser, with Catalogue, Testimonials, &c. Price £5 5s., and £7 7s. Agents wanted. Wm. Hall, 177, High Holborn.

ADAMS' HICKEY'S-LAND QUADRILLES are now being played with immense success every evening. Each 4s. net; single, from BEALE and Co., 27, Baker-street, Portman-square.

A DAM'S AMERICAN GALOP. Splendidly illustrated in Colours. Price 4s. net. BEALE'S Edition. "As like all Mr. Adam's non-pareilles, admirably marked for dancing and playing."—Morning Post. BEALE and Co., 27, Baker-street, Portman-square.

A DAMS' BURLESQUE QUADRILLES contain the "Young Man from the Country," the "Perfect Cure," the "Lancashire Witches," with Full Words, 2s. net each. Septet, 2s.; Orchestra, 2s. BEALE and Co., 27, Baker-street, Portman-square. Order of all Music-sellers.

HYMNE à la VIERGE—THECLA BADARZEWSKA. For beauty and elegance this piece surpasses every composition of the kind. Pianoforte, 4s. net; Septet, 2s.; Orchestra, 2s. BEALE and Co., 27, Baker-street, Portman-square.

HYMNE à la VIERGE.—Owing to the extraordinary demand for this elegant movement, the First Edition was found insufficient to supply the orders, and we publish that the Second Edition is now ready, fine for 4 stamps.

EVANS'S ENGLISH HARMONIUMS, for Church, Chapel, Cottage, Schools, Concerts, Country and other Public Institutions, are made in every possible variety. Prices from 10 to 100 guineas. The Harmonium, which is the only instrument that can be played with the perfection of the Organ Machine, the only substitute thereof that has ever been introduced, which can be used in churches of moderate size. The best, most powerful, pretty, and easy-toned instrument for Schools, Concerts, Country and other Public Institutions. Mr. EVANS, in order to meet the wishes of the numerous applications to him for a Harmonium of moderate power, combining beauty, durability, and cheapness, has had great pleasure in introducing to Illustrated Catalogues of Harmoniums, to be had gratis of the Publishers and Music-sellers, or of Mr. EVANS, Manufacturer, 21, Hatton-garden, London.

EVANS'S ENGLISH MODEL HARMONIUM, with two rows of keys and two stops, price 20 guineas. It moves easily, combines every modern improvement, and is of such moderate size that it may be placed upon this instrument, which possesses every gradation of tone from the softest to the full power of the Organ Machine, and is the only substitute thereof that has ever been introduced, which can be used in churches of moderate size. The best, most powerful, pretty, and easy-toned instrument for Schools, Concerts, Country and other Public Institutions, and is equally effective both in Church and Chapel.
HOOLEY and OLLIVE, Manufacturers, 21, Hatton-street, London.

EVANS'S PEDAL HARMONIUM, with two rows of keyboard, Pedal board, and two stops, price 30 guineas. It moves easily, combines every modern improvement, and is of such moderate size that it may be placed upon this instrument, which possesses every gradation of tone from the softest to the full power of the Organ Machine, and is the only substitute thereof that has ever been introduced, which can be used in churches of moderate size. The best, most powerful, pretty, and easy-toned instrument for Schools, Concerts, Country and other Public Institutions, and is equally effective both in Church and Chapel.
HOOLEY and OLLIVE, Manufacturers, 21, Hatton-street, London.

A LEXANDRE HARMONIUMS of every description at CHAPPELL and CO.'S, 50, New Bond-street.

THE NEW HARMONIUM, invented by ALEXANDRE, the best of all makers. To suit ears with a knowledge of fine music. Perfect by the united efforts of Alexandre père et fils. Sole Agents—At CHAPPELL'S, 50, New Bond-street.

NEW SIX-GUINEA HARMONIUM, by ALEXANDRE, with two rows of keys and two stops. These Harmoniums are larger in price and superior in all other respects to those usually sold at the same price. At CHAPPELL'S, 50, New Bond-street.

NEW CHURCH HARMONIUMS, with two rows of keys, by ALEXANDRE.—No. 1, with double keyboard, CCC to F in alt, and two stops, 30 guineas. No. 2, with double keyboard, CCC to F in alt, and three stops, 40 guineas. These instruments are of large size, and possess the power and quality of tone necessary in a drawing-room. They are especially manufactured for the use of Churches, Chapels, and Schools, and are strongly recommended by the profession. Testimonials as to the great superiority of the Alexandre Harmoniums from Professors Sir Henry Bishop, Dr. Wesley, Dr. Gauntlett, Dr. Elvey, Dr. Bennett, Mr. Goss, Mr. Turle, Mrs. Sloper, and the most eminent professors of the day. Illustrated Lists of the Alexandre Harmoniums may be had gratis of CHAPPELL and Co., 50, New Bond-street.

NEW DRAWING-ROOM MODEL HARMONIUM, the best that can be made, price 50 guineas, with two rows of keys, 25 stops, and 32 pedals. Catalogues of Pianofortes and Harmoniums sent gratis and post-free.
CHAPPELL and Co., 50, New Bond-street.

HARMONIUMS at CHAPPELL'S.
No. 1. In oak case, one stop, 5 octaves, 10 guineas.
No. 2. In oak case, two stops, 5 octaves, 12 guineas.
No. 3. In oak case, two stops, CCC to F in alt, 16 guineas.
No. 4. With two stops—oak, 21 guineas; rosewood, 24 guineas.
No. 5. With three stops—oak, 25 guineas; rosewood, 28 guineas.
No. 6. Twelve stops, oak or rosewood, 35 guineas.
No. 7. Fifteen stops, rosewood or walnut, 45 guineas.
No. 8. Three rows of keys, CCC to F in alt, 18 stops, 50 guineas.
No. 9. Eight stops, percussion action, oak or rosewood, 30 guineas.
No. 10. Twelve stops, percussion action, in oak, 40 guineas.
No. 11. Twelve stops, percussion action, large size, in rosewood, 50 guineas.
No. 12. Two rows of keys, 25 stops, percussion action, expression, a la main, &c., 80 guineas.
CHAPPELL and Co., 50, New Bond-street.

SECONDHAND HARMONIUMS by ALEXANDRE, nearly new, in oak, 20 and 25 guineas; rosewood, 25 and 30 guineas. At CHAPPELL'S, 50, New Bond-street.

PIANOFORTES at CHAPPELL'S.—The largest Stock in London by Broadwood, Collard, Erard, &c., for Sale or Hire.—50, New Bond-street.

SECONDHAND PIANOFORTES.—CHAPPELL and Co. have a large stock of SECONDHAND PIANOFORTES for Sale by BROADWOOD, COLLARD, ERARD, &c., at very reduced prices. Also, new Instruments of every description.—CHAPPELL and Co., 50, New Bond-street.

LONDON MAIN DRAINAGE.

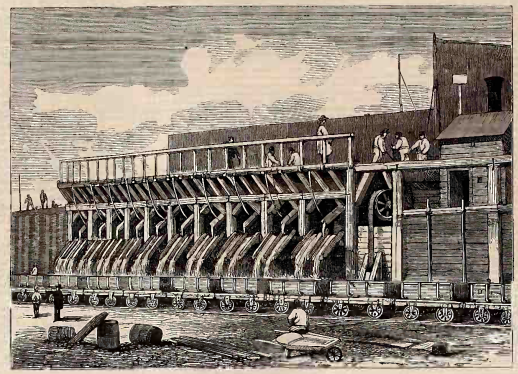
FORTY years ago good salmon were taken in the upper reaches of the Thames, and good fish of various kinds caught between Vauxhall and London Bridge; indeed, a thriving community of fishermen resided there in those picturesque old streets about the Archbishop's Palace who prosecuted their calling in the immediate neighbourhood. The walks along the shores of the Thames were pleasant places in those days, where the Londoners wandered on summer evenings to enjoy fresh air. The river was a comparatively clear stream, bearing on its surface hundreds of pleasure-boats; and the houses which had back gardens or lawns extending down to the river were highly prized as dwellings by the wealthiest citizens. How changed now is both the river and its banks! The former has become a filthy sewer, the fish have been destroyed, and those who travel on it do so only as a matter of business; on the latter the dwellings are abandoned and property immensely deteriorated in value, unless occupied by wharfingers and others whose necessities compel them to locate there. And what has brought all this great change about? Simply the fact that there is poured into the River Thames every day about sixty millions of gallons of sewage, the filthy washings, scourings, and cleansings of the three millions of people who inhabit the mighty city that has grown up on its banks.

It is with not a little pleasure, then, that we have taken up for illustration and description the metropolitan drainage works now being carried out, because, according to the report of the engineer who superintends them, we may hope in the course of two years or thereabout to see the Thames assume its original character. We cannot make sure of catching salmon at London-bridge so soon as that, but we may certainly expect at the expiration of the time stated to see the Thames a clear, wholesome stream, attractive for its natural beauties and adding to the healthiness of the metropolis generally.

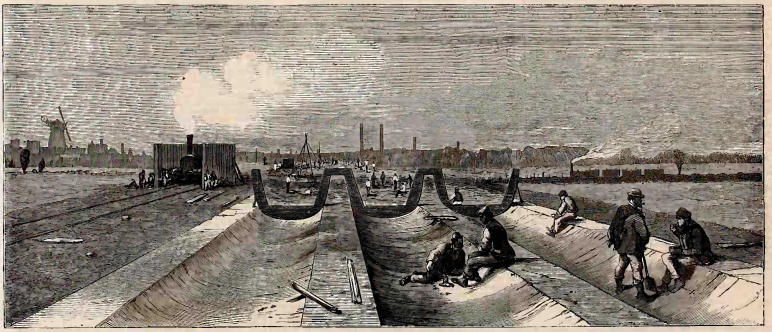
The object sought to be carried out by the works called the London Main Drainage is to intercept the sewage in its progress towards the river, and divert it by covered channels to Barking Creek, on the north side, and Erith Marshes on the south. These points are about fourteen miles below London-bridge, and it is intended that the entire mass of sewage shall be cast into the bottom of the river here during the first two hours of the ebb tide only. The period of discharge is restricted to these hours because then the sewage would be deodorised and diluted by a volume of water twenty times greater than that which now dilutes it at London, and because such ebb tide would, in returning to the sea, convey it to points twelve miles below the outfalls, or twenty-six miles below London-bridge, through a constantly-enlarging flood.

When once this system is got into working order there will be no reason why the Thames may not ebb and flow through London a perfectly clean stream, as the whole of the sewage launched at the first of the ebb will have got so far down before low water that

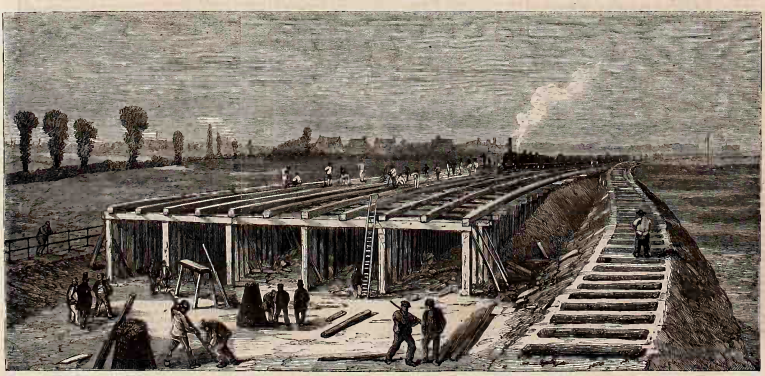
(*Continued on page* 555.)



THE CONCRETE MILLS AT PLAISTOW.



CONCRETE FOUNDATION FOR THE NORTHERN OUTFALL TUNNELS.



CONSTRUCTING THE CONCRETE EMBANKMENT ACROSS THE PLAISTOW MARSHES: DEPOSITING THE CONCRETE.

STRASBOURG CATHEDRAL.

THE Cathedral of Strasbourg, the fine old capital of Alsace, stands like an ever watchful sentinel on the banks of the Rhine, "the natural barrier," according to the geographers and to certain political naturalists, "of modern France and Germany." We say "on the banks," but that is somewhat figurative, although a quarter of an hour's drive from the Place de la Cathedrale (the point of view of our lingraving) from the Place de la Cathedrale (the point of view of our lingraving) takes one to the Rhenan shore, where, facing a little fortress, is established a custom-house officer and railway bridge. Strasbourg, however, is more than a mile distant from the river, and slightly change its course, the place and its population would not be much influenced by further banishment on the other side of the mighty river. But *nevermore à notre Cathédrale*.

It was upon the site occupied by the present cathedral that Clovis, the first Christian King, erected a church in the fifth century. Consigned of clay and wood, this church, after having lasted for several centuries, was replaced by Pepin and Charlemagne with a magnificence that excited universal admiration. Fire and lightning at different periods combined to destroy their beautiful edifice, and it was rebuilt in the year 1007. In 1015 the foundations of a new edifice were laid by Bishop Werther, and during fifteen years 100,000 marks were employed in the undertaking; but this church was not more fortunate than its predecessors, and four different fires in the course of a twelfth-century injured so greatly as to render necessary its entire reconstruction. Bishop Conrad induced Erwin de Steinbach, the best architect of his epoch, to undertake this great work, and in 1275 the nave was completed in 1275. Thereupon commenced the erection of the towers, which, according to the original plan, were to be 574 feet in elevation of 50 ells. The work, interrupted in 1289 by an earthquake which shook the Cathedral, and in 1298 by a fire that consumed the wooden roofing, was nevertheless urged on with great spirit, and superintended by Erwin down to the year 1318, when he died. He was succeeded by his son Jean and other architects, under whose direction the southern tower was stopped at the platform, terminated in 1360. The northern tower, completed by the Council of Cologne, was terminated in 1439; and, although the open-worked octagonal spire did not attain the height originally intended, the "Munster," as it is called, of the Strasbourg Cathedral is only seven feet inferior in height to the Great Pyramid of Egypt (461 feet). The masons of Strasbourg acquired an immense reputation from the ability they had shown in the construction of the spire, and their services were brought into requisition for similar work in the cathedrals of Metz, Vienna, Cologne, Fribourg, &c. They established themselves from culinary masons they formed a series of well-organised associations called *Hutten*, or lodges, of which the chief was based at Strasbourg. Rules accordingly were composed of masters, companions, and apprentices; but any mason who led a disorderly life, or who did not practise the precepts of the fraternity, was declared unworthy of belonging to any lodge whatever. After passing through a long novitiate, they received peculiar names and the communication of certain signs by which the members of the fraternity were known to each other. It is to these members that we are indebted for the Strasbourg, established thirteen years after the entire completion of the cathedral (1452), that the masonic lodges of modern times owe their origin.

Notwithstanding the unilateral appearance of the façade in consequence of the non-completion of the southern tower, the general effect of the Strasbourg Cathedral makes a deep impression on the amateur of fine religious monuments, who is invariably struck with admiration at the first architectural view. At the sight of this sublime edifice, whose spire seems to mingle into the atmosphere with such elegant grace and majesty, tapers away into the atmosphere with such elegant grace and majesty. From the diversity of its styles is a subject of interest for the student of ecclesiastical architecture, as the cathedral may be said to be a compendium of the styles of the middle ages, from the Romanesque, with its grave simplicity, down to the latest stages of the Gothic when it was disfigured by the superabundance of ornamental detail. The interior is, indeed, the whole of the sacred edifice in general, the finest in existence, in one state of preservation, in which the numbers of reparation to which the majority of French churches are just now exposed. The choir, the aisles, and the lower portion of the nave are Byzantine; in the upper portion of which, over Gothic style, predominates. Visitors to Strasbourg should never fail to visit the cathedral once or midday, when they will be highly interested by the movements of the wonderful astronomical clock, originally invented by Isaac Habrecht in 1574, but reconstructed and considerably improved by M. Schwilgue from 1838 to 1842. As soon as the hour of twelve has struck, a mechanical cock flaps its wings and crows three times, as naturally as the most industrious cock of the farm tribe, while a number of figures representing the Twelve Apostles pass before and salute our Saviour. Above these are other figures of colossal proportions, showing with the greatest exactness the motions of the constellations, the revolutions of the sun accuracy the motions of the constellations, the revolutions of the sun and moon, the signs of the week, the hours, the moveable feasts, and a variety of other useful astronomical observations.

THE DOSEH.

THE most remarkable of the many peculiar ceremonies in connection with the Jewish religion takes place on the 22nd day of the Festival of the Birthday of the Prophet.

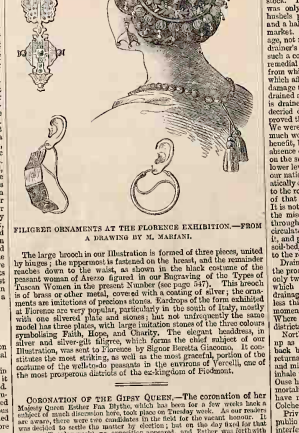
The fete is held in a portion of the gardens of the Ebrekieh in Cairo, and lasts nine days. Though it has lost something in reputation it is still tolerably well attended, and by the very orthodox quite worshiped. A great number of mercantile adventures which are brilliantly illuminated at night with innumerable glass lamps. These places are used by dervishes and others for the performance of the rites—a religious and somewhat laborious exercise, producing a species of hysteria, called "mithoor" by the Arabs. There are also other amusements, such as the Hassanya, where, it is said, he has spent the previous night in prayer and fasting, and proceeds to the house of the Sheikh (or chief priest). On the route the procession is joined by numbers of dervishes from various districts of the metropolis, each with their distinguishing flags. The march is further enlivened by several individuals who execute voltairnies on reed pipes, and by a number of cavalry and drums. A herd of men walking four or five abreast, and carefully watched by some dervishes, precede the Sheik. They are the neophytes, who are about to undergo the ordeal. The Sheik, bareheaded and rolling his head from side to side, uttering a hoarse cry of "Allahhu!" continually, apparently lost to everything but his own mental misery. Their appearance is anything but pleasing, and a superficial observer would undoubtedly attribute it to the effects of strong mechanical power, rather than great excitement under which they appear to be labouring under. That great excitement under which they appear to be labouring is unnatural, and would require stronger stimulants than any religious exercise could afford.

Following this mixed mob of fanatics, dervishes, flags, drums, and soldiers, is the Sheik himself on his favourite horse, and a large number of grenadiers from the Viceregal Guard and a crowd of officious ecclesiastics. On the first arrival at the south end of the Esbekieh, and opposite to the house of the Sheik El Bekry, the dervishes, urged by rite to the house of the Sheik El Bekry, the dervishes, urged by the dervishes, throw themselves flat upon the ground and run their carefully arranged and packed (core being taken to have the heads all one way), and continue their cry of "Allah!" which is taken up by the spectators, who become very much excited. The Sheik's horse is of powerful build, highly trained, and mached, but always hesitates to place its foot on the first body; this difficulty, however, being got over by the aid of some gentle inducements administered by the attendant priests, he ambles freely, but with singular care, over the whole; each man as it finishes upon twice. It is rarely, if ever, that the horse misses his footing—placing one foot on the shoulder of one man and one hind foot upon the hip of another. Immediately the Sheik has passed over, the men begin, shouting the usual "Allahhu!" The excitement at this particular moment is intense, and the excitement (police) are extremely lively and energetic in keeping the mob back. Amongst the crowd may be observed some of the Faustian turned "Soudeyeh," almost in a state of nudity they profess to eat glass and snakes' insides other vermin. Others of the same sect, who generally accompany or are present at the religious festivals, carry about with them pots of about one foot in length, surmounted with a heavy ball of the same metal, through their faces and which part of the body, even throwing them into the air and allowing them point downwards in their eyes, which they appear to penetrate some two or more inches. No one can visit upon these performances of these worthy gentlemen are highly creditable, and would undoubtedly earn them a decided position in the streets of London.

The Doseh, like many other Moslem observances, has not escaped the hand of innovation, and even now shows marked symptoms of decay. The number of dervishes who present themselves to be operated upon have greatly decreased within the last few years, and one of the lowest orders. The spectators are equally affected, and, with the exception of a few score, are principally foreigners. Even the astonishing performances of the dervishes scarcely provoke more than the usual exclamation of "Mashallah!" (Praise be to God).

FILIGREE ORNAMENTS AT THE FLORENCE EXHIBITION.

WE terminate our series of notices of the Florence Exhibition, which we began last week, by the reproduction of a drawing by M. Mariani, representing a number of filigree ornaments generally worn by and peculiar to the women of Italy. We could possess none such examples of jewellery of more or less value, either received or handed down as notorious religiously respected. This kind of jewellery is of down as notorious religiously respected. This kind of jewellery is of Oriental origin, and is called in the Italians *filigrana* (from the Latin *filum*, thread, and *granum*, grain), of which our English word *filigree* is evidently only a corruption. Most filigree articles are open, and in the guise of network, consisting of gilt or silvered wire worked faster fully one or less usually in size. They are made by the Italian peasantry, who are passionately fond of jewellery of every description, whether they can afford it or not. The expression is "beauty and do not seem to participate in the "use," which their fine classic forms and features would certainly justify them in adopting.



FILIGREE ORNAMENTS AT THE FLORENCE EXHIBITION.—FROM A DRAWING BY M. MARIANI.

The large brooch in our illustration is formed of three pieces, united by hinges; the uppermost is a fantastic head, and the remainder is worn suspended to the waist, as shown in the black costume of the peasant woman of Arezzo figured in our Engraving of the Types of Tuscan Women in the present Number (see page 547). This brooch is of brass or silver metal, covered with a coating of silver; the ornaments are imitations of precious stones. Earrings of the form exhibited at Florence are very popular, particularly in the south of Italy, mostly with one pendent globe and sometimes but unfrequently the addition of a second. The necklace and pendant are composed of coral, and the bracelet is of gilt metal.

CORONATION OF THE GIPSY QUEEN.

THE coronation of her Majesty Queen Esther Faa Blythe, which has been for a few weeks back a subject of much discourse in the high places of Tuesday Hill, on our north-western outskirts, took place on Tuesday week. As our readers are aware, there were two candidates in the field for the vacant honour; it was decided to settle the matter by ballot; and on the day fixed for the purpose (Tuesday week) no opposition appeared, and Esther was declared Queen. The ceremony was attended by a number of high personages. A royal proclamation which she had learnt had the effect of calling together a goodly number of the tribe; but the weather became very inclement, and no doubt deterred many of the general public from visiting the scene of action. The ceremony proceeded as follows:—Esther was seated in a chair of state, and Princess of the Imperial Blood—her brother Prince Charles, attired in a splendid suit of velvet, with a gold chain and medallion, ascended to her Majesty, some of her Majesty's grandchildren also being present. The Prince then placed her Majesty's grandchildren also being present. The Prince then placed her Majesty's grandchildren also being present. The ceremony of coronation was to be Majesty's grandchildren also being present. The ceremony of coronation was to be performed, the crown was placed upon her head, followed by the usual salutation performed, the crown was placed upon her head, followed by the usual salutation of homage. The ceremony stopped forward and placed the crimson upon her head, a feather of which was presented to each of the guests. The Queen then addressed the assembly in a few words, announcing her accession to the throne, and expressing a fervent wish that the night's entertainments would fulfil the duties of her royal station. A number of toasts were then given, "Her Majesty the Queen," "Prince Albert," "The Princess Royal," "The Queen's daughter" was handed round, and toasting honours paid to her Majesty, the Queen's piper riding and harpooner." The procession being set in motion, the Queen's piper riding and harpooner." The procession being set in motion, the Queen's piper riding in his peculiar costume, and the Queen following on foot, the whole party proceeded to the Queen's residence, where her Majesty held a levée, the Royal Princes and Princesses and retinue only being admitted.—*Aris's Circular*.

RIVER REFORM.

THE country has long wanted a General Drainage Act to empower landed proprietors in various districts to combine together for the purposes of systematic drainage, in the same way as they now combine for the purpose of inclosing waste and common lands under the Inclosure Act.

For the want of a general Act those who have been so enterprising as to seek to improve the drainage of their district have been put to much trouble and expense. Take, for instance, the Lincolnshire Fens, which contain about 400,000 acres, and of which about 300,000 acres have been reclaimed from the sea. Private Acts have been passed in Parliament for each of the fen-drainage and estuary-works erected in the district, but the law would no doubt appear fabulous, and large indeed in comparison with the cash expended in constructing the improvements. The first Act for making the Eau Brink Cut, on the Ouse, above King's Lynn, cost £12,000, whereas the bill itself only proposed to lay out £4,000 on the works. To execute the powers of the Act of Parliament have been required, to obtain which £100,000 have been expended, the contract for the works being for £70,000. Five and ten per cent. is charged on all cost. The history of the Nene Valley Drainage Act is enough to prevent all sensible people from attempting to improve a district under private legislation. The extent of land to be benefited is 16,000 acres, and there have been expended in Parliamentary proceedings nineteen shillings per acre. Conflicting interests between those who wish the river for navigation and those who wish it between those who wish the river for navigation and those who wish it for drainage, for those who wish the water kept up and those who wish it for quant it kept down, have rendered it necessary to go to Parliament for three separate Acts, which have cost more than £20,000. These expenses, with the rents of the engineering models, have ruined the scheme. This sum would have drained 6000 of the 16,000 acres; would have secured to property an improvement and rendered equal to the subsistence of 2500 of the labouring population; and had the work been executed under a general Act, the cost per acre, instead of reaching £1 per acre, would have been 6d.

It is scarcely to be wondered, then, that although landed proprietors have a vital interest in the successful result of the contest for the improvement of our great waterways, by rendering them better fitted to carry the increasing steam-borne traffic, and under a growing system of water-drainage, they were content to let the matter rest where it was. The consequence has been that we have now to talk of draining districts which are the foundation of our agricultural wealth as if they had to convey the water of drainage to the natural outfalls if the land were subject to the influence of the sea, nor could we deepen nor straighten a public watercourse passing through a neighbour's property; nor could ninety-nine proprietors combine to improve an unpicturesque, unsightly marsh, effect their object, where combination was necessary, if one objecting voice was raised.

It is scarcely necessary to insist upon the benefits of thorough underdrainage in a country whose agricultural prosperity is bound up in it. These of our readers who are unacquainted with rural affairs must know that the seed of our cereal crops will not germinate under unfavourable circumstances, and consequently, will not arrive at profitable maturity. It must be very potent to everybody that wheat will not thrive in a wet, undrained soil. Under such circumstances, the seed is either rotted and drained they generally anything, and giving the country unsightly, miserable, stunted, yellow crops, or consumptive-looking farmed stock. The wheat produce of this country now compared with what it was only forty years ago shows in the course of this or eight bushels per acre, which enables us to support about four million and a half more people than we could without having to go to foreign market. And yet, out of twenty-two millions of acres needing drainage, not more than one million and a half have felt the benefit of the age, not more than one million and a half have felt the benefit of the drainer's tool. If such benefits are thus derived from the drainage of such a comparatively small space, what may we not expect when those remedial works are more extended? The floods and excess of water from which we have suffered during the past two years and the drought which afflicted us during the three previous years would be—that is, the damage they did was due—to the fact that so much land was left undrained and that a proper outfall was not provided for it. Let us look. We were nationally losers to a great extent by the drought, and how much we have been losers by the excess of water during the floods is a question of vital importance to the country. Instead of looking upon the rivers as the natural outfalls of the land we have been contracting to the roots, it confesses it do not fall the plant.

Drainage is not the only thing the maintenance of health as for the production of food. The fact that we now lose yearly by death only twenty-two in every 1000 of the people in place of about forty-only twenty-two in every 1000 of the people in place of about forty-two is owing in the matter of sanitary science, is very much due to better drainage; and, were more attention given to the same subject, doubtless this death-rate would be considerably reduced. Consider for a moment the sanitary effects of river floods upon the districts through which they pass, and the scandal which exists in the districts abutting upon the flooding river?

Northampton, on the sluggish Nene which overtops its banks, held up for a week together by the heavy-laden barge, and pounded back by mill after mill slung its winding course, is shown by the returns to be one of the healthiest towns in the kingdom. Bedford, Ely, and milder but embedding maladies constantly visit the villages that inhabit the low-lying marshes of the navigable rivers. The Isle of Ely, Ouse has a like unhealthy character, as shown by the excessive rate of mortality in Buckingham and Cambridge. Hull, and the towns that have much of our shipping, lifeless steams, the deathrate at Norwich, Colchester, Salisbury, Bath, &c., being witness.

Private landowners, however, of late years have been too strong for public interests. The nation might suffer in its health rather than any man should be put to the trouble of a passage-way cut in his land. The public stomach might be defrauded of its food, but the weir must be kept intact. It is true that public necessity has compelled us to give up the right in the matter of railways; but the waterways were held sacred, and, though a single acre held back the water upon thousands of other acres, many millions of acres in the same acre could be gained, no easement might be effected, and the land and the hope of the inhabitants of the country were left to languish in their unhealthy condition.

But there were those who determined to enter the lists with private right. To say that they met with difficulties at every step in the old saying that iron ran over in the way of those who would advance. Of course these were difficulties. Sound and creditable works of undertakings are always so in the first place. Every disposition of a neighbour's land between the drained land and the natural outfall; in the first place, the engineer must be versed in the laws relating to the cleansing, deepening, and maintaining, &c., public watercourses; and, finally, by the powers of the Inclosure and engineering Act, a general legislation, under which improving landowners could only combine to deal systematically with large districts. Public and private interests, also, had to be considered, according to which mine of money were to be lost to be expended in undo-drainage works of public advantage and improvements. By one of these laws the drains were to be laid 4ft. deep. This was well if the outfalls would allow of it. But, suppose, a land to be thus drained, and his water to pass through it 3ft. inches, which are but 3ft. deep, and obstructs certain so, what possible good can an expenditure of 6d per acre to 4s. 6d. or to the county? The want of an outfall for such drains has prevented many a farmer applying for the loan.

Owing to the predominance of private interests our landowner has been forced to seek an escape for his water without respect to the drainage of adjoining estate, and, instead of beginning at the outfall, as every good drainer should do, he has begun at the other end, and has often found that, by reason of the drains being deeper than those of his neighbour, his own water is returned upon him, together with

(*Continued from page 551.*)

the returning tide will not be able to bring any portion of it nearly back again to the point from which it started.

As the levels of the land upon which London and its suburbs are built are exceedingly variable, sometimes reaching to a great elevation, as at Hampstead and Highgate on the north, and at others being down below the tide-level of the river, as portions of Lambeth on its south side, it may easily be imagined that great consideration was necessary in laying out the plans for overcoming these and the numerous other difficulties which were likely to arise. Innumerable schemes were discussed and the subject was thoroughly ventilated. The result was the adoption of the plan which is now being carried out by the Metropolitan Board of Works, under the direction of Mr. J. W. Bazalgette, engineer-in-chief to the board. This plan cannot be said to be the particular design of any one, but is rather the result of all the intelligence, science, and practical and theoretical knowledge that exist in the country; for almost every one who had or thought he had any knowledge of the subject at one time or other gave his opinion. The plan adopted had the approval of the most eminent engineers of the day. The present main-drainage scheme was commenced in February, 1859; the estimate was £3,000,000, and works to the amount of £2,000,000 have been contracted for. Some of these are completed, others nearly so, and the rest rapidly progressing.

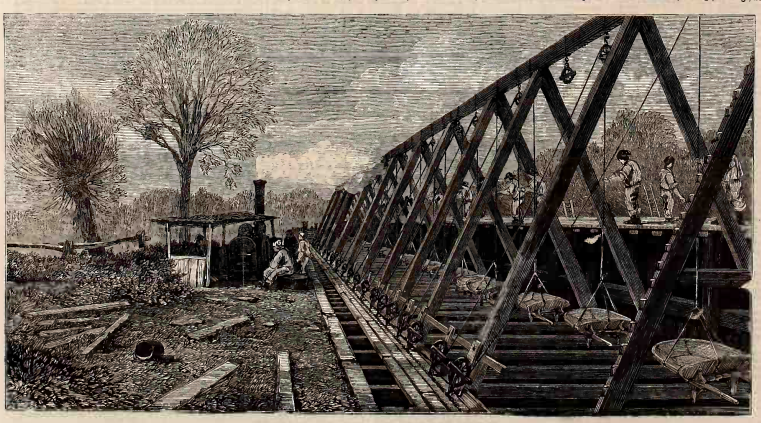
These contracts embrace fifty miles of main intercepting sewers, for the most part under ground; consequently but little is seen of them, and as little generally known. They are great works, nevertheless, requiring much more skill and care in their execution than is usual or necessary in the more showy works of engineers when executed above ground. In some places, however, the great drainage works are above the natural level of the earth, and there they have to be carried over navigable rivers, canals, railways, and public roads; great works, also, have to be erected to lift whole rivers of liquid sewage from a lower to a higher level; aqueducts have to be erected to carry it over the avenues of traffic; penstocks to regulate its course with nicety and discretion, sluices to shut out the returning waters; and numberless other works have been or have to be completed before the great work is finished.

THE NORTHERN MAIN DRAINAGE.

The main-drainage system on the north side of the Thames is divided into three distinct drainage areas, called respectively the high, middle, and low level areas. Each of these districts is separated from the one below it by a main sewer, generally running from east to west, which cuts off, at right angles, all the local drains which run into the Thames by their old outfalls, and carries their contents instead away to an outfall situated fourteen miles down the river.

The northern high-level sewer is nine miles in length, its head being at Hampstead. It passes through Stoke Newington, and intercepts in its way the old Fleet-river sewer, which now empties itself at Black-friars-bridge, and also the Hackney-brook drain, finally arriving at Old Ford, on the River Lea, having drained an area of ten square miles. In its downward course it passes under both the Great Northern Railway and the New River. At its upper end the diameter of the sewer is about 4ft. This is increased from time to time as subsidiary sewers are connected with it, until it finally grows to 12ft., which is its diameter at Old Ford.

It may, perhaps, assist our non-professional readers to form an estimate of the immense amount of work that has to be done to complete only one of these great drains if we give an approximation to the quantity of materials used in it:—For the northern high-level sewer half a million yards of earth had to be excavated to form the trench in which it was constructed; 40,000,000 of bricks had to be laid with the greatest care and accuracy; 100,000 cubic yards of concrete had to be deposited to form foundations, backings, coverings, &c.



BARROW-HOIST ON THE SOUTHERN HIGH-LEVEL SEWER AT PECKHAM.

In doing this 200,000 bushels of Portland cement and 350,000 bushels of lime were consumed, besides 20 tons of hoop iron and an immense amount of other materials. The average depth of this sewer under ground varies from 30ft. to 50ft. The rate of inclination is such as will ensure its being self-cleansing, by giving to its contents a velocity of about three miles per hour.

The northern middle-level sewer extends from Kensal-green to Old Ford, passing through Paddington and Notting-hill, along Oxford-street, through Bloomsbury and Clerkenwell, along Goswell-street, Shoreditch, through Bethnal-green, and under the Regent's Canal, eventually reaching the high-level sewer at Old Ford. This line of drainage will have three branches—the Piccadilly, Devereux-street, and Cripplegate branches. The main line and the Shoreditch are twelve miles and a half in length; the diameter of the sewer varies, like that on the higher level, from 11ft. at the upper end to 16ft. at the pentock chamber. The contract for this work is let to Messrs. Brassey and Co.; about a thousand men are engaged upon it, and it is progressing rapidly.

The northern low-level sewer has yet to be executed; in fact, it is scarcely yet planned out, as it is intended that for a considerable portion of its length it should form a part of the works of the proposed Thames embankment. Its course will be from Chelsea through Belgravia, down Victoria-street to the foot of Westminster-bridge, then along the banks of the river to the foot of London-bridge, and thence to the pumping-station at Abbey Mills.

The district which includes Acton, Hammersmith, Chiswick, and Fulham will be drained by a separate arrangement; this area is about twenty-one square miles, and is called the "western division." The sewage of this locality will be conveyed to a point on the Thames near Chelsea, when it will be deodorised and the clean water only allowed to enter the Thames.

Our readers will have observed that Old Ford is a very important point in the northern great drainage scheme; we will, therefore, endeavour to describe the works there.

At Old Ford, the northern high-level, the middle-level, and the Hackney-brook sewers meet in what is called the pentock chamber. A pentock is simply a gate to regulate the passage of water through an egress. The outfall of the kind are usually called penstocks, and so are used to regulate the water in ditches or distribute it upon water meadows. When the gates are large, as those which control the streams at mills, they are called hatches; and when still larger, as those for adjusting the efflux and influx of rivers and tides, as in the great drainages of Holland and Lincolnshire, they are called sluices. In this case, however, the name of penstock has been given to the very large gates which regulate the ebb of the drainage waters after coming down from a large part of the northern district of London. One of our illustrations shows the interior of the pentock chamber at Old Ford. The waters, having arrived in it from the high and middle level sewers, will pass through the large arched passage in the foreground of the Sketch until they are separated by the gates which fill the intermediate of the solid masonry between the two great drains which carry it to the outfall sewer at Abbey Mills. On reference to the Sketch it will be observed that the abutments of the larger arch are beyond the side walls of the arched passage. Between these abutments and the side walls there is a communication to another system of drainage below the floor of the great passage. This lower outlet consists of two 5ft. sewers, 9ft. wide and 6ft. high, whose outfall is in the River Lea. The present drainage from the sewers already constructed on entering the pentock chamber falls through a grating into these two lower sewers, and finds its way to that river. This is, however, only a temporary arrangement; when the main outfall sewer is completed to the gateway in the Sketch so partly raised will be lowered, and the entrance to the lower sewers closed at that point. The sewage of the high and middle level sewers will then pass through the large passage, and, as in great storms of rain such a body of water may accumulate in the pentock chamber that, when the two large sewers which join it at the far passage may be unable to carry it off, and so to ever getting any of these sewers full, and a head of water accumulate which would cause their instantly bursting at the weakest point, and in doing so, cause an amount of damage that will not have taken place if more effective means had, therefore, to be adopted to ensure their safe working under any exceptional circumstances that may arise. This difficulty has been most effectually provided for by means of the communication before alluded to, between the upper and lower drains, so that, should the water ever rise higher than the top of the side walls, it would immediately fall over into the lower-level drainage and be quickly discharged into the River Lea, so forming a most effectual safety valve to the whole of the colossal works of drainage communication above it.

A reference to the Sectional Diagram will assist the reader in obtaining a knowledge of the arrangements at this important point. The two upper sewers shown in the section are the outlets from the pentock chamber through which the sewage will be conveyed under all ordinary circumstances to the great outfall. The two drains below are those which will carry off the storm-waters to the River Lea. Below these is the horizontal section of the low-level sewer, the diagram being made at the point where it intersects the line of the outer wall. The low-level works at this point are extraordinary, when it is considered that a carriage might be driven through the upper and lower sewers, and that two or three men might walk abreast upright through the middle drain.

Above the pentock chamber is a building which contains the necessary machinery for lifting the different portcullis, the sliding of which is the person in charge of them.

The northern outfall sewer commences at the down-stream side of the pentock chamber; the point from which our artist has taken his Sketch may be said to be the head of it. Its lower end, or outfall, is at Barking Creek. At Abbey Mills the low-level sewer joins it with it, but, of course, many feet below. The whole of the sewage from the northern high-level sewer will have, therefore, to be raised through the steam power to the level of the main outfall. This operation, it is expected, will be completed without any interruption to the traffic at Abbey Mills the whole of the sewage of the northern district of London (except that small portion called the western division) will pass through three parallel sewers to the outfall.

The contract for this great work is the largest yet let; it is in the hands of Mr. Jackson, who is engaging it on a most extensive and systematic manner. An amount of skill is shown in the various arrangements for executing this work which is quite unprecedented of the kind.

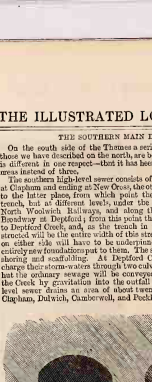
The northern outfall sewer is about five miles long. For the first mile it consists of two lines of tunnel inclosed in a raised embankment, and for the remainder of the distance three lines of tunnels, each nine feet in diameter. It crosses, by iron aqueducts, over certain branches of the River Lea, and passes under the Eastern Counties Railway and over the North Woolwich and Tilbury railways.

The remarkable manner in which the embankment or bed is formed upon which the tunnels are to be built will be best understood by reference to our illustration. The whole of the upper soil is first carefully removed, then a solid embankment of concrete is formed. Upon these plans this embankment is of about an twenty feet in depth and one hundred feet in width. It is formed by carrying out a staging upon a double several lines of rails on the top. This staging is made of the best Portland cement, and is mixed at a regular concrete manufactory, such as is one of our illustrations from time to time. It is conveyed in trains of waggons drawn by locomotives to the tip or head of the bank, where it is pitched from the staging to the required level below. The upper surface of this concrete is prepared to a proper shape to receive the invert of the three tunnels (see illustration).

This extraordinary bank was necessary on account of the treacherous nature of the soil upon which the drains were to be placed. It will be a magnificent work when finished, and one that may well astonish the world.

The united accumulation of all the sewage from the north side of the Thames having eventually arrived at Barking Creek, a fresh arrangement of works becomes necessary. It is intended to construct an immense reservoir, capable of containing 7,000,000 cubic feet of sewage, into which the outfall will discharge itself during the night hours that the Thames outlets will be closed. This reservoir will be covered with brick arches and earth, in order to prevent the escape of noxious gases.

From the reservoir pipes will pass along the bottom of the River Thames to nearly the centre of the stream. These outlets will only be opened at high tide, when there will be sixty feet of water over them; and it is expected that the sewage water so discharged will be swept away into salt water before the tide has entirely ebbed.



SECTION OF MAIN-DRAINAGE WORK NEAR OLD FORD.

The southern low-level sewer is intended to extend from Wandsworth to Deptford, passing through Battersea-fields to the Brixton-road, and will be 12 miles in length. It is intended to terminate at Old Deptford, into which it has to be raised by pumping. The drainage area of this sewer is about twenty-one square miles.

Two other branch sewers are necessary to complete the drainage of the southern district—one from Bermondsey to Deptford, the other to Greenwich, and a passage of the River Effra.

The southern outfall sewer will convey the sewage that is pumped into it from the low-level sewer, and the whole extent is by gravitation from the higher level through the town of Greenwich and under Blackheath, when it will pass through a high level through the Woolwich and Keith Marshes to a pumping-station at its outlet to the river. Great difficulties have been experienced in securing a solid bottom for the bed of the sewer, on account of the volume of water which deluged the works—baling and flowing with the tide, and requiring the occasional working of four very powerful steam-engines during the workmen being flooded out.

The outlet from the southern outfall is about seven miles and a half; it will terminate, like that on the northern side, in a covered reservoir.

The works already executed throughout the whole length of the southern main drainage are of unexampled excellence—a most unusual, and, we may say, unlooked-for circumstance, considering the nature of the ground being insisted on by Mr. Grant, under whose personal superintendence the whole is carried out, at all points deep in the bowels of the earth, where no human being will ever see it after it is once in work. The brickwork is executed as beautifully as though it could be handled in the most aristocratic thoroughfare of the metropolis. Indeed, we believe that every brick is so handled and examined before it is built into the sewer. These inspectors wear a badge of office, and are known in all parts of the works by the number of much greater excellence than those above ground, whose defects, if any, may be easily discovered and remedied. The whole of the works of the southern district are also be given to the works on the northern division, now executing under the superintendence of Mr. G. Dempsey.

The most important point on the works of the southern drainage is, doubtless, the pumping-station at Deptford. The immense volume of water to be pumped from a large deep under ground, and others as deep under the water; some working in stone, others in iron—extensive and many other and pumping-engines. The principal wells have all the preparations of the bed upon which the great pumping-engines are to rest. These are being built by Messrs. Slaughter and Gunning, both engines and pumps are in a forward state. We give an illustration of the works in progress. No part of this will be seen when the whole is finished, for it is entirely subterranean. The engine-house and pumping-machine there shown as only used for the purpose of keeping out the water during the construction of the works; one other illustrations of the works on the southern side shew the manner in which the sewer is carried forward by tunnelling instead of opening a trench. We have also given an illustration of a peculiar arrangement by which the workmen are enabled to work for many hours in less than two minutes by means of steam-machinery—an improvement on the plan of casting earth up from stage to stage. This plan is the patented invention of Mr. Grant. That now working on the southern high-level sewer has eighteen harrows attached to it, which are lifted from 30 to 40ft. in about half a minute; the harrows contain in all about three cubic yards of earth, and can be filled, lifted, emptied, and again lowered to their work ready for again filling in less than two minutes. We shall return again to the main drainage operations from time to time as the great works we have described in progress become finished and get into actual operation.

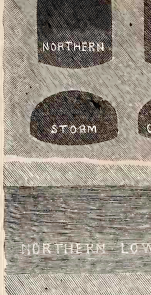
The Cotton Supply Association have lately received from the San Paolo (Brazilian) Railway Company samples of cotton found growing wild in the immediate vicinity of their line of railway, which have been valued at 10½d. and 11d. per lb.

The Matilda Asylbrug, of 676 tons, left Southampton on Sunday for Alexandria, with rental and ground ammunition to the number of 200 souls. They comprise 30 married couples, 70 single men, 40 single women, and 30 children. The Matilda Asylbrug is the first vessel that has left this port for Egypt with pilgrims since the outbreak of the cholera in that country in 1865, and the population so added to the colony have reached a total of 4272 souls.

THE SOUTHERN MAIN DRAINAGE.

On the south side of the Thames a series of works, very similar to those we have described on the north, are being constructed. The plan is different in one respect—all the sewage has been divided into two drainage areas instead of three.

The southern high-level sewer consists of two lines, one commencing at Clapham and ending at New Cross, the other extending from Dulwich to the latter place. From which point they are carried in the same trench, but at different levels, under the Brighton, North Kent, and North Woolwich Railways, and along the New Cross road to the Broadway in Deptford; from this point they pass down Church-street to Deptford Creek, and, as the trench in which they are to be constructed will be the entire width of the street, the whole of the houses on either side will have to be underpinned—that is, they must have additional foundations put to them. The street at present is a mass of shoring and scaffolding. At Deptford Creek these two sewers discharge their storm-waters through two culverts eleven feet in diameter; but the ordinary sewage will be carried by two lines pipes under the Creek by gravitation into the outfall sewer. The southern high-level sewer drains an area of about twenty square miles, embracing Clapham, Dulwich, Camberwell, and Peckham.



NAVAL AND MILITARY INTELLIGENCE.

Major-General Derinzy died at his residence at Cheltenham on the 22nd inst., in the seventy-fourth year of his age.

The inquiry into the recent riotous conduct of the cadets at Woolwich has resulted in an order for the "rustication" of two of the offenders for twelve months, and eight others for six months.

Ten 100-pounder Armstrong guns and twenty rifled guns of 32-pounder calibre are to be mounted shortly at the several forts, and the former description are being constantly forwarded for the naval service.

A percussion-fuse, on a new and simple principle, invented by Mr. Fotman, of the Royal Laboratory, having been subjected to numerous experiments, has been finally approved and adopted by the War Department.

A number of the most intelligent and experienced non-commissioned officers and men have been selected from the Royal Engineers at Chatham to be dispatched to Gallicia, when they will be employed on surveying operations in connection with the Danubian Boundary Commission.

The Warrior arrived at Spithead on Saturday from Plymouth Sound, having made a splendid run from anchorage to anchorage in ten hours, nine minutes, at the usual speed of the breakwater of the Sound to St. Helen's Roads, the tide being favourable for her only the whole time. The maximum speed during the day was 13½ knots under steam and plain sail to wash, which the ship on the port quarter and mouth water, the revolutions of the engines at the time being 64½.

We regret to have to report the occurrence of another murder at Aldershot. On Saturday night a private soldier, named Jackson, deliberately discharged his rifle at Sergeant Dixon. The ball passed through the unfortunate man's body, killing him almost instantaneously, and then passed through the shoulder of a corporal named Campbell. There appears to have been no particular motive for the commission of the crime—nothing but a savage desire to destroy life.

THE VOLUNTEER MOVEMENT.

Last Saturday afternoon the distribution of prizes shot for in the annual competition by the 1st Surrey Rifles took place in the centre tennecy, Crystal Palace, under the distinguished auspices of Lady Peboly. Wife of the Italian veteran, General Sir G. Pelloni, who is honorary Colonel of the corps. The prizes consisted of a gold plate—also suitably engraved—epergne, silver cups, purses of money, rifles, &c. The Royal standard, music jacks, stacks of arms, colours, and the flags of all nations were tastefully disposed, decorated the orchestra, in front of which the presentation took place. In presenting each of the prizes to the successful competitors Lady Peboly addressed appropriate and encouragement.

The shooting of the Streatham and Brixton (4th Surrey) Corps has this year proceeded with more than usual spirit, and the annual match of the regiment proceeded with more than usual spirit, and the annual match of the regiment proceeded with more than usual spirit, and the annual match of the regiment

A NEW FIELD FOR ACTION.

BETWEEN the Cape and India there is an island which has long been a source of wonder and curiosity to Europeans. Mime. Pfeiffer set out on her "last travels" with no other object than to get to this mysterious country, and, although she succeeded, it was at the cost of her life, for she there imbibed the seeds of the terrible malady that killed her after her return home. Again and again, before her time, have enterprising individuals, Frenchmen and Englishmen, penetrated to the interior, made friends with the authorities, and opened the door for expeditions from their respective countries, but always to fail in the end; partly from the dangerous nature of the climate and the savage character of certain races, but mostly also from their own want of rectitude of purpose and moral control. The French, so early as 1642, got hold of a little island on the shore of the greater one, and they held just that little island now, and no more, after the lapse of two centuries. The English also managed to make at one period a valuable treaty with an enlightened native King, Radama, surnamed the "Great," who stopped the export of slaves while promoting the import of missionaries, schools and civilisation; but, in the end, we got no better than the French. We were banished, and left behind as no bad a character that the very word "English" is, it is said, synonymous among the natives of Madecrol and Foval (not now worthy of such Milne Pfeiffer says he was; that the English Governor of the Mascarene Islands refused to have the island pointed out to him on the map when visiting. Religion itself fared no better, whether she appeared in the garb of Roman Catholicism, speaking with a French accent, or in that of Protestantism, transcended by an English tongue—the final result was the massacre of converts and the ruthless proscription of the Christian creed. The French made no more a point than we the two countries which sixteen years ago sent out an armed expedition; and Madagascar and the Isles which it could not—but long both—and, what was more wonderful still, induced both quietly to put up with their humiliation. All these later acts were performed under the sway of a woman, Ranavola, whose vigour and severity were alike marvellous, and of whom the most terrible stories are told, apparently with truth. She is said on occasion to have drawn together the entire male population of a certain tribe that did not, we suppose, acknowledge a female sovereign over the island (as said first of males—but not by us), with sufficient chivalrousness, and when they were assembled, to the number of 20,000, and bade, in homage, she solemnly ordered her soldiery upon them, and slaughtered the whole, to the very last man. The wives and children were sold as slaves.

But, if an island so scene of mystery were provoked by these and by similar facts, they were mostly of too painful and discouraging a nature to lead further inquiry, or to justify the persistence in the face of danger. But we learn from the German lady's book other facts that greatly modify and soften down the impression we are apt to form of a change in the supreme government of the island. This most truculent of Queens had a son who was in every conceivable respect her opposite—as gentle as she was savage; consistently sacrificed all his best energies to destroy; a man who was yearning for the light of a better civilisation, and blindly groping, in obedience to mental instincts, for the spiritual comfort of a true religious faith; who took to his friendship such few Europeans as his mother's jealous policy allowed to come near the Court; who communed with them on the dreadful sufferings endured by the people, their oppression and misery, principally by executions, war, and physical privation; and even went so far as to take their advice as to negotiating with France and England, with a view to the relief of the island, but always to be baffled by his desired nothing for his own, but only for the people's, sake. He once said to Mime. Pfeiffer, when no one knew how he should, "I have given a more significant or more touching evidence of his sincerity—that he did not desire whatever the people did not desire—than his desired nothing for his own, but only for the people's, sake. He once said to Mime. Pfeiffer, when no one knew how he should, "I have given a more significant or more touching evidence of his sincerity—that he did not desire whatever the people did not desire—than his possession of the island, *if only the people were properly governed*." Oh, excellent Mime. Pfeiffer on one occasion, "how much it is to be wished that the Government should be given to this island! An expression of childlike goodness is the characteristic of his face. He does he show any brilliant tendency by the European standard, or any so fond of wearing. Such is the man. Mark, now, his first acts. He wrote to the Protestant missionaries at the Mauritius and the Cape, who received his letters with great joy, and immediately sent to Prince M. Le Brun to give their answer in person. He also wrote to our Governor at the Mauritius (which has always kept up most commercial relation with Madagascar) announcing his accession and inviting free intercourse. The English Governor immediately replied by sending a mission of congratulation, and the Council of the island has voted a sum of 1000 for presents. Scientific men accompany the mission, and we look with interest for the report they will give us of the state of the island and for the knowledge they will necessarily be able to furnish to the arts and commercial enterprise.

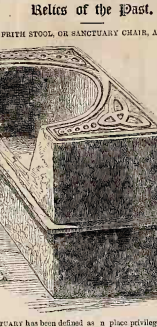
Dr. Sandwith says the country often "a field such as has not been opened since Livingstone's discoveries. There exists in the forest and inland lakes animals which may create a greater sensation when discovered than the gorilla, if, indeed, they prove to be unknown and not captured to astonish our citizens. We have already in the British Museum the cast of ages as large, or larger, than the human head, the original of which, taken from the bank of Madagascar, is now in our museum in Paris—indeed, some sanguine naturalists hope yet to discover in the island the original ape of 'The Arabian Nights.' An entire order of animals, the lemurs, are only found in Madagascar, one variety of which, the aye aye, is without a parallel amongst quadrupeds or monkey beaver. The vegetable productions are marvellous in their beauty," and there are orchids of the greatest brilliancy and magnificence. To ourselves and to our neighbours across the Channel these events are of deep significance. Already a race has begun between the Russians and the two forms of the Christian faith—the French politicians are crying out against English governmental designs, and the English statesmen hurry off to their colonies to counteract, if they work to talk. But why cannot both movements, religious and commercial, find full scope, as gain to entire humanity? Is the earth not enough to be done to satisfy all legitimate expectations; and there is land enough, both unoccupied and unbought for any number of years ahead to find occupation on its soil without quarrel, fight, or bloodshed. Nothing can be more deplorable than the state of the people in both regards. They are, in their little circle, the most ignorant and consequently ignorant of what the appliances of comfort mean. And as to religion, they have not even one whatever, unless their fanaticism and their gross superstition may be supposed to form one. But the nobles, so far as they have had any opportunity, have shown a courage ready to surround themselves with all that Europe can furnish for the making them life pleasant, sumptuous, or costly. They therefore are quite ready to buy; and their example will affect the people in soon as the latter, by improved government, get the means to spend. Let us consider what prospect of this may exist in the natural resources of the island.

Madagascar, then, is probably one of the richest, as it is with only single exception (Borneo) the very largest, island in the world, having a square area larger than the combined areas of Great Britain and Ireland. Its forests, of immense extent, include trees that furnish some of the most beautiful wood for furniture, &c., yet known; and abound with animals, such as wild cattle, pigs, and poultry. Ten turkeys have been purchased in Madagascar for a dollar; while in the Mauritius a single turkey would fetch three pounds. Game and fishes have long been matters of export. The far-stretching plant produce—parenthetically many of the most favoured products of tropical soil; the sugar-cane flourishes in great luxuriance, with rice (the finest kind of the staple) as a second main, indigo, cotton, and all of spices, any or all of which might be cultivated to an extent that would seem fabulous if we were to attempt to deal in figures. The magnificent hills, rising in some cases to ten and even twelve thousand feet, might furnish on their sides the finest coffee-grounds in existence. The soil is fertile and rich in minerals. Gold and iron have been obtained, and we should think the more precious metals are to be found in Madagascar; for, ignorant and untrained as the natives are, Mime. Pfeiffer saw silver vases, with designs in relief, that struck her by their beauty, and which she found on inquiry were the work of native artisans. These same untaught "savages," by-the-way, sometimes astonish Europeans by another and less agreeable exhibition of themselves, and imitate to perfection our own coin, and, doubtless, abroad, they put their artistic qualities to a successful test.

Let us hope, in conclusion, this whatever may be done to create trade between ourselves and Madagascar may be done under regulations of justice and under due commercial responsibility. All recent experience shows that, even in the permanent interests of trade itself, political honesty may be found in hand with business in all our relations with foreign and half-civilised peoples. There are only too many among us who throw off all restraints the moment they are beyond the limits of home, and it is these men who confront us in "native wars," and make our common Christianity a thing to be feared, loathed, or detested by the heathen whom we desire to win, and to whom we might be the instrument of bringing such "glad tidings."

Relics of the Past.

THE FRITH STOOL OR SANCTUARY CHAIR, AT HEXHAM.



A SANCTUARY has been defined as a place privileged by a Sovereign whereon such offenders or debtors as fled to it for refuge could not be taken forcibly from without their own leave and liking.

The institution of such asylums is of very ancient date. Moses, we learn, in pursuance of Divine command, appointed cities of refuge, of which "that the slayer might flee thither which should kill his neighbour unawares, and hated him not in time past; and that fleeing to one of these cities he might live." The original intention was that the manslayer, who by misfortune or accident had killed a fellow-creature, should not be condemned to death by unauthoritative, but should be brought to a cool and impartial trial for his act. In heathen countries the temples and sacred places were looked on by early nations as the first fled to them for safety, and it is probable that a similar privilege was transferred to Christian churches by general usage long before it was sanctioned by distinct law. The introduction of sanctuary into Britain is ascribed to King Lucius, who lived in the second century of our era; but we have no historic evidence of the fact. As early as the year 600, however, we find that at a synod of the great and wise men of the kingdom under King Ina of the West Saxons it was decreed that if any one accused of a capital crime took refuge in a church, his life should be spared; but that he should make compensation as the quality of the case might require; and if the offence were deserving only of stripes, the stripes should be remitted. By the laws of Alfred the Great (A.D. 887) the privilege of sanctuary was allowed to the perpetrator of any small offence for three nights, if he fled to a church. This was to afford him time to provide for himself or compound for his case. And if anyone violated the sanctuary by inflicting bonds, wounds, or blows upon the fugitive, he was either to pay the price set on the life of a man, and the sum of 120 shillings (a very large one in those days) to the ecclesiastical authority, or lose his hand.

In the fourth year of the reign of William the Conqueror the law of sanctuary was more clearly determined, and its privileges in some measure restricted. The Conqueror, on coming to the throne, found the King investedthe Abbot with authority to save any malefactor if he (the Abbot) pleased, from the punishment of his crime. Nevertheless, he constituted the abbey church a place of safety for any felon or murderer.

Some *asyla* were accounted more sacred than others, and, as a consequence, had more numerous privileges annexed to them—such as the entrance of the church, and that the cloth included the altar and the "Fridstol," or Frith Stool, which was the chair of the Bishop, also.

The Cotton Julius MSS. in the British Museum is a thick folio volume containing the register of persons who sought sanctuary for different crimes at St. Cuthbert's Church, Durham, from the year 1464 to the year 1524, and the nature of the crimes which compelled them to seek an asylum in the church, and the penalties also for such crimes, are very complete. "If a person within the mile," and abjure, perhaps, the only copy of a sanctuary oath now extant. The bailiffs of the archbishop, by whom the sanctuary was guarded, is directed to inquire of the refugee—

"Also ye shall aske what kind and what wise, and both their names; and then go upon his bee hand upon the book, saying on this wyse—Sir, the bailiffs of your archbishop of York, and we know and beleeve as our Lord Archbishop of York doth hold; and this bound to the protest of treasure, to the chancelore of this church, and all the rest of the officers.

"Also ye shall aske what goods he hath and what money he hath about him, and to what value, and where he became thereof. Also ye shall note his pedigree and surname, and where he was born, and of what parish.

"Also ye shall aske if he be any bondman of any man, and whose bondman he is, and where he was made free, and how and by whom.

"Also ye shall aske if he be any apprentice, and with what craft he is bound, and with what master, and how long he hath served, and how long he hath to serve.

"Also ye shall aske if he be any man's servant, and how long he hath served, and how long he hath to serve.

"Also ye shall aske if he be any man's debtor or stuff, or oder sothen sum of him with the sum, to bill to close it.

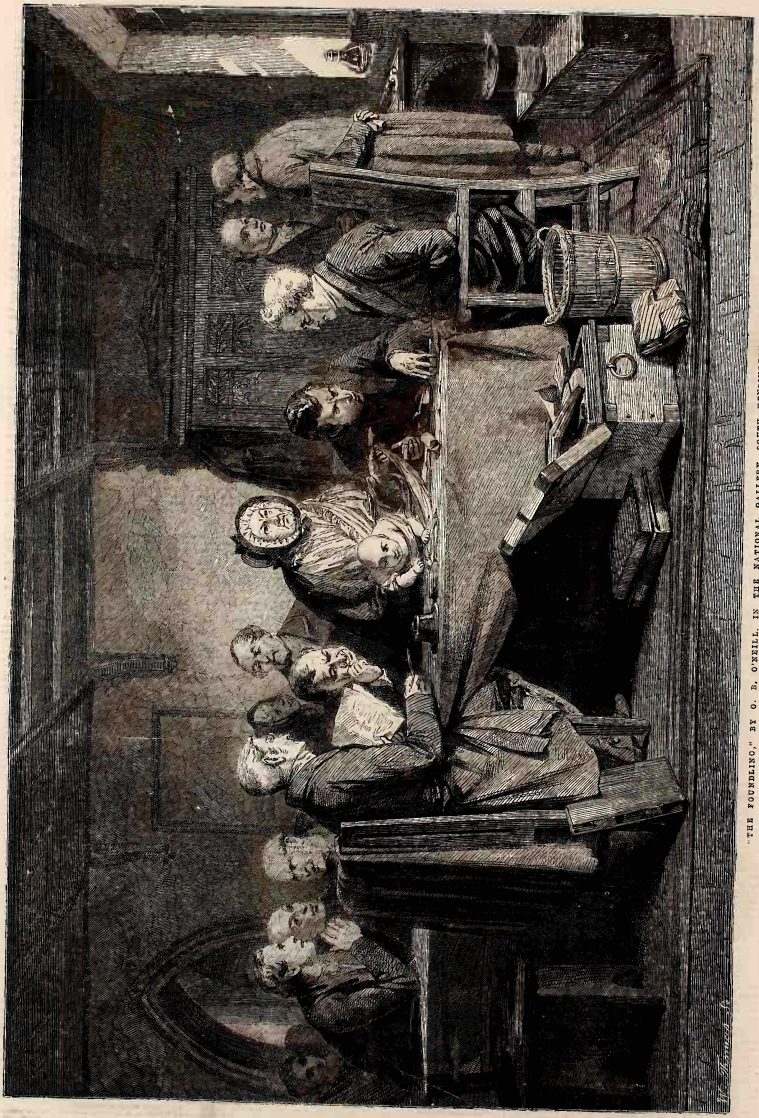
"Also ye shall be redy at the abbot of King Aukelum, at the Bridge, and the Moore, at such times as it is duke at the ourgang of the bothom of the town, and be your leave in ranging, and for to adver at the Moore on the Sonday, to wyte the God and thies holy evangelists. And then gat him by the beck."

The bailiff's fee on this occasion appears to have been two shillings and sixpence; that of the Clerk of the Court, for inscribing the name of the refugee in his register roll, fourpence.

The entries in these remarkable records are almost every description of crime, and afford a wonderfully interesting picture of English life in security was obtained by all who came within a mile of the monastery there. To mark the boundaries four crosses were set up in the three ways leading to the monastery, and a gradation of penalties was incurred, as at Beverley, by any one who ventured to approach a middle-factor within those sacred limits. Thus, if a party raised a fugitive who had contrived to reach any one of the four crosses he was obliged to pay two hundredth (a hundredth was equal to £5); if he took him within the town then he forfeited four hundredth; if within the walls of the churchyard, six hundredth; if within the choire, ten hundredth; if within the doors of the quire, then eighteen hundredth, besides penance, as in case of sacrilege; but if he contrived to take the runaway delinquent out of the very chair of "Frithstol" itself, the offence was irredeemable by money, and had become *sine emendatione*, "lyeable (forfeited) and called forth out of the utmost severity of the church but the heavies punishment of the secular power also.

The bounds of sanctuary at York and Ripon were nearly as ample as those of Beverley and Hexham, and the extent of the sanctuary of St. Martin-le-Grand, in London, on a portion of which the General Post Office now stands, must have been considerable.

The peculiarities of sanctuary in Durham regarding the privilege of securing the guilty or unfortunate from immediate punishment, varied somewhat from the general rule. Thus, in the case of murder, the malefactor, the wife



"THE FOUNDLING," BY C. B. O'NEILL, IN THE NATIONAL GALLERY, SOUTH KENSINGTON MUSEUM.

"THE GRAPESELLER," BY T. PHILLIP, R.A., IN MR. PLATOU'S COLLECTION.

"THE FOUNDLING," BY G. B. O'NEILL.

THE story of the little parish foundling on his first public appearance in life is aptly described by Crabbe in the following passage in his "Parish Register" :—

> To name an infant met our village eyes,
> Assembled all, as each event requires;
> Frequent and full, the rural signs are rare,
> And speakers many urged the busy debate—
> Some hasten'd knives, who rov'd the country round,
> That left a babe within the parish bound.

The artist in the work before us has well realised the poet's conception, and added suggestions of character and humour which give a dramatic interest to the incident. Round the table of the boardroom in the union-house the guardians are assembled—hard, matter-of-fact men—examining a child which has been found in the street. The nurse who has it in charge is an admirable study of the tribe; her broad, well-filled, but wrinkled countenance speaking of many creature comforts taken on the sly, her air of importance well befitting her important calling, and the interesting duty she is now engaged upon. We can told, and can easily believe it, that this personage is an exact portrait of some official original. The beadle, who would have it understood that he knows something more than other folk about the matter, shows his wisdom by not opening his lips. An elderly guardian is looking at the little stranger through a glass, with assumed indifference, as if he had never seen it or anything of the kind before. The chairman, however, seems to have a doubt upon this point, in which the energetic gentleman to his right seems to participate. The child itself, a stout, promising urchin, with a vulgar cast of features, is wholly unconcerned at the scrutiny and discussion of which he is the subject, and sprawls across the table as if attracted by a bright red spectacle-case belonging to one of the guardians. The composition and grouping and the variety in the heads displayed in this picture, are very clever; the drawing is good, the execution of a finished kind, and the colouring solid and harmonious.

This picture was exhibited at the Royal Academy in 1859, and was bequeathed to the National Gallery in 1859 by Mr. Jacob Bell.

"THE GRAPESELLER," BY T. PHILLIP.

This picture, which forms part of the interesting collection by modern artists now exhibiting at Hayward and Leggatt's City Gallery by Mr. Platou, and which we believe was expressly painted for that gentleman, is a fine specimen of the artist's vigorous conception and florid handling. The Andalusian beauty, with full, laughing eye, mouth *entr'ouvert*, and showing a row of pearly teeth, with black hair clustering in admired disorder beneath a gaily-striped berchief, is the very picture of health and good humour. The stock of grapes speaks well of the vintage, and will ensure a ready custom. The colouring of this picture is of lavish richness; and its effect, as it glows in its place on the wall, is almost to warm the dull November atmosphere which surrounds us.

FINE ARTS.

JOUBERT'S ENAMEL PHOTOGRAPHS.

Of the numerous improvements in photography, and new applications of its resources, the invention of M. Joubert for producing photographs enamelled or burnt in on glass, which he patented a little more than twelve months ago, is amongst the most important, bidding fair to supply nearly all that is required of glass-staining or painting for the decoration of the windows of cathedrals, churches, and other buildings, as well as to afford ready means for the application of similar ornamentation at a moderate cost to private houses.

The art of staining glass was very early discovered; the date is un-

certain, but (not to go to the period of antiquity) there are evidences in existence of as early a date as before the seventh century. The practice first generally adopted was to make a sort of mosaic work of an infinite number of small pieces of stained glass of various colours, set and framed in lead. Glass painting followed, which, in common with other applications of the arts of design, reached its highest state of excellence about the sixteenth century. Of the two processes, however, it may be observed that the earlier, though second to the later in artistic treatment, is grand and natural compared with the nearly day-like effect produced it in intensity and purity of colour and in the volume of transmitted light. This will be obvious when it is considered that in the one case the whole material of the glass is coloured, retaining still its translucency; while in the other the colour was laid on opaquely, at first in the ordinary way of painting, with a varnished surface, which more or less obstructed the rays of light, and after-wards fused it of vitrified colours. Between these two very grand things done in glass-painting, amongst the most remarkable of which in this country are the windows of the various colleges at Oxford, which were executed during the seventeenth century by Bernard van Linge and his pupils, the window of Lichfield Cathedral, &c. With the Revival of the Constitution, in the middle of the present century, the painted windows, in common with all other decorative objects in our churches, were destroyed by the Puritans, and the art has remained almost in abeyance amongst us until within our own times, when it has been taken up with new spirit, and occasionally with remarkable success.

So widespread, indeed, has become the taste for decorating windows in real colour, that surfaces with colours amongst, or rather under, the aristocracy, that in default of the real thing they resorted to "stains," which could by no means be condemned. Some few years ago there was a new art was introduced amongst us termed "Polichromy," by which coloured prints were passed inside glass boxes and put on behind mirrors, producing something of the effect of painted glass. Upon a similar principle coloured prints, whether produced by Ehlorotype or otherwise, were stuck behind panes of glass, and then varnished behind with copal or other varnish, in order to afford resistance to the effects of weather. But the process was, after all, a clumsy one, and the results of which would only satisfy the most vulgar and unelevated appetites for ornamentation, whilst as regards that of an artistic use of a window—to transmit light—it was frustrated to a very considerable extent by the material on which the decoration was applied.

Under these circumstances M. Jacquin's invention appears to prove an important one, as supplying, by a mechanical application of photography, a analogous to the old process of glass staining or painting. The inventor in his specification states that his process has for its object improvements in the application of photographic and other pictures, engravings, prints, devices, and designs on the surfaces of glass, porcelain or other substances, requiring to be fixed to it. He then thereon. The process itself may be thus briefly described:—A sheet of crown or plate glass, as free from defect as possible, being selected and cleaned, is then held horizontally, and a thin coat of liquid is poured over it. This liquid is composed of a saturated solution of bichromate of ammonia in the proportion of one part to twenty of albumen three parts each, all mixed and thinned with from twenty to thirty parts of distilled water. The preparation of this solution should be contained in a partially-darkened room, or under a yellow light. The glass, being dried by means of a gas stove, is then placed face downwards in a dark box, to be copied in an ordinary pressure-frame. This subject must be a positive picture on glass, or else on paper rendered transparent by waxing or other means, and then placed in contact to the light will be a faintly-indicated negative on the prepared glass. This design is then brought out by the application of a very finely-powdered enamel-colour, which adheres to the parts which have been protected from the light by the opaque parts of the positive. On the light of the picture, where the light has acted fully, the preparation has dried up and entirely lost its adhesive or sticky character; in the deep shadows there have been produced by contact by the opaque parts of the positive, the greatest amount of powder adhesive; in the half-tints more or less, according to the quantity of light excluded by the positive. The glass is then removed from the pressure-frame, and, after being carefully cleaned, is covered with albumen with a small quantity of nitric or acetic acid, for the purpose of fixing the colours is passed through water, again dried, and finally placed in the kiln for firing. Between the various operations, only by careful registering a variety of colours may be printed one after the other, so as to obtain a perfect imitation of the original picture. The extent to which this application of colour may be carried, and to what extent it may be applied, is a matter of some uncertainty, depending upon experiments now going forward; but, judging from some specimens we have seen, we think it holds a Perfect warrant, Engraving, we have little doubt that skill and perseverance will eventually overcome all difficulties in the way of its application as a substitute for glass painting or stained glass in all conditions as to colour in which it has been hitherto generally employed. For ecclesiastical buildings, however, the application of no binding of this it is obviously at once available, with all the truth and force of effect required. In sculpture subjects, too, may be obtained from it are of a highly satisfactory nature. On the whole, we consider the invention one of extreme value and interest, and congratulate M. Jacquin on the success which has attended his labours in bringing it into practical operation.

BRITISH INSTITUTION.—COPIES BY STUDENTS.

The exhibition of copies by students is gaining favour to the British Institution has been opened at the usual time in the dreary month of November. We have already more than once expressed our surprise as to the usefulness of this mode of study as it is now to any interest attaching to the resulting products, which at best can but create a hope and supply the place of a reality, and which, worst and worse are a positive offence to the master with whose works such liberties are taken, and a bar to all hope of originality on the student misemployed upon them. Amongst the works thus attempted by the aspiring copyist in this year are "The Portrait of a Lady," by Reubens, belonging to Mr. Alnutt; and "The Head of a Jew," by the same, belonging to Mr. Fordham. Can anything be considered more absurd than the attempt to copy one of the highest mysteries of art without a single authentic practical suggestion to guide the student? Other examples are "Sir Reynolds's "Schoolboy," the property of Lord Warwick; the same artist's "Portrait of Lady Fleetwood," and "The Rabita," by Canaletto, belonging to Sir Culling Eardley.

SOCIETY FOR THE ENCOURAGEMENT OF THE FINE ARTS.

The lecture course of the fourth session of this society commenced on Thursday evening last, their president, Sir Charles Eastlake, in a large gathering of members and their friends took place. Mr. James Dafforne delivered an able lecture on "Art Education, Past and Present, and Future." The lecturer commenced by remarking that no more striking evidence of the general indifference to art and all pertaining to it can be adduced than what is supplied by the fact that the government should only office projected and instituted to serve as a grand museum of artistic wealth of any kind for our instruction, and yet it has grown to become what it was intended to be, and the only real attractions are matters that belong to its original purpose, and are connected with a character unworthy of an intelligent mind. The disadvantages arising from ignorance of art were pointed out by the lecturer in such a manner as regarded the picture-buyer, the manufacturer, the designer, the artisan, and the public, and it was contended that there is little chance of the arts, fine and industrial, assuming a higher position among us till the entire educational system at present adopted has undergone a complete change. What it is that is wrong and requires this when the country derives from nature to take the lead in every branch of manufacture, we are yet so far behind the production of France, and, in some articles, other Continental countries? We have materials, capital, energies, industry, in quantity, and perseverance; but we want the taste and the mind to combine the whole in a successful result—a fact universally admitted at the International Exhibition of 1851. The systems of teaching employed in the Royal Academy, in the Government schools of design, and in private schools were brought under notice, and examples adduced to prove how inadequate they are to meet the exigency of the case; and the lecturer argued that it was of little use to educate the lower classes in art till the upper ranks had themselves been so educated as to enable them to appreciate what was really good. The lecturer argued against the absurdity of neglecting to allow a child to learn to draw because it may not have exhibited a decided taste for art, a reason which would be admitted with respect to music or the ordinary branches of education—for what parent stays to inquire whether or not his child has a taste for grammar or geography? It was not for mere practical or commercial purposes important as these are, that he advocated the cultivation of art among all classes, but because it is to be considered as one of the most effective means of cultivating the mind, and as a highly intellectual enjoyment to those who have made it a study, even if they have not gone beyond the mastery of its elementary principles; but, of course, the deeper the study the more intense the gratification it yields. At the close of the lecture, which was two hours in delivery, was listened to with great attention, and frequently applauded. An interesting discussion followed.

The next lecture course will be continued weekly till the first week in July, with the exception of the weeks wherein the conversazioni (six in number) take place.

Mr. Wallis requests us to state that the picture of "The Charity of Dorcas," by Dobson, in his collection now exhibiting at the French Gallery is not a replica, but the original work exhibited at the Academy.

The portraits of Lords Ranelagh and Elcho painted for the Volunteer Club, and spoken of by us last week, should have been described as by Mr. J. W. Watson, not Walter.

MR. BESSON Frères have just published, in three different sizes, the photographs of an ivory chess-table, executed in the last French Salon by M. Theodore Dalmasso.—"The Tea Merchant," "The Occidentalist," and "The Indian Fakir." These charming little compositions, of which we reproduced two in this Journal, may be seen at the establishment of M. Victor Delarue (Bond-street), MM. Besson' London agent.

LITERATURE.

THE CITY OF THE SAINTS, AND ACROSS THE ROCKY MOUNTAINS TO CALIFORNIA. By RICHARD F. BURTON, Author of "A Pilgrimage to Medinah and Meccah." Longman.

The author of this work has earned his title to a literary welcome. The ground which he has broken in his present essay, if not wholly new, is distinguished by features which will be found to be not less interestingly roused as not to leave a good deal more than mere gleanings behind. It hardly needed Captain Burton's second book—now publishing his work so soon after the appearance of Jules Remy's "Journey to the Great Salt Lake City," that the French naturalist passed through the Mormon settlement in 1855—to show that there is room for a second and even for a less conservative hands. In truth, the Mormonite would be lame beyond the passing notice that is by the author of "Pilgrimage" could it to which have appeared; and we are always glad to receive personal experience and observation of men and things which may in any way have for the solution of this great social problem in the world. Our author is a pleasant narrator, and, indeed, he have a fine subject to work upon in the singular and romantic circumstances which enjoyed the capabilities of the English language for that purpose. But it will not be denied that even with all the advantages of a subject which is capable of such perceptions, sharpened by practice and habit, are detailed with a minuteness which, even if every word be true, is somewhat out of place in a volume of this size. Such a volume as this should be a book of reference, and not a book to be read through at a sitting. Its object is to visit the young rival—*la ne dame*—of Memphis, Benares, Jerusalem, Rome, Mecca, and, after having studied the beginnings of a mighty empire, to leave it to the world to judge of it. To observe the origin and the working of a regular go-ahead Western and Christian institution. Mormonism, though it has a beginning, the city of the Great Salt Lake is a spiritual point of view, of seeing that it has a future. Such, in a few words, is the author's object in the same sense of guide-books, has pointed out as the proper, indeed the only, practical way of reaching the Mormon City from the shores of the Pacific. The consciences of the world, the Occidental Press had asserted was, in substance, the same as that followed by the emigrants of 1847, the nearer Orient are now walking cheek of foot; and our sees, if they would walk in the paths of their pages, must look to Chagrin and the pass above the Humboldt, and to Fort Bridger. It appears that the book will show that this is at once a programme of what is to come and a true description of what has been. The question of the best route to the various routes to Utah is discussed in the opening chapter, and in the very outset of the inquiry the reader finds a table, or rather descriptions of the preparations on the part of the traveller, and of the mode of conveyance, in which, on Tuesday, August 7, 1860, he started from St. Joseph's, on the Missouri River, on a journey thirty-five days, behindhand in that respect. In the pages of his book the author has done as he is accustomed to do in the pictorial than its geographical aspects, and gives less of large share of information than of description. The plan of the route suggested; but in the Appendix there will be found a detailed itinerary, showing the distance between camping-places, the several halting stations, the nature of the ground, the hours of travel, and the facilities of obtaining wood and water—in fact, all things required for the guidance of the emigrant. The plan is to give a full and adequate of dividing with its contents; it must be read as a whole; and therefore we do not propose to enter into the details of the route. In the wider sense of the term, confining ourselves in the first instance to the broad and decided characteristics of the country, we find it to be a Beyond that we may say that it embraces no less than thirteen chapters, besides a "conclusion" and an elaborate appendix. In these the writer describes the Mormon settlement, and gives, from his own evidence on the incidents and circumstances of the line of country which he traversed. Of course, in the course of years, many of these Indian tribes, historical and existent, and of the region through which he passed, and therefore his account of his route has reference to that time. Description of the sight which he saw on reaching the top of Big Mountain, where, on an eyrie 9300ft. above sea-level, he "at the foot of a long descent, the valley of the Great Salt Lake, and perils, the Happy Valley of the Great Salt Lake. The disposition of the settlement, we are told, is "like that of Jerusalem, and other cities built on the system of right angles, the roads, streets, and lanes, if they can be called such, intersecting one another. Judging from a plan which is inserted in this volume, the city is also one of "distances." Our author observes that, during the twenty-four days of his sojourn amongst the Mormons, ample opportunities of sur-vey observations were afforded him; he saw specimens of every class, and, as he tells us, he lived in the house of a Bishop. Being a stranger in the land, could ask questions and receive replies upon subjects which would have been delicate ones to the native and to the Gentile. There is, however, in Mormonism, as in all other exclusive faiths, an inner life which is not to be penetrated by the outsider. Mormonism, and all he promises is that what he recounts is stated honestly and truthfully, and uninfluenced by those motives which have rendered the writers of the Jules Remy and Mr. Gunnison's books so full of inaccuracies and apostates so untrustworthy. In this spirit Captain Burton narrates his personal experiences, his conversations—plain and rude, with among other things, comprehend his witnessing a Sunday service in the Bowery Theatre, at which services were performed by Brigham Young in his official capacity, and by the second President, Heber C. Kimball, and by the Prophet Brigham Young himself, who spoke in both. This is how, in Mormonism, as in all other exclusive faiths, no one is to be allowed to preach who has not received the priesthood

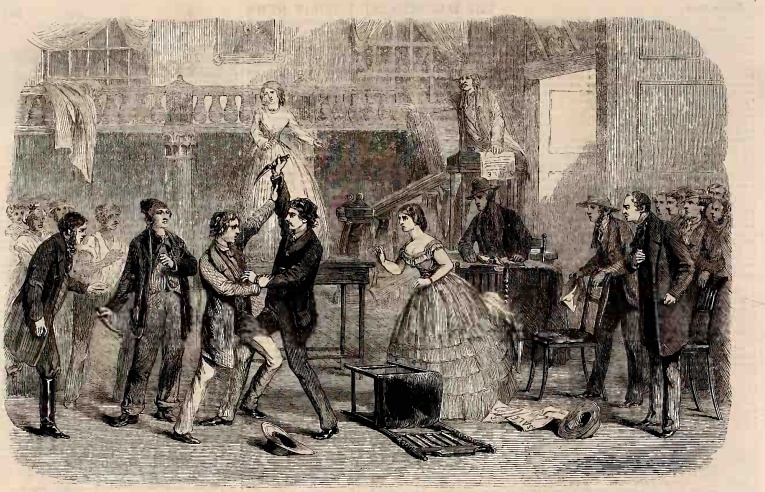
THE ILLUSTRATED LONDON NEWS

Nov. 30, 1861.

of the inmost feelings."—At first sight this may seem rather a disheartening process, and to denote a species of dilution in the treatment of the subjects chosen. But the apology is prompt. Mrs. Thomson, declining to be attacked by the necessity of narrating the grave events of our human condition, declares herself to have been enabled to dwell ultimately on the incidents which are generally considered to be beneath the dignity of history." The scope of such a plan, it is insisted on, presents many advantages. It enables an author to place two characters in such a position as to show the influence of the one on the other; it deals with those small facts of which life is made up, and which are lost sight of in the larger life of men; it also gives their curiosity to a certain extent gratified. In fact, we are promised what the Scotch call a "screed" of serious gossip. The Earl of Sarcey and Sir Alfred Evelyn, and Robert Doyle, the Earl of Sarcey's valet, Mr. Abbot and Miss Cowper and Mary Unwin, Mr. Hamilton Hervey, Thomas Wyatt, Mr. Addison and Beckie, Magdalen Herbert and the Princess Philip Sidney and Sir Fulke Greville, Cecil Lord Burleigh, Dr. Dominic Sir Edward and Miss Grey, Elizabeth Carter and Charles Lamb, Fenelon and Pope, Garrick and Mrs. Clive, and so on—Miss Talbot, Bolingbroke and Swift. There is a deviation from conventionality and of course is welcome. But the chapters which might easily have been made the most important are those on Imperial Rome, unless, indeed, it is a hint full of authorship to mix up the records of personages far apart in point of time. If so, it may fairly be hoped that the author will not make much use of anything that it is not pretended to know. It is true that some details, obtained from the letters lately discovered in the records of the Bastile, of the life of the Princess Philip Sidney, will be to some hitherto unknown letters of Sir Philip Sidney. Nevertheless, there is room for, in other events, by the utter the point of view, and the narrative of known events, by the utter wearing and contrast of characters, which renders the work not only agreeable but worthy of general acceptance.

FARM LIFE; or, Sketches for the Country. Saunders, Otley, and Co.

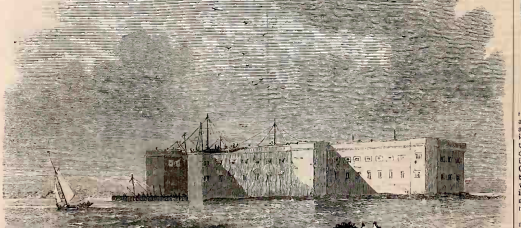
This volume professes to be written "by one 'Peter Dryland,' a name only to be found in the Directory," and the author is evidently a very curious to the critic," but still he has to be very much obliging. The book is divided into twenty-one chapters, all treating of farm life in some shape or another. The general tone is that of a very interesting, and "Retrospective" manner, pleasantly of the old times when the chiefs and heads of farms were in the habit of taking a good farm and could be had for £40. We think, however, when Peter speaks of the shortness of the leases of farms in the present day, the bull of the shortness refer to the tenants and Webster's day. The tenor of "English Husbandry" is like, and that "Systematic Farming" is like, and that "Colonial Farming" is also very nice and unobjectionable reflections but after that the book goes down hill, and the author wastes his time and sheep's paper. Agricultural pupils are "Griffs," the bailiff is "Overlooker" or "Cobbs," who must have had of Hannah More, is made to do duty again the chilful and broken down gentleman, who might have been a farm, through several scores of pages, and "Applebins" is "Mr. Pipes," the "Then, of course, he did tenant's" is "Mr. Pipes," the "Then, of course, he did tenant's" is "Mr. Pipes," the "Then, of course, he did tenant's



SCENE FROM MR. BOUCICAULT'S NEW DRAMA AT THE ADELPHI : THE SLAVE MARKET—SALE OF THE OCTOROON.

below Castor and Pollux, and finally, at about 10 or 15 deg. north of these stars, broke into three or four fragments and vanished. The duration of visibility was nearly ten seconds. A writer in the *Morning Star* says that while walking between Lee and Eltham at about 9.50 on the same night "a ball of fire presented itself to his right (the south) and slowly floated across his path, at an apparent elevation of 100 yards, and burst into fragments, seemingly as of many stars." A writer from Bognor, referring doubtless to the same meteor, says also that "it fell had the colours of the rainbow, that it exploded, like a rocket, into several balls of fire, and disappeared."

GEOLOGY OF THE ROCKY MOUNTAINS AND OF THE COUNTRY BETWEEN LAKE SUPERIOR AND THE PACIFIC OCEAN.—In the spring of 1857 her Majesty's Government, at the suggestion of the Royal Geographical Society, constituted an exploring expedition into the British territories above mentioned, part of the territory in the keeping of the Hudson's Bay Company The command of the expedition was given to Captain Palliser, whose previous adventures travels in the region had given assurance of the ability and energy necessary to penetrate unexplored regions and to preserve a friendly footing with the savage tribes that were to be encountered. Dr. James Hector was selected by Sir Roderick I. Murchison to hold the combined offices of surgeon and geologist. The more important results of his duties in the latter capacity he laid before the Geological Society, who have printed his long memoir in the new number of their *Quarterly Journal*, of which it occupies fifty pages, illustrated with a map and numerous woodcuts. We give an example of the latter. Near the elbow of the North Saskatchewan a remarkable group of boulders of limestone of enormous size crosses the country in a line parallel with the oblique between the Missouri and St. Peter's Rivers to the west. This line has been observed at points thirty and forty miles apart. They occur as great angular masses, consisting of several of the beds of limestone, the coherence of which, being very slight, proves that they must have been stranded without any great violence. One of these masses contains over 3000 cubic feet of stone, and rests on the plain obliquely, with its south-western angle buried in the soil. Boulders are large rounded blocks, lying on the surface of the ground, or imbedded in the soil, different in composition, from the rocks in their vicinity, which have been therefore transported from a distance. They are also termed "erratic blocks."



FORT MONTGOMERY, AT ROWSE'S POINT, LAKE CHAMPLAIN.

FORT MONTGOMERY.

MUCH interest is felt in the recent determination of the Federal Government to fortify its coast, lake, and frontier line, as conveyed in Mr. Seward's instructions of the 14th of October. The American Government, however, have for some time past been repairing and enlarging the system of fortifications on the Canadian frontier. One of the strongest of the enlarged works is Fort Montgomery, at Rowse's Point, at the head of Lake Champlain. This fort has been nicknamed Fort Blunder, because erected upon British soil, afterwards given up, under treaty, to the United States. The fort has been considerably enlarged, and is now nearly completed. It will mount sixty-five guns in position, and twenty-five en barbette. It is protected on the land side by a moat and rampart of earth; and, on the whole, it is a very formidable work. Rowse's Point is about thirty-eight miles from Montreal, and upon the main line of railway communication between Boston, New York, and Canada. Lake Champlain, which lies between the States of New York and Vermont, extending for four miles into Lower Canada, is 105 miles in length, north to south, its breadth varying from ten miles to half a mile. It contains numerous islands, receives several rivers, and discharges its superfluous waters by the Richelieu river into the St. Lawrence. This lake was the centre of many important military operations during the revolutionary war, and now forms an important medium of commerce.

SCENE FROM MR. BOUCICAULT'S NEW DRAMA.

THE SLAVE MARKET—SALE OF THE OCTOROON.

WE have selected the "sensation scene" from Mr. Boucicault's new drama of "The Octoroon" for an illustration this week. This particular scene recommends itself from its truthfulness. In delineating the dreadful business which it represents the dramatist has attempted no exaggeration. He has treated it as a familiar horror, one which

GREAT BOULDER ON THE PLAINS NEAR CHARLTON, U.S.

society has accepted as portion of the regular business of the market and legalised as an institution. However abominable it may be, it is authorised. Those who observe, and those who are actively engaged in the transaction, alike acquiesce in the fact and the principle, as if there were no outrage being done to nature, no sin against humanity committed. Any external demonstration of excitement would be improper. What confidence there is goes on within. That beautiful Octoroon—what feels she? They who would save her from the threatened degradation—what feel they? And in that determined wretch, who exacts his money for her purchase—O! what a hell there is in his bosom, of premeditated guilt, and even already of an anticipated remorse! The picture is presented on the stage in fine taste.

There can be no doubt that if it had been morally possible for the author to have given a happier ending to his drama it would have been

THE METEOR OF TUESDAY WEEK.

more immediately popular. But we do not think that this circumstance will in all interfere with its run. The audience take all through a strong interest in the fate of the heroine, and this is manifested by the reluctance they feel at the end when the victim finds no refuge but in death.

THE CYRENE MARBLES IN THE BRITISH MUSEUM.

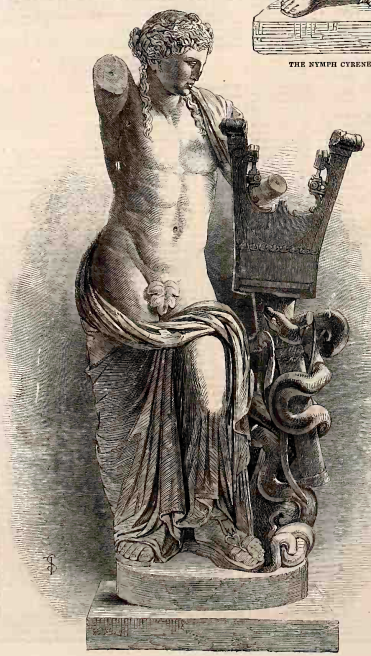
A PRIEST.

THE NYMPH CYRENE STRANGLING A LI N.

DIANA.

During the last few years the Foreign Office has shown a zeal in the service of archæology not second to that of the Continental Governments, and the National Collection has in consequence received priceless additions that would else have remained unnoticed or gone to enrich the museums of other countries. To its support the nation is indebted for the precious remains of Greek art discovered by Mr. Newton in the course of his researches in Asia Minor, and for the more recent acquisitions which form the subject of this paper. The success of the expedition to Halicarnassus led to a fresh enterprise of the same kind, this time to the north coast of Africa, and important fruits have already reached the British Museum.

A purchase made by the trustees three years ago had pointed out the Cyrenaica as a field where Greek remains of the best style might be discovered. This was a selection of antiquities collected by Mr. Warry, her Majesty's Vice-Consul at Ben Ghazee, a town which represents the ancient Hesperides, afterwards Berenice, the westernmost of the five cities of the Cyrenaica. The most interesting of these objects were small figures in terra-cotta, excelling in grace and freedom any works of the kind known to us. They probably date from about the third century before the Christian era, and show that a pure school of Greek art then flourished here; for these terra-cotta figures were not, like marble statues, costly works, often brought from remote countries, to adorn temples and the houses of a few wealthy citizens; they were the common, cheap, stock of the sculptor's shop, perhaps as common and as cheap as the plaster figures which are now carried about our streets, and such objects were probably the ornaments of almost every house in the place. They therefore show exactly what the artists of Berenice could

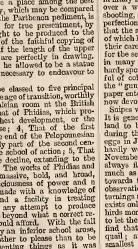


APOLLO.

BACCHUS.

The attitude is noble as well as graceful; the face is full of sweetness; the form and surface of the body are excellently rendered; and every drapery is well arranged. But, on the other hand, the expression of the face, combined with the long hair and the attitude of the statue, makes this too feminine a representation to deserve a place among the best Greek works. The modelling of the drapery, which may be compared for invirtuosities with that of the Venus of Milo, is sometimes carried to a mannerism, and the legs are perfectly in drawing. Notwithstanding these drawbacks this must be allowed to be a statue of the highest order of merit, and it is impossible to assign a date to it, or to determine its age, as nearly as may be.

The Greek sculpture known to us may be classed to five principles—archaic, severe, archaic art; 2. That of the age of transition, worthily represented by the early Apollo in the Pitigalian room at the British Museum; 3. That of Phidias, which produced the highest development, or the school of art; 4. That of the decline, from the end of the Peloponnesian war to the end of the Macedonian empire; and 5. That of the complete decline, extending to the Roman period. The works of Phidias and his school are massive, bold, and lofty, showing a consummate knowledge of the laws of form, made with a knowledge of the material as a finality for all beyond them, without any attempt to produce pleasing effects by means which must representation would afford. With the fall of Greek liberty an inferior school arose, which aimed more to please than to be truthful, representing things as it was thought they should be rather than as they were; hence action characterizes its works in place of the repose of the earlier school. Since this school had its origin when Greek art was still in its highest condition, it shows at first but slight signs of decline, and perhaps some of its works may be ranked with the best that could be executed. Certainly, if the famous Venus of Milo be of this school, as some assert, this is proved; but we know of no other later ideal work that can be compared with the statues of the Parthenon. Portrait art always flourishes after ideal art has declined, and we may, therefore, wonder less at the splendid portraits of the Roman period, when we remember the state of Macedon, or even of the latest school, as the well-known bust called Cyclus. In all these works being copies or imitations devoid of originality, we find no other than feeble attempts of modern times, while the art was in its infancy.



PART OF A LEG OF A COLOSSAL STATUE.

The Cyrene Apollo is undoubtedly of the second of the schools which we have mentioned, and is a fine example of the art in its most striking characteristics. The figure is in action; the artist's endeavour was clearly to please rather than to be truthful, for the drapery is not what the drapery is treated mechanically, not lovingly, as those objects are usually seen. Nevertheless, it is not to be denied that though the idea was that it might have been painted on the statue, the execution is admirable, and very delicate. So, too, the covering of accessories is eminently characteristic of the decline of art. In the Cyrene Apollo, as in that of the Parthenon, we may notice the same principle in the overloaded ornament of late Gothic, as well as of the degraded style of the Renaissance. The ornamentation carved in the earlier period of the third century before the Christian era is of the highest excellence, as in the Venus de Milo; and this can be assigned to this time, most of the supposed specimens of this school, in the museums of Europe, being copies of the Venus Genetrix, entirely devoid of the original character of the sculpture. Rome, entirely devoid of the original character of the sculpture. It forms, therefore, a valuable link in the chain of the progress of Greek art out of the National Collection. The wonderful metal statues from Herculaneum show us what Greek art was in its infancy; and in the next period (the school of Phidias) we have the splendid vases, bronzes, and a few statues. The sculptures from the Parthenon, in their relation to each other, form the highest work of art, and after the Macedonian marbles, fall of animation, that of the school of action. The Cyrene Apollo takes its place as a connecting link between these, and the Venus de Medici Ceres, from Cnidus, in its face the most beautiful statue in the collection, gradually sinks into the feeble and sickly Roman Venus Genetrix, more than this passing notice, for the extreme beauty of the head, worthy of the highest Greek art, is not appreciated as it should be, from the almost necessary deserving a place by that of some of the latest statues. Weighing this discordant evidence with the fact that the body was made in the country and the head by some great artist far away, we may, with great force, ask the question, Was the head and statues, which show the same inferiority of the body in a lesser degree, we are driven to suppose that the head must be executed in the country rather than at the Apollo of Cyrene.

The part of the leg of the colossal statue is a fragment calculated to excite the greatest regret; for it must have belonged to a very fine work, probably of the best age and of great size. It is, in fact, the only work, probably of the best age and of great size. It is, in fact, the only work of the kind in the collection, and before the time of the Egyptian rule.

The sculpture of the nymph Cyrene strangling a lion is more interesting from its reference to a local myth than as a work of art, for it belongs to a very low period, and is not executed in the best manner. It may, however, be considered to be a copy of an early statue. The story of Cyrene is supposed to be as follows:—Aristæus, the son of Apollo and Cyrene, was born in Libya, and was educated in Thessaly, and after he had married Eurydice, the wife of Orpheus, he was driven from the country of Cyrene is supposed to be as follows:—Aristæus, the son of Apollo and Cyrene, was born in Libya, and was educated in Thessaly, and after he had married Eurydice, the wife of Orpheus, he was driven from the country and Eurydice, the wife of Orpheus, he was driven from the country and visited the island of Ceos, where he married Cyrene, and by her had a son, Aristæus, who became the father of Actæon. Cyrene, after the marriage, visited Libya, and there, by the favour of Jupiter, became the mother of Aristæus, who became the father of Actæon. Cyrene, after the marriage, visited Libya, and there, by the favour of Jupiter, became the mother of Aristæus, who became the father of Actæon. The story of Cyrene is supposed to be as follows:—Aristæus, the son of Apollo and Cyrene, was born in Libya, and was educated in Thessaly, and after he had married Eurydice, the wife of Orpheus, he was driven from the country and visited the island of Ceos, where he married Cyrene, and by her had a son, Aristæus, who became the father of Actæon. Cyrene, after the marriage, visited Libya, and there, by the favour of Jupiter, became the mother of Aristæus, who became the father of Actæon.

The statue of Diana is an average specimen of late work.

THE ILLUSTRATED LONDON NEWS

We have intelligence of the loss of another Baltic steamer, the Hero, from Stettin to Lubeck, and Travemünde to Hull, is stated to be the fifteenth steamer engaged in the Baltic trade which has been wrecked within the last twelve months.

ECLIPSE OF THE SUN.—Photographers and astronomers are upon the qui vive, making their preparations for observing the eclipse of the Sun of next year, to which the recent discoveries by MM. Bunsen and Kirchoff in colouring photography and in spectrum analysis will be applied. The eclipse will be specially directed to the examination of the appearance of the corona with which the sun is surrounded. Many theories as to the nature of the corona exist, but no fact which exhibits an invention of the solid spectrum, the much-vexed question will be solved, and the existence of a solar atmosphere will become a definite scientific fact. If the curiosity should be the case, we may be compelled to admit that absorption takes place in the substance of the atmosphere, the result that absorption takes place in the substance of the atmosphere, the surface of which emits not only all the rays, but which also absorbs many of the rays, but which also absorbs many of the rays, but which also absorbs many of

Tavistock retiring from the Oakley, left Leicestershire for Bedfordshire, having purchased the hounds, engaged the hunters and whippers-in, and built a kennel at Thurleigh, as being the most central spot in the country. A sudden illness brought the Baronet to an early grave, and he was succeeded by Reginald Errington, Esq., and his brother Sir William Stanley. Since that period the Queen have seen many masters. Few, however, have attained the popularity of the present noble master, the Earl of Stamford and Warrington, then whose a better sportsman or more liberal supporter of the manly exercises of "Merrie England" does not exist. The hounds are in splendid condition, foxes humerous, and his Lordship's stud is second to none. Nor does the public career of Rudolph Park Aveline himself shine to the amusement of the higher classes; his attention to the wants of the poor are patent to the world; and no member of the attendance ever realised the character given by Kent of a country gentleman than Lord Stamford — a country gentleman naturally attached to a great station, as he is one of the strongest links in society between Government and the lower orders of mankind; and he is a real blessing to the district where he lives. Long may he remain the model of the true gentleman, a thorough gentleman, a good neighbour, and a liberal benefactor."

FECHTER'S VERSION OF "OTHELLO."

(To the Editor of the ILLUSTRATED LONDON NEWS.)

SIR,—The article in the *Athenæum* having declined to deem the justice to print the inclosed communication, and having simply reproduced two passages of the quoted matter in it, which did not in any way call for some remarks in my pamphlet entitled "Fechter's Version of 'Othello' Critically Analysed" are not accurately set forth.

You state that,

curiously enough, the strongest point that Mr. Oxley has made against M. Fechter relates to the interpose in which the latter has altered the stages of tradition in his stage arrangements. It occurs in the third act, the great scene between Desdemona and Othello. Here it is described as occurring in the open air, as also to the continuation of it in the room into. But in the stage-setting of M. Fechter's arrangements are altered, and the scene takes place in both instances in the interior of the castle.

Upon this I beg to observe that there is no scene described either in the folio or quarto editions, and that in my pamphlet I had acknowledged that M. Fechter adhered to the ordinary setting although, his alleged reasons why in his case he so doing was attended by peculiar inconvenience. My words are :—

In the ordinary setting edition the scene is laid within the castle, but divided into two scenes, in two several apartments. This last arrangement, is not in accordance with the requirements of the case even with the solution to be offered, does not suit the requirements of the case, and M. Fechter has corrected

THE ILLUSTRATED LONDON NEWS.

No. 1120.—VOL. XXXIX.] SATURDAY, DECEMBER 7, 1861. [WITH A SUPPLEMENT, FIVEPENCE

THE TRENT AND THE SAN JACINTO.

THE British public has been agitated by intense excitement during the past week by the apparent imminence of a rupture of friendly relations between this country and America. To the facts which have occasioned this state of things, and to the light in which they may be viewed by the law of nations, we shall presently advert. Before doing so, however, we gladly recognise the possibility, and express the hope, faint though it be, that the matter in dispute may be satisfactorily settled, even before the publication of our present Number. Our remarks are intended to hear upon the facts as they stood at the moment of our going to press; and should any authentic information from the other side of the Atlantic reach our shores before these pages are in the hands of our readers which will render the following comments unnecessary, because untimely, none will rejoice more heartily than ourselves at being "a day after the fair."

The facts of the case lie in a very narrow compass; the statement of them, although hitherto *ex parte* only, rests upon the concurrent testimony of several witnesses, and may fairly be assumed as trustworthy. They are so well known that it will not be necessary for us to give more than the barest outline of them. Messrs. Slidell and Mason, Commissioners of the Confederate States of America to France and England, together with their Secretaries, having succeeded in evading the blockade, and in reaching the neutral port of Havannah, engaged berths on board the mail-steamer Trent, with a view to proceed to Europe by the ocean mail-steamer La Plata from St. Thomas. Being on neutral territory, and contemplating a voyage in neutral ships, they made no secret of their intentions, nor of the official capacity in which they were acting. While these gentlemen were waiting at Havannah for the sailing of the Trent, the San Jacinto, an armed sloop in the service of the Federal Government at Washington, called at the port, having just left her station on the coast of Africa. Captain Wilkes, the commander of the San Jacinto, under general instructions, it is presumed, from his own Government, for the time was too short to admit of special instructions, determined upon intercepting the Commissioners on their way to St. Thomas, and for this purpose started from Havannah to the Bahama Channel, a narrow roadstead through which the Trent would have to pass. As soon as the British mail-steamer hove in sight the San Jacinto made all ready to stop, search, and, if resisted, to sink her. The first step taken by the Captain of the American cruiser was to fire a shot across the bows of the Trent, and to show her colours; but, as the British steamer did not heed the summons, his next proceeding was to fire a shell, which exploded within a hundred yards of her. The Trent, being unarmed, immediately brought to, and Lieutenant Fairfax was sent on board to demand a list of the passengers. This having been refused, the Lieutenant said he had good reason to know that Messrs. Slidell and Mason, and their secretaries, were among the passengers, and he required that they should be given up to him. On the refusal of Captain Moir to comply with this requisition three boats' crews were dispatched from the Federal sloop, and boarded the Trent, cutlass in hand. Further resistance on the part of Captain Moir was of course out of the question; and, under formal protest, the four gentlemen were seized and carried off as prisoners to the San Jacinto, and the Trent allowed to proceed on her voyage.

These facts have been laid before the law officers of the Crown, who have decided that the Captain of the San Jacinto has committed a breach of international law, and a despatch from the British Government is already on its way to Lord Lyons, instructing him, it has been said, to demand the restoration of the captured gentlemen to the protection from which they have been illegally taken, and a disavowal and apology on the part of the Federal Government for the act of their own officer. If this demand be not complied with, it is rumoured that our Minister at Washington will forthwith return home;

THE CIVIL WAR IN AMERICA: FEDERAL PICKET ON THE POTOMAC, IN FRONT OF THE CONFEDERATE BATTERIES.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE PAGE 570.

Mr. Adams, the American Minister at London, will be furnished with his passports; and diplomatic relations between the two countries will be broken off, in anticipation of war.

The ground upon which the law officers of the Crown rest their decision appears to be the only ground which could have been safely taken. The right of the San Jacinto to stop and search the Trent for contraband of war is not disputed. It is a right which Great Britain, as a foremost maritime power, has done her utmost to establish. The inclusion of persons as well as things within the category of contraband is also undoubted, although it remains a moot point (which, however, we shall not discuss) whether the diplomatic agents of one belligerent can be lawfully seized by another while proceeding in a neutral vessel between two neutral ports. It is a nice legal question, requiring for its decision the deliberate and solemn adjudication of a prize court. That which seems to be clear is that commanders of ships are not authorised by the law of nations, and cannot safely be permitted, to act on board neutral vessels on their own private views of law. The Captain of the San Jacinto, even on the hypothesis that Messrs. Slidell and Mason came within the description of contraband, was not bound to carry the Trent into the nearest port, there to await the decision of a regularly constituted prize court. Had such decision been in his favour, we should have had no illegality of which to complain; but it here against him he would have been responsible for whatever damage he had inflicted upon the property or the passengers of the Trent, in consequence of her interruption and detention. It may be quite true that by pursuing a legal course, instead of the high-handed one upon which he acted, he would have subjected the owners, crew, and passengers of the Trent to much more serious annoyance than they have now to complain of. But it is also true that by allowing the precedent we should open a wide door for every variety of insult to our mercantile marine from the ignorance, caprice, or passion of American commanding officers. Neutral vessels are not to be adjudged guilty of violating the laws of neutrality by every petty officer who has the authority and the power to arrest them. It might be very convenient, no doubt, in certain imaginable instances, for a police-constable to seize goods suspected to be stolen and simply to hand them over to the reputed owner. It would save an immensity of annoyance in some cases; but it is judged to be safer, on the whole, to refer the decision to a court of law, where evidence can be given on both sides and impartially sifted, and where verdict and sentence have a chance of being delivered with due and dispassionate deliberation. Now, international law is founded mainly upon the same principles of justice as those which are embodied in municipal law; and the very existence of prize courts rests upon the implication that between belligerents and neutrals all questions that arise shall be decided, not by an individual and private but by a public interpretation of the rights respectively of both parties.

But, happy, as we do, that a great wrong and, if sanctioned by submission, a dangerous infraction of international law and the rights of neutrals has been committed by the commander of the San Jacinto, we see many incidents connected with the case that should induce Great Britain to preserve her claim to reparation with as much calmness, considerateness, and forbearance as a due regard for the honour of her flag and the safety of her commercial marine will admit of, one or two of the most important of which we proceed, in the interest of peace, to submit to the judgment of our readers.

In the first place, then, it deserves to be borne in mind that we are as yet without any trustworthy evidence that the act of Captain Wilkes was done in obedience to instructions received from the Federal Government at Washington. The probabilities all lie the other way. The San Jacinto had but just left the coast of Africa, and had put into Havannah before it was possible for her to have had recent communications from Mr. Lincoln's Cabinet. It was there and then only that he could have ascertained the intention of Messrs. Slidell and Mason to go out by the Trent, and no sufficient interval was left him to submit his project to the judgment of the Cabinet. Mr. Adams, the American Minister in London, volunteered, immediately on the arrival of the news by the La Plata, a statement of his conviction that the Federal Government knew nothing whatever of the transaction until after it was consummated. The rumours which have reached us from America since the arrival of the prisoners at Fort Monroe lend additional probability to this opinion. Captain Wilkes was stated to have hinted in the course of a conversation with General Wool at the possible alternative of being disclaimed for his act—a proof, if true, that he had no definite authority. Lord Lyons, our Minister at Washington, is reported to have expressed his opinion that Messrs. Slidell and Mason would be given up to England. The next arrival may bring us an assurance that the Federal Government have honourably declined to take advantage of the wrong committed by their own officer, and the amicable relations of the two Governments may be re-established upon a sounder basis than before.

In the next place, it behoves us to remember that the rights of belligerents, as against those of neutrals, are a matter of judicial interpretation of which has led to the present disagreeable dilemma, are mainly, if not solely, rights which England herself has persisted in establishing, not merely in the face of many protests, but even to the certainty of war. We are not, therefore, in a position to fire up in anger, or to proceed in haste or in harshness to the last fearful arbitrament in vindication of the wrong we believe ourselves to have received. And, in the last place, we may well make some allowance for the difficulties which surround the Lincoln Administration, and, if we cannot safely pass by such an offence as that perpetrated by Captain Wilkes, we might, at any rate, act as courteously and considerately as possible in the prosecution of our demands. In the spirit and with these views we hope her Majesty's Government are dealing, and will deal, with the matter. Hitherto the great majority of the people of England have kept their natural excitement under creditable restraint, and we firmly believe will be prepared to make any sacrifice of feeling, not inconsistent with national honour, in order to avert a war with their American kin. We earnestly trust that their forbearance will meet with its due reward, and that by disavowing the act of Captain Wilks, and surrendering the Southern Commissioners to the hands from which they were summarily and rudely taken, the Federal Government will save themselves, the world, and us from hostilities which, while they would disgrace humanity, would bring nothing but evil to either party.

LATEST NEWS FROM ABROAD.

The following telegrams were received at Mr. Reuter's office yesterday (Friday):—

THE CIVIL WAR IN AMERICA.

NEW YORK, Nov. 22, per Edinburgh, via Queenstown.

Edward Everett, George Sumner, and other leading American legal authorities, declare the capture of Messrs. Mason and Slidell to be in accordance with international law. The subject, nevertheless, causes a universally uneasy feeling in the public mind in respect to the relations of America with England.

The Secretary-of-War has notified to the Governor of Maine that an officer will immediately be appointed to report on the seacoast defences of that State.

The Federal troops are reported to be in full possession of Accomac, Northampton county, on the eastern shore of Virginia.

Governor Jackson and the State Legislature of Missouri have passed a Secession ordinance.

Mr. Smith, Federal Secretary of the Interior, has disavowed the policy established by Mr. Cameron, Secretary of War, of putting arms into the hands of the slaves, declaring that such is not the policy of the Federal Administration.

Twenty-five vessels which are to be sunk at the entrance of a Southern harbour have sailed.

The Governor of North Carolina have established a provisional State Government at Hatteras.

The Confederate force has crossed Warsaw, Missouri, in order to prevent the Federals making winter quarters there.

General M'Clellan reviewed 70,000 men at Washington on the 20th inst., being the largest body of troops ever reviewed on the American continent.

Mr. George Lunt, a Boston lawyer, has addressed a letter from London to the *New York Herald* declaring that numbers of vessels are fitting out at English ports for the Confederate service. He also makes a violent attack on the British Government, and declares that England's neutrality is contemptible.

General Halleck has issued a proclamation notifying that no more fugitive slaves will be allowed to come into the Federal camp, as they have carried the foolish misfortune to disease.

The steamers Asia and City of Manchester have arrived out.

The French papers publish another letter from the Pope at Gaeta. The British frigate Immortalité arrived at Port Royal on the 18th inst.

NEW YORK, Nov. 23, Evening.

President Davis has delivered his Message to the Confederate Congress. It is a long document, and states that for seven months the Federals have failed to extend their occupancy of southern soil, and that the many points they have taken are of no defensive.

The Message announces that the military means and financial condition of the Confederates are stronger now than at the commencement of the struggle. It praises the people of Missouri and defends the occupancy of Kentucky.

The Confederate financial system is stated to have worked well and to promise success. The Treasury Notes "have obtained a very extensive circulation, and, although not yet convertible into coin, are freely used and make a judicious use of their resources, it would be difficult to fix a limit to the period during which the Confederates will be able to carry on the struggle for their freedom."

The reconstruction of the Union, which the Federals seek to effect by force of arms, has become more and more palpably impossible. The causes which induced the separation not only remain in full force but have been strengthened.

"The Confederates shrink with aversion at the bare idea of renewing connexion with the North. Such a thing would be impossible in any place with the North, but the separation is final. The South will accept no alternative."

President Davis then informs the Congress that Messrs. Slidell and Mason, Commissioners appointed to represent the Confederacy abroad, had been seized on board a British vessel within the dominions of a neutral nation, and says:—

"The action of the United States to seize them in the streets of London would have been as well founded as the seizure on board the Trent.

"And they been malefactors their arrest could not have taken place on board British ships except according to the law provided for the extradition of criminals.

"The Confederates asked no aid from foreign powers, but perhaps had a right to demand it. The Commissioners were not instructed to tender any specific view, as to the generality applied, or only in particular cases.

"Privateers will be laid before the European Governments of the total inefficiency of the blockade."

LATEST BY TELEGRAPH TO CAPE RACE.

NEW YORK, Nov. 27.

Southern accounts report that Fort Pickens, assisted by two steamers, has opened a bombardment on Pensacola.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Senate met on Monday, when the draught of the Senatus Consultum for giving the Corps Legislatif additional control over the finances was presented. The chief provisions are that the Budget, instead of being presented as a whole, will be divided into sections, and that no extraordinary or supplementary credits can be opened except by a special law. Authority, however, is given to the Government to authorise the transfer of sums from one vote to another, which will greatly lessen the sacrifice the other concession seems to confer; indeed, the real power of control conceded to the Chamber appears to be of the smallest description.

The *Revue des Deux Mondes* has an able article by M. Forcade on the financial position of the Empire. The writer points out that M. Fould has to provide for the exigencies of the past and the future. He supposes that M. Fould will not in the first instance increase the

THE CIVIL WAR IN AMERICA.

By the Canard steamer Persia we have received New York journals of the 30th ult.

The principal subject of interest is the reception of the news of the capture of Messrs. Mason and Slidell on board the British steamer Trent. The American account of the affair agrees with that of Captain Moir, except in that it is represented that all the documents of Messrs. Mason and Slidell were seized. It is also admitted that Captain Wilkes of the San Jacinto, acted without orders from Washington, that ship having only just returned to the West Indies from Africa. The news of the capture was received with great joy by the people of the large cities, although the means by which it was made caused a rush of stocks in Wall-street. The despatches were transmitted from New York to Fort Warren, near Boston. Commodore Wilkes is the same officer who commanded the United States' exploring expedition, 1838-42, on the account of which was given to the world in five large volumes.

WHAT THE NORTHERN JOURNALS SAY CONCERNING THE SEIZURE OF MESSRS. MASON AND SLIDELL.

The journals are full of quotations from Vattel, Wheaton, Phillimore, and Kent, and of decisions of Lord Stowell, to prove that the dispatches and the Commissioners who carried them, were "contraband of war," subjecting the vessel to the penalty of capture and condemnation in a Prize Court. The practice of taking British seamen out of American merchant ships at the commencement of this century is cited to strengthen Great Britain may object, that the taking out of the Circular before us, that "we make no speech to-night, but I will say that I heartily approve every sentiment uttered by your noble commander. Our countrymen will be hard to please if they do not endorse my own words. They are my sentiments—sentiments which will not only lead us to victory, but which will in the end restore to us all our glorious Federal Constitution. It is idle to talk about treating with the rebels upon their own terms. We must fight them to the extremities, treat them as enemies, and punish them as enemies, and not as rebels. I am glad to see so many Democrats present. I am pleased in our hands it is not to be in the power of preaching sinners—I am glad to see at the opportunity to say here, what I have already said elsewhere, in these few words, that I am the determined opponent of every species of Secession, Copperhead, or Southern Rights Democrat."

General Burnside, at Rhode Island, and Senator Wilson, of Massachusetts, the colleague of Charles Sumner, have made declarations of similar import. The latter said—

It was proper to manage the war otherwise. It was unwise to send our men from their firesides, their workshops, and their farms to die upon the Southern soil if the cause of the war was not made clear. The question was brought on the conflict without a cause, and aimed at the destruction of the Republic, remained unchanged the chief corner of its strength.

THE CONFEDERATE STATES.

Five bridges on the Virginia and Tennessee Railroad have been burned by the friends of East Tennessee. The line is the most important line of communication between Virginia and the South-Western States.

Colonel Corcoran, of the 69th (Irish) Regiment, has been thrown into gaol on a charge of the prisoners now confined in the Old Capitol, and twelve other officers are designated as hostages for the safety of the rest of the prisoner's crew.

The Georgia Senate have held a convention in which it was resolved that if the present cotton crop remain unsold they will not plant any cotton next year.

MISCELLANEOUS.

The New York banks have stood fast and obtained a postponement of the time when they will be called upon to take the third 50,000,000 dollars of the national loan until the 1st of January next.

Another condemnation of a cabet for engaging in the slave trade has taken place. The trial was held in New Bedford.

Within a short time the publication of the *New York Leader*, a weekly newspaper of no high standing, to write autobiographical experiences. The editor offers him 2000 dollars for a series of articles of this kind.

Advices from Havannah to the 15th ult. state that the Spanish loan had not started for Mexico.

The Queen has approved of Mr. Adrian Campbell Cator as Consul-General for the King of the Belgians.

It is said that the iron-cased frigate Normandie, now at Cherbourg, accomplished fourteen French knots an hour during her trial-trip.

A numerously-attended meeting of American residents in Paris assembled a few days ago, at the Hotel Westminster, to present their respects to General Scott, on the occasion of his arrival in that city. His Excellency Mr. Dayton, the United States' Minister, in addressing the General on behalf of his countrymen in Paris, avowed him of their respect for himself personally, and their high appreciation of the value of his long services to his country, referring particularly to the anxiety and energy displayed in his recent loyal defence of the capital when threatened by the Confederates of the South, declaring that his countrymen would ever cherish in their hearts a grateful recollection of his name. He expressed their regret at the feeble state of his health, and their wishes for his speedy restoration; and trusted that, on his return home, he would find his country more secure happy and united, and more prosperous than ever. General Scott, who seemed much affected at the compliment paid him, replied in suitable terms.

THE COURT.

The Queen, with Princesses Alice, rode out on horseback on Saturday. In the afternoon her Majesty, accompanied by Princess Alice, Prince Arthur, and the Princess of Leiningen, drove out in a carriage and four. The Queen held a Privy Council at five o'clock, at which were present his Royal Highness the Prince Consort, Earl Granville, the Duke of Somerset, and Sir G. C. Lewis. In the evening the Royal dinner party included Princess Alice, the Prince and Princess of Leiningen, the Queen and Princess Dowager, Hon. Mrs. Wellesley, the Rev. F. C. Cook, and Major Elphinstone, R.E.

On Sunday the Queen and the Royal Prince Consort, Princess Alice, Prince Arthur, Princess Helena, Princess Louise, and the Princess of Leiningen, the Duke and Duchess of Cambridge, the Duke of Saxe-Coburg-Gotha, attended Divine service in the private chapel of the castle. The Rev. F. C. Cook, one of her Majesty's Chaplains in Ordinary, officiated in the morning.

On Monday the Queen, accompanied by the Princess of Leiningen, drove out, afterwards the Queen walked in the Home Park, and Princess Louise rode in the riding-house. The Prince of Leiningen went out shooting. Lord Methuen and Colonel Seymour, C.B., returned from Lisbon to-day after delivering letters of condolence to the King of Portugal and Royal family from her Majesty and the Prince Consort. The Royal Dinner party included Princess Alice, the Princess of Leiningen, the Prince of Leiningen, Lord Methuen, Hon. T. de Ros, Hon. Miss Cadogan, Colonel Seymour, C.B., and the following visitors who arrived in the afternoon:—The Duke of Newcastle, the Marquis Ballantine, Viscount Torrington, and Alan Macnab, Bart.

On Tuesday it was announced that the Prince Consort had been suffering for the last three days from a feverish cold, which had confined his Royal Highness to his room. Sir Andrew Buchanan, her Majesty's Minister at the Hague, was presented at an audience on Saturday by Earl Russell, Principal Secretary of State for Foreign Affairs, on presenting the letters of his appointment as Ambassador to Berlin.

On Wednesday the Queen held a Privy Council at Windsor Castle, at which were present the Prince Consort, Earl Granville, and Lord Stanley of Alderley.

Princess Alice has honoured Mrs. Thorncycroft with sittings for her bust. The Princess has had the honour of submitting to the Prince Consort some of his enamel photographs burnt in on glass.

The Queen has appointed Lady Augusta Bruce to be Assistant Lady in Maid of Honour in Waiting to the Queen. Major Du Plat has been appointed Groom in Waiting to the Queen.

The Duke and Duchess of Argyll have arrived at Cannes, in the south of France, from Paris, where they made a brief sojourn en route to the south. The Duke and Duchess do not intend to return to England until the meeting of Parliament.

The Duke and Duchess of Montrose are at present at Combe Abbey, on a visit to the Emperor and Empress of the French.

The Marquis of Hartington, eldest son of the Duke of Devonshire, was married on Tuesday to the fourth unmarried daughter of the Earl and Countess of Clarendon have returned to The Grove, from their visit to Lord Lansdowne, in Berkshire. The Grove to-day on a visit to the Earl of Dudley at his seat in Staffordshire.

Viscount Palmerston has arrived in town from a visit to the Queen at Windsor Castle.

METROPOLITAN NEWS.

A full-dress ball, for the benefit of the Royal Dramatic College Fund, took place on Wednesday night at Willis's Rooms. It was numerously attended.

On Thursday evening Dr. Chu. Dresser delivered the first of a series of lectures, by Members of the Council, connected with the Society for the Encouragement of the Fine Arts at their rooms in Conduit-street.

Sir Peter Laurie, the oldest member of the City Court of Aldermen, has resigned his seat, on the fourth vacancy occurring, the office of Alderman for the Ward of Aldersgate.

Mr. Anderton, the proprietor of the Fitzroy-square, have presented their lucumbent, the Rev. William Gill, with an address and a purse of £410 in the honour of his having held the living for 50 years.

The Committee for Letting the Bridge-house Lands have resolved by a large majority to recommend the design of an iron bridge with three arches, by Mr. Thomas Page, to be used by the Corporation of London for the new bridge at Blackfriars.

An important alteration has been made in the amendment of the law relating to charitable trusts, with a view to legislative action, took place on Monday evening at the annual general meeting of the Law Amendment Society. Vice Chancellor Sir W. Page Wood presided.

At an oilman's shop in College-street, Camden-town, on Monday night, a fire broke out, which destroyed property to the amount by candle-light, exploded so violently as to break the cabin and blow out almost window, the flames burst out with such force that they set fire to the ceiling of the shop, which was burnt out. The man and boy were much hurt.

Dr. Anthony Todd Thomson, F.L.S., who died early this year, has bequeathed the pestatorie of Wycliffe, Chapel, left by him for fifty years. At a meeting held on the 27th ult. the trustees appointed to carry out the provisions of the testator deemed it expedient, "in the manner of the Church and congregation, to express their sense of gratitude for their said ministry," with a purse of 1000 guineas and a suitable silver. Dr. Reed's name is honourably connected with the foundation of the Hill of Asylum for Idiots, and the Asylum for Imbeciles for Incurables. He also founded the first savings-bank at the East-end.

The Bank of England has issued 9211 notices to all 1791 children now registered in London last week. In the ten corresponding weeks of the years 1859-60 the number of notices issued was 1,000,000. During the week last week we 1429, which is nearly the same number as that returned in the previous week. In the week ending the 23rd ult. there was exhibited a tolerably close approximation to that which is obtained by calculating from the returns of corresponding periods in the previous years, viz., 1429. The number of a man in Bermondsey were bitten by dogs; the former died in consequence of frigid, the latter from hydrophobia. Of the remaining 1427 persons who were bitten by mammals, caused by inhabiting noxious fumes in the course of his occupation, two persons died from the effects of fright, one of whom was a boy, aged 14, the age of 10 years.

A LAW AT POLICE.—Mr. Mellor has been appointed to the seat on the Bench vacated by Mr. Justice Hill. The elevation of the hon. and learned gentleman was hailed with the greatest satisfaction by the Bar, and the most judgeship was declared by the Attorney-General. The new Judge was born in Manchester, in 1809, and was called to the Bar in 1835, and became a queen's counsel in Lincoln's Inn.

A break of considerable case was tried in the Court of Exchequer on Monday, a widow of forty was carried by an old man who went on crutches, though, it is communicated, he was not lame, and was married to her in the year 1859. There was no denying the promise nor his receiving from it; and, after both parties had been severely cross-examined, the jury found a verdict for the £100, which the widow's friends accept.

In the Court of Bankruptcy on Monday Mr. Commissioner Fonblanque, after hearing a case in which the bankrupt had been refused by his counsel to plead guilty to a charge of fraud, said "If the Court had the power to send a man to goal's cap upon every one who pleads 'not-to-the-company,' I might be disposed to try it in this case." Several new persons would be written to.

The New Bankruptcy Act provided that all undischarged bankrupts should be entitled to their certificates, if they had paid 10s. in the pound of that court. But a dispute arose between these commissioners and the undischarged bankrupts, as to the exact meaning of the words "undischarged bankrupts." The Insolvency Commissioners have carried their point, and on Saturday Bankruptcy Commissioner Goulburn

On Monday the gaolers of the metropolitan debtors' prisons made their annual return to Parliament of the number of debtors confined in the prisons present a very different appearance now to what they did some time ago. The number of debtors in the Queen's Prison, which was formerly the largest debtors' prison in which to be lodged, has become so reduced as continues, but the facilities afforded to get out as prison under the Bankruptcy Act have made it a favourite resort for persons who wish to take advantage of the insolvent laws. There were 1,000 Queen's Bench commitments, leaving 10 "Remain." When the first return was made there were 180 Sheriffs and 70 County Court cases. In Horsemonger-lane Gaol there are now only 12 "Sheriffs," and about 8 County Court commitments, which commitments do not come under the new law. The only other prison in the metropolis is the Queen's Prison, where the number is under 100. Besides the prisoners discharged by the registrars, many took the hint and arranged with the defaulting creditors, and thus avoided being made bankrupts against their will.

A marriage is arranged to take place between Lady Londesborough and Lord Otho Fitzroy, son of the Duke of Leinster.

Lady Herbert and the Hon. Misses Herbert have arrived at Nice, from Rome.

THE FARM.

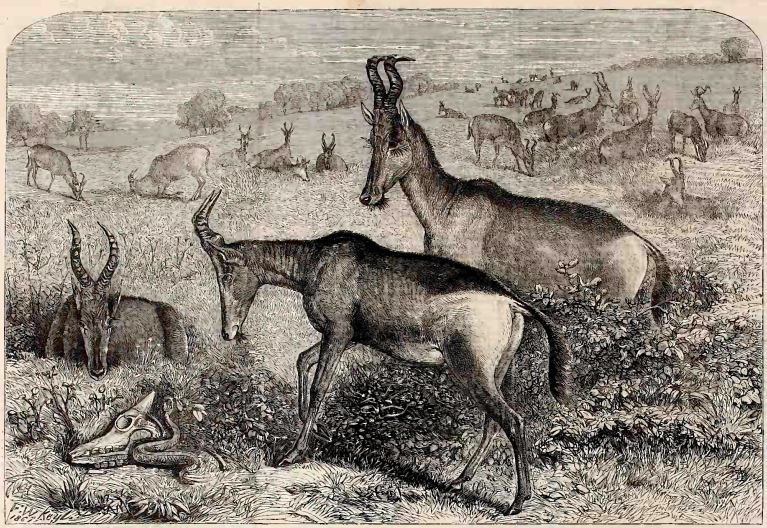
The Rugby and Dunchurch "Cattle and Conservative Association," which Mr. Newdegate, as is his wont, addressed after dinner entirely on political topics and "the aspirations of every true Conservative," had a very fair show; but the champion fat beast, which only came "fourth," with a commendation at Birmingham, was but a feeble successor of Baxter's Butterfly, and Mr. Stratton's fleshfield gold medallist. At Oakham, Earl Spencer's ox was first for the great open prize; and Mr. Baker, of Cottesmore, only second with one decidedly below the general Baker standard. Mr. Baker had also had the first cow; but she, like Mr. Baker's ox, was "nowhere" at Birmingham. Colonel Lowther was in good form with his sheep; and, though Mr. G. J. Brachan could not beat him, he had two firsts, four seconds, and an H.C. It is somewhat remarkable that at Darlington, the very quarters of the shorthorns, they should have been beaten for the 100-guinea Challenge Cup (which Soldier's Bride held last year, and the Duke of Cleveland's on the year before) by a Scotch ox belonging to Mr. James Stewart, of Aberdeen, which fairly eclipsed its sixty-five rivals, and came on to try the Duke's at Stockton. He is said, however, to resemble the shorthorn so closely in horns, colour, shape, &c., that many would declare that it was not a bona fide cross. Mr. Stewart was in immense luck, as he brought five or six cattle with him, and not one of them failed.

The average Rugby Hall catalogue is swelling into leviathan proportions, and the 1861 meeting will be remembered from the fact that all the breeds were beaten by an Aberdeen-Angus cross heifer of Mr. M'Combie for the Innkeepers' prize and the society's gold medal for the best animal in the yard. By virtue of that victory in the neighbourhood, the Hereford ticket precedence of the shorthorn here, but the show of them was only weak, and the short-legged, early, and mellow little steer of Mr. Shirley was far away the best, although, like the winning cow, it was roughish in its shoulder points. The latter was of a motley colour, and had a most wonderful coat, and very neat skull. In the shorthorn cows or steer class Lord Spencer was first and second. The latter of the pair was the whole, in a high-level manner, with the sweetest back in the world, and did not stand particularly well on its hind legs. The second was much larger and commoner in its style, and Mr. Swinnerton had a nice picturesque bull in the steer class. Mr. Taylor, of Sewerby Cottage, near Bridlington, made, we believe, his maiden effort with, perhaps, one of the best shorthorn bulls out of the most perfect steers that we ever saw, both in level feeding and nice quarters, and good as the Duke of Wiley's was, it was quite a case of *facile princeps* with his brother Yorkshireman. The Duke of Beaufort and Mr. Langston, M.P., shared a commendation. Mr. Taylor's wonderful 20-guinea bull was the best shorthorn in the yard, and the whole of the best ox or steer of all sorts, and richly he deserved it.

The shorthorn cows were a fine average class, and the judges tried so high that they only commended two, and left Madeleine 4th (Mr. Rowland's prize cow at Warwick April), Mr. Wright's Daisy (second that same year to Frederick's Fidelity among the two-year-old heifers), Lady Pigot's 2nd Duchess of Gloster, which has been second best, third over at Rugby, and her Ladyship's Singapore of Hindostan, and Mr. Amber's Necklace, both very large winners, without even a commend. The steerable heifers were of uneven merit over, and feeling seemed only to have taken fresh off her neck to throw it up by the head, which she seemed to handle well for herself, and her nose state did not become her like the one she has left. As for Daisy, it is a relief to get rid of those dreadful little horns. The winner, which belonged to Sir J. Gerard, was but still we have seen more striking cows. Devons were few and pretty good, and here his Royal Highness the Prince Consort took the first and second prizes for steers, and the gold medal with one of them for the Devon; and the first prize for the cow, the cow which won the head prize at the Leeds Royal, and the very first Devon his Royal Highness ever bred. Badminton found the second in the Rector's book with Sir Wesley Hall, and Mr. Fabyanke and Lord Walsingham were supreme with longwools and shortwools. Despite all the talk about the Shropshire, and the undoubted success they have had in the superfetare have tried to meet down the idea that they owed anything to the Leicester blood, and Mr. Hall Maxwell has all his own and there here. His Royal Highness the Prince Consort had two first prizes for pigs, and a silver cup for the best boar in the yard; Sir Charles Knightley at the head of a class of Berkshire pigs so good that there were four high commendations, and a third prize recommended for next year. Still we have seen better small pigs in the poultry-house, and nothing in the sty glory, and Mrs. Ferguson Blair headed the premium list with her pen of three very shocking pigs, besides winning the first and second prizes for young geese (grey and mottled), for which Mr. Robert Peel Buck, was highly commended. The Pekin duck class was only third to Mrs. Mary Seamore for white Aylesbury ducks, but first for old geese, grey and mottled; while Mr. Tate, of Driffield, was invincible in the white geese classes. The Rugby Hall had nearly 2484 visitors, against 2026 last year.

The show-yard on Tuesday, and an enormous breath has been put in. Wheat still keeps up its price, while barley is a little lower, and good Lincoln wool is unsaleable. Mr. Bowman has been in the East perhaps they have gone rather too much for form in their longwools, and got their skins too open. Lean and fat stock keep up their prices, but the change of atmosphere has told on the Scotch cattle, and soft winds has been unusually trying, and sheep have suffered severely in some parts.

There was a large attendance of members at the Royal Agricultural Council meeting; and, after electing twenty-eight new members, and payment the proposed Highland Society (a list of subscribers to some £4000) in its integrity, it was unanimously decided to adopt the great system of public judging at the Council meeting at Bristol next year. The motion was made by Mr. Torr, who has for some years past been a supporter of the scheme, and was seconded by Mr. Hall Maxwell. The original motion only included members of the society; but, at the suggestion of the Hon. Colonel Wood, it was extended to all who chose to pay a sovereign for the privileges. Thus our foreign visitors, and those who do not care to enroll themselves as members of the society and entitle themselves to this privilege, will find the two journeys to their annual sovereign, will not be excluded. For ourselves we can say that we have not seen a more satisfactory method which we have left a keen interest, and for nearly three years we have never ceased to press its adoption on the society. Not one of the many meetings we have ever chaired at Leeds when they knew that there were great rings inside, and that nothing but an iron routine, so alien to all Yorkshire customs, would be tolerated. And we have not marked the way which they reached at half-past one, before the two last classes of shorthorns were judged, but the fact that half of the cattle were sent away before the sale. Besides giving members more privileges, it tends to increase their numbers, and by creating a great deal of additional instructive interest, and a beautiful national spectacle as well, it forces that growing interest both of landlords and tenants to the study of stock. Good actions in the farm-yard to which both in horses, cattle, pigs, sheep, and poultry, the world must come if they want purity of breed, and symmetry and early maturity are every day feeling this more. The show will also become more select, as breeders will not send bad specimens to run up the chances of being publicly beaten, as now they often do before such a critical and not very charitable assembly. Judges will have more time to do some justice to exhibitors, as the greater bulk of decisions will be better seen, and no herdsman can alienate their masters' minds with stories of "our beast's better had been cut." The worst feature of the present system, which puts a judge of large sheep, however good, being allowed to judge in those classes because he had a horse or a beast in the yard, is that he may have wife, and the scope of the committee's choice will thus be immensely enlarged. The adoption of the principle is a very honourable mark of the Prince Consort's year of presidency; and although the Battersea meadows are not so large as we could wish, they will be well, on account of the difficulty of getting cattle through London, if the locality could yet be changed, still we have full faith that Mr. Gibbs will overcome every difficulty and contrive ample space. The numbers, from 7000 to 12,000, have been in the yard on such occasions before this in the north, when the arrangements were of a much more ordinary character than those at the Royal will be, and all will get well. In the Bath and West of England to continue a close borough much longer, and will Mr. Hall Maxwell be supported in his present exclusive notions when '63 arrives? Ireland can be inclusive, but its stewards have to learn to be less jealous of each other before they can carry it out to perfection.



HARTEBEESTE ANTELOPES.—SEE SUPPLEMENT, PAGE 544.

ILLUSTRATIONS OF THE WAR IN AMERICA.

Our Special Artist in the Federal Camp on the Potomac continues to forward to us Illustrations of noteworthy incidents in connection with the civil war raging in that part of the States. Four of these, respecting which he writes as follows, are given on the accompanying pages:—Fifty miles below Washington the Confederates have constructed some formidable batteries on the Virginia shore of the Potomac, opposite to a place known as Budd's Ferry. Among the series of sketches forwarded you will find one showing Budd's house, and a small earthwork mounting two 10-pound Parrott guns, which the Federalists have there in position. Preparations are being made at the same point for attack on the Confederate batteries over the river; three exceedingly heavy ones having been unmasked. During my visit a dozen or so of small schooners of light draught successfully

THE CIVIL WAR IN AMERICA: "MY RECONNAISSANCE WITH GENERAL SICKLES IN THE POTOMAC."—FROM A SKETCH BY OUR SPECIAL ARTIST.

THE CIVIL WAR IN AMERICA: THE CONFEDERATE BATTERIES ON THE LOWER POTOMAC, VIRGINIA SHORE, OPPOSITE BUDD'S FERRY—GOVERNMENT STORE-SCHOONERS RUNNING THE BLOCKADE.—FROM A SKETCH BY OUR SPECIAL ARTIST.

THE CIVIL WAR IN AMERICA: THE TEN-POUNDER GUN BATTERY (FEDERALIST) AT BUDD'S FERRY, LOWER POTOMAC, OPPOSITE THE CONFEDERATE BATTERIES ON THE VIRGINIA SHORE.—FROM A SKETCH BY OUR SPECIAL ARTIST.

ran the blockade by hugging the Maryland shore closely, where the water shoals considerably. Heavy vessels dare not risk it, as the deep channel lies right under the batteries, and the consequence is the blockade of the Potomac may be looked upon as effective. We on our side watched the little ships anxiously as they came within range of the enemy's guns, which they no sooner did than a terrible fire of shot and shell opened upon them, not one, however, being struck seriously, and all enabled to keep their course down river. We, the spectators, ran probably more risk than the vessels, for many of the shells came over to our neighborhood, bursting in close proximity to where we stood. Our turn then came, and we gave them a few rounds from the five Parrotts, pitching the 10-pound shells right into their works, and perporting a steamer, one of the Confederate navy, until they were driving the last four boats' crews into Cockpit Point, at this point in a mile and three-quarters in breadth. My "Reconnaissance with General Sickles in the Bed of the Potomac" will be a very remarkable ride, for nearly the whole time we had to wade to our horses' girths in the river itself, sometimes even swimming, the banks being impassable in places. The neighbour hood is Indian Head, close by the batteries.

WILLS AND BEQUESTS.

The late Right Hon. John Viscount Arbuthnott, who had attained the advanced age of eighty-seven, having died intestate without marriage or issue, his extensive estates have only now been granted by the Court in London to his uncle, the present Viscount, the Dowager Lady Arbuthnott having died in her widowhood. This and nobleman had a large family, his youngest child being born in 1824. It is to be presumed that the Viscount had landed estates which, together with the personal property, will have to be tested according to the late Government scheme of administration and succession duty inheritance.

The will of General Dennis Herbert was proved in the London Court on the 4th ult., by his daughters, Miss Isabella Francis Herbert, and Mrs. Charlotte Rimon, widow, joint executrixes. The personalty was sworn under £7000. The will bears date in 1852, and is very brief, and the General died on the 19th of September last, aged eighty-five. His eldest son, Captain Herbert, is disposed of his property, consisting of realty and personalty, principally to his remarried children, in equal proportions; and he has bequeathed to his wife all arrears of pay which may be due to him at the period of his decease in addition to the annuity provision allowed.

The will of Lieutenant-Colonel Henry Conway, formerly of Bodfel, Carnarvonshire, of Bachmont, Caernarvon, and late of Charlycwood House, Surrey, and Guilford, has been proved in London on the 15th ult., by the executors, William Wickham Cushing, Lieut.-Colonel Richard Conway, and the Rev. Edward Conway, all of Guilford, Esq., the personalty being sworn under £140,000. The Colonel died possessed of very considerable landed property, which he has bequeathed in the following manner:—To his wife an annuity in respect of dower, together with the household furniture, plate, linen, china, and carriages, &c. To his son, Colonel Conway, Esq., an annuity of £600. To his daughter the freehold and leasehold estates are devised for life, and on her decease to her children, if there be any, and in default to the eldest son of Major of issue. The entire residue of the property is bequeathed between the Colonel's five sons and his daughter. The will bears date the 14th of March, 1857, and the Colonel died the 29th of September last.

CALENDAR FOR THE WEEK.

SUNDAY, 8.—2nd Sunday in Advent.

THE SCOTTISH WIDOWS' FUND LIFE ASSURANCE SOCIETY.—Head Office, 9, St. Andrew-square, Edinburgh.—Is now, in course revenue and extent of business, the largest Office in the kingdom.
1. BONUS SYSTEM.—The last bonus for the seven years ending December, 1859, yielded additions on the sums assured of from £1 per cent per annum at the youngest ages to £2 per cent per annum on the oldest policies, which was equal, on an average, to from £40 per cent to £50 per cent on the premiums paid during the seven years. The next bonus will be declared by the 1st December, 1866.
2. CASH VALUE OF POLICIES PAYABLE ON DEMAND.—Each value is allowed at any time on the lapse of a policy in the option of the assured, equitable values, which neither entail on the remaining members additional liability nor diminish the bonus.
3. FUNDS AND REVENUE.—Funds exceed £4,000,000; annual revenue, £410,000.
Applications for Agencies may be addressed to the Head Office, or to the Agents.
London, 4, Royal Exchange-buildings, Cornhill, November, 1861.
JAMES WATSON, Jun. and R. S. BIRCH, Managers. Bankers, Bosanquet, Salt, Forbes, and Co. Solicitors, Messrs. Wilkinson, Pritt, and Pritt. Actuaries, Messrs. Sprague and Thomas.

THE LIFE ASSOCIATION OF SCOTLAND, 1825.—Head Office, 5, St. Andrew-square, Edinburgh.—Invested Funds, £1,500,000. Annual Income, £300,000. Bonuses have been declared at the close of each quinquennial period, and the Bonus Reserve Fund is sufficient to meet the claims of the Policies which will participate in the above advantages, and also any bonus accrue from proposals of later date.

CATTLE SHOW, 1861.
Lobb's Dog-coats.
Lobb's Leather Riding-coats. Frank Adelmann.
Lobb's Ladies' and Gentlemen's Riding-coats.
Lobb's Waterproofs.

NATAL, South Africa.—The LONDON JOINT-STOCK BANK, 5, Princes-street, London, RECEIVES MONEYS for account of and grants LETTERS of CREDIT on, the COLONIAL BANK of NATAL, the BANK of NATAL, payable at Pietermaritzburg or Durban free of charge.
The present rate of interest is 5 per cent.
" " discount 5 per cent per annum.
" " exchange 1 " "
Interest payable half-yearly in London, Cape Town, Pietermaritzburg, or Durban.
JAMES W. JACKSON, General Manager.
Durban, Port Natal, the 16th December, 1861.

SMART'S WRITING INSTITUTION.—Open from Ten till 5. Nine daily.—Persons of all ages received (privately), and fourth at any time entered (privately), and taught to write in a few lessons. No classes. No slates. No stooping. Terms, Two Guineas, Entrance Fee included. Separate rooms for Ladies, to which depart-ment of penmanship is exclusively devoted. Separate rooms for Gentlemen. Private lessons at pupils' residences. Testimonials and Prospectuses forwarded.—Mr. SMART, 337, Strand, W.C.

TO PRINTSELLERS, FRAMEMAKERS, &c., &c.—The Exquisite CHROMO-LITHOGRAPHS and choice LACE ENGRAVINGS of the Collection of Mr. Gambart, Paris, are now on sale at the hall, private gallery of the late remarkable copies of some of the oldest things ever produced, which will be shortly SOLD BY AUCTION. The Lace Engravings are unique, and the Chromo-Lithographs are the finest ever produced. Catalogues and Specimens may be had at the Gallery, 121, Pall-mall, next the Athenæum. Apply to DAY and SON, Lithographers to the Queen, 6, Gate-street, Lincoln's-inn-fields, and 121, Pall-mall, next the Athenæum.

CULLETON'S HERALDIC STUDIO.—For finding the Correct Armorial Bearings, Pedigrees, and Family History of nearly every Name in this Kingdom, apply personally or by letter to CULLETON'S HERALDIC OFFICE, 25, Cranbourn-street, Leicester-square, London. Fee, £1 1s. Plain Sketch, 2s. 6d. Arms Painted and Engraved on Seals, Rings, Dies, Steel Plates, &c. Gentleman's Crest, Cypher, and Address on 100 Cards, 10s. 6d. Culleton's Guide to Heraldry, 300 Illustrations, 12s. 6d. Boudoir Album, 21s. Crests Painted on Vellum, 5s. Culleton's Heraldic Studio, 25, Cranbourn-street (corner of St. Martin's-lane), W.C. Tradesmen and Library agents liberally dealt with.

BOOKPLATES Engraved with Arms, Crest, and Motto, 15s. Crest on Seals or Rings, 7s.; Crest Dies for Stamping Paper, 5s.—T. CULLETON, Engraver to the Queen, 25, Cranbourn-street, W.C. Arms Painted in their Proper Colours, 5s. Hints for Selecting Crests, 1s. Book of Reference, 1s.

STAMP YOUR OWN PAPER with Crest, Initials, or Name, without ink, by means of CULLETON'S PATENT EMBOSSING PRESS, 21s. Crest Dies, 5s. Initials, 5s. Name, 5s. Culleton's Illustrated Catalogue, Gratis and Post-free. Culleton, Die Sinker to the Queen, 25, Cranbourn-street (corner of St. Martin's-lane), W.C.

SOLID GOLD RING, Hall-marked, 18-carat, engraved with any Seal, 50s.; Ditto, Hall-marked, Fifteen-carat, 40s.; Hall-marked Silver Wedding Ring, 5s. Culleton's Illustrated Catalogue, Gratis and Post-free. CULLETON, Seal Engraver, 25, Cranbourn-street (corner of St. Martin's-lane), W.C.

THE PEN SUPERSEDED.—MARK YOUR LINEN.—The most fast and only method of marking linen is with CULLETON'S PATENT RUBBER STAMPS and Movable Numbers. Any person can use them. Initials, 2s.; Name, 3s.; Set of Numbers, 2s. 6d. Best Marking Ink, 1s. Cheap Ink, 6d. Stamps for Dating, Crests, &c. Catalogues Gratis and Post-free.—T. CULLETON, Seal Engraver, 25, Cranbourn-street (corner of St. Martin's-lane), W.C.

50 VISITING CARDS IN ONE HOUR.—A Copper Plate engraved in any style and 50 best Ivory Cards for 4s. post-free. WEDDING CARDS, for Lady and Gentleman, 50 each, 10 Embossed Envelopes with Maltese Name per cent ad-ditional. Arms, Crests, Monograms, Dies, Seals, Rings, Steel Plates, &c. Sent free.—T. CULLETON, Seal Engraver, 25, Cranbourn-street (corner of St. Martin's-lane), W.C.

HOSPITAL for CONSUMPTION and DISEASES of the CHEST, Brompton, London, S.W.—Many Two Hundred In-patients and non-hundred Out-patients are constantly under treatment at the Hospital. Additional FUNDS are earnestly SOLICITED in order to meet the increase, which will occur early in January.
PHILIP ROSE, Hon. Sec.; HENRY DOBELL, Sec.

THE INTERNATIONAL EXHIBITION OF 1862.

TO INTENDING EXHIBITORS.

THE conductors of the ILLUSTRATED LONDON NEWS, being desirous to give as complete and methodical an account of the approaching International Exhibition as it is possible to produce, beg to invite intending exhibitors to whom space has been allotted to forward to them particulars of the more important objects they propose displaying, accompanied, when necessary, by drawings or models for the purpose of illustration.

The object of the conductors of this journal in reporting upon this great international undertaking is to omit nothing that may be of interest on illustrating the progress and condition of the various branches of industry at home and abroad, and to give to every subject that amount of space and prominence to which it may be justly entitled. To examine into the nature and determine the relative importance of the several works exhibited will necessarily be a work of considerable labour and time; and the conductors of the ILLUSTRATED LONDON NEWS therefore venture to urge upon all who wish their productions to be brought before the world in their pages to favour them with their communications in relation to these at their earliest possible convenience.

Artists and others intending to exhibit Paintings, Sculptures, &c., which from their nature require considerable time and care in engraving, are more particularly urged to pay early attention to this announcement.

It need hardly be added that all subjects adopted for illustration in this Journal will be selected simply upon consideration of their merits and public importance, and that in no case will any charge be made for engraving.

THE EXTRAORDINARY

CHRISTMAS DOUBLE NUMBER

OF

THE ILLUSTRATED LONDON NEWS

TO BE PUBLISHED ON SATURDAY, DEC. 21.

WILL COMPRISE

A Large and Beautiful Picture (Four Pages), PRINTED IN COLOURS, THE

BURGOMASTER'S DESSERT,

FROM A PAINTING BY

GEORGE LANCE;

WHOLE-SHEET CHRISTMAS SUPPLEMENT,

CONTAINING THE FOLLOWING ORIGINAL TALES:

THE MIDDLETON BOUGH ... ... By Anthony Trollope: Illustrated by John Gilbert;

A PEARL AMONG WOMEN ... ... By H. Leslie;

Illustrated by L. Huard;

A LEGEND OF RAVENSHURST ... ... By J. Saunders, Illustrated by R. P. Leitch;

THE CURATE OF GLENDERRY ... ... By W. J. Stewart, Illustrated by S. Read and J. D. Watson;

AN ORIGINAL SONG;

CHARADES and CHRISTMAS AMUSEMENTS written by Mark Lemon; and other seasonable matter;

AND THE FOLLOWING CHRISTMAS PICTURES:

FIRST CHRISTMAS FROM HOME ... Drawn by A. Hunt;
CHRISTMAS PRESENT... ... ... ,, E. Duncan;
WHAT I SAW IN THE FIRE ... ... ,, A. Crowquill;
THE SPIRIT DANCE ... ... ,, H. K. Browne;
CHRISTMAS MUMMERS ... ... ,, A. Hunt;

In addition to which the usual Paper and Supplement, with all the News of the Week, fully Illustrated: comprising in all (the Number and Three Supplements) Eight Sheets.

Price One Shilling—Stamped Copies 2l. extra.

To ensure a supply, orders should be immediately given to Newsagents and Booksellers.

NOTICE TO ADVERTISERS.—Advertisements for the CHRISTMAS Double Number, Dec. 21, cannot be received later than the 16th inst. Terms, 5s. a line of ten words; lowest charge, 12s. for thirty-four words.

LONDON, SATURDAY, DECEMBER 7, 1861.

THE one topic of the day is the great question whether American democracy will permit American statesmanship to do right. No other subject has any claim to present discussion. For it is impossible to talk of any other topic, or other of the ordinary themes of the journalist, when England, making a stand for her honour, but in nowise irritated or unreasonable, awaits the tidings whether the New Year is to be inaugurated by the signal for war. At another time it might be interesting to hear that the Mexicans have resolved not to risk a struggle with the great Powers that have united to put down piracy and ruffianism in Mexico, and to assert the rights of civilisation. We might be glad to know that there was a probability of these objects being effected without bloodshed, and we might urge upon the Governments to be in no hurry to believe in the value of promises extorted by fear, and which must be rendered valuable by material guarantees, and by the condign punishment of those who are indulging in their usual vein of tyranny and robbery. But an expedition which excited some interest a month ago may now sail almost unmarked, except that England casts a not unsatisfied glance at her own share in the ships, and is glad that they are sailing westward. The Indian news is far from uninteresting, but, except that we shall be glad to hear that the Indian cotton crop is likely to be quadrupled, we have not much attention for the Oriental Empire. On Christmas Day many of the gathered households of the country may be graver than is their wont at that season.

> The mother looks on her son to-day
> With a troubled heart and eye,
> And the maiden's brow hath a shade of care
> Mid the gleam of her golden hair;

for news, like that of the German legend, that "the Wild Huntsman hath gone by" and that war is coming, may sadden the homes of England. Yet throughout the length and breadth of the land there is but one cry,—We must uphold the old flag.

The smaller domestic topics of the week may be thrown into a single paragraph. The terrible Edinburgh casualty has been too sad to be dismissed into forgetfulness, and a noble subscription has been raised for the benefit of the survivors in need and, especially for the poor little children who in an instant became orphans and homeless. English liberality may well help in the cause. The vacancy caused by the retirement of Mr. Justice Talfourd from the Bench has been filled by the appointment of Mr. Mellor, the Recorder of Leicester, and the lawyers do not grumble more than usual (no appointment ever pleases them entirely). The run at Carlisle was so close that no doubt both parties found themselves to the winning; and the chance desire to petition against Mr. Potter's return on the ground that Liberal zeal has outstripped legal discretion; but one is accustomed to hear these things during the first discomfort of a defeat. The decision of the authorities in the case of the Wooler witch-cake may be technically justifiable in fact, it is scarcely opposed to the feelings of the day that young gentlemen of eighteen or twenty should be treated worse than shoolboys are used that we presume the rather arbitrary-sounding sentence is given as a sop to the spectators, and that a new sentence will be arranged. Another military murder has been committed. The frequency of this species of murder is now matter of such general comment that the authorities will certainly be compelled to consider whether it is meet that brave soldiers and valuable officers are to be constantly at the mercy of the ruffians of whom every hundred from the lower class of society must contain a considerable percentage. Finally, as the only bit of political gossip, it may be mentioned that the Conservative party are to have a meeting, and that much talk from their ranks one who might some day have been their wise leader—namely, Lord Stanley, who, declining to subscribe to the test about the danger to the Church, is in a fair way to be ostracised.

THE INTERNATIONAL EXHIBITION, 1862.

WE are sorry to find that the apprehensions already more than once submitted by us as to the possibility of the Exhibition Building not being completed in all its parts by the time specified assume more and more gravity every day. We stated last week that the only arrangements in the way of the satisfactory advance of the works are the ornamental domes, in the construction of which, we learn, more difficulties continue to present themselves, principally upon the fitting of materials—than were at first anticipated, or than might reasonably have been looked for in a country where the most gigantic engineering works have hitherto been carried on with a rapidity, punctuality, and precision which have been the admiration of the world. For the sake of our engineering and architectural character it would be certainly to be regretted if there should, after all, be cause for disappointment in this particular when all the world comes to see on "our opening day," on the 1st of May next; but from what we hear during the week it is now seems that the non-completion of the domes will be of even more serious consequences than we first thought it, inasmuch as the contractors are unwilling to undertake the fixing of the glazing. The insufficient lighting of the nave by means of its clerestory windows, and the consequent gloom that will at present seem now to be generally admitted. We now gather, however, that the nave was intended to depend in great part for its illumination upon head means of glass which are to be let in through the glass roof, and that those enormous domes at either end (a very questionable expedient, it may be observed, for lighting a gallery 600 feet in length and 100 feet high); and that, should the domes not be in condition to afford this supply of light, the nave must necessarily remain dark. Such a contingency would have taken the heart of a bastard glazing, will have to be resorted to with regard to them for the purpose of obtaining it.

The privileges of supplying refreshments has been awarded, to two several contracts, to Messrs. Morrish and Saunders, and Messrs. Welland and Garrod. The former, though hitherto unknown in the metropolis, enjoy a very high reputation in the northern districts, particularly at Leeds and Bradford, where they have in a high degree represent the culinary art and enterprise of France. We think it is satisfactory that a company composed of men not established in this matter. Though, in strictness, the monopoly will be nearly divided into two equal parts, in two several hands, a principle of rivalry will be brought to bear on the most important department, strictly in consonance with the spirit in which the "International Exhibition" is founded, and the latter, which, after all, will feel but hitherto ghosted—the roast beef of Old England, with London or Dublin stout and Bass or Allsopp's pale ale. Under the will be the fullest integrity on the one hand, whilst French potages, entrées, and rotis, with an abundance of light wines, will go to make up the provisions on the other. Upon the ground of an interchange of "notions" tions to be established between the eating communities of the two countries the amicable connection thus arranged upon will, we believe, prove most useful in its results. With respect to the principle upon which the contracts for refreshments have been made (by sealed specimen candidates) was made, some of the writers in the daily press inform us that the contractors were not so much influenced by the money payment proposed in the several tenders as by a regard to the effectual and satisfactory manner in which the supply of the public should be provided. This principle is certainly to the advantage of the public, but it cannot, we think, be said that the commissioners have made a very liberal return for the concession. It is said that they will receive a rental of £50,000 for these concessions, independent of headmoney, or percentage upon receipts. Supposing the attendance to be open for twenty-four weeks, and an average of 50,000 persons to visit it daily, the gross receipts will be £6,000,000, and the sum paid for the right to about one penny per head for every visitor. With regard to the tariff at which refreshments of various kinds are to be supplied, we are glad to understand that it is not intended that the same charges which are made in the leading conditions originally propounded by the commissioners. The most extravagant charges will be those which are directly involved in the rental, to say nothing of any additional payment that may be exacted, would be closely connected with and in connection with any idea of profit; and to make up for the loss upon the supply of the humbler visitor out of the profits obtained from the wealthier. Everybody would be to put both classes of customers in a false position, most undesirable in every respect.

The arrangements adopted by the commissioners in getting up the Illustrated Catalogue of the Exhibition has called forth some severe remarks amongst manufacturers and others interested in the matter, based on the extreme of what is proposed, will be liable to great objection. In 1851 it may be recollected that the privilege of publishing the "Illustrated Catalogue" was sold to Messrs. Clowes for £2000, who required that the cost of drawing and engraving should be paid by the exhibitors. The result was that as many works of comparative insignificance have taken the Illustrated Catalogue into their own hands, with all the profits thereunto accruing, and have determined, as we understand, that no work shall be illustrated unless the exhibitor pays for the engraving according to the space occupied. To this end the various wood woodblocks, with their respective prices affixed, are open to inspection of all comers, who may choose, large or small, according to their means. This surely is a practice very much akin to mere advertising, putting selection on the part of the "editor" almost out of the question, and consequently destroying the value of the catalogue as that a well-informed and impartial record of the contents of the exhibition.

Our Engraving this week represents a picturesque scene enough, which takes place in the closing gloom every evening—the workmen employed upon the building (in round numbers, some thousands) leaving the building and proceeding to their homes. Such a mass of human industry and intelligence was perhaps never before seen issuing from one field of labour of similar dimensions. The men employed upon this great work, we understand, are all picked men of their several classes; and, from all we have heard, as well as from what have observed of their manner of executing their several tasks and of their general demeanour, we should say that a finer or more respectable body of working men was never brought together, and that their selection and management reflect great credit upon the contractors, Messrs. Kell and Lucas.

The point of view from which the men emerge is in the Commercial-road front, from the grand ecclesiastical entrance to the picturesque offices of which we gave a View last week. In reference to this part of the building we are requested to state that an alteration has been decided upon since the drawing was made from which our engraving was taken, and that instead of the figure of Britannia, intended to ornament the entrance, a large dial of a clock, manufactured by a well-known firm, will be placed there. The point of view taken by our artist also affords him an opportunity of showing the row of houses on the opposite side of the road, exemplifying the restricted street space which surrounds the building on all its sides of approach, and which in a former article we remarked soon as an unfortunate condition of things.

NATIONAL SPORTS.

THE professional racing world, which has flitts more or "doubtless" to amuse itself with, is now being treated to its annual stabbles. The list of sires followed hard upon that of the jockeys, and among these Stockwell has quite come to the fore. Sixty-nine of his get have run 306 times, and they have won nearly £34,000. The Flying Dutchman, similar to Doncaster, has also had a great season, with stands second with £13,572. Orlando (sire of Diophantus) is third with £13,471; Newminster (sire of Somers) fourth with £13,019; and King Tom (sire of Old Colabar) fifth. Kettledrum is brought Rataplan into the sixth place, and Kingston, Will Daywell, and Voltigeur, the former with about £400 and the other two with £5000, follow in order. As regards the two-year-olds, Old Calabar is first with £2700, Ely with £1100 in advance of Marpin; and Pathe brings Lord Stamford up a good third with £2070. Toluroo, £1057, and King of Hearts, £1140, follow next; and, Scobie to the Blood Duke Stakes, Lord Glasgow's Chelsea colt gets sixth in the order of merit. Outcaste will, it said, still ride for Mr. Merry, who has let Dundee to Mr. Blenkiron, and Jack Goddard is with his humble once more.

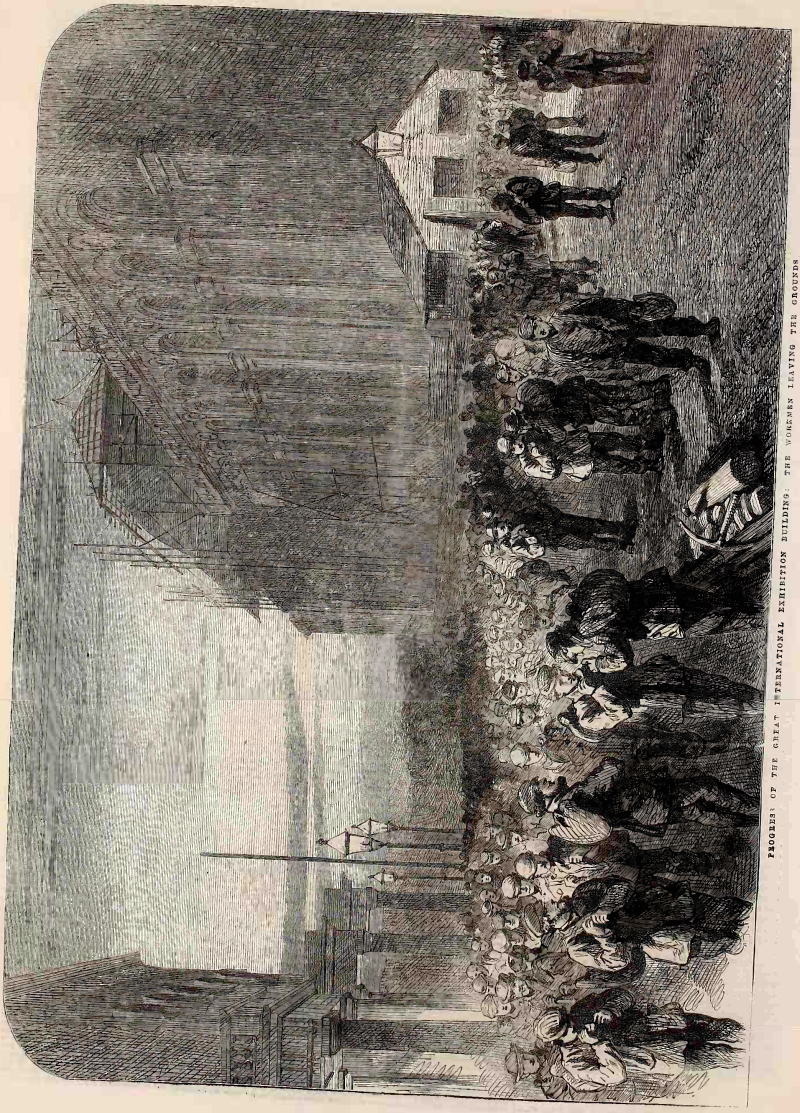
The Mechanics had a pretty good time of it at Marlean; and at the Welcome Club Mr. Rust just missed the Cup with Elixir, a daughter of Effort, who was, however, beaten easily by Faith, a daughter of Dundonan. Ann of Corby went down before Sophia, a son of Dovid and Dundee, by Sunbeam, was also a winner. At the Round, Lord Lurgan had it all his own way, both in the St. Leger, with three puppies all distinctly bad, and Lord Clifden's Ascobie, in the Cup. Hart's blood was twice second in Hampton Court, with Buff Rose beaten by Mr. Lowe's Bald Eleven, and first with Brian and Bright Chandelier, who divided a stake with Brook o' Doy Boy. The coursing meetings and the entries were first Cumberland, Chesterton, and Spelhorne Club, on Tuesday and Wednesday; Kendal Club, on Thursday; Sudbury, on Thursday and Friday; and Thornley (open), on Thursday, &c.

The Birmingham Dog Show was a great success, and, considering the size and scope which Mr. Burdett Coutts has laid down for the working-up of the thing) and Mr. Braisford, the general manager for the week, have brought to bear upon it, it may well be the pattern for all others. Like the Fancy Dog Charities, visitors had to pay 1s. as it was requires much improvement. The position of the centre table caused a complete block, and the door keeper for the time was useless, and must have been almost smothered when it was high tide with the crowd. Some 4,000 were given away, and there were 600 purchase silver cups, which made a beautiful array. Eleven bloodhounds of both sexes came, and old Druid was in his glory with the ten-guinea cup, and Lord Bagot's Ruby with the five-guinea one. The Cheshire pack sent nothing to the foxhound classes this year; and the entries were few and poor. Mr. Foljambe's Belvoidere and the Atherstone, and the above was their order of merit in each class. The two winners were exceedingly good, and Arthur had won the puppy prize in her kennel this summer, while her companion was a dashing, three-season hunter, with a head like a Thorn.

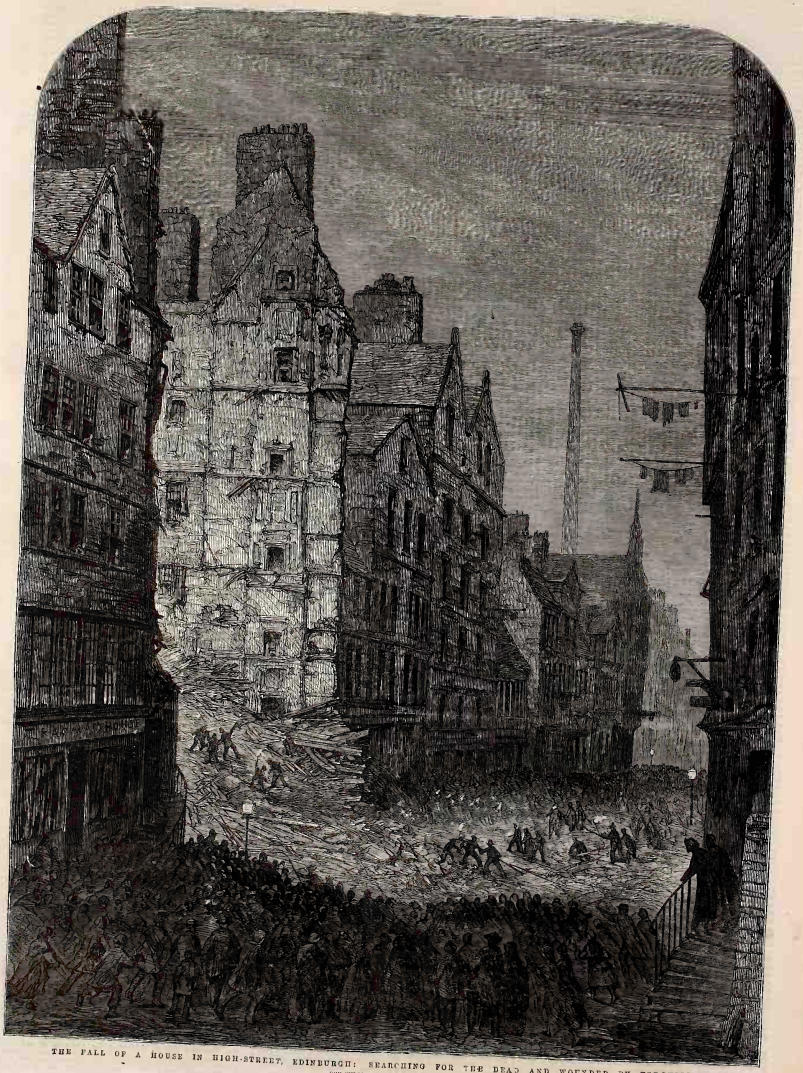
The Setter carriers won all four classes, as well they might; and Mr. Hensley, of Cambridge, threw out of the four bench-goes. Viscount Dill was unopposed in orthodoxies, and Lieutenant-Colonel Hogg had it nearly his own way with dorebounds. There were twenty greyhounds, but as Lord Sefton or Canonbie among them; and the latter in the only class was withheld. Seventy dog pointers of the large size contended, and a very magnificent fellow (Ranger), belonging to Mr. Price, of Newtown, Montgomery, or Rainsley Lodge, Stafford, won by Cheshire, Herefordshire, Middlesex, and Yorkshire ranked next in this fine strength; and the Earl of Derby's Jane was held in the larger pointer class, in which eleven were engaged intellectually against Mr. R. Purdey's Rush. The stag-vow was small; twelve puppy fairly divided between the sexes, and Mr. E. Bailey's lemon and white Dash and Mr. Worsey's Boss were the winners. Rockbirds and Dandies mustered two women to the English setter classes (36 strong), in the first of which Bob, the first prize-winner at Darlington and Birmingham last year, only came second. Sir John Hurst Guise, Bart., headed the black-and-tan class with Ned and Rock, head by Mr. Hall, of Birmingham, among the seventy-odd fallow setters Mr. G. Jones, near Birmingham, did well and a retriever of Mr. Riley, of Halifax, moderately priced at 10gs., had to succumb to Mr. Hall's dog and one of Mr. Lort's next to him. Mr. Holford, M.P., had two flats, and Lord Spencer and Mr. Bonler each a second for Cumbers; and a Russian setter beat a Russian wolfhound. Several Hindoos mustered as an Egyptian greyhound in the extra class. Field sports altogether had 444 representatives, and we do not think that two per cent of them were absent.

The other division comprised 121, and the winning mastiff, a fine cream-coloured fellow, came from near Leeds. We like the second Newfoundland more than the first, but few of them had heads at all up to the mark. Birmingham had a fine set and middling prizes with its King Dick and Wadman, and one of the winning sheepdogs came from Scotland. The terriers were good, and the Skyes and Italian greyhounds and Blenheim spaniels continued to about see much; while a Cuban, a Chinese, and a Sacred Ibis, and a French poodle, were present also. The game ranked out for distinction from Messrs. Wickstead and Tailby, a present and retired trainer, and there were among the eleven judges; and in the forty-five classes 119 prizes (ten of them extra ones) were given, and two were withheld. The Field system was highly and generally approved of. Bramham and Peter judicially styled a "very good," and Chumber spaniels a "most excellent" class, and two cobs, Lord Derby and Mr. O.'s were given to the bulldogs, rather an appropriate compliment to the town.

Dorchester ran with Mills, Barker, and Brighton, for the Dorchester nine mile challenge cup at Lewes. Mills gave up in the twenty-sixth lap out of the forty-four, and Brighton was in distress at the forty-first, and was beaten at last by Barker. Barker got home in 1hr. 10min. 10sec., being the shortest time on record. Dorchester ran 25 min. 10 sec., being the shortest time on record. Dorchester ran in the presence of the Prince of Wales, as well as some 5000 spectators, at Cambridge on Wednesday, and detested Brighton and Barker tetore, at Cambridge on Wednesday, and detested Brighton and Barker tetore, at Cambridge on Wednesday, and detested Brighton and Barker tetore



PROGRESS OF THE GREAT INTERNATIONAL EXHIBITION BUILDING: THE WORKMEN LEAVING THE GROUNDS



THE FALL OF A HOUSE IN HIGH-STREET, EDINBURGH: SEARCHING FOR THE DEAD AND WOUNDED BY TORCHLIGHT

SEE SUPPLEMENT, PAGE 564.

MEMBERS OUT OF PARLIAMENT.

THERE have been not a few students in the school of the immortal satirist who "smiled Spain's chivalry away," and Quixotism, being interpreted into a simple search after adventures, has found many exponents besides the literal imitation of Smollett and the virtuous transcendentalism of Hannah More. At the present moment the type of that restlessness, which may be called as being gentle with a pun on the pose, is to be found nowhere so remarkably exemplified as in the leader of her Majesty's Opposition. Something of the spirit of the mysterious hero, an idea of whom has been attributed to Dr. Croly in his fiction of "Salathiel," and whose popular designation has been heredity adopted as one of the nicknames of Eugene Sue, serves to have come over the political impulses of the chief of the Conservatives in the House of Commons. A statement was made in the course of the debate on Friday which is more curious, not to say equivocal, position than the Tapers and Tadpoles of his own creation. A few years from Berkshire, to the Treasury bench, and down the platform of the railway station at Sandalford, and probably observant of the scores of the provincial three-compenny-bit, just such as the dodo, is now seen on the consciousness of their like when accident has brought into the holy of the House what would have elicited a debate had not he beguiled the time by showing how familiarly and in what accomplished a grace orator, at that very moment engrossed with commonplace a great speech, could converse on a weary occasion, on customary topics, with the supreme equal Deighton of the period. Safe through such a social peril, we next find him at Durham, whither he has come to assist at the inauguration of a statue to a very efficient cavalry officer, and one of the best-dressed men of his time, and while his public exploits, we may certainly remember, are by no means exactly what we call distinguished. Nothing could be more amusing than the way in which Mr. Disraeli showed his failure of astonishment at the fact of finding himself in the position which he then occupied. The elaboration of his apologies for knowing nothing about the Durham Light Infantry, and for the way he was desirous of intruding himself into an occasional a ceremony which was essentially local and of a purely provincial character, deserved a debate of its own. It endeavored to prove that the late Marquis of Londonderry was entitled to statue, because that, as Miss Peacock proverb relates, he had perpetrated a rugged English verse, and which indicates a certain nobleness of character, was strong in his mind. After this came a list of stereotyped eulogies and definitions of the House of Commons, the upshot of the speech—to deliver which he had travelled all those strange miles—was to present himself to the electorate, to him semi-strange regions—was that, being just now wholly unattached, without a policy as leader of the Opposition, and with the party the elements of which he nominally held slipping through his fingers, he was glad to avail himself of any opportunity likely to afford him a platform, and, therefore, to be a certain pathos which underlies his address; and there is undoubted a something melancholy in the attempt which this political pilgrim now occupies in the arena in which his best feats of skill have been displayed.

In the remarkable personification of political and human affairs which have prevailed of late years there seems to be only one vein of discoverable, and that is the opposition between their functions and their official leaders. We have just left the leader of the Conservative party stranded, and, having for the very opposite reason, we have in the Bright left by the force of circumstances nearly if not, indeed, more high and dry. In the autumnal demonstrations of the country not a Parliament has been without its two heads. This week he breaks a silence which the world believes not to be so much self-imposed seclusion from both the political and provincial platform as the impossibility of a seat in the Lancashire, but in the great British, sense—for Mr. Bright has long attained a position which causes whatever he says to be addressed not to Manchester but to the country. Any one who has watched Mr. Bright's career in Parliament since he first took his political bath has from the House knows how large is the infusion of the practical into his speeches and his conduct. He has learnt to face facts and accept circumstances by circumstances, and in the power of human destiny, and still less the power of mere declamation, will not hid to budge an inch. He has had significant fixtures of opinion of late, that which may be called the abstract, which still characterises his speeches are mostly marked by eloquence and power, but which is taken a common-sense view of things as they are, and does not believe that they can be changed by elaborate descriptions of what they think they ought to be changed by. He says what he believes should be the condition of things in this country; but he does not now speak as if he deemed that he should witness the realisation of his theories. It is evident that he holds that the machinery for working out his ideas is wanting, because somehow the people are lacking in the moral qualities for the pursuit of personal and national prosperity presents more tangible results than a host of political perfection; and one can hardly but admire the feeling with which he has declared his hope that he shall never witness a politician or social agitation again. The spectacle of American horrors have been mortifying and saddening to him of all men; and it is his simple justice to say that in the speech at Rochdale he has given the most candid and unbiased view of the war which any public man has been expected of late.

In the last Session Mr. W. E. Forster, the new member for Bradford—who, by-the-by, in a very short time took a very prominent position in the House—was unable to see any other means to vindicate the cause of the Northern as against the Southern States of America. He too, most feel himself placed rather in a contrast by recent occurrences. It was reckoned for a leader of the party speaking in that capacity, to have to deal with the question of war with the United States, but on the whole, Mr. Forster has come very well; and probably there is no Englishman who does not in his heart of hearts, be he hine, desire that there may be no other war with America, and who does not hope that America herself may save us from such a dire necessity.

Some of the "little men," as the more obscure members are familiarly called, have been speaking out on this subject. For instance, the members for Sandwich have said their say, and will not Captain Scott, perhaps, ought not to be excommunicably lumped among the "little men" of Parliament, because he was for a year promoted to the staff of the Conservative whippers-in, vice Sir William Jolliffe, retired, although he is by small men, and representing a purely rural county in England, yet as a cavalry and yeomanry officer he was entitled to be a little more warlike in his tone than his colleagues Evans and Smollett, who are not of the "Light Brigade" and Hebdomadal Council.

Some of the "little men," as the more obscure members are familiarly called, have been speaking out on this subject. For instance, the members for Sandwich have said their say, and will not Captain Scott, perhaps, ought not to be excommunicably lumped among the "little men" of Parliament, because he was for a year promoted to the staff of the Conservative whippers-in, vice Sir William Jolliffe, retired, although he is by small men, and representing a purely rural county in England, yet as a cavalry and yeomanry officer he was entitled to be a little more warlike in his tone than his colleagues Evans and Smollett, who are not of the "Light Brigade" and Hebdomadal Council.

To a critical audience, such as that which met Ristori, one of the most entertaining exhibitions in the House of Commons is a speech from Mr. Roebuck. This "member" is not, like Bright, Cobden, or Lindsay, he always gives warning of his coming eruption. In the course of a great debate he may be seen to take, night after night, his seat, and after loading it with steely peritonitis, but occupying it most uncomfortably, and thus giving his son an object for his body literally, and, sometimes little handle of papers peeping out of his right hand. As to the expression of his face, the mingled self-complacency, eagerness, and severity that are there depicted, it is not to be appreciated. Somehow, after a series of false starts, he contrives to get out, occasionally when the House is very full, and strange to say, with all his presence, he has not reached that position in his party which would entitle him to be selected from the number of speaker on the other side, or to have a moment chosen for him when he may have a clear audience. It is true, Mr. Disraeli sometimes gives him, turns round to listen to choice him, and it possible, mentions his speech the next time he addresses the House. Perhaps this is derived from a habitual familiarity with an unbilious member who has learnt to refuse to recognise, and who is determined "that the time shall come when they shall hear him." For the rest of the present parliamentary year we hope that the time is long distant when pluckidinous pomposity, elaborate composition, idle proverbial expressions, philosophical, or sought to be made antithetical for humiliative use, and an air of personal persecution, shall constitute an unimpeachable claim to be heard in the House of Commons. If a member be something such as has been indicated in that great school for bringing every man to his true level, what must he be on his native heath, and amongst those who must be supposed to believe in him? Alas for Exeter!

Another member has gone "out of Parliament" in a manner the most satisfactory to himself. Nottingham has lost one of its members, and the Court of Queen's Bench has got (we have not heard anybody say gained) a new Judge. In a choice of mediocrities, mediocrity must be chosen, and there is an end of the matter. Speaking from this solemn, and with a view to future materials for subject-matter of a cognate nature, we hope that Mr. Harper Twelvetrees will assert a decided position at Nottingham, and be the new member. The reformation of Mr. Cox to the representation of Finsbury, of which there has been a gleam, would be equally welcome, and for a similar reason. One of means, let us have members with matter in them, never mind the quality.

MUSIC.

Balfe's new opera, "The Puritan's Daughter," was produced at the Royal English Opera, Covent Garden, on Saturday evening. The house was full to overflowing, and this last effort of the prince of the most popular of English composers was received with a degree of enthusiasm which fully proved that the public are not yet tired of any of his own most successful works. During this week it has been performed every night, and the warmth of its reception has not, if possible, increased. Its success, we are convinced, will be permanent, for it has all the qualities to which its author owes his reputation. It bears the genuine stamp and impress of his hand. His own peculiar style is conspicuous throughout, every part of the work being as original and independent as it is brilliant, and masterly. Melodies, melodies are delicious for freshness and variety; and, in respect to the instrumentation and finish, skilful and delicate accompaniments, and richness of combination and harmony, the composer may in this opera challenge a comparison with Auber and Meyerbeer. One thing we have overlooked in its success has undoubtedly been the singular merit of the libretto, which is from the able and practised pen of Mr. Fitzball. It is an excellent drama, possessing a well-constructed plot, and a train of probable incidents leading to an interesting conclusion, while the dialogue is pointed and animated, and the lyrical portions—the words of the airs, choruses, and concerted pieces—have no small share of poetical merit.

Without entering into details as to the plot of the piece, of which we have had enough from our daily contemporaries, we shall give a short sketch of the subject. It belongs to the time of Charles II., a time fruitful in matter for the novel-writer and dramatist. The plot has been carefully and judiciously laid, and is well worked out in locations career. A Puritan conspiracy has been set on foot to dethrone the King. Its leaders are Colonel Everard, a fanatical expiscator is Colonel Wolf, an old trooper of Cromwell's "Ironsides," a tutor family, who plays an important part in the piece. The scene is laid in the same house on the seacoast; and the King being expected in the neighborhood, a plan is laid to intercept him, seize him, and carry him off in a frigate, which is to be in waiting for the purpose, to the port of the hand of Mary Wolf, the Puritan's daughter, being the promised reward of the conspirator who shall effect the capture. The plot, the story; for Colonel Wolf, as his character is painted, could never have the slightest chance of success; so will the public, for Cromwell's niece, Mary, moreover, has a lover of her own—Clifford, a Cavalier gentleman of ruined fortunes, who is the Colonel's friend notwithstanding their opposite principles, and whom he knows to be the lover of his daughter. In this state of things at the old manorhouse Clifford himself, and Patience Rochester, a poor orphan girl, whom the scene. They have lost their way in the night, and, coming to the door of the house, it is opened by a mysterious individual under assumed names. The incidents now become complicated and many of the characters discovered to be in disguise. It is the King, warn him of his danger, and endeavours to aid his escape; and this secret intercourse with him rouses the jealousy of Clifford, who suspects the existence of a rival. Patience, however, is the real object, however, of his error, he magnanimously, by exchanging dresses with the King, enables him to escape, he himself remaining to answer for the consequences. These are likely to be fatal, for, Clifford's act being discovered, and Patience, by the disguise, having been taken for the King, at the head of an armed force, returns to his rescue. All is now well. The King restores to Clifford his forfeited estates, and Patience is married to Mary.

The music sparkles with beauties. To specify them would be to enumerate almost every piece in the opera, so numerous are the gems. The songs and ballads especially are charming, and will soon be found on every piano in the kingdom. The performance is admirable in every respect; but this is very what he believes should be the condition of things in this country; but he does not now speak as if he deemed that he should witness the realisation of his theories. It is evident that he holds that the machinery for working out his ideas is wanting, because somehow the people are lacking in the moral qualities for the pursuit of personal and national prosperity presents more tangible results than a host of political perfection; and one can hardly but admire the feeling with which he has declared his hope that he shall never witness a politician or social agitation again. The spectacle of American horrors have been mortifying and saddening to him of all men; and it is his simple justice to say that in the speech at Rochdale he has given the most candid and unbiased view of the war which any public man has been expected of late.

In the last Session Mr. W. E. On Saturday last the *Gazette*, in an extraordinary supplement, published a Royal proclamation interdicting the further exportation of gunpowder, saltpetre, arms, and ammunition; and a *Gazette Extraordinary* was published on Monday night containing a Royal proclamation to the same effect, in consequence of the United Kingdom of arms, ammunition, and in full expectation of all kinds. An order in Council prohibits the exportation of the same materials of war from the Islands of Jersey, Guernsey, Alderney, and Sark, and the Isle of Man, except by license of the Governors of those islands.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

THE resilement caused by the illegal seizure of the two Southern Commissioners on board the Trent has in no way subsided; on the contrary, it has continued to increase, especially as great activity is now reported in our dockyards in preparing numerous vessels for sea. The result is that extensive fluctuations have taken place in the value of money and the public funds, and with the exception of the Unlisted Bank, have further resulted in some extent. The applications for advances on larger than at any period during the present year, and the whole of the operators for a rise in Consols have closed their accounts.

The demand for money at the Bank of England and in Lombard-street has been regulated by nothing yet, except by the large amount of sugar-sacking employment, the best commercial bills are readily discounted as follows:—

	For cash.	For Account.
Thirty days' bills	3	3½
Four months' bills	3½	4
Six months' bills	4	4½

In the Stock Exchange money is a mere drag, and advances may be had on Consols at from 1 to 1½ per cent.

The Directors of the Bank of Holland have advanced their minimum quotation for the week by ½ per cent, in other parts of the Continent the demand is steady demand for accommodation at the annexed rates:—

	Open market.			Bank rate.	Open market.	
	For cash.	For acct.		For cash.	For acct.	
Paris ...	4	...	Turin ...	5	4½	
Vienna ...	4	...	Trieste ...	4	3½	
Berlin ...	4	...	Hamburg ...	4	3½	
Frankfort ...	4	...	Madrid ...	5	4½	
Amsterdam ...	3½	...	Petersburg ...	5	4½	

Although the Continental exchanges are still somewhat favourable, very little gold has come to hand—the total arrivals being under £100,000. The shipments of the week have amounted to about £125,000, another million and £5,000.

The amount now in hand to meet the dividend and sinking fund of the Turkish Loan of 1858, is about £150,000.

The subscription of New Turkish Loan, 1861, to 1863, and enumerated letters state that the associated banks have agreed to take the third instalment of the £2,000,000.

The dividend of the Bank of British North America is at the rate of 6, of the African Banking Company at 10, and of the Union of Australia at 12 per cent.

The United Mexican Mining Company have received the final payment of the loan which they had contracted for the acquisition of the mines.

An immense amount of warlike material, including saltpetre, has been shipped from the London Docks during the week, and several steamers have been fully laden for the Continent.

The prospect of a war with America has led to a heavy depression in Sisters' Securities, which have been a drug upon the market. Stock more than 3 dividends payable in this country will exceed £2,000,000.

The sailings to the English Stock Exchange on Monday were much restricted; on the whole, prices were fairly supported. Consols, for Transfer, closed at 91½ ½ at the end of January, 91½ ½; Reduced and New Three per Cents, 99¾ ¾; Exchequer Bills, March, 65 to 11s.; Ditto, June, 12s. to 10s. prem.; Bank Stock, 217 to 214. India Stock was 226 to 220; Ditto, New, 226 to 103¼ ex div.; Ripee Paper, 97½ and 103½; the Bonds realised 12s. to 7s. prem. The following is for the 7th, the latest place for the settlement with a heavy pressure of stock:—Bank Stock 2l5 off at 210 to 214; India Stock, 226 to 221; Ditto, New, for Account, 104 to 103; Reduced, 99¾ ¾; Consols, 91¾ ¾; New Three per Cents, 99¾ ¾; India Five per Cents, 102¾ ¾ ex div.; Ripee Paper, 97½ and 103½; Exchequer Bonds, 12s. to 10s. prem.; Exchequer Bills, March, 9s. to 10s. prem. The market was heavy and unsettled on Wednesday:—Consols closed at the close of 91¾ ¾; Reduced and New Three per Cents, 99¾ ¾; Bank Stock left off at 210 to 214; Reduced and New Three per Cents, 99¾ ¾; India Stock, 227 to 222; Ripee Paper, 97½ and 103½; Exchequer Bonds, 12s. to 10s. prem.; and Exchequer Bills, 9s. to 10s. prem. The following is for the 5th:—Bank Stock, 215 to 214; India Stock, 227 to 222; Ditto, New, for the Settlement, 104 to 103; Reduced, 99¾ ¾; Consols, 91¾ ¾; New Three per Cents, 99¾ ¾; March Exchequer Bills, 10s. to 12s. prem.; and June Ditto, 10s. to 12s. prem.; Bank Stock closed at 213 and 215; India Stock, 222; and Ditto, New, for the Stock, 103 to 102½.

The amount of foreign bonds has ruled heavy, and prices, almost generally, have given way. The most considerable fall is in the value of Turkish securities and Four-and-a-Half per Cents have realised 81 ex div., Ditto, 1858, 86½ ex div.; Buenos Ayres Six per Cents, 78; Mexican Three per Cents, 19½; Portuguese Four-and-a-Half per Cents, 49½ ex div.; Spanish Three per Cents, 41½; Peruvian Four-and-a-Half per Cents (Ulloaman Bonds), 80½; Peruvian Three per Cents, 47; Portuguese Three per Cents, 47; Russian Bonds-and-a-Half per Cents, 91½; Russian Three per Cents, 86; Sardinian Five per Cents, 71½; Swedish Three per Cents, 69½; Turkish Six per Cents, 1858, 86; Ditto, 1854, 86; Turkish Old Six per Cents, 78; Ditto, 1858, 86; Turkish Four per Cents, 81; Ditto, 1854, Three per Cents, 51; and Ditto, 1858, Three per Cents, 45.

The alterations in Joint-stock Bank Shares have been less numerous than for some weeks past, yet very little alteration has been made in the quotations. The following are the closing prices:—Australasia, 60 to 58; Australian Agricultural, 20 to 19; Bank of Egypt, 10 to 9; Bank of Hindostan, 41 to 39; Bank of Upper India, 41 to 39; Chartered, 1½; London Chartered of Australia, 2½; London and China, 2½; Ditto, Anglo-Indian, 2½; Ditto, Australian, 2½; Ditto, Eastern of Ottoman, 18½; Union of Australia, 39; and Union of London, 27½.

The following are the closing prices in new undertakings as to follow:—Crown Mortar Insurance, 4½ to 5 prem.; Thames and Mersey Marine, 16-16 to 11-16 prem.; Universal Marine Insurance, 1½ to 1¾ dis.; London and Provincial Marine, 4 to 4½; Mercantile Fire, 1½ to 1 prem.; Commercial Union Fire, 1¾ to 2; Ditto, Indian Carrying Company, par to 1 prem.

Colonial Government Securities have been dull, and drooping in value. Canada Bonds, 1859, have left off at 100 to 101; Ditto, 1860, 100 to 101; Cape Bills to 101; and the Five per Cents to 92. New Brunswick Six per Cents have been done at 110 to 112; South Wales Five per Cents, 1854, 101 to 102; Ditto, 1858 and upwards, 98½; New South Six per Cents, 102; and Victoria Six per Cents, 101½.

In Miscellaneous Securities the transactions have been to a very moderate extent, and prices have ruled heavy. Australian Land, 21 ½; Black Jack, 1½; Canada Land, 1½; Crystal Palace, 8½; English and Australian Copper, 41; Marine Investment and Cloud, 3½; Ottoman, 1½; Peninsular and Oriental Steam Navigation, 84; Peruvian, 1½; and Sun India Shipping, 1½; and Southern Docks, 91.

The Railway Share Market has been in a most depressed state. Prices recorded have given evidence of the influence of large sales. The following are the "cash" for the present month amount to £620,861. The following are Thursday's closing prices and transactions:—

ORDINARY SHARES AND STOCKS.—Caledonian, 101½; Edinburgh and Glasgow, 99; Edinburgh, Perth, and Dundee, 97½; Great Northern, 133½; Ditto, A Stock, 111½; Great Western, 69½; Lancashire and Yorkshire, 105½; Lancaster and Carlisle, 107; Dover, 45; London and North-Western, 97½; London and South-Western, 93½; Manchester, Sheffield, and Lincolnshire, 44½; Midland, 72½; Ditto, 1857, 107½; North British, 64½; North-Eastern, Berwick, 103½; Ditto, York, 84½; North Staffordshire, 12½; South-Eastern, 71½; South Wales, 93; West Hartlepool Harbour and Railway, 94½; West Sussex, 57½; Oxford, 46.

PREFERENCE SHARES.—Great Northern Five per Cent, 115½; London, Chatham, and Dover, 32; Londonderry and Enniskillen, 11½; Midland—Birmingham and Derby, 52; Great Ditto, 1862, 108; Ditto, Leicester and Hitchen, 84½; Ditto, Bedford, 109½; West Midland—Oxford, 1st preference, 19.

LOANS LEASED AT FIXED RENTALS.—Chester and Holyhead Five-and-a-Half per Cent, 192; Manchester, Buxton, and Matlock, 34; Wilts and Somerset, 95½.

BRITISH POSSESSIONS.—East Indian, 101½; Ditto Five per Cent Debentures, 1864, 104; Great Trunk of Canada, 18½; Great Indian Peninsula, 139½; Ditto, New, 111½; Great Southern of India, 80; Great Western of Canada, 9½; Ditto, New, 6½; Madras, 88½; Punjaub, 1½.

FOREIGN.—Antwerp and Rotterdam, 8; Bohia and San Francisco, 14½; Eastern of France, 27½; Ottoman, 1½; Rio de Janeiro and San Paulo, 14½; Sambre and Meuse, 6½; San Paulo, 7½; South Australian and Leopoldina Venture, 11½.

The returns of the Bank of England for the week ending Dec. 4 show the following results when compared with the previous week:—

An increase of circulation of	£49,000	An increase of bullion of ... ...
A decrease of other deposits of	1,000	A decrease of other securities of ...
A decrease of other securities of	383,117	An increase of rest of ... ...
An increase of Securities of	27,338	

The total amount is £28,745,622: public deposits amount to £3,386,314; and private deposits to £13,792,132. Securities are £27,314,587; and the stock of bullion is £21,193,713.

Friday Afternoon.

The market for Home Securities is very dull to-day, and a further fall has taken place in the quotations. Consols, for Money, are 90 to 90½; for the Account, 90½ to ¾. Reduced and the new Three per Cents, 99½ to 99; and Exchequer Bills, 8s. to 11s. prem. Indian Stock) are heavy, at reduced currency of 101 to 101½. Five per Cent Stock, 102½ to ¾. The following are the prices of Foreign Bonds in unfavourable, and in the value of Railway Shares a further decline has occurred.

THE MARKETS.

Corn Exchange, Mark-lane, Friday.—Although the fresh arrivals of English wheat were very moderate last week, both by land and coast, the trade ruled dull, and prices were in favour of buyers. The imports into London from foreign ports were also moderate, but the supply of foreign wheat was tolerably extensive; hence some variations in offering rates, and the sale was of limited extent, at Monday's quotations. Barley ruled extremely dull, and the value of malting qualities declined fully sixpence per quarter, as hardly sufficient grinding. Grinding and distilling sorts were also cheaper. Beans and peas obtained hardly a sale, at former prices. Oats were in good request, and prices were fully supported. Beans and peas obtained hardly a sale, at former prices. Oats were in good request, and prices were fully supported. Beans and peas obtained hardly anything, at former terms.

The following are the imports into London for the week ending last Saturday:—Wheat, 12,870 quarters; barley, 1,000; oats, 1,000; flour, 11,000; other kinds, 800; total, 126, Foreign:—wheat, 34,960; barley, 600; oats, 1,050; flour, 17,000; other kinds, 800; total, 54,410. Total imports of the week:—Wheat, 47,830; barley, 1,600; oats, 2,050; flour, 28,000; other kinds, 1,600; total, 180,530. Average prices, 1,600 qrs., 32s. 10d.; 2,000 qrs., 33s. 1d.; 3,000 qrs., 33s. 2d.; 4,000 qrs., 33s. 3d.; 5,000 qrs., 33s. 4d.; 6,000 qrs., 33s. 5d.; 7,000 qrs., 33s. 6d.; 8,000 qrs., 33s. 7d.; 9,000 qrs., 33s. 8d.; 10,000 qrs., 33s. 9d.; 11,000 qrs., 33s. 10d.; 12,000 qrs., 33s. 11d.; 13,000 qrs., 34s.; 14,000 qrs., 34s. 1d.; 15,000 qrs., 34s. 2d.; 16,000 qrs., 34s. 3d.; 17,000 qrs., 34s. 4d.; 18,000 qrs., 34s. 5d.; 19,000 qrs., 34s. 6d.; 20,000 qrs., 34s. 7d.; 21,000 qrs., 34s. 8d.; 22,000 qrs., 34s. 9d.; 23,000 qrs., 34s. 10d.; 24,000 qrs., 34s. 11d.; 25,000 qrs., 35s.; 26,000 qrs., 35s. 1d.; 27,000 qrs., 35s. 2d.; beaten by Stanley Rose at Darlington, in the teeth of an earnest protest from Mr. Unthank, who, without knowing what she was, marked her for the prize the moment he looked them over, she reversed that decision easily at Hull, and then went on with very little let and hindrance in the showyards. She made her ground very gradually in the Royal lists, as she was second at Canterbury to Mr. Archer's Woodrose, and first the next year in the cow class against Queen Mab, Woodrose, 2nd Duchess of Gloster, and other good winners. The white and roan twins have each beaten her once at Dunstable and Selby, and so did Soldier's Bride last August; but she has won about twenty-two times in all, and brought eight cups, some of the challenge ones, to Captain Gunter and his heirs for ever. It is said that the Captain does not intend to rank his animals by forcing them for shows in future, but we trust to meet his roans and whites, at all events, in the heifer-calf class, at the Royal. He has won the other three female classes: in one year, with Duchesses 77th, 78th, and 83rd, already, besides being second for cow and first and second for another in the previous year, and he is hardly likely to rest satisfied till he has set this calf seal on a success which we believe has no parallel in herd annals.

THE NEW PRESIDENT OF CHILI.

THE second period of five years of the presidency of Senor Don Manuel Montt being about to terminate, men of all political grades began to look around for a successor to replace him in the high office on the 18th of September of the present year.

According to the Constitution of Chili the Deputies to the approaching Congress were elected in March last, their functions commencing on the 1st of June, and embracing a period of three years—that is, to the same date of 1864. Then followed in May last the election of the Corporation for the same period of office, and on the 25th of July was elected the new President, who assumed the duties of first magistrate on the 18th of September last.

The result of the general scrutiny of votes in all the provinces of the Republic was the unanimous election to the presidency of Senor Don *José* Joaquin Perez—a most important fact, filling with joy the heart of every true Chilano. It is hoped that his known moderation, his matured capacity for and experience in public affairs, will enable him during his five years of office to guide the bark of State with prudence and energy. The services he has rendered to his country date far back, as will be learned from the cursory biography of his public life which we give in continuation.

Senor Don José Joaquin Perez was born in Santiago de Chili, the 19th of March, 1801, and belongs to one of the most respectable families of the capital. His public career dates from the year 1827, when he was sent to the United States in the capacity of Secretary of the Chili Legation at Washington. After a residence of nearly three years in the United States he was appointed by the President of Chili, Don Francisco Vicuna, to the post of Consul-General in France. He sailed from New York, and arrived in Paris a short time previous to the fall of Charles X., but was only accredited in his position by the Government of Louis Philippe, who was the first to acknowledge the independence of the South American Republics. Returning to Chili in 1833, he was elected a Deputy to the National Congress, and in the years 1835 and 1836 was brought into notice as editor of a Government paper called the *Araucano*. He was a friend of the great Chilian Minister Portales, and about that time wrote several important articles, distinguished alike for clearness of view and sound argument. In 1836, Chili, conjointly with the Argentine Republic, was desirous of making war against the Peru-Bolivian Confederation, and it being necessary to send some one to Buenos Ayres to discuss the subject with that Government, Portalis fixed upon Perez, and sent him to Buenos Ayres in the capacity of Charge d'Affaires to obtain from that Government, if possible, an acknowledgment of Santa Cruz's usurpation of power in Peru, as also a declaration of war by General Rosas. In 1839 Perez returned to Chili, having satisfactorily fulfilled the commission intrusted to him, not only obtaining a declaration of war against the Peru-Bolivian Confederation, but likewise a considerable military force, under the command of General Heredia, which force, however, was unfortunately routed by General Bruin, who commanded the Confederate army. On the 12th of September, 1844, Irarrazabal, the Vice-President of Chili, appointed him Provisional Minister of Finance during the illness of Don Manuel Rengifo, and on the 17th of April, 1845, on the death of this latter personage, Perez was confirmed in his post, which he continued to occupy till the 16th of September in the same year, when his resignation was tendered to and accepted by the President, General Bulnes. On the 12th of June, 1846, he was called upon to fill the office of Home and Foreign Minister. During the years 1850-1 he was President of the Chamber of Deputies, and in 1857 occupied the same post in the Senate, of which assembly he had been a member from 1852, and during the administration of Don Manuel Montt he was a Privy Councillor.

In the debates in which he has taken part during the periods above alluded to, his calmness, moderation, and quickness of perception alone conspicuously, qualified only by his promptness in openly and fearlessly opposing all measures bearing semblance of injustice, and at the same time lending his valuable assistance to the furtherance of such measures as in his opinion tended to the good of his country.

In the Chambers of 1849, when the projects were discussed of granting extraordinary powers to the Executive, and declaring the refractory provinces in a state of siege, Perez, as First Minister of State, eloquently defended the policy of the Government, attacked by revolution and insurrection.

Since the event of 1850, when the constitutional Government triumphed over the hordes who had raised the standard of rebellion in almost every province of the Republic, the revolutionary mind has remained in a state of prostration and despair.

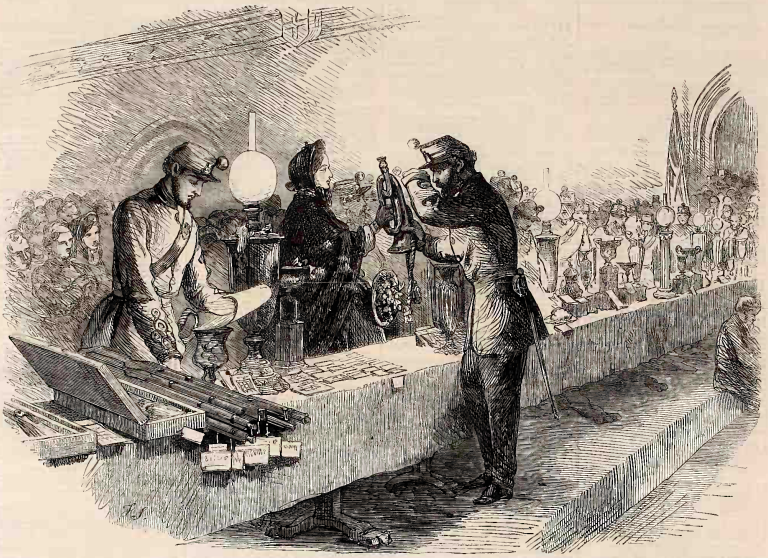
Such are the auspices under which the new President of Chili enters upon office.

SENOR DON JOSE JOAQUIN PEREZ, THE NEW PRESIDENT OF CHILI.

DESTRUCTION OF AN HOTEL BY FIRE.

ON Monday week the Queen Railway Hotel, a magnificent building, opened last summer, at Chester, was to a great extent destroyed by fire. The catastrophe originated about five o'clock from an overheated flue in the kitchen. The Mayor, the magistrates, and the militia were all quickly on the spot, with the Chester fire-engines. The Birkenhead and Crewe engines were telegraphed for and soon arrived. The Railway engines were also present in good time. Captain Humberston, M.P., heading a small body of volunteers, supported the police, and every effort was made to protect the property. There was just time to save the plate and a large part of the furniture. At one period the railway station itself, which cost above a quarter of a million, was deemed in danger. The interior of the original part of the hotel is destroyed, but the large new wing is safe, so that the establishment may be soon reopened. The building is partially insured in the London and Liverpool Fire Office.

DESTRUCTION BY FIRE OF THE QUEEN RAILWAY HOTEL AT CHESTER.



PRESENTATION OF PRIZES TO THE QUEEN'S (WESTMINSTER) RIFLE VOLUNTEERS IN WESTMINSTER HALL ON SATURDAY LAST BY COUNTESS GROSVENOR: THE COUNTESS PRESENTING THE CHAMPION BUGLE TO THE FIFTEENTH COMPANY.—SEE SUPPLEMENT, PAGE 585.

UNDERGROUND LONDON GAS—WATER—SEWERS—RAILWAYS.

By ALFRED HOLCOMBE BELL.

Author of "Old Journeys," "Days of Long," &c., &c.

Groombridge, 5, Paternoster-row, London.

ILLUMINATED and PRINTED BOOKS in imitation of the Missals, Illuminated Manuscripts, and Printed Books of the Fifteenth Century, executed by hand in accordance with the principles of Mediæval Art, through the same means of industry, desire to advance themselves in the pursuit of knowledge, and to obtain a respectable competency, and, by an honest, conscientious, and steadfast discharge of their duties, to secure the confidence and goodwill of their employers, are supplied with all the assistance and gallery of effort that can be combined and brought to bear upon the production of a perfect work of art and trade. The artistic and typographical execution of this work has given the reputation of being one of the most eminent English Illuminating and Printing Establishments. During the last 20 years the valid resident in the kingdom, and has held, and now holds, the appointment of Illuminator and Printer to the Queen, the Prince Consort, and the Royal Family, and has executed, for individuals, by chromolithography, at the colonial universities and by the gentlemen of the clergy, books, and other works of an instructive and descriptive kind, the whole set up in the most style, and printed in the best manner, and illuminated with the most elaborate and costly materials, and in the most splendid and enduring specimens. Only a small edition will be made.—London: Longman, Brown, Longmans, and Roberts, and Day and Son, to the Queen.—Leicester-square.

THE SEIZURE BY CAPTAIN WILKES, OF U.S.S. "SAN JACINTO," OF MESSRS. SLIDELL AND MASON, CONFEDERATE COMMISSIONERS, ON BOARD THE BRITISH MAIL-STEAMER "TRENT."—SEE NEXT PAGE.

SEIZURE OF CONFEDERATE COMMISSIONERS.

Our Number last week contained an account of the forcible seizure of Messrs. Slidell and Mason, Confederate Commissioners to France and England, on board the Trent, by bodies of armed men from the United States' war-ship San Jacinto; and we now give, on the preceding page, an Engraving representing this violation of international law—which will be extended, it is to be feared, with the very gravest consequences. The power of the mail-steamer Trent supplies the following narrative of the circumstances attending the boarding of that vessel by the Lieutenant and men of the American sloop-of-war San Jacinto and the seizure of the Confederate Commissioners:—

Having to forward some particulars of the grievous outrage committed by (or rather, as against the English flag by the United States' steam-sloop San Jacinto, Captain Wilkes, Yes, how painfully must the word be written—upon the little steamer Theodora, having on board the commissioners sent by the Confederate States of America to London and Paris, into the port of Cardenas, sailing early in November. Once arrived there, the gist of our information (and an excellent authority we may consider it) was that a commissariat steamer had been sent by the same power to convey those persons, and that, in the meantime, the Theodora was to remain in port. Mr. Slidell, the commissioner for France, was accompanied by his son, and by Mr. Mason, the commissioner for England, being Mrs. Mason, the wife of the latter gentleman, and their four children. Mr. M'Intosh, a Texan, was also there in Havannah. Mr. Eustis, who was booked for the whole party to proceed by this steamer to St. Thomas, to join the homeward West India mail steamship for Southampton. They accordingly embarked yesterday morning, trusting to receive the same protection under the English flag which they had already received from that of Spain.

We left Havannah yesterday morning at eight. This morning, about half-past eleven, we observed a large steam-ship ahead, and on a nearer approach found she was bore by, evidently unwilling us. We were then in the narrowest part of the Bahama Channel, abreast of Paradon Grande Island, Cuba. As soon as we were well within range, she fired the first intimation of her nationality and intentions by a round-shot being fired across our bows, and at the same moment by her ensign—American colours. We were now sufficiently near to observe that she carried a pivot-gun, a gun on each broadside, and a rifled gun on the poop; more topmasts showed a shell from a rifled gun at large enough to be a formidable vessel of war. We were now within about a mile, when Captain Wilkes hailed us to be quiet. We were now within about a mile, when Captain Wilkes hailed us to be quiet. We were now within about a mile, when Captain Wilkes hailed us to be quiet

Relics of the Past.

THE HORN OF ULPHUS, AND THE CORDWAINERS' BOWL, IN YORK MINSTER.

Few persons are aware, perhaps, that one of the most ancient modes of transferring inheritances was that of conveying them by the presentation of a horn. When this ceremonial took place, a document was obtained in England is not known; but the "Horn of Ulphus," represented above, affords indirect evidence that the custom prevailed as early as the beginning of the eleventh century, for this remarkable relic of a remote age is the identical instrument by which Archbishop Private Ulphus, foreseeing dissension and probable bloodshed between his two sons on account of his possessions, bestowed the whole of them upon the Church of York. "Come hither, my sons," Canute relates, "and, taking the horn wherein he was wont to drink with him, he filled it with wine, and, kneeling before the altar, bestowed upon God and the blessed St. Peter all his lands and revenues." When the Reformation in Edward VI.'s time swept away nearly every ornament belonging to the Church, this horn, which had been carefully preserved in the sacristy of York Minster, was sold to a goldsmith, by whom it was deprived it of the original gold adornments and chain. In 1666 it fortunately came into the hands of Thomas Lord Fairfax, and after him into those of Henry Lord Fairfax, and by him was generously bestowed to its first repository, where it has ever since remained. It is formed of ivory, probably from the tusk of an elephant, and was no doubt the usual drinking-cup of the nobleman in question.*

Another extant proof of this primitive manner of investment is the "Pussy Horn," by which the manor of Pussy, in Berkshire, was long held by the family of that name, and which was originally given to an ancestor by King Canute. This is a very beautiful horn, and belonged apparently to an ox of middling size. In the middle it has a ring of silver-gilt, and is divided into three parts, each of which is small and is a hound's head, of silver-gilt, which is made to screw in as a stopper, showing the instrument formed for a double purpose, to put out the stopper to be a hunting-horn, with the stopper to be a drinking-horn. The traditional history of the endowment is this:—Canute being encamped in the neighbourhood of Pussy, and the Saxons at a few miles distance, the King received intelligence from an officer of his army, who, in the disguise of a shepherd, had got into the enemy's camp, of an ambuscade formed by the Saxons to intercept him. This intelligence proved true, and the Monarch in consequence escaped the danger, gave the manor to the officer and his heirs for the service to hold for ever.

In 1083, on occasion of a trial for the estate, this horn was produced in the Court of Chancery, and, with universal admiration, was received, admitted, and proved to be the veritable one by which, as by a charter, Canute had conveyed the manor 700 years before. It is still, we understand, in the possession of the family; and has the following inscription round the middle:—

† King knutbe gave Æðelhun Bercte ‡
& Bi Þem he holde Þe by londe.

A third example of the same tenure is a horn of almost equal antiquity with the two described, called the "Bestial Horn," preserved to this day in the Ashney family. By this horn it is said Edward the Confessor gave the Rosgrenlly of Berkswode to one Nigel and his heirs. This Nigel was a forester, who, having destroyed a monstrous wild boar which had long infested Berkswood Forest, and presented the beast's head to the King, received as a reward one hyde of arable land called Dere Hyde, a wood called Hidewood, with the custody of the Forest of Berkswod, and the Manor of Lowell, to hold to him and to his heirs from the King, *per unum cornu, quod est charta proximæ Foreste.* Upon this ground Nigel built a lodge or manor-house called Bestwall, in memory of the deed. This horn, in proof of this, in a large folio vellum book containing transcripts of charters and evidences relating to this estate is a rude delineation of the site of Bestial House and Manor, and under it the figure of a man presenting on his knee to the King the head and horn on the point of a sword, and the King returning him a cost of arms. The same figure of a boar's head was carved on the front of an old lodge-gate remaining a few years back in the lodge of the ancient house, and is said to be seen in the windows and other parts of the mansion. And, what is of greater authority, the original horn, tipped at each end with a silver gilt, fitted with wreaths of leather to hang about the neck, with an old horn of sealing, and date of tenure, and other particulars, is said to be seen all more preserved by the lords of Bestial, under the name of Nigels, and still by the possessors of the Ashney family, by whom the estate descended. This horn is of a dark brown colour, variegated and veined like tortoiseshell. It is two feet four inches long, and appears to have been the horn of a bison or buffalo.

Ingulphus, the venerable Abbot of Croyland (if the chronicle which passes for his was not a mere monkish compilation), particularly specifies the horn as one of the things whereby lands were conveyed in the beginning of the eleventh century:—"Confectæ sunt cartulæ etiam primo multis prædia nobis verbo, aliisque scripto vel charta, tantum non donni gladio, vel gladii, vel cornu, vel cruce," &c. "At first many estates were transferred by bare word, without any writing or charter, and only by the sword, or helmet, or horn, or cup," &c. It was undoubtedly so employed also among the Saxons at a very early time. In Bloome's "Jocoseres" it is recorded that Walter Achard or Achel claimed to hold by inheritance the office of sexbearer and conner through the whole honour of Tethury, in the county of Sexford, for which office he could produce no evidence, charter, or other writing, but only a white hunter's horn, decorated in the middle and at each end with silver gilt to which was affixed a girdle of fine black silk (*haut negri*) adorned with certain buckles of silver, in the midst of which were placed the arms of Edmund II., son of Henry III.

In addition to the Charter Horns just noticed there are the "lytle whyte horne of ivory" mentioned in the will of Thomas, Earl of Oxmond, in 1416, which bore Beaufleur, signifying here a badge or office; and a very ancient one, known as Lord Bruce's horn. The latter is supposed to have been given to the present possessor (called the Seynor ate) but how or from whom it came to them has never been discovered.

THE CORDWAINERS' BOWL.—The Engraving which accompanies the Horn of Ulphus is of a curious silver bowl, now in the custody of the objects of antiquity in the Church of York, and believed to have been given to the Company of Cordwainers by Archbishop Scrope when he was beheaded for rebellion in 1405. It seems, however, more probable that it originally belonged to the Guild of Corpus Christi at York, having been given to them by Agnes Wynyard, who died in 1478.

NAVAL AND MILITARY INTELLIGENCE.

Great activity is displayed at the dockyards. Orders have been received at Portsmouth, Sheerness, Woolwich, and Devonport, to take on additional hands, to prepare several ships for commissioning, and to get the Warrior in undergoing repairs at Portsmouth, and the Black Prince is to be brought forward at as early a date as possible for completion.

Special instructions have been sent out to Admiral Milne, the Commander-in-Chief on the North American and West Indian station.

The men belonging to the naval reserve in London, Shields, Liverpool, Sunderland, and other places, have called their services to the Government.

The *Daily News* says that the actual force now under the command Vice-Admiral Sir James Stirling, on the North American and West India Stations, consists of twenty-six ships, carrying 366 guns and 4,197 men, the total force never before, and the numbers of 30 ships. Besides these, there are five receiving hulks and ships, four convict-ships, a barbour and a depot ship, making a total of sixty-six ships in commission, and having 337 men, the tonnage being 148,335 tons, and the horse-power 3640.

It appears that a considerable quantity of the new Enfield rifles mentioned the ships in "reserve" at Portsmouth number thirty, and carry a national and private armament. Of these, twenty-four are ready for sea, and the other six are either ready sea, and could be rendered so with but little delay. In the event of a sudden emergency, the Government has the ships three or four days' notice, and could be ready in a fortnight. Of the ships three or four days' notice, and could be ready in a fortnight. Of the ships, one does it take any account of the gun and mortar boats laid up at Hoxlar. In addition to the ships in reserve, there are the ships in course of fitting the Warrior, which mount an aggregate armament of 342 guns. One hundred and fifty men have been ordered to join that vessel, under the command of Sir Alexander Milne, and an imperishable armament to carry to the Warrior. The Black Prince, which is to be ready for sea in January, transport leaves Woolwich for Nova Scotia, with a battery of the Royal Artillery, and a detachment of Royal Engineers.

Sir William Armstrong has made an elaborate reply to the statements made in the House of Commons by Lord Palmerston and Mr. Hodgkinson's Bill, instead of £1000 as alleged; that the defects pointed out by Captain Blakely were merely temporary; that, contrary to the allegations of his assailants, his guns have passed triumphantly through the ordeal of service, and have accomplished all that was expected of them "unprecedented strength;" that the injuries sustained by the vent-pieces Colonel Murdoch Smith had been exhibited by that officer to the Committee, mainly arises from the ignorance of the persons to whom the firing has been entrusted; that the Armstrong gun is not liable to "jump" out of the trunnion cradles with particular pride to the fact that his system of rifled artillery, which was first introduced into the service, "has not occasioned a single accident without loss of either life or limb, or injury to a single individual." He also points to the fact that the Armstrong guns are free from the defects of fracture, and explains that the supposition of the issue of that class of gun for field service is founded on a misconception. The Government will not consequently unimportant character might be made. Lord Palmerston some trials to which the Whitworth gun was to be subjected. The result was to be communicated.

OUR IRON-CLAD FRIGATES.—Every improvement which it is possible to make in our iron-clad frigates will be made, and made soon. On the other hand, they will be free from all her defects, especially that most serious one of inadequate armament, which has been the subject of much fault. The new ships will be coated with armour from end to end. At every point where the guns will be fired there will be armour-plates. The bows, in fact, are formed like the outline of a swan's breast, according to the plan first suggested in the Admiralty inside. After the completion of the trials of the Warrior target the propriety of adding to the weight of the armour-plates by the addition of a few inches of wood at the back will be one of the first the highest authorities. For every purpose of warfare the Warrior is practically unassailable, and the Government have only to make up their minds to the addition of protection to the guns, and a great deal may be done in that direction. The Warrior is the wonder of the world, and unwieldy as rough weather the length of the Warrior will be found unwieldy as rough weather. The new ships are to draw less water, and will be handier. The new ships are to draw less water, and will be handier. The new ships are to draw less water, and will be handier

LITERATURE

THE LIFE OF J. M. W. TURNER, R.A. Founded on Letters and Papers furnished by his Friends and Fellow-Academicians. By WALTER THORNBURY. 2 vols. Hurst and Blackett.

The question which first occurs to us on opening these pages is, whether there is any State necessity for a two-volume "life" of every R.A. or artist of eminence that dies amongst us—whether it is conducive to the interests of art that Historians that there should be? As a supposed State question to be answered in the affirmative, thirdly, where the materials are to come from, and where the hand to work them into shape? Mr. Thornbury, an experienced getter-up of books of all sorts on the shortest notice, very unhesitatingly betrays the difficulty of the task he has taken in hand with on the present occasion—the task of writing two octavo volumes about a man of whom almost every thing that could be said had already been written and printed in various forms of publication, as C. Redding's autobiography, Leslie's diary, Ruskin's voluminous works, Peter Pindar, Monypenny, the Athenæum, and other journals. Mr. Thornbury acknowledges his obligations to these recondite sources of information, as also to several professional and other acquaintances of "the great man," as he calls him, who had supplied him with some additional information; to Sir Charles Eastlake, for instance, whose assistance is rather vaguely referred to; and to "Mr. Wornum, as official of the National Gallery," to whom he expresses his acknowledgements for "two or three dates," and whom, in another part of his book, he courteously describes as "a great authority in dates, and in dates only." The materials so obtained by the three pennyworth of tar together, just as they came to hand, in the most off-hand, ill-considered manner, the jumble of dates, the impertinences, the contradictions, the inconsistencies being utterly inconceivable to any one not thoroughly versed in the characteristics of this kind of "literature."

Nor did Mr. Thornbury venture upon this unambitious labour of compilation until he had asked permission of a gentleman whom he appears to look upon as a veritable Grand Lama in all that concerns the fame of Turner. "Some four years ago," he informs us "when the desire to write a life of Turner first occurred to me, I determined that I take no steps in such a scheme till I had ascertained whether Mr. Ruskin really meant to have some narrative of incidents and some biography of that great painter whose genius he had done so much to illustrate." In reply to a letter of inquiry from Mr. Thornbury "the greatest of all dead or living writers on art" declared that he had no intention of disparaging the kind, but that he should "refuse in my life. Mr. Thornbury did not, one would give us all the information he could, and then he abandoned him then as to be made of treating the subject—if it is not beginning the following out, in a manner unique, to quarrel by failed of obtaining more than eye-orchidy.

Mr. Thornbury has been pulled, however, out of his interaction in an unbalancing manner; and, whilst holding up "the great man," or "the magician," as he sometimes calls him, to the adoration of the world, he has also been holding a by-stall at the same time for the sale of the monotony of the performance.

We are told how "Turner's youth" was spent in that myriad-room fount of musics before London-bridge, in cheap "poor Jack" tops among the people at Chelsea at the "Adam and Eve," at Greenwich or Deptford; "to which is appended the reflection, "This could not have improved Turner's manners or morality. Long after the fisheries of Billingsgate and Greenwich had been deserted for the Docks, he often afterwards his morality was regulated by the sailor's standard." And then, in another paragraph of his after life, he says:

I can carry to own lord, I cannot say very much for Turner's moral character. A selfish and unfeeling old man, he was, in his latter years, surrounded by those expected to lead to anything but a selish and various old age. Latterly Turner received no one, except by politick, to some knowledge and gossip. Dr. Chilton Hare he grew way to even more fatal drinking.

Turner was not to any extent a drunkard. He would often, latterly, I am assured by only to good authority paint hard all the week till Saturday night; he would then put by his unfinished picture in his pocket, hurry off to some low tavern or tap there, and set off to some low sailors' house in Wapping or Rotherhithe, to realise till Monday night morning left him free again to drudge industriously all week. A shrewd fisherman, indeed—a fallen angel, forgetful of his best Paradise.

Of his habits of life we learn from the following anecdote, which under suitable trains—one instance out of many illustrative of the monstrous vagaries indulged in "painting days" at the Royal Academy:—

In 1829, when Constable exhibited his "Opening of Waterloo Bridge," it was placed in the School of Painting, one of the small rooms at Somerset House. A sculptor by Turner was next to it—a group of Cupids beautiful and true, but with no positive colour in any part of it. Constable's picture seemed to it with a flood of rich colour. Turner came early to the Academy, and sat down with a box of colours, pencils, vermilion and lake the discordance and rage of the sky begins. Turner is said to have exclaimed, on seeing it, "I'll show them how to use colour;" and, getting up on a bench, he painted somewhat higher than a sibling, on his grey sea, went away without a word. The intensity of the red and lake made more vivid by the contrast of the cooler crowd even the vermilion and lake of Constable to look weak. I came into the room just after Turner left it. "He has been here," said Leslie, with a red on a sun." On the opposite wall was a picture, by Jones, of "Shylock, Moloch, and Antonio in the Forum." "A sad," said Leslie, "he bounced across the room from Jones's picture, and set fire to Turner's sea." The picture did not come again into the room for a day or two; but then, in the last moments that were allowed for painting, he glazed the sea-red he had put in, and displayed it into a hue.

In laughing about his pictures he conducted himself in a manner which Mr. Thornbury very much admires, but which we cannot so highly approve of—

In the sale of his pictures he always took a high moral position. When asked the price of a picture by a purchaser for his cabinet, he would say, "I will not take more than 1,000 guineas for it. But I will give you one hundred and twenty-five." "No, I cannot take less than 1,000 guineas for that picture." "Then you must have it, Mr. Turner, I suppose." Turner drew you your price for that picture: the two hundred guineas he had refused he considered his due. He would not take less, but was perfectly willing to take more if you mind also; the price of the picture to-day is two hundred and twenty-five guineas." The purchaser was satisfied, and perhaps the artist was glad to have the picture at another advanced price.

Some of the anecdotes by way of trade were indeed open to objection, even in the opinion of his biographer. Speaking of the "Liber Studiorum," he says:—"I am sorry, too, to say that there can be no doubt that many of its drawings, Mr. Ruskin, Mr. Wornum, and other collectors, that Turner often took out the thick-line letters of the plates in his house, and engraved again upon them, and then put on the plate—in fact, he sold sham proofs, having private marks and scratches on the plate by himself to recognise them.

His generosity is enforced by such anecdotes as the following, taken from the life of Turner's contemporary, Mr. Trimmer, the son of the late Rev. Mr. Trimmer, Rector of Heston, Middlesex:—

My late father, Mr. Trimmer, Vicar of Heston, was Turner's chief executor, and was on terms with other many years. When Mr. Danby died from the Rose the decease of a memento of my father, whom they mistook for Turner. Turner was very much affected, and said, "All, poor fellow; so he is gone! I must go and see my father called at Queen Anne-street to make inquiries touching the last moments of Mr. Danby. Turner was much affected, and stated all the facts upon his separation.

"I mention these," observes the writer, with singular simplicity, "as instances of Turner's kindness of heart and sincerity in friendship." And Mr. Trimmer, indeed, when he proceeds to the "facts" and literalness with the unbalanced fidelity of a photograph," sets out with stating:—"We find him mean, grasping, parsimonious to the degree almost of disease. I see in this a natural innate acquisitiveness, nourished by a poor, parsimonious, narrow-minded father, and encouraged by his own painful growth of struggling ambition."

Turner's education, as we all know, had been sadly neglected, and yet, like many others who in other matters have displayed striking, honest talent, had a strong propensity for writing dogged poetry, which he frequently indulged in. The biographer who had regard for his subject's fame would have suppressed "these painful, stammering efforts of a crippled mind." Not so Mr. Thornbury, who, for the sake of filling up a dozen pages of his second volume, prints "the longest fragment found amongst the papers of the dead painter," which, he adds, "will satisfy even the most sanguine enthusiast how fallacious were Turner's hopes of ever becoming a great poet, ambitious as he must always have been of such an honour" to which is added the steering remark (which is not very grammatically expressed nor exactly true) that "there is hardly much hope for a poet who cannot even spell correctly."

Mr. Thornbury makes copious extracts from Mr. Ruskin's criticisms upon Turner's genius and works, and what he adds of his own is slight, and by no means calculated to exalt the "great man's" fame, or to silence the cavils of those who have refused to consider it fully admirable and its performances. Of his celebrated "Dido building Carthage," exhibited in 1815, and one of the two works he ever put in competition with the Claudes in the National Gallery, he says:—"Unfortunately, the picture is also fast decaying and becoming hot and tawdry, so that the purity of Claude and Poussin is wanting." Of "Crossing the Brook," exhibited in 1818, in a "confused and unequal picture," "a muddle of sublimity, a perfect *Britannia* of all Turner's pets." And of "Ulysses deriding Polyphemus," exhibited in 1829, "a "Polyphemus" exhibited in 1829, and now in the National Collection, we read:—"So horrible is this monstrous giant that he must introduce at once, and into the picture, day and night, joy and sorrow, the cold and the warm together, as the sun rises, shadows and his cherishes (or rather we see the horses; for, to return to those of Ansdell, they are his vanished)." Mr. Thornbury adds:—"It has sometimes struck me that Turner, who did occasionally steal (and may not, as well as his betters, Mr. Thornbury?), derived his idea of 'Polyphemus' from Michael Angelo's great picture sketch of 'Tityus' . . . Had Turner seen anything of Michael Angelo's at the time he painted this picture?" Or Rake, Steam, and Speed—the Great Western Railway," painted in 1832, and in the National Gallery, "unfortunately, the hardest and most hideous of Turner's pictures. Is "War—the Exile and the Rock Limpet," exhibited in 1812, "owing to the fact that the picture of Napoleon looks as if he were standing on stilts." Of his third period, in which he "ran wild," we are told that "Turner was now painting as he now disdained both ideal and (sometimes) fear truth too." In the fourth period, "the artist, sober truth, determined to paint in spite of his primatic experiments a public that would not buy his pictures and ridiculed them, and the Academy hitched him on to Wilkie's dreams." About this time he produced his "Opening of the Walls," which "probably painted, with alterations, from a fed engraving," and the "magnificent" picture of "Ivy Bridge," which he sent to the Academy of Navarre," who unable to make anything of it, and having probably no more knowledge of Devonshire than of Timbuctoo, sent it back." Of one picture, which, I should think, to the artist's wrath and disgust—

Even as there are spots on the sun, so there may be weak points in Turner. When, however, dealing in generalities, Mr. Thornbury rises, and, to continue the simile, we find the sun shining with all its glory on his idol. As he engraves Turner having taken Michael Angelo for his model in the "Liber Studiorum," and "Rembrandt," he goes on to suggest that Mr. Thornbury had Henry Russell's "cessation" ditty, "I sat sat listening to the lady" running in his head when penning the following:—

Turner's Pilgrimage to Rome and I seem to see Turner. I had him on the Derbyshire hills, and among the ruins of Kenilworth, and in the streets of Venice, and on the Rhine, and in the snows of Devon. I seem to see him in the great hospitals of Kent, and in the Cathedrals of Rouen and Amiens, and in the Campagna, and in the Pontine Marshes, and in the lonely margins of Scotch lakes. I never go on the Thames and look at St. Paul's but I see Turner sketching it, or Canaletti painting it. I see Turner at Wales, at Oxford, at Sussex, in Wiltshire, I still cannot drive away the remembrance of Turner. Turner has become a part of myself. He has become to me every old castle and abbey in England; he has been on every river and in every valley.

And again:—

When I think of Turner should I remember my own travelling, and seem to see him travelling with me? I have met Turner at every inn at Clovelly, on Cypress Hill, looking down on Smallstone in the red-tiled dens of Penzance, and on Dartmoor, and among the Cheddar Cliffs, and in the Vale of Ilfracombe, when in the vale sunshine, Tourists feathers in its quiet plume of pure white cotton. I have met Turner at Bude, and at the Land's End, and beside arches of the Colosseum. I see him on the Montmorenci watching the boats lay on the Seine, and on the Loire. I see him at Fontainebleau, and at Nice, and Spain on, dreaming of a still fairer river, and of still more radiant skies. I see him at Genoa, at Florence, at Naples, looking down on the little dens of the Invalides, blue in the distance. I see him where Schaffhausen thunders and the Alps are in their glory.

Unfortunately, the design for the Turner monument, to be put up in St. Paul's Cathedral, by Mr. Thornbury, is not yet completed, and the work in progress (the painter being represented in it, appropriately enough, with his palette and pencils in his pocket, leaning on a sketch by Mr. Thornbury might have been acted upon. Speaking of his picture of Sir Robert Peel—"a fine piece," Turner said to the author, "I did not paint it on purpose." He understood, but I would not let him see it was. I got the sailors to lash me to the mast to observe it. I was lashed for three hours. I shut out every one from the room. I forced to recoil it if I did," upon which Mr. Thornbury exclaims, "This anecdote should be a lesson to all artists not to sacrifice their lives in danger in the pursuit of his art. *It is in this position*" (tied to a post) "*that I would paint Peel. I have seen his representation by the sculptor in his monument in St Paul's.*"

As a personal biography these volumes are singularly meagre, even for a life of a painter. Turner, R.A., we are told, was born in London; one that he was born in 1775, in Maiden-lane (No. 21, recently pulled down to make room for the approaches to the Strand Bridge), another down to the river (), at the end of which was a summerhouse." And in another (vol. i.), we are told that Turner "had a fond fold of architecture," designed his own house, Soho Lodge, Twickenham, and "built" it for himself. Of his father, we are told, I suppose to express his love of, or wish for, solitude.—Turner afterwards assumed into Sandycombe Lodge." But in the very next page the author informs us that Turner's father became "a barber's assistant." And he says, "About this time (no time stated, though from another entry we gather it was in 1800) Turner left his father's residence to Twickenham, where he purchased Sandycombe Lodge, near Richmond-bridge."

But there are innumerable evidences of confusion and carelessness throughout the book. Chapter iv. of vol. ii., entitled "Turner and the Royal Academy" opens with "Turner's connection with the academy, with all its faults. It had been quick to see his genius and to confess to him from the first. It had given him its studentship, and was soon an academician." One naturally asks when is it now? there is no date to help us. Then we have to turn back to the preceding chapter ending with the date Oct. 6, 1815. Mr. Thornbury then proceeds to say:—"The first picture for it at the election was done for its mother; for his great heart was very susceptible of gratitude," and this idea is illustrated by the anecdote related of Turner's having painted a picture for the wife of the "kind-hearted Hayden" he (being at his easel) "scarcely stopped painting, but, with a wave of his hand, ordered the boy to go and tell Hayden he stabled his mother!" by which, it is surmised, "he figuratively paid his debt to the academy, together with the picture which had to be executed him." Not after all, what had Turner to be grateful for to the Royal Academy? Mr. Thornbury early in the work quotes a long passage from the writings of Sir Joshua, which begins thus:—

The academy taught Turner nothing, not even the one thing it might have taught him—the science of colours. Turner, from the beginning, set his face steadily against the academy system of colours. Turner, from the beginning, set his face steadily against the academy system of colours. Turner, from the beginning, would not take conventional and monotonous rules, and obtain results proved thousands of which you seldom proved more than "Mr. President," and "namely," the words which Turner used to return to when he had hopelessly entangled himself in the subtleties of his own rhetoric; and through all this mumbling confusion the hero of Sir. Martin's brake in, merrily and melodiously, with their

One two—three four Five six—seven eight
Five seven Six eight

then cause a ball, through which again you heard "Mr. President" and "namely."

And in the next page we are told that "Turner's want of (the power of) expression rendered him almost useless as a professor of Perspective, though he took great pains to prepare the most learned diagrams;" and that on one memorable occasion, when the hour had come for one of his lectures the following scene took place:—

The professor arrived at the morning of the day, students had assembled. The professor assumes his desk—every eye is fixed on him and on his book's bones. But the professor is uneasy, he is perplexed, he is confused into one point—now turns the other, No! Now he begins, but what he says is "Gentlemen, *you have come and kept me waiting*" in the lecture-room.

What must anybody, what must foreigners more particularly, think of an academy of arts, consisting of the "most eminent and respectable artists in England," one of whose professors should stand by a figure as is here described of poor Turner? "Call you this backing your friends?"

Taking his material's from various sources, and not condescending to the trouble of collating and digesting them, Mr. Thornbury, like a bull-hoses goes over the ground again and again, till we get quite bewildered and dizzy in accompanying him; and, as a matter of course, the same occurrences are referred to more than once, though, unfortunately, not in a consistent manner. Thus at page 172, vol. ii. we are told in Mr. Trimmer's reminiscences how Jerwan accompanied his father's (the Rev. Mr. Trimmer) the portrait of his younger brother, "a child holding a ball;" and how "the artist painted the artist: the head and forelegs were capital, but the hind-leg and tail caused the difficulty—to get the right position." "Wrap them up in your red pocket-handkerchief, said Turner, who was looking on; and we only saw the cat differently disposed of, but the picture was improved; it was one of Howard's best." You die, or you recover, but an remark that it is a pity Mr. Thornbury could not find sooppings material about Turner's cat. A wonder without involving an imputation against another artist, a brother academician and professor of painting, of not being able to paint the hind-quarters of a cat. Again, at page 31, vol. ii., we meet with the same incident again referred to, though described in a totally different manner, on the authority of Mr. Lupton, the engraver:—

It is generally supposed that Turner never painted a picture in conjunction with any other academician, but the following story will show that he did. On one occasion, when he was staying at the house of his old friend, the Rev. Mr. Trimmer, of Heston, near Hounslow, a kitten, a favourite with the whole parish gentlemen, he was much beloved, Turner was present while Mr. Howard was painting the portrait of the child with a ball. The painter placed the animal and Helen had got into a bobbin; the picture would not come right. Turner, who was looking on, exclaimed, "Let me have it," and he took up leisurely the kitten, and with a few touches of warm colour in the foreground. He advised the introduction of a cat, and the picture was finished. The more elegant pencil and brilliant colour of Turner added to the introduction. Turner instantly took up his brushes, and painted in the animal's head. This picture was owned by the above-named gentleman, and still exists in Mr. Trimmer's house, an interesting relic of Turner's sagacity.

Which of these two versions of the same affair is the true one? Is either of them accurate?

Diffuse as Mr. Thornbury is in the search for materials in any way relating to Turner he finds it impossible to fill out the allotted space of two octavo volumes with them, and, as a makeshift, has resort to all sorts of matters having nothing to do with the life of the painter—the object of his work, such as a description of London in the time of Turner's boyhood; "Turner's Contemporaries in Water and Oil;" a sketch of the history of water-colour painting; a memoir of Girtin, chiefly extracted from printed authorities; historic notes on engravers in England; "Contemporaries, Academicals and Domestic," and "Professors" of Turner (where we are told "Scotland, *originally* an independent state, was born 1745;" and that "Ireland was originally a kingdom was born 1757"); a list of dates of public events at home and abroad during Turner's life, and so forth. Regret that it was not Mr. Thornbury that gave *birth to modern art*, that *threw open our exhibitions*, and that originated our galleries of modern pictures"); again memoirs of various artists—Sidney Cooper, Stanfield, Lawrence, &c.; historic notes on the origin and progress of the Royal Academy, with a full description of Arthur's celebrated picture of the Royal Academicians and of that of the Royal Academy Exhibition in 1789, which our readers will remember was engraved in the ILLUSTRATED LONDON NEWS of May 11, &c.

But worse still, when dealing with the various contributions made to him, he seems to have been without any consideration of the responsibility which would attach to him in giving these publicity, and he occasionally publishes statements affecting the memory of individuals, artists, and others, more or less known to the public, and many of which can be attributable only to the grossest amount of ignorance and spleen in the writers. We shall content ourselves by referring to some remarks made on the late Thomas Lawrence, on the authority of Mr. Thornbury's reminisces on trimmer Mr. Trimmer. Never was artist after his death more damaged by "faint praise" and ill-considered eulogy. Lawrence, had these alone will establish his reputation upon a just footing. Mr. Thornbury's contributor did not do so. He speaks of him "at a bowl-room, Islington, Wellington, Canning, and others not worth naming," but "the year *I have forgotten*" Could any Mr. Thornbury be compelled to How little he knew of Lawrence as an artist will be apparent to those who know the man by the observation—"I have been told by Howard (who is a good authority) that Lawrence made a crayon drawing of the sitter, from which he did his oil; but if this had been the case the drawings would be in the Soane Museum." The writer of the above can assert, from personal knowledge, that Lawrence did no such thing as is here described; on the contrary, he usually commenced his picture on a bold crayon cartoon of his sitter in black and white, with all the arrangement of drapery, &c., on the canvas. He has painted in the face, about which he was always so anxious that he has been known to rub out the whole two, three, and four times before he was satisfied with the result of the drapery. Had these been destroyed in the rest being probably left to his assistants, except the finishing work, which, as in the case of Reynolds, he did himself. Mr. Trimmer announces, in apparent astonishment, "They used to say in Lawrence's time that he painted with a fan." Those who saw his pencil, and the number of portraits he turned out every year, would have little hesitation in crediting the amount suggested.

The same gentleman's highly intelligent little sketch of the great portrait-painter he "giving a couple of anecdotes of Lawrence and George IV., which are not generally known:"—

The first has reference to the time when a gold chain was placed by the corporation on Lawrence's neck, at the conclusion of the inauguration presidency. Quoth the Monarch, "I give this chain to you and yours," &c. (I forgive the exact terms). "And Lawrence, then your father's name, your family or my successors?" "Your successors," said the King. The King turned red; and what a face he could make! "Another lie added to my list." "Damn the fellow, what does he mean? Damn his family, what do I care for his family?"

I think it was before this that he had given offence. Lawrence had brought the portrait of Royal Highness, at that time among the favourites of Napoleon's set, the young Duc de Reichstadt, who is said to have been poisoned. Lawrence had been told that the King "was very anxious to see it."

"Lawrence," said the King, "I must have this." Lawrence bowed. "I am much honoured, sir, but it is not finished." "Then it must be finished, I will return with it in the morning." The next day Lawrence was ushered into the King's closet with it. "Lawrence," said the King, "I have taken it from the King of the Netherlands." "Your successors," said the King. "Lawrence, you have insulted me. I will not have it at all. I will not have it.

NEW BOOKS,

W. HARRY ROGERS'NEW BOOK OF EMBLEMS.
Beautifully Printed by Whittingham in Old English Text, with Initial Letters and Borders, Engraved by Thompson, price 21s. cloth gilt; 25s. calf extra; 30s. 6d. morocco antique,

SPIRITUAL CONCEITS, extracted from the Sacred Writings of the Fathers, the Old and New Testaments, &c. With an Historical Introduction and Elucidations. By W. HARRY ROGERS, Author of "Emblematical Panels," &c. Published at 28, Paternoster-row.

STANDARD NEW ILLUSTRATED GIFT-BOOK.
Ready Next Week, Printed in Gold and Colours,

THE WISDOM OF SOLOMON. From the Text of the Authorised Version. A Photographic Gem of the Queen of Sheba and her Retinue, from a Picture by Horace Vernet, and Eighty-four Pictures by the Greatest Living Artists. Cloth, richly ornamented, 21s.; morocco, 31s. 6d. GEISLER and FARRAR, owner of St. Paul's-churchyard.

NEW BOOKS FOR BOYS.

THE STORY OF KING ARTHUR AND HIS KNIGHTS. By the Author of "Tom Brown's School Days." Illustrated by Doyle and Pinwell, and Printed by Whittingham. Uniform with "Alice in Wonderland," by C. H. Bennett. Post 8vo, price 5s. cloth; 7s. 6d. morocco; 21s. calf extra.

GEISLER and FARRAR.

ILLUSTRATED and JUVENILE BOOKS
This day. Illustrated by Birket Foster.

SHAKSPEARE'S SONGS and SONNETS. Illustrated by JOHN GILBERT. Uniform with "Cats' Paradise," &c. Illustrated by Birket Foster. In fcap. 8vo, price 4s. cloth; 6s. 6d. morocco, gilt.

POETRY OF THE ELIZABETHAN AGE: a Selection of the best Ballads, all Shakspeare's Songs, and Miscellaneous Poetry. Illustrated by Birket Foster. In fcap. 8vo, price 4s. cloth; 6s. 6d. morocco, gilt.

THE PSALMS OF DAVID. With Illustrated and Ornamental Borders designed by JOHN FRANCIS, and Initial Letters by Thompson. In 4to, price 21s.; morocco, 42s.

FAVOURITE ENGLISH POEMS OF THE LAST HUNDRED YEARS—THOMSON to TENNYSON. With 300 Illustrations by Birket Foster, Gilbert, Absolon, Pinwell, &c. Cloth extra, gilt edges, 21s.; morocco, 42s.

LIFE AMONGST THE INDIANS. By GEORGE CATLIN, the Indian Traveller. With 12 Illustrations. Small 8vo, cloth, price 5s.

"Compare a child's book with 'Robinson Crusoe,' and in spite of the latter's unapproachable merit, the former will be found to be the more commercially valuable property of the two."—Mr. Gladstone's words, with one of the best volumes for the money of the season to be had in your town."—Athenæum, July 13.

THE DOG'S OWN BOOK OF BOATS.
LIBRARY EDITION, Bound: or, Schooling Sports. THE VOYAGE OF THE CONSTANCE.

LITTLE BIRD RED and LITTLE BIRD BLUE: a Story of the Nursery. By the Author of Little Owl at Home. Beautifully Printed, with Coloured Illustrations and Borders. Price 5s. bevelled boards.

The appearance of a book like this will create more fancy and altogether desirable in peculiarly refined taste."—The Queen, Oct. 26.

CHILD'S PLAY. Illustrated in Colours by E. V. B. Price 16s.

THE CHILD and the MAN: PICTURES OF THE INFANCY OF ANIMALS. 70 Hand-Engravings. Square, cloth, gilt edges. Price 5s.

CHILDREN'S PICTURE-BOOK.
CHILD'S PICTURE TREASURY OF PLEASURE-BOOKS.

PAUL DUNCAN'S LITTLE BY LITTLE: or, The Story of a Child's Progress. By FLORA LEE FREEMAN. Fcap. cloth, gilt edges, 3s. 6d.

Also, uniform, 2s. 6d. & 3s. 6d. each, cloth, gilt edges:
DIFFICULTIES OVERCOME.
JACK BUNTLINE; or, Life on the Ocean.
THE POST MISTRESS'S DAUGHTER.
THE BABES IN THE BASKET.
GEISLER and FARRAR, 26 and 28, Paternoster-row, and 49, Ludgate-hill.

Lately, fcap. 8vo, price 5s. cloth,
BOOK of SHADOWS ON LIFE'S PATHWAY. By the Author of "Doing and Suffering."
SEELEY, JACKSON, and HALLIDAY, 54, Fleet-street.

Lately, fcap. 8vo, price 5s. cloth,
MINISTERING CHILDREN. Cheap Edition. Uniform with "Ursula." By the Author of "Amy Herbert."
SEELEY, JACKSON, and HALLIDAY, 54, Fleet-street.

Price 1s., cloth; Abridged Edition, 6d.
GRAY'S ANATOMICAL TEXT-BOOK.
"Apparatus and anatomy, healthy and morbidly, depicted on the Cards. . . . Students will find these cards of great use in refreshing their heads at the back of the hippocampus, which abounds in organic matter, and in helping them to remember the names of the cerebral convolutions, and the course of the principal vessels, nerves, and tissues, and the locomotory apparatus by the muscles of the shape, view, &c. . . . Mr. Gray has done his work well, and we wish him success."—Medical Times and Gazette, Oct. 26, 1861.
"Excellent."—Medical Circular.
JOHN CHURCHILL, New Burlington-street.

Just published, Fifth Edition, price 2s. 6d., free by post 32 stamps,
DISEASES OF THE SKIN: a Guide to their Treatment. Dedicated, by permission, to the Queen. By ERASMUS WILSON, F.R.S., Lecturer on Anatomy to the Royal College of Surgeons, Author of "Healthy Skin," &c. This new edition contains those diseases from the Author's Lectures at the Royal College of Surgeons.
London: J. CHURCHILL, 32, Great Marlborough-street.

WEDDING STATIONERY—Pattern free by return of post. At Mappin's, No. 4, the Queen's and Royal Patentees' Establishment, Sheffield. Manufactory, Queen's-road. Warehouse, 77 and 78, Cornhill, corner.

DRESSING-CASES and DRESSING-BAGS. A choice of upwards of 100 of the best manufactures, and fitted in the most complete manner for immediate use, and Despatch-boxes, Dressing-bags, Envelope-cases, Writing-cases, Blotting-books, &c., at trade prices.
PARKINS and GOTTO, 24 and 25, Oxford-street, London.

CRAUFURD COLLEGE, MAIDENHEAD, Berkshire.—Preparation for the Civil Service and Military Examinations, and for the Universities. The Rev. CHARLES BRADLEY, late Indian Assistant Commissary-General, Author of "Field Exercise for professional, agricultural, manufacturing, and commercial pursuits; and for Gentlemen's Sons." Terms, including private instruction, 120 guineas per annum. Cricket, fives, rowing, and riding. Healthy locality, and every attention applies to the moral, intellectual, and physical improvement. Attendance from the Metropolitan Companies, with the best references, on application.

ORIENTAL GENERAL GARDENS.

THE ORIENTAL INLAND STEAM COMPANY (Limited), undertake daily from the Indian Gardens—Pimlico—to Greenwich.

This Company is a new general service both by land and water, and as a great, far-reaching service throughout the East. They receive goods in charge for the Ports of India, China, and Australia, and whether on the coast or in the interior they convey goods by rail-road, steam-boat, or sailing-vessel, and undertake to insure them for the voyage, and they undertake to procure Passports and Letters of Credit for travellers to England. They forward bets by the Cape and Overland Mails, and undertake to pay the Duties and Charges on Importation, and to forward Goods to the Interior. They undertake to have deliveries at the lowest possible charge, without incurring trouble to the shipper or consignee, which is the case now almost everywhere, and in addition they receive the interest free of any advantage. The Company's Offices are at the Indian Gardens, Pimlico, and at the Company's Agencies at the Chinese Empire, Australia, and the Cape of Good Hope, where they already have extensive connexion, and the orders may be given or supplied as possible. The following are the Agencies at present established:—

Agra	Mangalore
Ahmednugger	Nagpore
Allahabad	Neemuch
Arcot	Nellore
Bangalore	Nusseerabad
Baroda	Poonah
Bellary	Rajahmundry
Bhopal	Saugor
Bombay	Seetapore
Calcutta	Secunderabad
Cawnpore	Shahabadhaur
Chittagong	Simla
Delhi	Surat
Dinapore	Trichinopoly
Dindigul	Umballa

The arrangements for the Modern Presidency are not matured, but will be announced when completed.

THE PALACE HOTEL, Buckingham-gate, London. Visitors to the Palace are open to receive at this Hotel various Suites of Apartments, a convenience not elsewhere offered. The Hotel is replete with every comfort, and the Proprietor, confiding in the patronage of the Nobility and Gentry, who have made it their Establishment for perfect respectability, and only about 40 yards from the new Railway Junction.—J. G. ISAACS, Proprietor.

THE LIVERPOOL and LONDON FIRE and LIFE INSURANCE COMPANY.

The Annual Fire Premiums ... £350,000
Bonuses to Insurers ... ...

SIR JOHN FORBES, M.D.

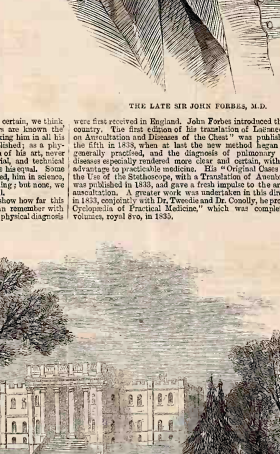
JOHN FORBES, Knight, M.D., D.C.L. Oxon, was born on the 18th of October, 1787, at Cuttlebra, Banffshire, Scotland, and was the fourth son of Mr. Alexander Forbes. At the age of eleven, after the usual discipline of a village school, he was sent to the Fordyce Academy, where he remained three years. He then went to the Grammar School in Aberdeen for a year, after which (1805) he entered Marischal College, where he studied classes for three sessions. Subsequently spending a session at Edinburgh University (1806-7), he entered the Navy as Assistant Surgeon in 1807. After the short period of twenty months he was promoted to be Surgeon, and continued in active service until 1816. We have heard him refer with honest pride to his early promotion, as it was a reward for a Report on the Meteorology of the West India Station. In 1811 he held for three months the appointment of Assistant Medical Officer at Haslar Hospital. During the intervals of this period of public service he returned to Edinburgh for the purpose of attending various courses of lectures, both medical and scientific, and where he finally graduated, in 1817, as Doctor of Medicine. His inaugural dissertation indicated the leading bias of his mind; it was entitled "Tentamen Inaugurale de Mentis Exercitatione et Felicitate exinde Derivanda."

Dr. Forbes early retired from the Navy and commenced practice as a physician at Penzance, at the same time he devoted himself with zeal to scientific pursuits, but more particularly to the study of geology and climatology. In 1820 he married, at Torrington, in Devonshire, Eliza Mary, daughter of John Burgh, Esq., H.E.I.C. She died in London, in 1851. His only child, a son (Alexander Clark Forbes), was born at Chichester in 1824, whither Dr. Forbes had removed the year preceding as successor to Sir William Burnett. He had a large practice there, and (as at Penzance) was an active supporter of all the local, charitable, scientific, and literary institutions. In particular, he was usually instrumental in establishing the Infirmary at Chichester. Some of the lectures he delivered before the Philosophical Society were published by request. It was here that he meditated and launched his two great enterprises, "The Cyclopædia of Practical Medicine" and "The British and Foreign Medical Review." In 1840 he found it expedient to remove to London, where he continued the same vigorous of life until, in 1850, his failing health compelled his retirement from practice; and he then left London to reside with his son at Whitchurch, near Reading, where he died. He had the honour of Knighthood conferred upon him in 1853. On retiring from practice he presented his large and valuable library to his Alma Mater, Marischal College, Aberdeen. Two years previously, in conjunction with Sir John Clark, he had established a library at Fordyce, where he had got his early education.

THE LATE SIR JOHN FORBES, M.D.

Whatever may be now thought of his merits, it is certain, we think, that the more John Forbes's character and labours are known the higher will be his rank on the roll of fame. Taking him in all his relations—as a scholar, at once scientific and accomplished; as a physician, deeply read, learned, and practical; as a man of his art, never wearying in his efforts to advance the social, material, and technical interests of his profession—it will not be easy to name his equal. Some British physicians may have equalled, perhaps excelled, him in science, or in learning, or even one or two in extensive reading; but none, we believe, have equalled or excelled him in each and all.

A short notice of his chief labours will serve to show how far this opinion is well founded. Many living physicians can remember with what contemptuous disregard the doctrines and art of physical diagnosis were first received in England. John Forbes introduced them into this country. The first edition of his translation of Laennec's "Treatise on Auscultation and Diseases of the Chest" was published in 1821, the fifth in 1838, when at last the new method began to be more generally practised, and the diagnosis of pulmonary and cardiac diseases especially rendered more clear and certain, with incalculable advantage to practicable medicine. His "Original Cases Illustrating the Use of the Stethoscope, with a Translation of Avenbrugger," &c., was published in 1833, and gave a fresh impulse to the art of mediate auscultation. A greater work was undertaken in this direction when, in 1833, conjointly with Dr. Tweedie and Dr. Conolly, he projected "The Cyclopædia of Practical Medicine," which was completed in four volumes, royal 8vo, in 1835.



KIMBOLTON CASTLE, HUNTS, THE SEAT OF THE DUKE OF MANCHESTER, VISITED LAST WEEK BY THE PRINCE OF WALES.

No great physician ever limited his labours to mere professional studies, and John Forbes proved no exception to the law. Hence he diverged into the fields of general science. He loved science, and encouraged it because he loved it; and he was a most constant attendant at the meetings of the Royal Society and the Royal Institution, on the council and committee of which respectively he frequently served. Nor did he neglect the walks of general literature. He was a pleasant and easy writer, as is proved by his "Physician's Holiday; or, a Month's Tour in Switzerland," published in 1849, and which was republished in a cheap form. It is highly characteristic of the mind of the writer and pervaded by a genial and so healthy a tone that its most timid could not fail to be instructed and charmed by its perusal. A similar spirit pervades a little essay, written in 1855, entitled "Of Happiness in its Relations to Work and Knowledge," in which he returned to the theme that occupied him as a student in Edinburgh in 1817. It was published at the request of the members of the Chichester Literary Institute, to whom it was delivered at the opening of their session. He also published two other books of travel—viz., "Memorandums made in Ireland in the Autumn, 1852;" and "Sightseeing in Germany and the Tyrol in 1856."

In private life John Forbes was a man to be both loved and honoured. Professing too little, perhaps, of the Christian faith, there was no brighter example of all Christian virtues. He bore no malice, and he had so little of it in his nature that he had difficulty in understanding how man could be such fools as to entertain it. "Do as you would be done by" was the daily rule of his life, and was manifested in acts of overflowing benevolence. No poor governess struggling with penury, or young artist launched with insufficient capital or patronage on the great sea of London life, ever applied to him in vain. He sympathised with the young practitioner in his early struggles, and he had no greater happiness than in holding out a helping hand to any professional brother who appealed to him for aid in pecuniary difficulties. In every medical benevolent institution he took an active interest, and his sympathies extended even far beyond professional circles. Amongst the many benevolent and charitable institutions he thus laboriously fostered during his residence in London may be mentioned the Hospital for Consumption at Brompton, the Governesses' Benevolent Institution, the Asylum for Idiots, the Medical Benevolent Fund and College, the Convalescent Hospital, &c. In a rigid estimate of his character the excessive benevolence must be considered a defect, for it sometimes ran wild; but with his defects we have nothing to do. At any rate, it was once be shared with other distinguished physicians.

John Forbes received a fair share of those honours and honourable titles which often indicate rather the opinions of the donors than the merits of the recipient. He was a Knight; Hon. D.C.L. of Oxford; a Fellow of the Royal Society and of the College of Physicians, London; hon. member of the Caledonian Philosophical Society, of the Academy of Sciences at Madrid, of the Royal Society of Gottingen, of the Royal Medical Society of Copenhagen, of the Imperial Society of Physicians of Vienna, of the Medico-Chirurgical Societies of Turin and Amsterdam, of the American Philosophical Society, &c. He held the appointments of Physician in Ordinary to her Majesty's Household and to the late Duke of Cambridge, Physician Extraordinary to the Prince Consort, and Consulting Physician to the Hospital for Consumption.

KIMBOLTON CASTLE.

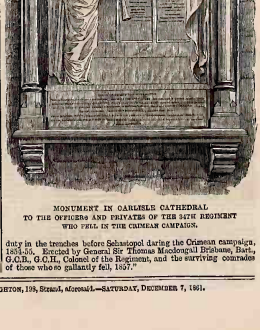
THE Duke and Duchess of Manchester had the honour of entertaining last week the Prince of Wales at the Duke's seat, Kimbolton Castle, in Huntingdonshire. This castle, an ancient stone building, was the residence of Catherine of Aragon, the first wife of King Henry VIII., after his divorce, and here she died. It has undergone many alterations since that period. The park is well stocked with deer. The accompanying Engraving represents the east front of Kimbolton Castle.

CRIMEAN MONUMENT IN CARLISLE CATHEDRAL.

THIS monument, in Carrara marble, executed by Steele, of Edinburgh, has lately been placed in the Cathedral of Carlisle. The figure of Fame is gracefully represented mourning over the fallen, and suspending above their names wreaths of laurel.

The central compartment contains the names of the officers and the number of the sergeants, corporals, drummers, and privates of the 34th Regiment who fell in action or died before Sebastopol, during the campaign of 1854-5, in the Crimea—viz., Captains John Shiffner and John Robinson; Lieutenants Francis Richard Hurst, Herbt Macleod Lawrence, Henry Daniel Alt, William Walker Jordan, Robert Browne Clayton, Norman Ramsay; thirteen sergeants, eleven corporals, four drummers, and two hundred and eighty-nine privates.

A tablet beneath bears the following inscription:—"This tablet commemorates the heroic and devoted services of the officers whose names are above inscribed, and of the non-commissioned officers, drummers, and privates of her Majesty's 34th, or Cumberland, Regiment, who were killed in action or died from the effects of arduous duty in the trenches before Sebastopol during the Crimean campaign, 1854-56. Erected by General Sir Thomas Macdougall Brisbane, Bart., G.C.B., G.C.H., Colonel of the Regiment, and the surviving comrades of those who so gallantly fell, 1857."



MONUMENT IN CARLISLE CATHEDRAL TO THE OFFICERS AND PRIVATES OF THE 34TH REGIMENT WHO FELL IN THE CRIMEAN CAMPAIGN.

LONDON: Printed and Published at the Office, 198, Strand, in the Parish of St. Clement Danes, in the County of Middlesex, by GEORGE C. LEIGHTON, 198, Strand, aforesaid.—SATURDAY, DECEMBER 7, 1861.

THE ILLUSTRATED LONDON NEWS.

No. 1121.—VOL. XXXIX.] SATURDAY, DECEMBER 14, 1861. [WITH A SUPPLEMENT, FIVEPENCE

OUR CONTROVERSY WITH AMERICA.

THE attitude and bearing of the people of England under the circumstances which have arisen in connection with the seizure of the Confederate Commissioners on board the Trent have been in all respects worthy of the occasion. This is not the verdict of mere self-complacency, but ample testimony has been borne by the press of France to the mingled dignity, moderation, and firmness of purpose which have been displayed by the whole country, and without exception of class. The bitterest satirists on England and the English have failed to find anything in our conduct on which to base even a sneer; while for an accusation no shadow of a foundation has been discovered. If it were necessary we might quote some of the language of writers in Continental journals in which our national spirit, our unanimity of feeling, and our consciousness of being in the right are held up to admiration in no measured terms; but we only refer to these eulogies for the purpose of illustration, and with no desire to make more of a highly creditable state of things than it deserves. It would certainly have been a melancholy thing if a country like this should on the occurrence of an act of aggression have set about to scold and vapour with all the sound and fury of those, whether persons or nations, who are assured neither of their position nor the rights of the matter in dispute; and therefore, while admitting simply and unostentatiously the justice of any commendation which we have received for our conduct in this juncture of our national affairs, we can afford to be almost surprised that any one should have conceived it could have been other than it has been. It is to be observed that, as the time since the intelligence of the Jacinto affair was received has run on, the public mind has taken a calmer view of the situation; but, nevertheless, there has not appeared any abatement of the resolute determination to hold to the honour of England at all hazards which was the first sensation that pervaded the land. If there be any change in the view of this question—and we think there is—it is a growing incredulity with regard to the necessity for a resort to the bloody arbitrement of the sword. Reflection, consideration, examination of the subject in all its bearings, seem to lead to something like a conviction that, if a similar process be applied to the question on the other side of the water, it must result in a peaceable issue. The most recent accounts show that some change has come over the spirit in which most of the Federal so-called organs of public opinions deal with this subject. The tone adopted by these journals is much more serious and practical than that which characterised the delivery of opinions on the first blush of the matter; and something has been done to familiarise the popular mind in America with the surrender of the Confederate Commissioners as a contingency by no means remote. Some of them go so far as to say that the recent event cannot—we suppose because it ought not—be a cause of war; and others have allowed that, if the act of the officers of the Federal navy is not justifiable by the law of nations, it cannot inflict any wound on the national honour to make a suitable apology. The signs of the existence of such a feeling, however feeble they may be, are not without significance, and from them may be drawn auguries of things to come which, we believe, the most sensitive Englishmen would be willing enough to witness. It must be remembered that these indications of a tendency to

MR. SLIDELL.

THE CONFEDERATE COMMISSIONERS TO ENGLAND AND FRANCE SEIZED ON BOARD THE TRENT.—SEE NEXT PAGE.

concession in America have taken place before there has been any knowledge of the manner in which the affair of the Trent has been received in England. Surely the ungrateful spectacle of a nation unanimous for the vindication of its honour, and consentaneous in its conviction that that honour has been wounded, cannot be without its effect even on a nation so impulsive as the Americans. It is with a full consciousness of all the disadvantages, present and prospective, to both countries which must follow a war such as that which we are obliged to contemplate, but ready at all points for even such a contingency, that England awaits the result of the intercommunication between the two Governments.

In the mean time, in a spirit of perfect candour, and divesting ourselves of any mere partisanship, it may be worth while to consider some of the disadvantages which this untoward act—for such it is from any point of view—is calculated to bring upon the cause for which the Northern States are contending. It is useless to blink the fact that the civil war has assumed a magnitude which probably we in Europe did not contemplate, and which has called forth at the very earliest period all the resources of the North. The visions of a rapid subjugation of the South in one triumphant campaign have faded before the stern reality of the situation; and, while it is broadly stated on all hands on this side of the water that a restoration of the old Union is assuming the aspect of an impossibility, it has been whispered that such an opinion has secretly taken root in the minds of the Cabinet at Washington, and that a contest with England is adopted as a policy out of which may spring a pretext for the ultimate acknowledgment of the independence of the South. If this is really the case, why, all ground for argument is cut away, and it must be readily admitted that no course more calculated to attain that end could have been selected than that of bringing on a quarrel with this country.

But disregarding the insinuation that a policy so tortuous underlies the conduct of the advisers of Mr. Lincoln, and assuming that the object of the Federal Government is the rehabilitation of the Union, it is impossible not to see the instantaneous damage that would be done to that object if war with England comes to pass. Already we see in the message of Mr. Jefferson Davis indications of the effect which such a dispute would have on the fortunes of the party of which he is the head. His bold assertion of a violation of international law in the case of the Trent is pregnant with suggestion, and its interpretation is that he will not shut out a present prospect of the recognition of the Southern States as an independent Republic by one of the first Powers of Europe. Of the moral force of such a declaration on the sense of which he is the apostle there can be little doubt; but if the matter should come to pitched battle, hostilities a glance will suffice to show, in the first place, the whole Southern seaboard practically set free from blockade, the cotton trade in full operation, under the practical convoy of the fleets of England, with a corresponding financial effect on the resources for that part of the American continent; while, on the other hand, the ports of the North will be fast closed, and an equivalent check placed on the commerce and sources of strength and action of the Federal power. This is no idle boast or senseless assertion, for we have the ships, the guns, and, above all, at this juncture of our naval history, we are strong just where we have hitherto been weak; we have the men, the sailors, without whom all the vessels of war in the world would be but useless masses. Already there comes from the great emporiums of trade and commerce, from New York notably, the rumour of mercantile stagnation, and, worse still, the cry of popular distress. Civil war alone has given the seeds of paralysis in that mighty progeny of which Americans were so justly proud, and in the most fortunate future looms a large national debt and years of financial struggle. What may not be predicated as the result of a war with a powerful kingdom like England, added to the enormous strife which is now going on in the States? In the interests of humanity and of civilisation and progress one shrinks from the contemplation of the rebound of a quarter of a century of a nation which always a world's wonder, suspended within it so many of the elements of advancement to greatness.

Nor, in considering the consequences of an unfriendly termination of the differences between England and the Federal States, can the probable conduct of other Powers in Europe be placed out of sight. In the very first rank, of course, must be placed France; and, if the opinions of the Imperial Government be at all truly indicated, there is little doubt of the line which will be taken by that country. If the arguments of the French journals—even those which, as the phrase goes, are "inspired" from the highest quarters—mean anything, they mean that this question is not to be looked at from a merely English point of view at all. It is stated that it is set only in accordance with the Confederate Government were seized under the British flag; for, supposing they had found it convenient to take passage in a French vessel, the officers of the San Jacinto would have felt themselves equally bound to have captured them under the treaties. In fact, it is urged that the question is a purely international one, and one on which it is impossible but that the opinion of all the nations of Europe must be consentaneous. The *casus belli* and its immediate vindication rest on England; but the moral force of international opinion will also be brought to bear on the quarrel, and that in direct opposition to the American side of the question. These considerations take the matter wholly out of the comparatively narrow bounds of a captious dispute between England and the Federal States. The question becomes cosmopolitan, and its bearings and its consequences assume adequate proportions.

If something of all this, which we have, owing to an earnest desire to enter on the discussion with the utmost moderation, perhaps too faintly indicated, could present itself to the American as it most surely does to the English mind, we might yet see a satisfactory, because a peaceful, solution of this vexed question. England, resolute and prepared for any eventuality, but more in sorrow than in anger, demands reparation for an international as well as a national wrong. If she had any choice she would have preferred that any other State of Europe should have undertaken the vindication of a principle which she holds only in common with other nations. There are special reasons too obvious and too often dwelt upon which make a quarrel of this kind in the abstract distasteful to her. She does not forget that the blood is thicker than water, but she also remembers that the time has been when in a contest for high principles and rights she could bear to see conflict even between brother and brother on her own soil, and, grievous as was the sacrifice, it was a frustration from which she did not shrink. She wishes to shed no kinsman's blood now let us hope that that feeling will prove to be reciprocal.

CAPTAIN WILKS, OF THE SAN JACINTO.

CAPTAIN CHARLES WILKES, the hero of the hour in the United States, was born in the State of New York in 1800, and entered the United States' Navy in 1818. In 1838 he was commissioned by the Federal Government with the rank of Captain, to the command of a naval expedition to explore the countries bordering on the Pacific and Southern Oceans. Starting from New York, he visited Valparaiso, visited the Sandwich, Feejee, and other Polynesian groups, and the coast of Oregon; crossed over to Australia and Tasmania, descending as far as the 63rd degree of south latitude. He visited Singapore and Borneo, and returned to New York in 1842, by way of the Cape of Good Hope. Several court-martial was held upon Captain Wilkes, however, he issued without loss of rank. The results of his exposition were recorded in a voluminous blue book, entitled "Narrative of the United States' Exploring Expedition." In 1848 the Geographical Society of London presented him with a gold medal as a token of their appreciation of his services to science. He also published a work entitled "Western America," which contains statistical and geographical facts and maps relating to the States of the Pacific Coast. He was returning from the coast of Africa, in command of the San Jacinto, when, hearing at Gibraltar that the Confederate Commissioners intended to take passage in the steamer Trent, he determined to seize them and any despatches they might have with them. In acting on this advice that he was guided only by his own notions of his duty to his country, and that he had no instructions from his superiors at Washington.

THE COMMISSIONERS OF THE CONFEDERATE STATES.

IN our issue of this week we give Portraits of Mr. Mason and Mr. Slidell, the Commissioners of the Southern States of America, who were arrested with the officers of the Confederate on board the British mail-steamer Trent.

MR. MASON.

This gentleman, the Commissioner to England, is a native of the State of Virginia, and is of direct English descent, this fact having been established by Mr. Mason himself in his family. He is the grandson of George Mason, one of the most celebrated of the worthies of Virginia, who was the author and chief supporter of the first Constitution of that State. The subject of our present memoir was born in the year 1798, and was, consequently, made his first appearance in public life in 1823, as a member of a Convention of the Southern States which was assembled for the purpose of framing the Constitution of Virginia. In 1826 he opening up the resources of Virginia by means of a canal between the Ohio and the Chesapeake River. In 1827 he was a member of a Convention under whose auspices the old Constitution of the State of Virginia was altered. In 1841 he was elected to the Senate of the United States, and was afterwards reelected at every election almost without opposition. Immediately on his becoming a member he was appointed a member of the Committee on Foreign Affairs of the Senate, the Foreign Relations Committee, which position he held without interruption until his retirement from that body, and he was for more than ten years the chairman of that Committee. In 1850 he took part in the discussion which ended in the Union being declared a Free State, and was one of the seven or eight members who, in conjunction with Mr. Jefferson Davis, were in favour of "secession" at the conclusion of the Convention under whose auspices the old Constitution of the State of Virginia was altered. In 1847 he was elected to the Senate of the United States, and was afterwards reelected at every election almost without opposition. Immediately on his becoming a member he was appointed a member of the Committee on Foreign Affairs of the Senate, the Foreign Relations Committee, which position he held without interruption until his retirement from that body, and he was for more than ten years the chairman of that Committee. In 1850 he took part in the discussion which ended in California being declared a Free State, and was one of the seven or eight members who, in conjunction with Mr. Jefferson Davis, were in favour of "secession" at the conclusion of the Convention under whose auspices the old Constitution of the State of Virginia was altered. In 1861

THE CIVIL WAR IN AMERICA.

By the arrival of the screw-steamer Etna we have received New York journals of the 30th ult.

THE OUTRAGE ON THE TRENT.

The journals of New York, Boston, and Philadelphia, as a general rule, speak in much more hesitatingly of the legality of Captain Wilkes' act than they did a week previously. They condemned to contemplate the possibility of reclamations on the part of Great Britain, and of yielding them. The *Tribune* says that if the British Government can be induced for the sake of reclaiming them ("Messrs. Mason and Slidell") to take the highest American ground in favour of neutral maritime rights, we shall have sold them for a great deal more than they are worth. The *World* acknowledges that the Northerners have hitherto been prone to the British Government in complaining that it recognised the South as a belligerent Power. The President as usual sees into the same position.

It has transpired that no despatches have been found in the trunks of the Ambassadors. The *New York Times* remarks upon this unwelcome discovery:—"In that case the letter of march of the roaming employed in justification of the act of Captain Wilkes may become augatory."

The journals have begun to suspect that the Laurens and other cases have been misrepresented by Messrs. George Sumner and Everett, while the managers men still refuse to accept the assurances of the journals that it was all right." It was feared, however, that the news of the burning of the Harvey Birch by the Nashville would again inflame the minds of the people against England.

CAPTAIN WILKES' RECEPTION IN BOSTON.

The Bostonians, usually so much more friendly than the New Yorkers, have on this occasion not acted in a manner worthy of their well-earned reputation. A public banquet at the Revere House was got up for the hero of the hour, and nothing could exceed the bad taste of the Massachusetts speakers (among whom were Judges Bigelow and Russell, Governor Andrew, and Mayor Lincoln), in their remarks that was overheard. At last two unfortunate expletives at the Government and people of a friendly nation.

BELLIGERENT OPERATIONS ON LAND AND SEA.

The Federals had taken possession of the Island of Tybee, at the mouth of the Savannah River. The people of that city were flying panic-stricken into the interior. The Confederates had blockaded the inlet leading to Savannah.

The Federal Hilton Head Island found the place very unhealthy, and were suffering much from fever and ague and congestive fever. All the teamsters and camp-followers were leaving for the North. The Federals have also occupied Fernandina. Below Beaufort, fifteen miles north of Port Royal.

On the 12th ult. Colonel Brown opened fire from Fort Pickens on Pensacola Florida. On the 24th the fight was still going on, we know not certainly with what result. Commodore Armstrong and the Navy-yard was destroyed, with all its stores; that Pensacola had been evacuated; and that General Bragg had called for reinforcements. On the other hand, they had driven off the vessels of the enemy of war, to have whilled the Niagara with balls, and thoroughly disabled the Colorado. It is to be hoped that each account; it will probably be the week before the Northern report reaches us.

The same mail brings the news that the Upper Potomac was engaged in lasting themselves. It is still, however, strenuously denied that they are going to the winter quarters.

The largest body of men ever reviewed on the American continent was passed in review by General M'Clellan, at Washington, on the 26th of December. They consisted of seventy-six regiments of infantry, seven of cavalry, and seventeen batteries, in all about 70,000 men.

Commerce in Missouri below St. Louis will be conducted by the Federal Government.

The Frigate had run into Charleston with her valuable and timely cargo. On the same day, the Federal ships have captured several vessels laden with contraband of war.

THE POLICY OF EMANCIPATION.

On this question Secretary Smith, a member of Mr. Lincoln's Cabinet, has expressed himself to the effect that the views of Mr. Cameron were not those of the Administration.

THE CONFEDERATE STATES.

Congress had passed a resolution for removing the seat of Government from Richmond to Nashville, Tennessee. Perhaps one reason for this step is the declaration of the people in the Northern Virginia and Tennessee Railroad, which imperils the connection between Richmond and the South-western States.

The Union men of North Carolina formally established a provisional State Government at Hatteras Inlet on the 18th ult.

A portion of the people of Kentucky and Missouri have passed Secession ordinances.

PRESIDENT DAVIS'S MESSAGE.

President Davis congratulates Congress on the progress of domestic manufactures among them. He speaks moderately of the great deeds of the Confederacy and the high and lofty spirit of patriotism with which they are animated. He says:—

A succession of victories at Bethel, Bull Run, Manassas, Springfield, Lexington, Leesburg, and Belmont, has stamped the wicked invasion which spread of fire and the unconscionable list of spoils upon each of the States has proved that numbers cease to avail when directed against a people fighting for the sacred rights of self-government and the privileges of freemen. The seven months of war the enemy have not only failed to extend their occupancy of our soil in the States and territories they have invaded to our embarrassment, while, instead of their threatened march of unchecked conquest, they have been driven at many points to assume the defensive, and, in fact, a fair comparison between the two belligerents as to men, military means, and financial condition the Confederate States are greatly more powerful now than when the struggle commenced.

After referring to the occurrences in Kentucky and Missouri, and, acknowledging that the postal service was entirely disarranged, he puts as good a face as possible on the commercial blockade of Southern ports which, however, is evidently driven to the extremity of issuing hasteless promises to pay. By constructing forty miles of railroad between Danville in Virginia, and Greensborough, in North Carolina, a third line for the line of communication could be opened from North to South. He urgently advises Congress to give all the necessary powers for the prosecution of war and administration. He scouts at the very idea of reconstructing the Union. Our people now know what Northern subjugation means and those with whom they have been so recently associated. They shrink with aversion from the bare idea of renewing such a connection."

When they saw a President making war without the consent of Congress—when they beheld Judges threatened because they maintain the writ of habeas corpus, not only when they see juries and law libraries disregarded under the order of military authority, and private men and innocent women dragged from their homes and firesides to the casemates of fortresses, there is no people who had been in the full enjoyment of freedom and self-government, who they believe that there must be some radical incompatibility between such people and themselves. With such a people no union could be formed or desired, but the separation is final, and for the independence we have asserted we will maintain it to the last extremity.

After denouncing the barbarous manner in which the United States have arrested the will, he accuses them of desiring to excite a servile war by the invasion of South Carolina, and warns them that in such a war they would forfeit all claims to be considered as prisoners of war. Of the outrage on Messrs. Mason and Slidell he says:—

The United States have thus claimed a general jurisdiction over the high seas, and over the vessels of all nations, sailing under the authority and the right of embargo, for the most part held sacred, even among barbarians, by seizing our citizens while sailing under the protection and with the documents of a neutral nation.

These proceedings were as much under the jurisdiction of the British Government as that it by and beneath that flag as if they had been on board of it, and the action on the part of the United States so said them in the estimation of the world have been as well founded as that to apprehend them where they were taken. Had they been malefactors, and citizens even of the United States, they could not have been arrested on a British ship or on British soil unless under the express provisions of a treaty and according to the forms therein provided for the extradition of criminals. But rights the most sacred seem to have lost all respect in their eyes.

The close of Mr. Davis's Message is evidently levelled rather at Great Britain and France than at the body he professes to be addressing. On the subjects of the blockade and the growth of cotton he says:—

Perhaps we had the right, if we had chosen to exercise it, to ask to know whether the principle, that blockades to be binding must be effectual, solemnly announced by the great Powers of Europe at Paris, is to be generally enforced or applied only to particular cases.

When the Confederate States, at your last session, became a party to the declaration reaffirming this principle of international law, which has been recognised so long by publicists and Governments, we certainly supposed it was to be universally enforced. The customary law of nations is made up of the concessions which nations, in their intercourse, and with reciprocal benefit to be enforced in particular instances at the pleasure of those who make them, that is the consent of the world, so far as that consent has placed under a moral law, will become subject to the caprice of those who execute it or suspend it at will. If it be true that the law of nations is made up of the usages of nations, it will then become a rule for the weak and not for the strong.

Feeling that such views must be taken by the neutral nations of the earth, we cannot but the surprise to be elicited which has been manifested by the inefficiency of the proclaimed blockade of our coast, and shall direct it to be laid before you the correspondence which shall attest the truth of our statement.

But, although we should be benefitted by the enforcement of this law, we do not desire it. We have no cotton to spare, and are fully prepared for the total enforcement for the successful prosecution of the war. As long as hostilities continue the Confederate States will maintain their present policy, and, to furnish their troops with food, clothing, and arms. If they should be forced to forego many of the luxuries and even the comforts of life, they will at least have the consolation of knowing that they are thus daily lessening more and more independent of the rest of the world. If, in this process, labour in the Confederate States should be gradually diverted from the cotton plant to the cereals which have been given by the earth to the commerce of mankind into other channels, so as to render unnecessary the export of cotton, the change will be attended only by the early harvest of benefits which must sooner or later result from the diversification of labour. It is clear that the consumption of cotton in the United States will be greatly reduced by the same cause, and the South will only be relieved from one of the incentives of our social system, which implies that a long continuance of this blockade might, by a diversion of labour and investment of capital in other employments, so establish the culture of cotton as to bring again the same interests of foreign countries which are dependent upon it for subsistence.

For every labourer who is diverted from the culture of cotton in the South, perhaps more than the number elsewhere will be employed in raising the various employments growing out of its use, will be forced also to change their occupation.

While the war which is waged is into from the right of self-government, we can have no cause to fear that the sympathies of the civilized population in the historical system of the world, which may carry suffering to other lands as well as to our own.

CANADA.

On the San Jacinto outrage, the *Quebec Chronicle*, the *Montreal Advertiser*, *Journal*, *Herald*, and *Gazette*, the *Toronto Globe* and *Herald*, and the *Hamilton Spectator* declare themselves in a sense which the London Times has not yet reached. The whole of the Canadian newspapers which dissent from the general view.

The Militia Bill has come into force, and is preparing for the worst. The former have commenced the erection of new forts at Toronto, the latter are busy in the construction of minor regiments, and eagerly learning the rudiments of a soldier's profession.

Since the Canadian line of European steamers have begun to run in the winter, and the Grand Trunk Railway has been in operation, inaugurated by Mr. Seward, it very troublesome to Canadian travellers. Not only has Mr. Seward given notice to terminate the issue passports, much delay ensues, and many travellers have been forced to pay the fee of a dollar each person, and to wait hours. This conduct on the part of Mr. Seward causes much heartburning among the people who dwell on the north bank of the St. Lawrence.

The Prince of Wales arrived at Montreal on the 20th inst. on the 23th ult.

The war in America has hitherto brought many advantages to the industrial interests of Canada. For the first time in history the St. Lawrence route has been crowded with vessels laden with the cereals of the Western States. As a consequence, Montreal has risen to be the second American export in grain and provision business. The canal-boats, warehouses, and elevators on the St. Lawrence line are unable to transact the business which has so suddenly poured in upon them. Freights, which were ruinously low during the years when the United States have fallen off more than fifty per cent. The Canadian canals, which were in a ruinous condition, could not stop attention is immediately drawn towards the position of the British provinces in North America, and particularly to the locality which the separates them from the United States.

It would be useless to disguise from the question as to how the frontier line of Canada and New Brunswick has become what it is, or whether it might not have been, by more judicious management, better than we have it. It is a fact that the boundary line of the United States of Maine and New York does so cut into the British territory that United States ports are commanding and dangerous positions in front of our principal cities and yet be on their own soil.

Nowadays, when Canada, New Brunswick, and Nova Scotia nearly one, we may safely calculate on our naval supremacy ensuring their protection from aggression. Like Victoria, Vancouver's Island, and British Columbia, the Canadas, and the British North-west Territory, our position is by no means to satisfactory, as in many instances in these latter provinces the land in the immediate neighbourhood of the United Government and those of the United States being separated by little more than six hundred miles of forest from the navigable waters which flow through the wilderness, and a few stones have been set up at long distances apart, and that is the only division that marks the frontier between the two peoples who, though coming of a common stock, speaking the same language and worshipping God in the same manner, yet are ever ready to fly at each other's throats upon the slightest provocation or mischief. There is yet hope that it may not be so, but the threatening aspect of affairs at many points on the frontier does not increase on the frontier.

The city of Quebec, our great stronghold in North America, is only thirty miles from the United States' territory; and River du Loup, the present Canadian terminus of the Grand Trunk Railway, is but a few miles from the United States' boundary line. It was to this point that it may not be so, but the threatening aspect of affairs at many points on the frontier does not increase on the frontier.

The city of Quebec, our great stronghold in North America, is only thirty miles from the United States' territory; and River du Loup, the present Canadian terminus of the Grand Trunk Railway, is but a few miles from the United States' boundary line. It was to this point that

Montreal, the capital of the Canadas, is only forty-four miles by railway from Rouse's Point, on the head of Lake Champlain, where the States of New York and Vermont meet. Several of the United States' railways connect the Atlantic cities with this important position should war break out: it was so in 1814, a great battle being fought in this neighbourhood, the victory being claimed by the Americans.

From Rouse's Point for nearly 300 miles eastward are what are called the eastern townships of Canada, a country of undulating hills and valleys, downs and much cleared and cultivated land; these abut upon the United States' territory, and, indeed, in many places are of a marked physical boundary, the St. Lawrence lying on their northern or western edge. West of Montreal, nearly opposite the Canadian town of Cornwall, the boundary line of the United States hits the St. Lawrence, and the river then separates them from Canada until it receives its waters at the outlet from Lake Ontario, a very good town lying on each side of it. On the Canadian banks the principal are Cornwall, Morrisburg, Prescott, and Kingston; on the United States' side the principal town is Ogdensburg, exactly opposite Prescott. These latter are large and important places, situated pretty much as Gravesend and Tilbury Fort are; both are important railway termini. Prescott is the point of junction of the Grand Trunk Railway with the line to Ottawa, the intended seat of the Government of Canada; while Ogdensburg is connected by railway with Rouse's Point to the eastward and with the New York Central Railway to the northward and westward. Kingston, in Canada, is situated at the point where Lake Ontario pours its waters into the St. Lawrence through a thousand channels formed by a number of beautiful islands. Kingston is a fortified place, and adjoins Fort Henry, a military position second only in importance to Quebec. Fort Henry is built on the site of the old French Fort Frontenac. In a war with the United States this place would become most important as a depôt for troops, as well as a naval station, where craft would be built to act upon Lake Ontario and the upper waters of the St. Lawrence. On the north shore of Lake Ontario is situated the large, rich, and dominating city of Toronto, the capital of Western Canada. It is built close upon the water's edge, is utterly unprotected by art, but nature has done much for it. It is a peculiarity of Canadian cities that they have been formed in particular situations long banks of sand and shingle, locally called beaches. At a considerable distance from the shore, in front of the city, is a long narrow bank of this description, upon which Toronto could be formed with rapidity, that would effectually protect this important city from all attacks on the lake side, while effectually commanding which Fort Henry would secure it landwards. Toronto, therefore, though apparently open and exposed, may be safely expected to take care of itself when the time arrives for its doing so. At the western end of Lake Ontario is situated the large and important city, Hamilton, and protected from all attacks from the lake by a beach similar to that which lies in front of Toronto. A single vessel can, in the case which operates the waters of Burlington Bay (on the south shore of which Hamilton is situated) with those of Lake Ontario renders it impossible for any vessel to approach within range or two miles of Hamilton. Its dangers, therefore, must be sought for in the opposite direction.

On the south shore of Lake Ontario there are situated several important United States' towns; and between the mouth of the Niagara River and the point where the lake becomes the River St. Lawrence are no less than six railway termini to lines which are connected with the New York central line. In these Generals, at the present day, such a harbour, in the event of hostilities, armaments would be fitted out to operate upon the opposite shore. Sackett's Harbour, for instance, would again become the scene of remarkable naval exploits. Across the lake, nearly opposite to Toronto, and well within sight of it on a clear day, upon a high hill, stands the monument recently erected to General Brock, who fell there, after having gained a victory over the American troops.

The international boundary line, having passed up the centre of Lake Ontario to opposite that point, immediately inwards and then follows the centre of the deep river which enters the lake here, pouring out in one unbroken mass the immense volume of the waters of the Lakes Erie, Huron, Michigan, and Superior, while and foamy after the great leap they have made at Niagara, and which is the source of the power. The Niagara River is a secure barrier for either nation. It may be crossed at its mouth, it is true, but not with impunity if an enemy occupied the precipitous hills on either side of the bed of the Great Falls it may also be crossed, but a thousand men having done so could not land if fifty enemies were in the neighbourhood. Above it a magnificent bridge spans the terrible rush of waters down the gorge of the Niagara—a triumph of engineering skill, but one of the evils it has produced, and which, doubtless, the art of war will destroy.

Above the falls of Niagara the boundary line keeps the centre of the stream until it enters Lake Erie. The north shore of this lake is British, and contains some of the best districts of Western Canada, the Lake Erie terminus of the railway of Buffalo also, Dunkirk, Erie, Cleveland, and Sandusky, the whole of which are railway termini.

The international boundary line is again found in the lake and through the River St. Clair and Lake St. Clair into Lake Huron, the Lake Huron and Lake Michigan and the United States' territory is divided only by a fine navigable river, much like the Thames at Erith; the large American city of Detroit is situated on its west bank and the Canadian town of Windsor opposite to it. The head of the western terminus of the Great Western Railway of Canada, the former the focus of a system of railways. From the north bank of the River St. Clair, the boundary line divides equally the waters of Lake Huron, and enters Lake Superior through the River St. Mary. The large portion of this lake belongs to the Americans. From its northern shore the line follows the direction of the 49th parallel of latitude, adjoining the State of Minnesota, there exists a very valuable country known as the Red River settlement, which, although in the possession of the Hudson Bay Company, it is a tract of exceedingly fine land, and contains some settlements known as the Red River and Selkirk settlements. This is a far-off, outlying property of the British Crown, exceedingly valuable to us, and much coveted by the United States, it has been sadly neglected by its owners, and we may soon find it the most difficult to protect.

THE WEATHER.

Commander Williams, R.N., the Admiralty agent of the Trent, has received a letter from the Government approving of his conduct.

Mr. Burke, of the Record Office, has arranged for such of South-ampton in charge of the Doomsday Book, for the purpose of having its accounts of the counties of Northumberland, Cumberland, Westmoreland, copied by Sir Henry James's photo-lithographic process.

OPENING OF VOLUNTEER BARRACKS AT BRADFORD.

We stated in our last Number that spacious and commodious volunteer barracks—the first erected in the United Kingdom—had recently been opened at Bradford for the use of the 3rd West York Volunteer Corps. These buildings (of which we give an Engraving on page 595) consist of a drill-shed, 150 by 70 feet, with a gymnasium 60 feet by 30ft., an armoury 46ft. by 30ft.; officers', orderly, and committee rooms, each 20ft. by 15ft.; a room for cleaning and repairing guns, and a storeroom. A drill-sergeant's house and stable form part of the buildings, which stand in the midst of a playground of about an acre and a half in extent. The whole cost is about £2000—a sum which has been raised by the contributions to a bazaar got up by the ladies of Bradford, and by a liberal donation from a gentleman who the architect. Saturday, the 30th ult., was the day fixed for the opening of the barracks and the inspection of the corps, and the most creditable portions of the annual shooting contest of the regiment. Mr. Alderman Ald, Mr. Lister, of Manningham Hall, the Lieutenant-Colonel of the regiment, distributed the prizes. The most important were a rifle to Sergeant Woodcock, value 20 guineas (presented by Mr. John Bald); a silver cup, value 11 guineas to Sergeant H. Stephenson (also presented by Mr. Bald); a silver cup to Corporal C. Anderson, value 10 guineas (presented by Mr. W. E. Forster, M.P.); and a silver cup to Corporal W. Milton, value £10 (presented by Mrs. Lister). After the distribution had been concluded, three hearty cheers were given for Mrs. Lister. The members of the corps and their friends, to the number of 400, then partook of a luncheon, provided in the drill-room, at the cost of Lieutenant-Colonel Lister, who acted as chairman and addressed the volunteers present in an appropriate speech.

CAPTAIN JAMES MOIR.

CAPTAIN JAMES MOIR, commander of the Royal Mail Steam-packet Company's ship Trent, now engaged in the intercolonial service in the West Indies, is about forty years of age, a native of Scotland, and his family residence is at Somerville, Haddington. The earlier part of his seagoing life was spent in the East India service, where ultimately he commanded one of the finest vessels trading between this company and the East Indies. Subsequently he joined the West India mail service as a junior officer, and at the time of the Russian War he was chief officer of the Royal mail steam-packet Crinoco when that

CAPTAIN MOIR, OF THE TRENT.

vessel was engaged in towing the disabled men-of-war from the thickest of the fight. Soon after the war he was appointed commander of the Royal mail steam-packet Teviot, then to the Conway, and finally to the Trent, which he now commands. On several occasions he has had to take the command of the Atrato and La Plata in the Transatlantic service, and the passengers by those, as well as the intercolonial ships which he has commanded, cannot fail to remember the strict attention paid to their comfort, the scrupulous neatness and cleanliness of the ship, the excellent discipline of the crew, and courteous and gentlemanlike demeanour of the Captain, of whom the worst that can be said is, that he is a good officer and a thorough gentleman.

ALPACAS AND LLAMAS IN AUSTRALIA.

ALPACAS and Llamas are indigenous to Peru, Bolivia, and Chili, and supply food and clothing for their inhabitants, the latter being also used as beasts of burden. The wool of the former is highly esteemed, and the trade therein is vastly increasing. In 1834 the import into Liverpool was 5700lb., and now reaches nearly to 3,000,000lb. In 1836

ARMOURY AND DRILLROOM AT BRADFORD FOR THE THIRD WEST YORK RIFLE VOLUNTEERS.—SEE PRECEDING PAGE.

the price was 8d., and during the last ten years it has fluctuated between 1s. 8d. to 3s. 9d., per lb. The Peruvian Government, jealous of so wealth-producing an animal being possessed by other countries, in 1845 issued a decree prohibiting their exportation, and imposing a penalty of forfeiture of the flock and of ten years' labour in chains at the Chincha Islands on the owner and driver of any flock of these animals found within a certain distance of the coast. After overcoming innumerable difficulties and encountering great hardships during a period of nearly seven years, almost exclusively devoted to the prosecution of the enterprise, Mr. Charles Ledger succeeded, in November, 1858, in landing at Sydney 276 of these animals out of nearly 1500 he had at various times taken into his flock. It is impossible too highly to estimate the importance of this to the future of our colonies. All, or nearly all, the animals introduced into Australia have flourished there. In 1788 Australia had no sheep; the animal stock of New South Wales was one bull, three cows, one horse, three mares and three colts (Fairfax). In 1859 New South Wales alone had 200,715 horses, 2,110,604 cattle, 22,843 pigs, and 7,561,752 sheep; while the product of wool imported into this country alone from all our Australian colonies amounted in 1860 to nearly 60,000,000 lb. Mr. Charles Ledger estimates the probable increase in the alpaca flock in Australia in fifty years to reach 5,606,720 animals, which, at 7lb. only (a low average), will give a total of 39,247,040lb. of alpaca wool; and, at 2s. per lb., to yield an income of £3,924,704. The figures are large, no doubt, but the time is long in the life of a man although short in the history of a people. The number of animals at last account was 368, and the lambing time was close at hand, after which the shearing, the second in the colony, was to take place, and was anticipated to be encouraging in the highest degree.

Our Engraving represents some of the animals selected for slaughter and exhibition as stuffed specimens of the product of the colony at the Great Exhibition of 1862. They have, with the exception of the llama, all been born in the colony.

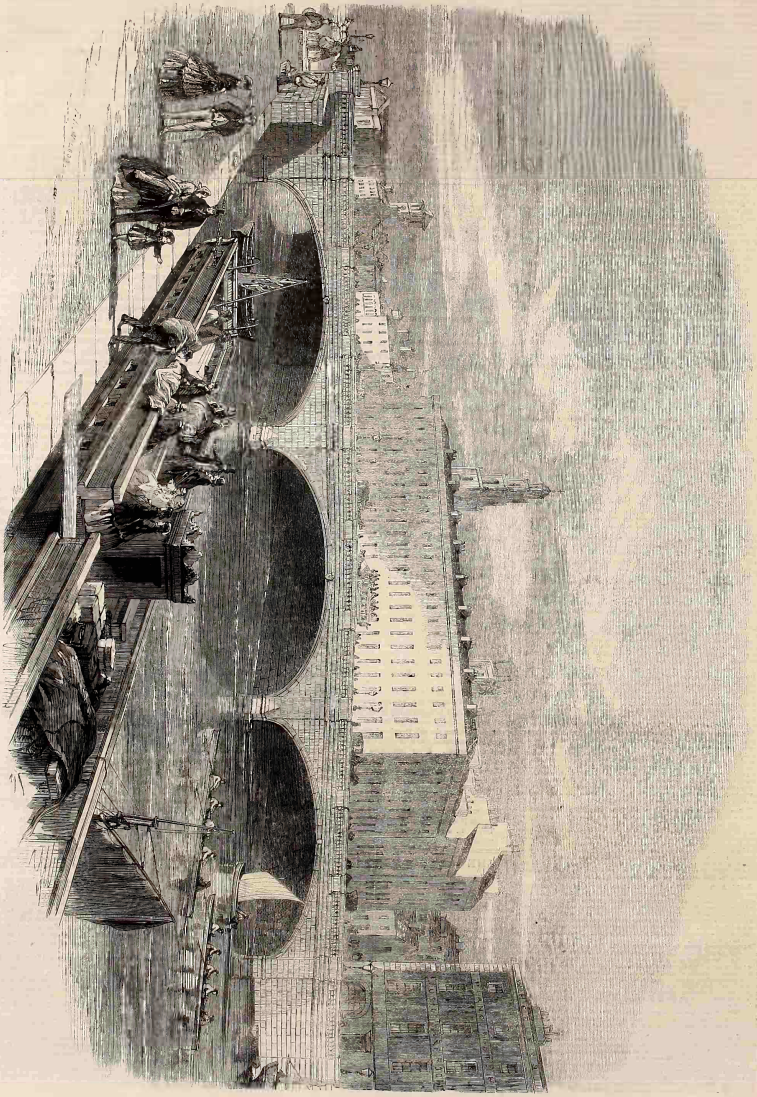
The animals possess fleeces such as Peru has never seen, and the fat (of which specimens will also be sent) obtained from each animal exceeds any ever seen in South America, showing in the most convincing manner both the perfect acclimatisation of the alpaca in Australia and the complete success of the crossbreeding Mr. Ledger has been contriving.

The Engraving is from a photograph, and represents the animals depasturing on the lawn attached to the residence of J. H. Atkinson, Esq., M.L.A., at Sophienburg, about twenty-three miles from Sydney, on the Great Southern Railway: the spot will be famous in the history of Australia as that at which the alpacas spent the first year of their colonial existence; where the first clip of colonial alpaca wool was shorn, in November, 1859; and where, on the 7th of September, 1861, the first alpaca meat killed in the colony was partaken of by a party of more than 100 ladies and gentlemen of the élite of Sydney, including the Hon. C. Cowper, the Premier, several members of the Legislature, and members of the leading commercial firms of Sydney.

At the first weekly meeting of the Society of Arts for the session 1861-2, held at the society's rooms, Adelphi, on Wednesday, the 20th of November, 1861, a silver medal was presented "To Mr. Charles Ledger, for the introduction of the alpaca into the Australian Colonies."

LLAMA. GOAT. ALPACA.

MR. LEDGER'S ALPACAS AND LLAMAS AT SOPHIENBURG, THE SEAT OF MR. ATKINSON, NEW SOUTH WALES.



ST. PATRICK'S BRIDGE, CORK, OPENED ON THURSDAY, DEC. 2, BY THE PRINCE OF WALES.

ST. PATRICK'S BRIDGE, CORK.

THIS elegant structure, of which we give an Engraving on page 589, was opened to the public on Thursday with great ceremony. "The arch of St. Patrick's Bridge," says the *Cork Examiner*, from which columns we extract the following details, "will be one of the finest in the three kingdoms. In the true elements of perfection in a bridge—stability of construction, and abundance of accommodation to passenger—it will be found remarkably excellent. Every invention which adds strength to a structure of the kind has been made available, and the result has exceeded even the architect's expectations. Through all the floods which were so common last year, and on any occasion during the present, no part of the work gave way, and even the adjuncts of scaffolding and supports were quite firm. A proof of the solidity and nice calculation with which all the parts have been deposited in their places is to be found in the fact that, when the centres were removed, the weight under the arches—were removed the sinking was remarkably small. The two side arches only fell a quarter of an inch, and the middle one but an inch, which is the minimum amount that could be calculated on, and much less than was anticipated. The new Lancaster Bridge sank in this way nine inches after the removal of the supports. To any one looking at the bridge it will be evident it is built very strongly and at the same time with a great deal of grace and lightness. As to the accommodation for passengers and traffic, the dimensions of the bridge speak for themselves. From the middle of one balustrade to the middle of the other it measures sixty feet six inches. Ten feet will be taken off each side for footpaths, which will be constructed of granite. The distance in many bridges where there is large traffic, of too great a gradient or rise in the centre, scarcely exists here at all, as in the entire length of the bridge, 222ft., there is a rise from the level is only about 2ft. There are several novel features in the building of this bridge. One of these consists in having the whole of the work all round carved. In the centre of each of the arches at both the west and east faces, carved in stone at Mr. Sexton's, Dublin, is a shield, on which is carved the arms of the licensees of St. Bridget, St. Patrick, and Neptune. They have been executed with remarkable taste, and add much to the effective appearance of the bridge; though the combination of heathen mythology and Christian tradition is, we think, a rather unfortunate incongruity. At all events, in the matter of public accommodation, solidity of build, and gracefulness of design, the bridge is perfect nothing. The remaining item is the comparative expense of construction. In this point of view the bridge bears even a more favourable comparison than in any other. A few calculations made by the clerk of the works as to this point are interesting. The ordinary mode of calculating the expense of a bridge is by the superficial content of its roadway, and the cost, therefore, calculated, of a single foot. In Patrick's Bridge there are 13,875 superficial feet, which have been built for £14,500, or about £1 1s. a foot. The cost of all the great bridges in London was £5 5s. a foot, or something over three times the cost of the Cork bridge."

Sir John Benson is the architect of the bridge, Mr. Hargrave the contractor, and Mr. Barnard clerk of the works. Our Engraving is from a drawing by Mr. Stopford.

METROPOLITAN NEWS.

At the Jamaica Coffeehouse on Wednesday an association of citizowners was formed for insuring British ships against war risks.

The returning officer for Finsbury has fixed Saturday (to-day) for the nomination at which will take place an Ordinance Pageant. We oughting, if any, will take place on Monday.

Mr. Wilkinson addressed his constituents at the Horns Tavern, Kennington, on Monday night. The hon. gentlemen's speech was, for the most part, a review of the leading events of the last Session. He dwelt in very complimentary language to the difficulty with America, which he earnestly hoped would be speedily settled. A vote of confidence in the hon. gentleman was passed with great cordiality. A resolution in favour of referring the American question to arbitration was also adopted with much enthusiasm.

A special general court of the subscribers to the Female Orphan Asylum took place on Monday at the Asylum, Mr. Thomas Farncomb in the chair—for the election of ten children as inmates out of a list of forty candidates. The committee congratulated the court upon the enlarged prosperity of the institution and the general health of the children. He impressed upon the subscribers the great necessity for increased exertion on their part to keep the charity in its present state of efficiency.

On Sunday it was announced from the pulpits of a large number of churches and chapels of the metropolis that on Thursday, being the day on which is annually celebrated the anniversary of the accession of Her Majesty to the throne, a collection in aid of the hospital for consumption in the metropolis now established at Brompton, would be held in those churches. It is hoped that Almighty God in His providence to guide the counsels of the two Governments, and preserve to both countries the prosperous blessings of peace.

The births of 837 boys and 819 girls were registered last week in London. In the ten corresponding weeks of the years 1851-60 the average number was 1,377; in the week last 1858 twelve were registered. The mortality was considerably lower than it had been in the last two weeks of November, when the deaths were in both instance more than 1,600. But the average rate of mortality, as calculated on the returns of corresponding weeks in the previous years (18-1-6), the deaths in the week last were below 1,500.

A dispute has been going on between the Charing-cross Railway Company and the Governors of St. Thomas's Hospital as to the value of the hospital property, which it was settled the company must purchase as their line rendered the buildings useless for the purposes of an hospital. The governors value the hospital premises, &c., as well as the estate they would be put to in finding other premises, at £750,000. The the company desirous to secure the premises, have offered £500,000. The Lord Mayor who nominated Mr. John Stewart, of Liverpool, as umpire. That gentleman has declined to act on board, refusing the hospital estate at that price.

Mr. Cowper, the First Commissioner of Works, has addressed a letter to the Lord Mayor, appealing like this and the metropolitan of the Government a Royal commission has been issued to take into consideration the question of building the northern side of the Thames corresponding with that of the Middlesex side. The commissioners are the same gentlemen who investigated the project of a northern embankment. The Government and the Lord Mayor has been again invited to act as chairman. It is understood that, in the event of the commissioners recommending the embankment, Mr. Barry side to be undertaken contemporaneously with that on the north, the Government will be prepared to propose to Parliament in the present Session to introduce a bill to provide the necessary funds.

The deputations from the different parishes interested in having a road made through Hyde Park had an interview with Mr. Cowper on the subject on Saturday last. The right hon. gentleman explained the plan which he thought would meet the views of the inhabitants, in which a subway was taken along beneath the level the surface, but to run through the Hyde Park, but Kensington Gardens, at a point that would not interfere with the convenience of the inhabitants of the Queen's Palace. Communication would be continued, and all the rather than detract from, the beauty and the aesthetic of the surrounding scenery. The deputation left with the impression that the Government was voluntary to raise money, and Mr. Cowper distinctly assured them that nothing was to be expected from Parliament.

LAW AND POLICE.—The Common Law Courts commenced their sittings for the First sittings at Guildhall on Monday. The list was heavy, and contains nearly 100 more causes than at these sittings last year. In the absence of Mr. Baron Bramwell, the business was taken by the commissioner, and considerable number of the whole are marked as special jury cases. It is expected that the sittings will extend to fourteen days, and further time will be required for the business in the Court of Exchequer the cause list contains the names of 118 causes, fourteen of which are marked for trial by special jury, eleven by special juries.

Judgment was given by the Master of the Rolls yesterday week in the matter of the suit filed by the present representative of the late Mr. Lewis, claiming to be entitled to the five hundredth shares with the principal of the "Crystal Palace," the interest of which was declared by the Court of Chancery for the purpose of supplying annuities to the retired servants of the late Company. The argument was that the Company, by the transfer of its property and liabilities to the Crown, had forfeited its right to the fund. His Honour held that the records and all the documents connected with the affairs of the Company to the Crown, together with all trusts incidental to such property. The bill must therefore be dismissed.

On Monday last the second general quarterly meeting of debtors by the Registrars of the Queen's Bench Prison was held in the prison for the relief of the poor. It appeared that by Christmas the number of prisoners will be very much reduced throughout England. On Tuesday the number confined in Whitecross-street Prison was 170. Since the operation of the new law many have been arrested and speedily arraigned, so as to escape being made bankrupt. There is little doubt that Christmas will present a very different picture to the one presented last year in respect to the debtors' prisons.

Mr. Lovegrove, a solicitor, of 14, Gray's Inn-square, was charged at the Mansion House, on Wednesday, with an extensive forgery on the Bank of England. He had, it was said, uttered a forged power of attorney to transfer £2100 New Annuities. In another case it is stated that he had succeeded in transferring £5000. The prisoner was remanded, bail being refused.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 15.—3rd Sunday in Advent.
MONDAY, 16.—Cambridge Michaelmas Term ends.
TUESDAY, 17.—Oxford Michaelmas Term ends. Full Moon, 5h. 8m., a.m.
WEDNESDAY, 18.—Lord Holland died, 1859.
THURSDAY, 19.—Hanover Royal Jewels restored, 1857.
FRIDAY, 20.—Louis Napoleon proclaimed President, 1848.
SATURDAY, 21.—St. Thomas. Shortest Day.

TIMES OF HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING DECEMBER 21, 1861.

Row ready.

THE ILLUSTRATED LONDON ALMANACK for 1862, price 1s., post-free, 1s. 2d., containing GROUPS OF DOMESTIC ANIMALS (printed in Colours), from Drawings by HARRISON WEIR, and interesting Historical Description of the whole by THOMAS MILLER; Twelve Full-page Engravings; also, Astronomical Diagrams (printed in Colours), &c., of Remarkable Phenomena, with Explanatory Notes by J. RUSSELL; together with Illustrations of the seasons by A. HUNT.

To ensure a supply of the ILLUSTRATED LONDON ALMANACK orders should be sent immediately.—Office, 198, Strand.

Agent for GERMANY, RUSSIA, and EASTERN EUROPE, Mr. LUDWIG DENICKE, Leipsic.

GARIBALDI'S PORTRAIT.

In consequence of the numerous applications for the Coloured Portrait of Garibaldi, it has been reprinted; and a few copies are still on Sale at the published price, 5d.; or by post, 6d. Office, 198, Strand.

THE EXTRAORDINARY
CHRISTMAS DOUBLE NUMBER
OF
THE ILLUSTRATED LONDON NEWS
TO BE PUBLISHED NEXT SATURDAY, DEC. 21,
WILL CONTAIN
A Large and Beautiful Picture (Four Pages), PRINTED IN COLOURS,
THE BUROOMASTER'S DESSERT,
FROM A PAINTING BY
GEORGE LANCE;

WHOLE-SHEET CHRISTMAS SUPPLEMENT,
CONTAINING THE FOLLOWING ORIGINAL TALES:

THE MISTLETOE BOUGH ... ... By Anthony Trollope.
Illustrated by John Gilbert;
A PEARL AMONG WOMEN ... ... By H. Lydia,
Illustrated by L. Huard;
JOSIAH: A LEGEND OF RAVENSHURST ... By Katherine Saunders,
Illustrated by R. P. Leitch;
THE CURATE OF GLENVENNO ... ... By W. J. Stewart,
Illustrated by S. Read and J. D. Watson;
AN ORIGINAL SONG;
CHARADES and CHRISTMAS AMUSEMENTS written by Mark Lemon;
and other seasonable matter;
AND THE FOLLOWING CHRISTMAS PICTURES:
FIRST CHRISTMAS AT OUR HOME ... Drawn by A. Hunt;
CHRISTMAS PRESENT ... ... " E. Duncan;
WHAT I SAW IN THE FIRE ... ... " A. Concanen;
THE SEMI-DETACHED ... ... " H. K. Browne;
CHRISTMAS MUMMERS ... ... " A. Hunt;
And, in addition, the usual Number and Supplement, containing—
Portrait of Mdme. Garrodella; Its exciting Sketches from the Federal States; "The Holy Family," after Guido; Portrait of George Lance, Esq.; the Price Cattle at the Smithfield Club Show; Price Poultry and Pigeons at the Birmingham Show; View of Patras—Spectators Waiting for Carnuts; New Congregational Church at Darlington—the First of the Hundred Memorial Churches; Inauguration of the Statue of the Marquis of Londonderry at Durham; and other News Illustrations.
Comprising in all (the Number and Three Supplements) Four Sheets.
Price One Shilling—Stamped Copies 2d. extra.
Orders should be immediately given to Newsagents and Booksellers.

*** To ensure the safe transit of the Coloured Picture through the post, we recommend it be rolled the narrow way within the Number and Supplement. Every precaution will be taken to prevent the Coloured Engraving sticking; but, should some particles of paper adhere to any of the copies, they may easily be removed by the application of a damp sponge or flannel, without injury to the Picture.

NOTICE TO ADVERTISERS.—Advertisements for the Christmas Double Number, Dec. 21, cannot be received later than the 16th inst. Terms, 8s. a line of ten words; lowest charge, 12s. for thirty-four words.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 14, 1861.

ALTHOUGH a certain and computed time must elapse before the answer from America shall determine whether hells or cannon will be the fittest ushers to announce the New Year, it is impossible to obtain much serious attention for any other subject. The candidate addressing the crowd, or senator giving in his accounts to his constituents, even the ex-Minister casually complimenting volunteers, at once fix on the American difficulty and submit their hopes or their solutions. Meantime journalists can but speculate and conjecture, and look out for the occasion that we must uphold the honour of the English flag, but that we trust the good sense of the respectable classes in America will dominate over the passionate mob and spare us the terrible necessity of striking a blow. From the French papers we cull little save the expression of French opinion upon the outrage for which we have demanded redress, and it is satisfactory to see that the logical minds of the French journalists, when permitted fair play, at once lead them to the conclusion that England had but one course open to her. Deeply interesting as would be at any other time the debates in the Italian Parliament and the situation of Baron Ricasoli and his Ministry, the fiery eloquence or languid pedantry of the speakers is little heeded, nor can much indignation be spared for the atrocious cruelties which, if accounts be true, are being perpetrated upon the unfortunate Poles, in punishment for their recent demonstrations of love of country. All this negligence of all but one subject should be noted across the Atlantic, for it is a grim proof how thoroughly England—once aroused—shows herself in earnest.

Yet occurrences of some interest in themselves take place at home. Among these, the first Birkenhead election has been made; and, if the place had enjoyed the privileges of the franchise for centuries, it could not have behaved worse in the discharge of the solemn duty which Mr. Bright tells us so many thousands are eager to perform. It bribed, and pilloried, and generally conducted itself as if its electoral education had been complete, instead of Birkenhead being called on for the first time to contribute its opinions towards the stock of Parliamentary wisdom. The return of Mr. Laird, the Conservative candidate, was an act of gratitude for what he has done for the place, and perhaps a better-known antagonist might have run him harder; but as regards the eligibility of the gentlemen who has been chosen there is nothing to say against the unanimous decision of Birkenhead. Finally, we are to choose her man. It is stated that the Tower Hamlets will soon have an opportunity of electing a successor to Mr. Ayrton, who is said to have "distinguished himself into a judgeship." Having time before them, the Tower Hamlets electors should be taken to look for somebody worth having, and to see whether he reciprocates their admiration.

The approach of Christmas will excuse an appeal which, we regret to say, must be made with some earnestness. There will be great suffering this winter among the poor, and the causes which tend to increase the usual hardships of the season will occur to every reader. It will be well if the benevolent exertions which are always so honourably made on behalf of those who need the help of others should be taken in hand speedily, and with more discretion than always accompanies British benevolence. We are a little impulsive, but not always just, in our charity. The other day a girl who had committed a theft lost the good fortune to be too heavily sentenced, and subscriptions poured in for her, and the little thing is provided for during the rest of her life; while many of her honester little companions will probably be wandering and wondering beggars. These exceptional absurdities in no degree diminish the humanity of the nation, for they and similar follies should be guarded against. Christmas should not be a time to which the idle and the drunken look forward with pleasure; and, though indulgence is even better than austerity, it is due to the latter that we set not to fling immoderately the old which might be so much better bestowed. Of course, it is coster to give than to inquire, and therefore such a mass of charity is ill-directed. But even those who have neither time nor inclination to discriminate between unfortunates and are deprived of excuse because the police magistrates have cemented to the great addition to their labours which is involved in superintending the dispensing of charity, and therefore it becomes the clear duty of every one who contributes personally inquire into the cases to send the Christmas subscription to the magistrates of the district. It is certain that, so far as possible, it will be worthily applied. But how much may be done by a little real inquiry among those who cannot dig, and to beg are ashamed! How much deserved hostility would be thereof by a small donation, given quietly and repaid by no advertisement of nomes, those who will consult the ministers of religion or the relieving officers of districts will easily learn, and the knowledge will be worth something. We have much confidence in the good sense as well as the good feeling of the public not to believe that thousands are dissatisfied with the habit of scattering charity broadcast, and would be glad to sow it with discretion. We have therefore indicated the means.

THE COURT.

We are sorry to announce that the Prince Consort has been confined to his apartments for the last fortnight, suffering from a feverish cold, with pains in the limbs, but we are rather immune from fear; but there are no unfavourable symptoms. On Wednesday the following bulletin was issued:—

His Royal Highness the Prince Consort is suffering from fever, unattended by unfavourable symptoms, but likely, from its nature, to continue for some time.
JAMES CLARK, M.D.
HENRY HOLLAND, M.D.
THOMAS WATSON, M.D.
WILLIAM JENNER, M.D.

Windsor Castle, Dec. 11.

On Sunday the Queen, Princess Alice, Prince Arthur, Princess Helena, Princess Louise, and Princess of Leiningen, attended by the ladies and gentlemen of the Court and the domestic household, attended Divine service in the private chapel of the Castle. The Rev. J. Kingsley preached the sermon.

On Monday the Queen, accompanied by Princess Alice, drove out in a carriage and four, attended by Lord Alfred Paget. The Prince of Leiningen went out shooting. The Judge-Advocate-General had an audience of her Majesty. The gentlemen in waiting had the honour to accomble to-day at Windsor Castle was countermanded on Saturday.

On Tuesday the Queen, accompanied by the Princess Alice, drove out in a carriage and four, attended by the Lady in Waiting and Major De Pin. The Prince of Leiningen went out shooting. His Serene Highness has since left the castle. The Princess of Leiningen remains on a visit.

On Wednesday the Queen drove out in a carriage and four, attended by the Duchess of Athell and Lord Alfred Paget.

The Prince of Leiningen took his departure this morning.

Lord Canoys and Lieutenant-General Sir Henry Bentinck have succeeded the Earl of Chichester and Lieutenant-Colonel Cavendish as Lord and Groom in Waiting to her Majesty. Lord Alfred Paget has succeeded Major-General Seymour as Equerry in Waiting to her Majesty.

THE PRINCE OF WALES.

The Prince of Wales is about to visit the Holy Land and the East. On Monday next the Prince leaves Cambridge, and on the following evening a grand entertainment is to be given in his honour by the Earl and Countess of Hardwicke. On Wednesday, the 18th, the Prince joins the Court; and, after spending the Christmas holidays with his august parents, will start for the regions which from romance ages has presented such interest and attractions to Western Europeans. On his way to the East the Prince will visit his brother, Prince Leopold, as his France-Italian retreat at Nice.

"His Royal Highness Prince Leopold," says a private letter from Nice, "has been at Cannes since the 14th ult. The party was advised to travel slowly, owing to the indisposition of Sir Edward Bowyer, who has not yet quite recovered from the journey."

Their Royal Highnesses the Duchess of Cambridge and the Princess Mary will leave Cambridge Cottage in a few days for Ashridge Park, on a visit to Lady Marian Alford.

The Duke of Buccleuch, who has been on a visit to the Emperor of the French at Compiègne, arrived at Folkestone on Wednesday, and proceeded to London the same afternoon by the special train.

The Earl of Portsmouth has been seriously ill at his residence, Eggesford House, North Devon. We learn that the Locdship is now pronouncing favourably.

The Chancellor of the Exchequer and Mrs. Gladstone have left Hawarden for Hatfield House.

COUNTRY NEWS.

Mr. Serjeant Hayes, of the Midland Circuit, has been appointed Recorder of Leicester, in the room of Mr. Justice Shee.

A bird show, the largest known in England, was held last week at Southampton. Every British bird, except the cuckoo, was exhibited.

On Tuesday week a handsome piece of plate was presented to Sir Peverine Acland, at Fairfield, by his Scientary, as a mark of their regard.

Mr. W. E. Hindmarch, of the Northern Circuit, has been appointed Attorney-General for the County Palatine of Durham, in the room of Mr. R. Ingham, Q.C., deceased.

Last Saturday morning the Eagle brig, coal-laden from Newcastle, was wrecked while attempting to enter Aberdeen harbour, and two of the crew were drowned.

At the Lincoln Assizes, yesterday week, Mr. Toone, late Supervisor of the Lincolnshire constabulary, was presented with a testimonial of ten years' penal servitude for forgery.

Mr. Gregory, of Dublin, is proceeding in the restoration of St. Patrick's Cathedral. Corn stone of Bath stone, having failed in previous instances of repair, is used in the interior of the edifice.

The election for East Worcestershire is fixed for Saturday (to-day), when an opposition is expected to the return of Mr. H. J. Vernon, who is the only candidate on his worship's side.

A monument is about to be erected to the memory of Sir Humphry Davy, at Penzance. It will consist of a granite column, and be surmounted with a statue of the great chemist holding a safety-lamp.

Sir John Arnott, M.P., Mayor of Cork, has invested £10,000 in the establishment of a "seaman's library" at Milford Haven, with a view of selling to the poor at first cost during the approaching season of distress.

The new steamer launched at Richardson's shipyard, by a large majority returned Mr. Isaac, the great shipbuilder, as its representative in the House of Commons. The polling took place on Tuesday, and the numbers were—Isaac (C.), 1661; Bromley (L.), 1325.

Yesterday Mr. Lindsay Stokes, the station-master at Portwood, Southampton, lost his life in saving that of a passenger, a woman who was attempting to get into a moving train. The woman was saved, but Mr. Stokes slipped down on the rails, and was cut to pieces.

Over £1000 being portion of the reserved fund of the late Earl Fitzhardinge, has been applied by the Lord Chancellor in the hands of Mr. C. De Grenier, resident magistrate of Mallow, for the purchase of land, the property of the distributive shareholders, who are in the list of the great destitution at present prevails.

It has been decided that the memorial to the late Sir Harry Smith at Whittlesey shall consist of a marble bust and a mural tablet, and that the sculptor employed to execute the memorial shall be commissioned by the chapel of St. Mary's Church, in which the late gallant General was educated, it having been also a schoolroom during his boyhood.

A serious explosion took place at a chemist's shop in Hereford-street, Park-lane, Saturday night last. A man was in the act of pouring oil of vitriol from a bottle into a measure, when the bottle was accidentally broken. The effect was disastrous so far as property was concerned, and the master of the shop and the boy were severely scorched.

The Island Revenue officers have been making a raid on the premises of certain shopkeepers in Bradford, and their prey appears to have been successful. In one case the tobacconist, who is a manufacturer, was found to have in his shop and in the upper rooms of the house 1800lb. weight of tobacco, which, all unstamped, had been brought from one to two years, and on which the duty, if now included was £12, but the real offence was obtaining her Majesty's Revenue, and not that of evading her Majesty's Customs. A similar capture of one of the defendants with the rhubarb leaves was fined £50, as it was considered by a mere smuggler in the trade on the venture.

PUBLIC MEETINGS.—A meeting of the hengrowers of the district was held at Warren-street, Maidstone, on Monday evening, for the purpose in the chair, to take into consideration the state of the hop trade. Mr. Bensusan, Mr. Bernard Hope, and others attended as a deputation from the Central Association for the Repeal of the Hop Duties. This association is based on the principle of re-selling both the excise and the Customs duties on hops and the removal duty on those imported from abroad; but the Worcester and Hereford hopgrowers are not in favour of the repeal of the excise duties, and the resolutions adopted at the meeting were for the repeal of the excise duties only. There was considerable division by the meeting on this difference of opinion, but the resolutions themselves were passed with great unanimity.

Mr. Mowbray, one of the members for Durham, who filled the office of Judge Advocate-General in the Derby Administration, has received a requisition from the constituents last Saturday night. The right hon. gentleman alluded in terms of the warmest admiration to the late Prince Consort as the head of the Commander of the Sea Service, and undertook to promise, on behalf of the Government, that the Channel squadron would be considerably increased. The Conservative party are very strongly in favour of the measure to adopt for securing the honour and dignity of the country.

A public meeting was held in the Townhall, Oldham, yesterday week, for the purpose of hearing addresses on "The British Empire in the West, and how to secure the Union," from the Hon. George Brown, late Premier of Upper North; the Hon. J. L. Tilley, of New Brunswick; and Mr. E. W. Watkin. All the speakers dwelt upon the advantage which the British possessions abroad as lending emigrants; and they also referred to the "American difficulty."

At a banquet in connection with the Liberal party held in the Fountaine Room, Nottingham, on Thursday week, Mr. Pagel, after a few preliminary remarks, alluded to the serious opposition in the mind of the people for the state of our relations with North America. Mr. Pagel said, amidst loud cheers, "As it has been perpetrated, it has been perpetrated by the act of the Federal Republic which is in advance against the law of nations as it has insult to the British flag. (Loud cheers.) Such a wrong cannot be repaired without a full apology and reparation."

Mr. Dudley Fortescue presided at the second dinner of the Sherborne Agricultural Society, and in proposing the toast of the evening, "The Prosperity of the Day," from the Hon. George Denman, M.P., Mr. Fortescue said that Mr. Cobden addressed his constituents at Oldham on Monday night. The hon. gentleman first expressed a decided opinion that the late riots and threats of international law raised by the seizure of Messrs. Slidell and Mason on board the Trent, supported by a most unjustifiable demand by the naval authorities that we had suffered an outrage, he should support the Ministry in demanding reparation, and decline to join the "peace at any price school" in accepting an American view of the case.

Mr. Hennessy addressed his constituents at Dungarvan on Tuesday. There was a numerous attendance, and the right hon. gentleman was well received. The principal topic of Mr. Herbert's speech was devoted to the American question. He insisted that right was on our side, and said that, if the Americans insisted on misunderstanding a war, they were much more likely to lose Maine than to annex Canada.

At the dinner which followed the Lewes Pat Stock Show on Tuesday the Earl of Chichester, his hereditary supporter, being the Hon. H. Brand (Parliamentary Secretary of the Treasury) and Mr. Gorringe (Member for Lewes). Mr. Brand said that the country was in a very critical position. "Is there to be war with America?" was not to be answered by Ministers, but by Americans. If, on the one hand, the conduct of the American Government were guided by reason we should have peace; if these councils were guided by passion we should have war.

The Financial Secretary of the Treasury has also broken silence on the subject of the Trent affair. Mr. P. Pol discussed it at a meeting of the Cambridgeshire Agricultural Society, on Wednesday. The country, he said, would "be ready to support the Government" if a hostile answer were returned to the demand. "Whether it was war that was meant by America?" But, on the other hand, if the demand were granted, the answer were not on the act by which they had challenged us should be also surrendered." Mr. Peel's constituents passed a vote of confidence in him.

On Tuesday week Mr. Miller, M.P. for the Isle of Bute, addressed his constituents in the Assembly Rooms, Leith. At the close of the luncheon under address, which embraced a wide range of topics, a vote of confidence was unanimously passed.

An agricultural dinner at Horsham on Wednesday was attended by several members of Parliament. Mr. Seymour Fitzgerald, who presided, made the American question the topic of his speech, and declared that the Conservative party would give Government an "unhesitating and unflinching support." Colonel Turnbull, M.P., and Mr. Cave, M.P., also gave expression to their opinions on the same subject; the latter taking a favourable view of the war in America.

MEMBERS OUT OF PARLIAMENT.

Supposing that there were any little matters in difference between constituencies and their representatives, the fact that there is one topic on which there is no mean or possible unanimity in the mind of England has gone far to condone all offences. It must be a vast relief to members in all provincial performances to be able to get up and say that on other stages is called a sensation scene, and to wave the "meteor flag" of this country unambiguously over a crowd of sympathising electors. Notably this may be remarked as one of the reasons why the meeting between Mr. Horsman and the constituency of Stroud has this day been looked forward to with both pleasure and pride. The hon. gentleman in question is, as is well known, a speaker of no ordinary powers, and when he puts forth his energies, even on a subject in which his audiences do not congree with his sentiments, he never fails to tell and excite. He came to the constituency at the close of the last session, and it is not surprised that he speaks to his constituents of the Government with sentiments of approval, and that his address was an expression of confidence. In his place in the House he had taken more into a approach to party strife, and he had not departure from the sittings for five or six weeks before the prorogation. When one rises to address the electors on such a subject as the present, and when those he represents this time last year, and when it is considered that the existence of the present Parliament was roused by another twelvemonth, and when one has to deal with a question which is the very subject of general election on which he could first again into the House, we have no doubt that the meeting will be one of the greatest interest for a second day or two ago.

The Australian members have cropped up in the last few days. Marylebone has been spoken to, and perhaps that section of the electors which has the honour of holding the fate of its members in its hands will be invited to meet them in a body on occasion. Marylebone is the high-sounding but inconsequent oratory of a gentleman who was returned by the Tower Hamlets. Mr. Berkeley and Sir Francis Head have solved a singular social problem, inasmuch as, in his proper person, the latter gentleman has been returned by Marylebone, the height of reputation in London and find that he has exactly reached his level in New York. Mr. Berkeley and Sir Francis Head are the two Englishmen are on a level with the roots of those in Belgravia, and yet they are both magnificent districts. The electors of Marylebone have learned that the Australian members are unsuitable to their wants. They will rush to a peerage; and, if the couples say south, it is the ambition of their representatives to go North. Henry Bulwer has gone to the United Kingdom. But it is to be feared that Lord Derwent has not yet attained the highest ambition of his constituents, and that Sir Benjamin Hall to accept a peerage in satisfaction and discharge of his claims to one day be the Lord Llanover. Nothing can be more expressive of the failure of the mission of the public man to which and then the way in which he flourished in his speech this week between Marylebone and Wales. Lord Derwent has now returned his constituents to the standard of 1852 and the admission that if we should join the Federal States in a war with France and Spain, it would be a state of preparation for such an emergency. Before parting with the Australian members, we may add that a new class of constituents to that phrase have appeared in the Tower Hamlets suggesting a vacancy in the representation of that borough and hinting at the possibility of Mr. Berkeley's return. Mr. Hunt is the name of the members qualified for such a post. It is a curious coincidence that the Hunt family have always had a connection with the Tower in the garb of private life, and with no professional call for his presence there, for the Lord Lieutenant of the Tower appears to be at present waiting for an interview with that functionary.

Mr. Lowe, who is the new Vice-President, somewhat takes up an Irish question he becomes more Irish than the Irish themselves. Mr. Maguire, who has succeeded to the charge of the crusade against Maynooth, vice Mr. Monsell, promoted to the Colonies, has addressed privately in queer and blatant oratory with the great O'Donoghue himself. The reform is not a new one, nevertheless, and the speech of the demonstrations which in these days produces not even such an effect as it might have done in the days of Swift, and the people, Whiteboy, the very same spot in the same building, proclaims that he is about to make the same speech. Nothing, however, is more likely to set the Irish member members for the city of Dublin, who have hitherto not been supposed to be deficient in common sense, while in the exhumation of the Irish question, which is the very last thing that Ireland wants, and for many years, the absurdity of the scene culminated. We do not suppose that Mr. Lowe will be able to "put down" the agitation of it on this occasion, we imagine that it is exactly that which is expressed by the phrase of each other. But there is fun, after all.

There have been two exhibitions of great men in small places this week. The Lord Mayor of London has been entertaining the Corporation party given to the rising generation of the parish of St. Martin-in-the-Fields, and has turned his powerful oratory in a fertilizing stream on the young idea of those distinct. The Lord Mayor is the chief magistrate leader of the Opposition in a new character. He has been reviewing the troops of the Queen's Bench Division, and made them a speech which no doubt had a great effect upon them.

LONDON MAIN DRAINAGE.—(To the Editor.)—In the very interesting article in your Number of the 30th ult. on the "London Main Drainage" the writer has inadvertently been led into a statement which is calculated to do much injury to the interests of the Metropolitan Board of Works. He says that "the Board has not yet come to any decision upon which to now being carried out by the Metropolitan Board of Works, and that the whole of the plans of which are to be submitted to Parliament. This plan cannot be said to be the particular designs of any one, but is rather the result of the deliberations, extending over a long period, of a committee of the Board, consisting of the whole of which the Board of Works is composed. Now, I shall be borne out by all those members of the Metropolitan Board of Works who have taken any subject in hand, when I say that the plans and suggestions which have from time to time been made for the object there is not one of the plans which has not been the result of

PRIZE DOGS FROM THE EXHIBITION OF SPORTING AND OTHER DOGS HELD LAST WEEK AT BIRMINGHAM.—SEE SUPPLEMENT, PAGE 609.

GENERAL M'CLELLAN, COMMANDER-IN-CHIEF OF THE FEDERAL FORCES.—SEE SUPPLEMENT, PAGE 613.

THE SMITHFIELD SHOW.

IF never fell him The Christmas-tide time it have been during the past week, and the private view was short, as far as celebrities were concerned, as the entire visiting list was full, and hence the crowd. Plus 1 There was no exhilarating frost outside, and hence the dulness to the weather, thing rather out of season. Some attributed the dulness to the weather, then ever, and this Mr. Hudson will have a farewell banquet to-day (Saturday) in the place in which the society have found rest since 1795, when Francis Duke of Bedford formed it into a club of since 1795, when Francis Duke of Bedford formed it into a club of office, with fifty guineas' worth of prizes; and now, after twenty-three years' residence, it is destined to migrate to Dicconi's Leyton, into the more commodious premises of the late, brief, Argyll Rooms. Bounty's Butcher, Peach (whose talented master, Mr. Tom Mason, died, we are sad to say, on Sunday), and Lord Lurgan, and regretted under the age of 40, it has nothing to touch them this year, it makes a brilliant West-end finish with Mr. Taylor's ox, who will head the parade on the first Monday, generation en en of the great landmarks of feeding.

While the Herefords sank away to fifteen the Devon men came bravely up to the scratch, not merely in numbers but stamp as well. Seven out of the thirty-three were in the Devon pen, and only 1 Mr. Heath was with one of John Quartly's breeding. It was very neat, but rather too small, and the spectators were much disposed to think the Duke of Cleveland's nearly if not quite as good. The Royal Highness the Prince Consort was third with a grandson of The Sconce, and rather I had back told against the splendid one of Mr. Fordham's. The Duke's had back told against the splendid one of Mr. Fordham's. The Duke's had back told against the splendid one of Mr. Fordham's. The Duke's

Lowther, of Barrisphere Hall, Oakham, Rutland, 26 on 2 w, improved Leicester, bred by exhibitor.

CLASS 31.—Fat Wether Sheep, of any Long-woolled breed, 1 year old (under 22 months), each sheep not to exceed 210lb. live weight: 1st prize of 20l. to Mr. Wilmore, of The Knoll, Leicester, 20 on pure Leicesters, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to R. Bowman, of Barrisphere, Rutlandshire, 19 on Leicesters, bred by exhibitor. 3rd prize of 5l. to the Marquis of Exeter, of Burghley House, Stamford, under 20 on Leicesters, bred by exhibitor.

CLASS 32.—Fat Wether Sheep, of any Long-woolled breed (not Leicesters), 1 year old (under 22 months), the pair not to exceed 210lb. live weight: 1st prize of 20l. to Mr. Wilmore, of The Knoll, Leicester, 20 on 2 w Cotswold, bred by exhibitor—silver Warm, Middlesborough, Yorkshire, 20 on 2 w Cotswold, bred by exhibitor. 3rd prize of 5l. to J. K. Fowler, of Rushton Hall, Kettering, 20 on 2 w Cotswold, bred by exhibitor.

CLASS 33.—Fat Wether Sheep, of the Scottish or Horned Polled breeds, of any age: 1st prize of 20l. to Mr. Mitchell Gillespie, of Morton Hall, Dumfries, 20 on Scotch, bred by exhibitor. 2nd prize of 10l. to Mr. Alexander Hunter, of Kelso, 20 on Scotch, bred by exhibitor.

CLASS 34.—Fat Wether Sheep, of the Scottish or Horned Polled breeds, 1 year old (above 22 months): 1st prize of 20l. to Mr. Mitchell Gillespie, of Morton Hall, Dumfries, 20 on Scotch, bred by exhibitor. 2nd prize of 10l. to Mr. Alexander Hunter, of Kelso, 20 on Scotch, bred by exhibitor. 3rd prize of 5l. to Mr. Thomas Bowman, of Richmond, of Goodwood, Chichester, Sussex, 20 on Southdown, bred by exhibitor.

CLASS 35.—Fat Wether Sheep of any Short-woolled breed (not Southdowns), 1 year old (under 22 months): 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 36.—Fat Wether Sheep of the Shropshire breed, 1 year old (under 22 months): 1st prize of 20l. to Edward Richard Cheney, of Badger Hall, Shrewsbury, 20 on Shropshire, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to John Kent, of Goodwood, Chichester, Sussex, 20 on Southdown, bred by the Duke of Richmond. 3rd prize of 5l. to the Duke of Richmond, of Goodwood, Chichester, Sussex, 20 on Southdown, bred by exhibitor.

CLASS 37.—Fat Wether Sheep of any Short-woolled breed (not Southdowns), 1 year old (under 22 months), the pair not to exceed 420lb. live weight: 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 38.—Fat Wether Sheep of the Shropshire breed, 1 year old (under 22 months): 1st prize of 20l. to Edward Richard Cheney, of Badger Hall, Shrewsbury, 20 on Shropshire, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 39.—Fat Wether Sheep of any Short-woolled breed (not Southdowns), 1 year old (above 22 months): 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 40.—Fat Wether Sheep, of any Short-woolled breed, 1 year old (under 22 months), the pair not to exceed 420lb. live weight: 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 41.—Fat Wether Sheep, of any Short-woolled breed, 1 year old (under 22 months), each sheep not to exceed 210lb. live weight: 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 42.—Fat Wether Sheep, of any Long-woolled breed (not Leicesters), 1 year old (under 22 months), the pair not to exceed 420lb. live weight: 1st prize of 20l. to Mr. Wilmore, of The Knoll, Leicester, 20 on 2 w Cotswold, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Thomas Warm, of Middlesborough, Yorkshire, 20 on 2 w Cotswold, bred by exhibitor. 3rd prize of 5l. to J. K. Fowler, of Rushton Hall, Kettering, 20 on 2 w Cotswold, bred by exhibitor.

CLASS 43.—Fat Wether Sheep, of any Long-woolled breed (not Leicesters), 1 year old (under 22 months), each sheep not to exceed 210lb. live weight: 1st prize of 20l. to Mr. Wilmore, of The Knoll, Leicester, 20 on 2 w Cotswold, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Thomas Warm, of Middlesborough, Yorkshire, 20 on 2 w Cotswold, bred by exhibitor. 3rd prize of 5l. to Mr. J. K. Fowler, of Rushton Hall, Kettering, 20 on 2 w Cotswold, bred by exhibitor.

CLASS 44.—Fat Wether Sheep, of any Short-woolled breed, 1 year old (under 22 months): 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to the Duke of Richmond, of Goodwood, Chichester, Sussex, 20 on Southdown, bred by exhibitor.

CLASS 45.—Fat Wether Sheep of any Short-woolled breed (not Southdowns), 1 year old (under 22 months), the pair not to exceed 420lb. live weight: 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor.

CLASS 46.—Fat Wether Sheep, of any Short-woolled breed, 1 year old (under 22 months), each sheep not to exceed 210lb. live weight: 1st prize of 20l. to Mr. Thomas Bowman, of Richmond, of Farm, Hangerford, Berks, 21 on West Country down, bred by exhibitor—silver medal to the breeder. 2nd prize of 10l. to Mr. Jonas Webb, of Babraham, Cambridge, 20 on Southdown, bred by exhibitor. 3rd prize of 5l. to the Duke of Richmond, of Goodwood, Chichester, Sussex, 20 on Southdown, bred by exhibitor.

PIGS.

CLASS 47.—Pigs of any breed, not exceeding 4 months old: 1st prize of 10l. to John Lynn, of Church Farm, Stanton, Grantham, Lincoln, 3 on 1 b d, improved Yorkshire—silver medal to the breeder. 2nd prize of 5l. to William Wood, of Bramham Park, Tadcaster, Yorkshire, 3 on 1 b d, improved Yorkshire, bred by exhibitor. 3rd prize of 2l. to George Harris, of Chilton Farm, Harwell, Berks, 3 on 2 b d, improved Chilton, bred by exhibitor.

CLASS 48.—Pigs of any breed, above 4 and not exceeding 6 months old: 1st prize of 10l. to Mr. Colonel Pennell, M.P., of Pinchin Castle, Beaver, Carnarvon, 3 on 1 b d, improved Yorkshire—silver medal to the breeder. 2nd prize of 5l. to William Wood, of Bramham Park, Tadcaster, Yorkshire, 3 on 1 b d, improved Yorkshire, bred by exhibitor. 3rd prize of 2l. to George Harris, of Chilton Farm, Harwell, Berks, 3 on 2 b d, improved Chilton, bred by exhibitor.

CLASS 49.—Pigs of any breed, above 6 and not exceeding 9 months old: 1st prize of 10l. to George Harris, of Chilton Farm, Harwell, Berks, 3 on 1 b d, improved Chilton, bred by exhibitor. 2nd prize of 5l. to Mr. Colonel Pennell, M.P., of Pinchin Castle, Beaver, Carnarvon, 3 on 1 b d, improved Yorkshire—silver medal to the breeder. 3rd prize of 2l. to Mr. Colonel Pennell, M.P., of Pinchin Castle, Beaver, Carnarvon, 3 on 1 b d, improved Yorkshire, bred by exhibitor.

CLASS 50.—Pigs of any breed, above 9 and not exceeding 12 months old: 1st prize of 10l. to George Harris, of Chilton Farm, Harwell, Berks, 3 on 1 b d, improved Chilton, bred by exhibitor. 2nd prize of 5l. to William Baker, of Pen-y-Bont, Ruabon, Denbigh, 3 on 1 b d, improved Yorkshire, bred by exhibitor. 3rd prize of 2l. to William Baker, of Pen-y-Bont, Ruabon, Denbigh, 3 on 1 b d, improved Yorkshire, bred by exhibitor.

CLASS 51.—Pigs of any breed, above 12 and under 18 months old: 1st prize of 10l. to John Coate, of Hermanus, North Devon, 1 on 1 b d, improved Devon, bred by exhibitor—silver medal to the breeder. 2nd prize of 7l. to Thomas Cotton, of Bridge Farm, Stafford, 1 on 1 b d, improved Yorkshire, bred by exhibitor. 3rd prize of 3l. to Samuel Druce, of Abbey Farm, Ryecote, Oxford, 1 on 1 b d, improved Oxford, bred by exhibitor.

GOLD MEDALS.

Gold medals were awarded to the following exhibitors:—

Mr. Jonas Webb, Babraham, Cambridge, for the best pen of pigs in any of the classes, 2 pr. 11 m. 7d. bred by C. Clark, of Hainsworth, York.

John Faulkner, Derby Farm, Burton-on-Trent—for the best heifer or cow in any of the classes, 2 yr. old, bred by Sir John Harper Crewe, Bart., of Calke Abbey, Ticknall, Derby.

G. R. Jackson, Osberton Hall, Worksop, Nottingham—for the best pen of Ingrassed sheep in any of the classes, 20 m. Leicesters, bred by exhibitor.

The Duke of Richmond, Goodwood, Chichester, Sussex—for the best pen of one year old shortwooled sheep in the 39th, 40th, or 41th classes, 21 m. Southdowns, bred by exhibitor.

John Coate, Hermanus, Bradford, Devon—for the best pen of pigs in any of the classes, 3 m. improved Devon, bred by exhibitor.

EXTRA STOCK.

The following exhibitors received extra and other medals:—

The Earl Spencer, Althorp, Northampton—for the best steer or ox in extra stock, 2 yr. old, Shorthorn, bred by exhibitor.

William Wells, Sandhurst, Penshurst, Kent—for the best heifer or cow in extra stock, any age, Shorthorn, bred by exhibitor—silver medal to the breeder, if asked, Herefordshire.

G. R. Wilmore, Osberton Hall, Worksop, Nottingham—for the best long-woolled wether in extra stock, 20 m. Leicester, bred by exhibitor.

William Lowther, Barrisphere Hall, Oakham, Rutland—for the best long-woolled wether sheep in extra stock, 2 shearlings, bred by exhibitor.

Lord Wenlock, Morton Hall, Thetford, Norfolk—for the best long-woolled ewe in extra stock, 20 m. Southdown, bred by exhibitor.

Wm. George Cumberbatch, Bridge, Canterbury, Sussex—for the best short-woolled sheep (not Southdown) in extra stock, 21 m. West Country-down, bred by exhibitor.

The executors of the late Samuel Treadwell, of Westcott Field, Wallaston, Aylesbury, Bucks—for the best long-headed sheep in extra stock, 2 w Oxfordshire-down wether, bred by exhibitors.

Wm. Baker, Pen-y-Bont, Ruabon, Cricklehowell, Ruabon—for the best pig in extra stock, 20 d, improved Hampshire, bred by exhibitor.

CASELLA'S MERCURIAL MINIMUM THERMOMETER. — Mr. Spencer, in a letter to the Times, said that in this Journal appeared a recommending of Casella's minimum thermometer under certain conditions now written as follows:—"I think it right to say that although I should myself be very unwilling to abandon thoroughly his minimum thermometer, I feel that he has exceeded the limits of the positive, and so to inform you further that the sensitiveness to the instrument that may be relied on. It may be allowed to add that, without saying my judgment is altered in the slightest degree in several tubes, and the capacity of my objection was admitted by a gentleman present to be correct, is unhesitatingly on the subject."

The London Directors of the Grand Trunk Railway of Canada have issued a brief report, together with the company's accounts for the half year ending the 30th of June last. To these documents are attached the report of Mr. Edward Watkin, who has recently been out to Canada. Mr. Watkin finds upon the absolute necessity of placing the company's credit on a surer footing by getting rid of the floating debt. He also urges that liberality and permanent arrangements should be concluded between the Grand Trunk, Buffalo and Lake Huron, and Great Western Companies, which he is of opinion will secure to each a considerable accession of traffic at more remunerative rates, and, at the same time, economise expenditure. The London directors intimate generally that, conducing to the expediency of Mr. Watkin's recommendations, they have not yet come to a decision upon which spread necessary for their settlement.

THE FARM.

SOMETHING has of course been the topic of the week, and the defeat of the black-faced Scotch heifer, who set even the cock sneer at defiance at Birmingham, has added some zest to the thing; but still, as regards agriculture generally, it has been a dull time. We missed many a face which we were accustomed to see, and at one great central country town in Cambridgeshire the attendance was positively small indeed, as there was no one to go by them. The truth is that farmers are reserving themselves for the Smithfield exhibitions next June, and saving their spare cash. When they do a thing they like to do it as their wives and families will want to come with them.

The agricultural papers are full of hints for the Christmas shows, which are springing up with great vigour in every direction, and in every Cattle Show a difficulty arises in knowing what to do, and how to understand why there has been torpor on the point so long, but the fact is that the Smithfield has for two years stood very unsupported, so speaking, very little written about, and we still have the Cattle Show of Booth and Bates now who hardly know the names before. The story has become so fashionable that the Agricultural Gazette has to put its hand to keep up their specialty. Last Monday, by the courtesy of Mr. Clarke (to whom the press acknowledge their obligations so largely as they say "Thank you for nothing" to Mr. Hall Maxwell), both the Morning Advertiser and Bell's Weekly Messenger can regular horse expenses from Baker-street to their offices, so as to give the animals up to the last moment.

The Royal Agricultural Society held a very large general meeting on Monday, and it appears from the report that its members number 7,178, which is an advance of last and 12 of the year before. Our Coats £17,488 17s. 10d. The arrears of subscriptions, which not many years since ranged from 800 to 900 annually, have been reduced to 400, and Mr. Torr has a motion on the books to admit the Highland Society members to equal privileges during the show week. Irish sheep and cattle are to have a show each, and there is to be one for pigs, and under fourteen hands and under twelve and a half. In future the bull classes in the Royal are to be divided into those under and those above two years, a year to two years, two to three, and three to six; and there will be no bull calves. The Queen's gold plate is to be given for the Leicester and Southdown runs are also to have a gold medal; hunters are to cease to be exhibited, and the Show Yard is to be used for that purpose. Poultry will not send their crack horses to be carved in a dog-cart, and the Show will be improved as well.

The Yorkshire Society held a very excellent Fat Stock, Poultry, and Implement Show at Leeds last week, which we shall notice. The veteran Mr. Wiley, who is only two or three years younger than his old sheep ally, Sir Tatton Sykes, and with like fun, is a green and vigorous old age, was the first prize man in the yard. He got up a meeting also at Birmingham, and the president's silver cup with it as well, for the best animal in the show-yard. The Leeds Fat Stock Meeting—the first took the first prize for the best young pig of the small white breed. The silver cup for the best pen of pigs in the show was second at large breed belonging to Mr. A Christie, of Green Hammerton; and that for the best pen of sheep to Mr. Wm. Foster, of Queen's Head, pen of Leicester wethers. Mr. H. W. B. Revell, of Hitchley, was two out of the four poultry cups for Dorkings and Cochin Chinas.

NATIONAL SPORTS

A LETTER from Admiral Rous on the recent startling appointment—in which he disclaims any responsibility for the handicapping—will be the best men of the sporting world. But Mr. M'George is as good a starter as the world has ever seen, and the appointment of the Jockey Club stewards were tried and *failed*, whereas Mr. Markwell was never allowed to take the flag in hand, but deluded with a promise that he would have it at the Craven Meeting—the first the principal racing topic of the week. Dundee went, we believe, to the post for the Cambridgeshire Stakes on Monday, but Mr. Payne he and Ide Boy and Horror are to be the Ribbon stars of next season. We have not the amount of Mr. Merry's winnings which he gained twice over against Avalanche at Ascot, Zuyder Zee, that very good-looking son of Melbourne and Cobweb, is now in training at Ilton, in Suffolk, along with Colleton, and as quiet as possible, now that his racing is ended; and Sweetmeat is replaced at Mr. Sykes's by his son, Prime Minister. Mr. Merry's colt Ambassador, by Stockwell, has been quite worn out, died during his sea journey to Baron Rolfe; and Wetherby's dam Wetherbella, by Melbourne, is dead (to which 498 were barren), and replaces 764 colts and 691 fillies. Eighty-two colts and fillies by Stockwell, 43 were barren, and 12 went abroad. Lord Stamford is the principal winner during the year, having won the largest amount of money. His account is then: £31,035 for seventy-five races, or nearly £300 less than Mr. Merry's winnings in 1860. Col. Townley stands 2nd with £29,000, and Mr. Ten Broek 3rd of £20,000 for the past year, with £22,891. If we compare the last three years, we find that Orlando has won £50,000 in stakes, and Lord Clifden £40,000, that The Dutchman has been twice over second, and once third.

Ironside is out of Mr. Merry and Lightfoot, and winning the Bridekirk Cup, in which the first three came put out the Waterloo Cup winner, Maid of the Mill and Bouncing Meg, by Beacon, after winning the Puppy Stakes, went on to the Derby Cup, and divided a stake after an undecided course with Mr. Spinks's Sea Trip. Mr. Charles de Mornay's Lady Elizabeth, a winner of the Chesterfield Stakes his Sea Foam was drawn after winning one course, and he won the stake with Sea Trip. Mr. Gilbert's Bonnie Scotland has had a bit his colt with Sea Foam, and in one of the classes of the Members' Plate he was first to the post, but was disqualified, and Mr. Spinks's Sea Trip the Waterloo Cup with such a wondrous team. Two Bedlam Toms of Mr. Sadler's divided a stake at the West Herefordshire Meeting; and Rosalind, by Bedlam, is one of the favourites for next year's Oaks. Polly, and Rackety Ringdove. Mr. Sharpe has also dropped in for a stake at the Ashford Meeting. Mr. Payne has also dropped in for ex Canobie, on Tuesday and Wednesday; Southminster (0), on Wednesday and Thursday; Ironside (1) at Bridekirk; Lady Elizabeth (1) town (Southport), on Thursday; and Selby (0), on Thursday and Friday.

The fun at Melton has begun in earnest at last. On Saturday the Duke of Rutland had a capital day's sport, and Earl Wilton unfortunately started with the best hounds in the country. On Monday he had a hunter from Melton Spinney, and the Quorn a still better run from Goadby Fleckney Gorse, which was finally killed after a fine hunting five minutes from Cold Overton Wood, without a check, to ground near Thorpe Trussels. Lord Gey of Ribston was first and all the way, and good as the new comers are, they cannot blow the way to the old ones. The Tedworth are having good sport; but, owing to severe illness, the Earl of Ducie's hounds will not be out for short time from the saddle. The late Mr. Greene's two hunters, the property of his widow, are to be sold at Tattersall's, and the stud is to be sold at Rolleston on Friday, Dec. 23.

"Despite of Adverse Winds" will always stick on Monday for an eighteen race, but there is little or no betting on these events, as people do not choose to have their chances of victory fooled away by the mode in which the Brighthelmstone runs. Derrford is rising to great honour. On Sunday, says *The Sporting Life*, he dined in the Hall of Trinity College, Cambridge, with his Royal Highness the Prince of Wales, and the rest of the Fellows; and on Monday, at three a.m., he reached Norwich near the scene for the good dinner and the old ale's ale, and defeated the Norwich champion, Brighton, by two yards and a half in a six-mile race. He did the distance in 31 min. 30 sec., and gave his was whoop, which has delighted the Cambridge people so much, at the end. The Prince and the Duke of Wellington, and several of the leading families of the county, clergymen, &c., were present; and on Wednesday he ran again at Yarmouth, and won by ten yards.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

NOTWITHSTANDING that the advices from America, in reference to the Blast and the hope that the Southern Commissioners, are by no means favourable, and that great activity has been exhibited in our markets in preparing coal for the war, during the week, there has been a considerable improvement in the tone of business, and prices, though they have not advanced regularly, have been fully maintained. The operations for time bargains, however, have been limited, and no doubt they will continue so until after the arrival of more than ordinary news from the States.

The money market is still largely supplied with surplus capital, and the demand for accommodation may be considered steady at the annexed rates for the best unobjectionable paper.

	Per cent.		Per cent.
Thirty Days' Bills	2½ to 3	Four Months' Bills	3½ to 3¾
Two Months' Bills	3 to 3½	Six Months' Bills	3½ to 3¾
Three Months' Bills	3½ to 3½		

The Bank rate of discount is maintained at 3 per cent., but at Hamburgh it has declined to 8. On other parts of the Continent no change of importance has taken place. The following are the quotations:—

	Bank rate. per cent.	Open market. per cent.		Bank rate. per cent.	Open market. per cent.
Paris ...	3	3	Turin ...	5	4½
Vienna ...	5	4½	Hamburgh ...	3	3
Berlin ...	4	4	Amsterdam ...	3	2½
Frankfort ...	3	3	Madrid ...	5	5
Petersburgh ...	5	5	Lisbon ...	6	6

The exchange at New York comes at 109. The quotation has given rise to some uneasiness in the States, in as much as it is below par gold. It is stated that in order to prevent bullion leaving the country a bill will be almost immediately introduced into the House of Assembly at Albany prohibiting duties on foreign importations. About £10,000,000 of the new Federal Loan of £20,000,000 has been paid into the Treasury at Washington, and it is understood that only about £7,000,000 has been subscribed for by the public.

The Continental exchanges have become less firm, and the imports of the precious metals from all quarters have been very moderate. Gold continues to flow here, and an additional £70,000, including several parcels of silver is to hand.

In the Stock Exchange, the bulk of business in the Bank of France has increased by £50,000 since the last account, while the Bank of England's stock of bullion is £1,000 less than a month ago. Consols for 28,317,000l. have been capitally purchased.

A fully-paying dividend, at the rate of 6 per cent per annum, on the new shares of 5 per cent, have been declared by the National Provincial Bank of England.

The market for Home Stocks ruled steady on Monday, at an advance in the quotations of ¼ per cent—Consols for Account, 93¼; Reduced, 93¼; New 3 per Cents, 93¼; Bank Stock closed at 222 to 224; Rational and New Three per Cents, 93¼ to 94; India Stock, 224 to 226; Ditto Bonds, 1859 and 1861, 1 Paper, Paper, 96 and 102; India Bonds, 12s to 15s. prem.; and Exchequer Bills, 1s to 2s. prem. On Tuesday there was less firmness in the market; nevertheless, prices were fairly supported—Consols for Transfer left off at 93¼ to ¾; Reduced, 93¼; India Five per Cents, 101¼ to 102; Bank Stock, 222 to 224; Reduced and New Three per Cents, 93¼ to ¾; Long Annuities, 17 7-16 to 17 9-16; India Bonds, 102; India Bonds 12s. to 15s. prem.; Exchequer Bills, 2s. to 1s. prem. On Wednesday the transactions were to a limited extent, at barely former rates—Consols for Account, 93¼; India Five per Cents, 101¼ to 102; Bank Stock, 222 to 224; Reduced and New Three per Cents, 93¼ to ¾; India Stock, 224 to 226; Ditto Bonds, 102; India Bonds, 12s. to 15s. prem.; Exchequer Bills, 2s. to 1s. prem. On Thursday prices steadily advanced—The closing rates for Consols were—Money, 93¼; for Account, 93¼; Reduced, 93¼; New Three per Cents, 93¼ to ¾; and Exchequer Bills, 2s. to 1s. prem.

The market for foreign Stocks has generally ruled steady, but more stock than last week. Prices, however, have not been to any firm, weakness having been observed in them occasionally. Brazil Five per Cents, 97¼; Buenos Ayres Four-and-a-Half per Cents, 87½; Guatemala, 75; Mexican Three per Cents, 21½; Ditto New Deferred, 15½; Peruvian Three per Cents, 66½; Russian Four-and-a-Half per Cents, 91½; Russian Three per Cents, 55½; Sardinian Five per Cents, 85½; Spanish Three per Cents, 21½; Ditto, New Deferred, 12½; Ditto, Certificates, 9½; Ditto, Passive, 1½; Turkish Six per Cents, 1858, 75½; Ditto, 1860, 75½; Ditto £5 Certificates, 75½; Venezuela Three per Cents, 21½; and Dutch Five per Cents, 67½.

Joint-stock Bank Shares have been dull to a limited extent, at barely late currencies—Australasia, have marked 66½; Chartered, 4½; Colonial, 87½; Commercial of London, 30½; Eastern, 4½; English, Scottish, and Australian, 8½; London and Westminster, 34½; London Joint-stock, 22½; London and County, 36½; London Provincial, 12½; London Scottish, 2½; Union of Australia, 56½; Union, 31½; and Western of London, 8½.

There has been a much better feeling in the market for Canada Bonds, and an advance in the value has taken place since the Six per Cents, due 1860, were marked 102; Ditto, 1860-2, 104; and the Five per Cents, 97; New Brunswick Six per Cents have sold at 118; Nova Scotia Six per Cents, 1870, 120; and Canada Six per Cents, 105.

The leading quotations for shares in new undertakings are as follows:—Ocean Marine Insurance, 4l to 5l prem.; Thames and Mersey Marine, 1½ to 1 prem.; Universal Marine Insurance, 7 to 9l dis.; London and Provincial Marine, 1 to 1 dis.; Mercantile Fire, 1 to 2 prem.; Commercial Union Fire, 1½ to 1 dis.; and Universal Life Assurance, 1 to 2 prem.

The transactions in Miscellaneous Securities have been far from numerous. Canada Land have been done at 1 discount; Ditto, 5 per Cent Inscribed Stock, and Canal, 1; English and Australian Copper, 8½; Great Ship, Seventeenth Class, 1½; Great Western Cotton Company, 1½; Imperial Mercantile Credit Association, 1½; Peninsular, 1½; Tasmania, and Oriental, New, 1½; South Australian Land, 1½; and Van Diemen's Land, 1½ discount.

On the whole, a fair average business has been transacted in Railway Shares, and prices have somewhat recovered from the late depression. The following are the leading quotations of railroad shares and securities:—

ORDINARY SHARES AND STOCKS.—Bristol and Exeter, 98½; Caledonian, 97½; Eastern Counties, 6½; Edinburgh and Glasgow, 72½; Great Northern, 111; Ditto A Stock, 103; Ditto B Stock, 101; Great Western, 68; Lancashire and Yorkshire, 103½; London, Brighton and South Coast, 103; London and North Western, 95½; Manchester, Sheffield, and Lincolnshire, 44½; Midland, 97½; Norfolk, 87½; North British, 62; North Eastern—Berwick, 99½; Ditto, Leeds, 96; Ditto, York, 83; North Staffordshire, 7½; South Devon, 4½; South Eastern—Dover, 74½; Ditto, Folkestone and Hythe, 46½; and Ditto, 42½.

PREFERENCE SHARES.—Great Northern, Five per Cent, 114½; London, Chatham, and Dover, 82; Midland—Bristol, and Birmingham, 118; Ditto Birmingham, Four per Cent Stock, 103½.

DEBENTURE LOANS AT FIXED RENTALS.—Birkenhead, 85; London, Tilbury, and Southend, 8½.

BORROWING POWERS.—Caledonian, 33½; Glasgow, Paisley, and Greenock, 16½; Great Northern, 33½; Great Western, 33½; Lancashire and Yorkshire, 16½; Ditto Lease, 10½; Ditto Five per Cent Debentures, 1863, 100; Ditto Four per Cent Debentures, 1865, 100; Ditto Four per Cent Debentures, 81½; Ditto Seven per Cent, 1865, 96; Ditto, 1867, 98; Great Indian Peninsula, 9½; Great Western Canada, 11; Ditto New, 6½; Madras Five per Cent, 98; Punjaub, 14½.

FOREIGN AND COLONIAL.—Antwerp to Rotterdam, 3½; Dublin and Drogheda, 14½; Dutch Rhenish, 15½; San Paulo, 4½.

The returns of the Bank of England for the week ending December 11 shows the following results when compared with the previous week:—

Circulation ...	£19,000	Public deposits ...	£5,000
Deposits ...	£1,000	Other deposits ...	£95,000
Government securities ...	£1,000	Seven-day and other bills ...	£5,000
Other securities ...	£1,000	Bullion ...	£1,000

An increase of public deposits of £19,000
An increase of other deposits of £1,000
A decrease of Government securities of £1,000
An increase of Government securities of £1,000
A decrease of bullion of £1,000

The total deposits amount to £7,000,000; the public deposits to £7,000,000; and private deposits to £13,000,000. Securities are £27,000,000; and the stock of bullion is £14,000,000.

Friday Afternoon.

The business doing in Home Securities to-day is very unsatisfactory, prices rule stationary—Consols, for Transfer, being 93¼ to ¾; for the Account, 93¾; the Reduced and New Three per Cents, 93¼ to ¾; India and Exchequer Bills, 2s. to 1s. prem. India Five per Cent Stock 101¾ to 102; Bank Stock, 222 to 224; and Long Annuities, 17 7-16 to 17 9-16; and no alteration has taken place in the quotations. The Railway Share Market is inactive, at about previous currencies.

PREFERMENTS AND APPOINTMENTS IN THE CHURCH.—The Rev. P. C. Ilay to be Minor Canon at Bristol Cathedral; Rev. L. M. Humbert, Master of St. Cross Hospital, Winchester, to be Chaplain to the Queen; Rev. On the 10th of November, Elizabeth, the wife of Mr. John Evans, of Wardlow-street, Soho, in her 74th year.

THE MARKETS.

CORN EXCHANGE (Friday).—Fresh up to this morning's arrivals last week's rates of wheat were supported in the early part of the week, but at the close the inquiry was a more sale, never before known. The business being was confined to retail wants, at about Monday's quotations. Barley and malting qualities were in good request, and the prices of inferior sorts were 1s. per quarter higher. Good and fine beans were in full demand, at full prices; but inferior kinds were a dull inquiry. Grinding and softening qualities were 1s. per qr. higher. In peas a moderate business was transacted, on former terms. Oats were firm, at full prices. Linseed cakes were in fair request, at £5 10s. per ton. Rapeseed was in good request, and prices were firmly maintained. Fine flour made was still. Fine grades were offered freely, at former rates.

Arrivals—Wheat—English, wheat, 2710 qrs.; barley, 1,000 qrs.; oats, 1,960 qrs.; beans, 1,000 qrs.; peas, 1,120 qrs.; flour, 4,000 sacks; Foreign, wheat, 47,720 qrs.; barley, 2,000 qrs.; oats, 2,000 qrs.; beans, 2,000 qrs.; peas, 1,000 qrs.; flour, 1,000 sacks.

Arrivals.—Wheat, Essex and Kent, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th, and 9th inst., 2,710 qrs.; Scotch, 2nd inst., 1,000 qrs.; Irish, 2nd inst., 1,000 qrs.; Foreign, 2nd inst., 2,000 qrs.; 3rd inst., 2,000 qrs.; 4th inst., 2,000 qrs.; 5th inst., 2,000 qrs.; 6th inst., 2,000 qrs.; 7th inst., 2,000 qrs.; 8th inst., 2,000 qrs.; 9th inst., 2,000 qrs.; 7th, 8th, and 9th inst., 2,720 qrs.; Danubian, 2nd inst., 2,000 qrs.; 3rd inst., 2,000 qrs.; 4th inst., 2,000 qrs.; 5th inst., 2,000 qrs.; 6th inst., 2,000 qrs.; 7th inst., 2,000 qrs.; 8th inst., 2,000 qrs.; 9th inst., 2,000 qrs.; 7th, 8th, and 9th inst., 2,720 qrs.; Barley, 2nd inst., 1,000 qrs.; 3rd inst., 1,000 qrs.; 4th inst., 1,000 qrs.; 5th inst., 1,000 qrs.; 6th inst., 1,000 qrs.; 7th inst., 1,000 qrs.; 8th inst., 1,000 qrs.; 9th inst., 1,000 qrs.; 7th, 8th, and 9th inst., 1,000 qrs.; Oats, 2nd inst., 1,000 qrs.; 3rd inst., 1,000 qrs.; 4th inst., 1,000 qrs.; 5th inst., 1,000 qrs.; 6th inst., 1,000 qrs.; 7th inst., 1,000 qrs.; 8th inst., 1,000 qrs.; 9th inst., 1,000 qrs.; 7th, 8th, and 9th inst., 1,000 qrs.; Beans, 2nd inst., 1,000 qrs.; 3rd inst., 1,000 qrs.; 4th inst., 1,000 qrs.; 5th inst., 1,000 qrs.; 6th inst., 1,000 qrs.; 7th inst., 1,000 qrs.; 8th inst., 1,000 qrs.; 9th inst., 1,000 qrs.; 7th, 8th, and 9th inst., 1,000 qrs.; Peas, 2nd inst., 1,000 qrs.; 3rd inst., 1,000 qrs.; 4th inst., 1,000 qrs.; 5th inst., 1,000 qrs.; 6th inst., 1,000 qrs.; 7th inst., 1,000 qrs.; 8th inst., 1,000 qrs.; 9th inst., 1,000 qrs.; 7th, 8th, and 9th inst., 1,000 qrs.; Flour, 2nd inst., 1,000 sacks; 3rd inst., 1,000 sacks; 4th inst., 1,000 sacks; 5th inst., 1,000 sacks; 6th inst., 1,000 sacks; 7th inst., 1,000 sacks; 8th inst., 1,000 sacks; 9th inst., 1,000 sacks; 7th, 8th, and 9th inst., 1,000 sacks.

Average prices of British grain for the week ending December 7, 1861:—Wheat, 44s. 2d.; barley, 28s. 8d.; oats, 19s. 10d.; rye, 30s. 8d.; beans, 34s. 8d.; peas, 33s. 8d

T. CROCKER, 293, Oxford-street, W.

PIANOFORTES BY THE BEST MAKERS, FOR SALE OR HIRE.
CRAMER, BEALE, and WOOD, 201, Regent-street, W., have for SALE a large and choice selection, received with the utmost care from the Factories of BROADWOOD, COLLARD, ERARD, KIRKMAN, and other eminent makers, in Cottage, Semi-Cottage, Semi-Grand, and Grand Pianofortes, including qualities of tone possessed by the pianofortes of each maker, placed at very low rates by sale, or pianofortes of the same quality on the most favourable terms to hire (hire under the same circumstances as in a private residence).
Illustrated pamphlet sent free by post on application.

CRAMER, BEALE, and WOODS New and MODEL COTTAGE PIANOFORTE, price 70 guineas. Every instrument is warranted for five years, and the tone and touch may be restored after the influence of any climate. Pianofortes may be hired for three months and the hire then be considered as purchase if returned in October and the Piano in perfect order.

PIANOFORTES.
CRAMER, BEALE, and WOOD select PIANOFORTES by all makers, new and second hand, for SALE or HIRE, at the lowest prices, and the principle of hire purchase allowed. Illustrated pamphlet sent free by post on application.

CRAMER, BEALE, and WOOD execute all kinds of REPAIRS on PIANOFORTES and HARMONIUMS, and have Workmen always on the premises for that purpose.

HARMONIUMS.—CRAMER, BEALE, and WOOD'S latest LIST OF PRICES is Now Ready, and may be had on application to 201, Regent-street.

COSTLY WALNUT DRAWING-ROOM SUITE, in rich carved and massive Italian style, and Dining and Library Suites, recently removed from a mansion, the whole being unusually cheap, and the Drawing-room Suite forming a desirable opportunity to intending purchasers, will be found at WILLIAM S. BURTON'S, from No. 1 to 61, Oxford-street, Nos. 1, 2, 3, and 4, Newman-street, and 4, Perry's-place, and 1, Charles-street.

CHIMNEYGLASSES.—ALFRED GREEN invites attention to his selection of brilliant Plate Chimneyglasses in small modern frames.
Plate, 20 inches by 16 inches ... 2l. 2s.
Plate, 30 inches by 20 inches ... 3l. 3s.
Plate, 40 inches by 30 inches ... 5l. 5s.
The best and cheapest article ever offered to the public. The trade supplied. ALFRED GREEN, 3, Piccadilly, corner of Air-street, by Waterloo-place, S.W. (Established 1760.)

CARPETS.—ALFRED GREEN'S assortment of Brussels, Tapestry, and other Carpets is on the largest scale, and of the most approved designs. Excellent Tapestry Carpets, 2s. 3d. per yard; Brussels (3-plied), from 3s.
Alfred Green, 3, Piccadilly, corner of Air-street.

BEDROOM FURNITURE.—The French-polished Mahogany Dressing Bedstead, with spring mattress, as fitted to the best and most elegant description of bedroom furniture. Its lightness and ease to sit up in is unequalled, and its cheapness will recommend it to every purchaser on application at Alfred Green's Upholstery and General Furnishing Warehouses, 3, Piccadilly, corner of Air-street. Price lists of these and other goods post-free.

STAINED DEAL GOTHIC FURNITURE.—ALFRED GREEN invites attention to his complete Bedroom Suites of this unique and elegant style, from 10 guineas; also to Dining-room suites in pine, and every article to furnish cottage or villa, at 3, Piccadilly, corner of Air-street, by Waterloo-place, London, W.

ANTIQUE FURNITURE for a Dining-room. A dark oak, in the medieval style, the carvings capricious and grotesque, consisting of a Sideboard, Extending Table, and high-backed chairs, second to nobody; pair of armchairs to match; Chiffonier, Overmantel, and Cabinet, all of the most elaborate description—the whole had to be seen to be appreciated. Belgrave House, 12, Hans-street, Belgravia.
Also some very handy Bentwood Furniture, equally cheap.

FURNITURE, CARPETS, and BEDDING.—See our Galleries, elaborately illustrated with nearly 50 Engravings, of Bedsteads, Bedding, Bed-hangings, Carpets, Curtains, Chimney-glasses, Tables, Chairs, Cabinets, Bookcases, Lamps, Fenders, Fire-irons, Kitchen Utensils, &c., sent free by post. HEAL and LUCAS, Manufacturers, 24 and 25, Tottenham-court-road, and 1, Conway-street, Fitzroy-square, London.

TABLE-KNIVES.—Best Ivory Balance-handles—Table, 10s.; 9s., 8s.; Dessert, 8s.; 7s., and 6s. 6d. per dozen. Carvers, 3s. per pair. Black-horn Table-knives, 6s. per dozen. Cake-trowels, 2s. Razors, 2s. 6d. and 3s. JACKSON, 336, Strand.

WILLIAM S. BURTON'S GENERAL FURNISHING IRONMONGERY contains the largest, most varied, and most economical assortment in existence of every article required for furnishing, whether in Electro-plate, Cutlery, Stoves, Fenders, Marble Chimney-pieces, Kitchen Utensils, Tin-plate Goods, Turnery, Iron and Brass Bedsteads, Bedding, Lamps, Gasaliers, Tea Trays, Clocks, Table Linen, Baths, Toilet Ware, Turnery, Brushes, Mats, and Clothes Pegs, &c., all of which are arranged in Sixteen Large Rooms, so that purchasers may easily make their selection. A Catalogue containing upwards of 400 Illustrations, with Prices attached, sent free by post. Orders above 20s. forwarded to any railway station. Nos. 1, 2, 3, and 4, Newman-street; 4, Perry's-place; and 1, Charles-street, London, W.

SPOONS and FORKS.—SLACK'S SILVER ELECTROPLATE is a coating of sterling silver over nickel: the fact of twenty years' trial is unequivocal proof of its durability. Table Spoons and Forks, full size, 30s. per dozen; Dessert, 20s. and 24s.; Tea, 12s. and 14s. Sold by all Ironmongers. Slack's Catalogue of Prices, Richard and John Slack, 336, Strand.

EMBARKATION AT WOOLWICH OF THE 2 BATTERY FOURTH BRIGADE OF ROYAL FIELD ARTILLERY, ON BOARD THE MEDIOMEDE FOR CANADA.—SEE PAGE 606.

PRIZE-TAKERS AT THE BIRMINGHAM DOG SHOW.

DOG SHOWS may be said to be a great national fact at last, and the people of Birmingham and Mr. Burdett, who have fostered them into greatness, have just reaped their reward in a catalogue of 455 entries and a workers' list of station thousands. We give, on page 598, Portraits of some of the principal prize-takers, and annex are some particulars respecting the animals de'picted, taking them in order, beginning at the top left-hand corner.

Birmingham kept up its bulldog specialty with Mr. Lamphier's King Dick, who appeared with his silver collar on, and bent a good class of terriers, with a fair friend from Birmingham second. We get next to the mastiff, "that prodigy of British valour," as old sporting magazines always termed him. A saying of Sir Mc. Cobden that if his friend John Bright's lot had not been happily cast in a different sphere he would have become a prize-fighter, and the owner of the winning mastiff seems to have caught the hint, and called him "Quaker" accordingly. He is the property of Mr. Church, of Great Hall, and of a very dark fawn colour, and with a black face, a colour which has been decided to be the true orthodox garb of the "national defender." Mr. Jonathan's Druid was in his glory once more among the bloodhounds, and as regards cups, he will soon be on a par with Beeswing and Dr. Syntax. He is out forty years and a half old, and combines the Fowlerian, Rothschild, and Castle Howard strains. The prize pet upon his head is pug-, and the woolston comes next, and dwarfs, as he does in making as his lever, quite mark him out as a monarch among dogs. There was nothing in the class at all comparable to Sarah his, as they could not pass the great head test. Mr. Thursby won an extra class for foreign dogs, and used in field sports with his Cuban "Jose," which had to meet "Jose," a Chinese used dog; "Sili," a French poodle; and "Wolf," a Pyrenean dog.

The silver cup, which there was an size-restriction attached, were a great class; and Mr. Hofford, M.P.—who has long since proved to those illiterate constituents of his who will rudimentally disturb the harmony of a fashionting county for the sake of a few paltry pheasants, that he likes a dog on the wing fancy as a mere lover of the country—took second with the first prize with his Trimbush, beating Capt. Spencer's Bob, a dog of great substance, and also a fine fellow. The Weston Bet tested had full honours paid to him, as he is Holford's Trove dead in the female class, and marked, like her companion, at 10 ops.

"The white terrier English terriers" had a large entry, and victory rested with Mr. Richard Atkin, of Warwickshire, who marked his dog Jack—which was bred by Mr. Jesse Hall, of North Stafford shire, once as great as a huntsman and a rider before he lost his leg over the Chilton Cross, at about £200. Mr. James Mitchell had once made a notions shed his little Vic in the Scotch terrier class, as £20 would have satisfied him, and in fact only two in the class were marked lower.

In otterhounds the Right Hon. Viscount Hill had no opponents, at shot with Mr. Hoskins's crown in our Portrait, and Mr. Newton's Ranger is one of the grandest sporting dogs that ever entered a show bench. He was carefully looked after and shown up, and it was only when some friends asked for him that his fine proportions were fully revealed and seen as he trod the platform. As the class consisted of couples, the callow may be well pulled of. He was a very fine liver and white by Sir Thomas Whichcote's Ranger, and winner at the Mr. Stanhope's, Earl Henry Bentinck's, and Lord Craven's kennel blood in his pedigree. In a humbler way, and although exceptionally fine, Mr. Bulman's "Sill," the French poodle, claims her picture; and Gipsy, a Russian setter, the property of Mr. Hawkins, of Birmingham, will be seen at the head of the extra class for foreign sporting dogs. With her black tan puppies Gipsy made up a most interesting group, and they were, in fact, the only nursery left in the show.

A little more room if possible in the sweeps, dog-platforms raised some eighteen inches higher, and better precautions against a fall in the fancy chamber, and this show will be as good as the Smithfield or the Royal in its arrangements.

"PEEP O' DAY."
THE OLD QUARRY IN THE POIL DHUIV.

On the taking the moss sheds partial day,
But darkness reigns below.

MR. FALCONER'S new drama at the Lyceum appears to increase in attraction. Its scenery is equal to any with other "sensation" drama; and, in some respects, is undoubtedly superior to contemporary productions. The sensation scene of "Peep o' Day" is the one of which we give an illustration this week. It concludes the third act, and is laid by the playbills so skilfully disposed that a positive climax of interest is attained. Here it is that Black Michael endeavours to await the coming of Kathleen Kavanagh, in order to accomplish her murder. She has already dug the grave for his intended victim. The scene is altogether capitally, and is excellently painted by Mr. Telbin. The moonlight is on the edge of a mountain precipice, while the gloom and savage depth beneath. The precipice is awfully high and steep; and when Black any attempt been to rescue the poor girl from assassin's power, the bridge across the chasm having been cut away by him, if the tree whose branches reached to the edge, had not presented the means of escape. With these few hints the reader will well enough understand the scene. Its pictorial beauties will speak for themselves, and extend the fame of Macready's revival of a piece of action by whom it has been designed and painted.

Mr. Falconer's drama is saved, but she divides the interest with another, who is saved also; so that the author has been careful to have two effects in his favour. He might very well have been content with fatal ensing to Kathleen's story; but he wisely abstained. We could have wished, however, that she had reappeared to share the triumph at the fall of the curtain. Nevertheless, the catastrophe in her absence sufficiently explains itself.

THE CELEBRATED TROTTING COB JACKEY.

LIVERPOOL and its captains and its shrubbers have always preserved a traditional love for trotting when it could strike root in no other part of our country and the fields of Builder and Driver and Sailor Jack, the hassling of "The Squire" and Macdonald were forgotten. Hence, if a few judicious men had not thought of, it is not to be Hotherwell's or Aldridge's that we have to look for them, but to the Liverpool gentlemen. Jackey is quite a king among cobs in that district, and as high in local favour as Mr. Sandall's mouse pony Mary Ann, who was wont to be in old times. He is now in his twenty-ninth year, and measures 13½ hands. Mr. Beer bought him of a Mr. Bowden, and Mr. Barnet Fair in 1835 he was supposed to be a two-pearled Welsh pony. It was some years before anyone dare duly tested, and he was a full seven years old before he trotted his first match on Nov. 4, 1845, when his owner backed him to trot a hundred miles in ten hours in harness, out of Wiltshire to London. This he achieved in 9 hours and 10 min., and was shortly afterwards sold to a brother for 41S. His speed as a Woodford mare was then brought into requisition again, and Mr. Johnson gave 45O for him, and was several matches.

On May 15, 1850, the week after Voltigeur won the Derby, he was pitted for the greatest effort against the American pony "Tinker" for £50 a side on a 14 mile level course, and under Mr. Bartley's hand did the five miles in 14 min. 40 sec., quenching the hopes of "Tinker" (Peter Paget) in the middle of the eighth. The Americans were not a little amazed at the performance, and so was Mr. Hillman of Liverpool, who forthwith gave £200 for him, and matched him against the American mare Lucifer for a thousand ten miles for £200 aside, owning to drive and hence, on June 23, 1851, he did his part towards the assessment, and averaged the tolerable and unlikely details by beating her in 31 min., 11 sec. over Aintree racecourse.

On Sept. 4 of the same year he won on the same course the Five mile Steeplechase (open to all the world) of 10 sovs. each, with £100, beating Mr. Lawson's bay mare Kate, ridden by Bateman, and Mr. Bowring's American chestnut pulling Sir William, ridden by his owner, Jackey was driven in harness by Mr. H. Holmes, and won cleverly by ten lengths, performing the distance in 14 min. 26 sec. To this on Aug. 12, 1852, succeeded a four-mile victory at Wolverhampton over the Manchester mare Bess, Stumper, Little Nell, Little Bustan, and two others, in 12 min. 6 sec. Aintree saw him A. 1 again the next month in a ten-mile match with Mr. Jones's bay mare Bess, in 28 min. 53 sec.; and, during his training for this match, he trotted in a trial five miles in 14 min. 5 sec., carrying 10st., which is, we believe, 10lb. more than on record in England. A bent-race fell to his lot at Middleton, Westmoreland, with R. Birchall in the saddle the next year (1853), and another with the same rider at Macclesfield. This was an extra three miles with him, as within a fortnight he was covering three miles on the London and Brighton road with Mr. Ode's celebrated Tom Thumb, for 25 sovs. a side, and was winner in 11 min. 57 sec., driven by his owner. After that he was sold to a banker in Manchester for £400, and he would like to see a good mare in Liverpool. He met, however, with an accident which caused lameness, and, in consequence, he lost a match in Scotland for £100 a-side, and was beaten by the mare Maggie. He was, however, soon all right up, and a quarter of a century old, said him to Mr. Charles Hastie, of London, his present owner, who has got him in fine fettle, and matched him successfully in September, 1858, to trot four miles against Mr. Wadhouse's mare Lady Clare, which he beat by 200 yards. On June 17, 1860, the evergreen was in public again, and matched to trot three miles in two, for £50, which he did, driven by his owner, on the Woodford road in 8 min. 45 sec. Then came the grand coup, and on the 4th of last September, in the same hands, he won the Aintree Stakes over the Liverpool Steeplechase course, beating Rose Tommy, Fisherman, Iron Duke, and several other celebrated trotters—distance, 2 miles 240 yards, and time 6 min. 12 sec.

We have had some everlastings on the turf—the Potentate, Zohrab, Ivanhoe, and Newcastle, to wit; but Jackey may well claim the supremacy of the Road; and, if the thunder of Captain Wilkie's guns are ever heard on Londonderry, we should expect that Jackey will be one of the first prizes which he will seize in London and confiscate in the Republic.

NAVAL AND MILITARY INTELLIGENCE.

REINFORCEMENTS FOR CANADA.

In consequence of the possibility of a rupture between this country and the Federal States of America, the Government have recently taken measures with extraordinary vigour to send reinforcements promptly to Canada. The route taken is that by the Gulf of St. Lawrence, and 3 millions troops are their way to Canada. This will bring up the strength of the regular forces in the province to between 7000 and 8000, and we have at home a reserve, if the necessity should be forced upon us, would enable us to bring 30,000 highly-disciplined men into the field. The Duke of Newcastle, in his previous secretary prevails in getting ships of war ready for sea—the number destined for service in the Gulf of St. Lawrence, North American station being 15 ships of the line and frigates.

Yesterday week the officers, non-commissioned officers, gunners, and drivers of the Royal Canadian Rifle Regiment of Artillery, Brigade Royal Field Artillery, assembled on parade at Woolwich, and after inspection marched to the wharf under the direction of Major-General Lord Alexander Russell, and embarked on board the screw steam-vessel Melbourne, for Canada. The streets to the line of march were thronged with spectators, who cheered the men as they passed. At the head of the regiment and numerous field officers, was repeatedly cheered by the spectators. Previous to the embarking the men were served with refreshments where a multitude had assembled. The force immediately embarked from the Royal Arsenal, Woolwich, consists of 6 officers, 6 sergeants, 6 bombardiers, the following amount of war stores—viz., two complete batteries of Armstrong 9-pounder field guns, 12 guns in all, with their ammunition complete, 100,000 rounds of Minié rifle balls and small-arms ammunition, 1000 rounds of Armstrong shells, Armstrong fuses, &c. The men are clothed in a blue military clothing and a quantity of stores peculiarly adapted for Canada, including 4 waggons and 4 carts, with harness complete, and a quantity of forage. The engine department were working day and night to manufacture during the last few days the ammunition for the guns, &c. The Royal Canadian Rifle Regiment has received to increase by a large number the supply of weights for the Armstrong guns, and the whole of the military stores and ammunition have been consequently packed during the night. The ammunition seems to depend upon the range of the guns, which are to be mounted on travelling carriages of the latest construction. The Melbourne sailed on Saturday at half-past two p.m. The long and tedious preparations for the passage of carrying troops and stores to Jamaica and Halifax. The Persia and Australasian are being rapidly fitted for the accommodation of troops. The Australasian will be ready for the troops by the 20th inst., and will be ready to sail about the 5th or 10th inst. Each of them is to carry out a detachment of the 30th Regiment of some 300 rank and file, and the Australasian is also to take a field battery and a large quantity of ammunition. The Persia will be ready to sail about the 20th inst., and will have the same distinguished officer to assist in the organization of the Canadian militia—each regiment of which is to be called upon to furnish a certain number of men for duty. It is stated that in some regiments as many as thirty sergeants have volunteered.

Colonel Naylor, Deputy Quartermaster-General in Canada, is placed on the staff of Major-General Sir Fenwick Williams, and Major Hay, appointed as Deputy Quartermaster-General by Colonel Mackenzie, C.B., who was on the Canadian staff, have left London for Canada to join their duties in the Gulf of St. Lawrence.

On Tuesday week a large number of mechanics and labourers were engaged at the Royal Arsenal, London in packing firearms and every kind of article which is required for the equipment of troops. Large cases were filled with the various articles, and the cases which were duly packed and covered in barge to the Government steamer at Woolwich. The cases were then on board the steamer with all possible despatch. There were large gangs of gunmakers at the east end of London are working night and day to execute large numbers of rifles, and considerable numbers are sent from Woolwich daily, which are tested at the proofhouse and then sent to the Tower for exportation.

On Monday the first battalion of the Grenadier Guards were inspected at the Tower Armoury previous to embarkation for Canada. The whole of the men have undergone medical examination, and those found unfit for service have been rejected.

By order of the Lords of the Admiralty, Commodore Nicolson, of the Royal Navy, has been appointed to the command of the Naval Reserve that all members of the Royal Navy temporarily borne on the books of the Hogarth division have been paid off, and will have their discharges on a month's leave of absence, are to rejoin immediately. Similar orders have been issued to the officers of the Naval Reserve belonging to the Liverpool district in the Royal Navy. The entry of able and ordinary seamen for her Majesty's ships has been suspended, commencing on the 1st inst., and continuing for three months. The Admiralty have also given notice that they are prepared to receive men for the Royal Marine Artillery, Royal Marine Light Infantry, and Royal Marine Battalion. It appears that the total strength of the corps is 1046 men, 130 of the number are artillerymen, 916 are marines, 3 buglers, and 109 boys. The corps is now complete, and no further recruits will be taken in.

The following is a detail of the vessels of war which are now fitting out for service, and which will be commanded by officers of the Royal Navy temporarily borne on the books of the Hogarth division

THE GREAT SCHOOLS OF ENGLAND.

No. IV.—SHREWSBURY SCHOOL.

THE picturesque appearance of Shrewsbury from whatever side we approach it, the beauty of its situation and surrounding scenery, with the richness of its historical associations, combine to render it one of the most interesting of our English towns. Shrewsbury is built upon the banks and crest of a gentle eminence, rising from the plain of North Shropshire, and formed by one of the windings of the Severn. Seven of its sides present a bank or rock of which, on the seventh side, is not more than three hundred yards in breadth. Beyond these limits it throws out three long suburbs—the Abbey-Foregate, the English Bridge, stretching to the south-east and south; over the English Bridge, and the Welsh Bridge, to the south-west; and Frankwell, beyond the Welsh Bridge, to the north-west, from whence the Castle Foregate, also beyond the river, running under the castle, traverses the island and bridge northwards.

The ruins to the south-east of Shrewsbury the Wrekin rises from this plain to the height of twelve hundred feet, and near it, still on the left bank of the Severn, are the hills overhanging Coalbrookdale, while on the opposite side of the river commences the Ironstone slope extending to the picturesque hills which form the eastern barrier of the vale of Church Stretton.

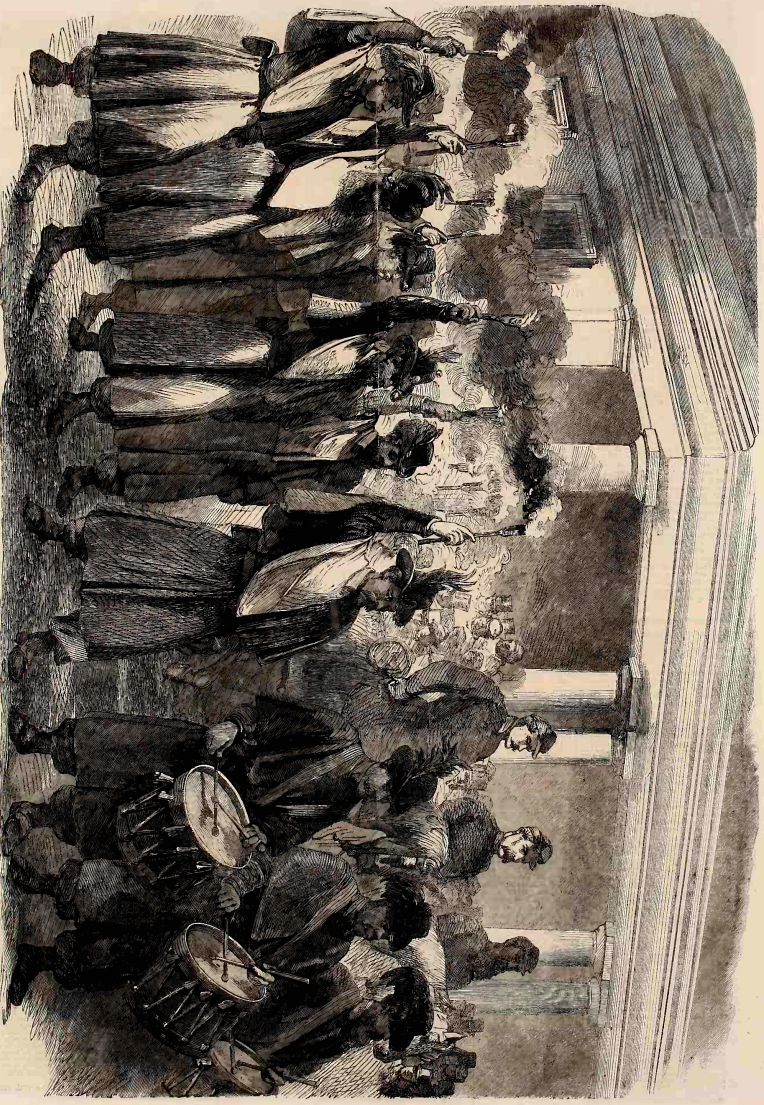
Five miles from Shrewsbury, near the confluence of the Severn and Tern Rivers, is the village of Wroxeter, the site of the ancient Roman town of Uriconium, Cornoviorum, or Viroconium (Ptolemy), evidently Latinised from the British name of the neighbouring mountain, Wrekin, Welsh, Wrikon, Wrichon. The modern name is still nearer to Wroxeter being a corruption of Wrekin-ceaster, as never the Wrekin we have the village of Wrockwardine—Wrekin-worthy.

Within the Conqueror granted the town and large domains in the county of Salop (Shrewsbury" as an earl's fief to Roger de Montgomery, one of his followers and kinsmen. After the death of that nobleman, and of his son Hugh, second Earl, Henry de Bellomont, third Earl of Leicester, succeeded to the earldom of Shrewsbury, which by his Earl Robert, succeeded to the earldom of Shrewsbury, which by his rebellion against Henry I. became forfeit, and was again bestowed by Henry III. on Edmund, Earl of Lancaster, created by county of Salopbury on his second wife, Adelicia of Louvain, who appointed as her Viscount at Shrewsbury William Fitz Alan, ancestor of the Dukes of Norfolk. After Henry's death Fitz Alan espoused the cause of the Empress Maud, and held the castle against Stephen, who laid siege to it in person, but taking it in a few weeks, hanged ninety-four persons, and among them Arnulf de Hesding, guide of Fitz Alan, who had himself escaped. Fitz Alan subsequently reinstated Fitz Alan in the government of Shrewsbury. In the reign of John negotiations took place between Shrewsbury, who assisted the Great Prince of North Wales. War ensued; and amidst the difficulties in which John's disputes with the Pope involved the English kingdom, Llewelyn, "the Great," took "Posgwern," 450 years after it had been wrested from his ancestors.

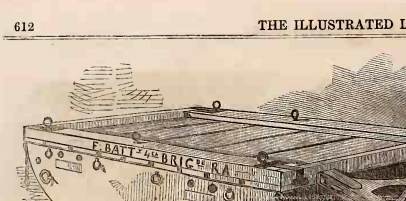
Shrewsbury had long continue in the hands of the Welsh, but not its honour during the two next reigns is intimately connected with the town of the two countries. It received several Parliaments there the wars of the two countries. It received several Parliaments there in the reign of Edward I., and the asylum of many a marcher. In 1231 it was again attacked, and partly burnt, by Llewelyn. In 1241 Henry III. visited it, transferred the earldom to his son Edward, and taking it in a few weeks, hanged ninety-four persons, and among them Arnulf de Hesding, guide of Fitz Alan, who had himself escaped. Fitz Alan subsequently reinstated Fitz Alan in the government of Shrewsbury. In the reign of John negotiations took place between Shrewsbury, who assisted the Great Prince of North Wales. War ensued; and amidst the difficulties in which John's disputes with the Pope involved the English kingdom, Llewelyn, "the Great," took "Posgwern," 450 years after it had been wrested from his ancestors.

Shrewsbury had long continue in the hands of the Welsh, but not its honour during the two next reigns is intimately connected with the town of the two countries. It received several Parliaments there in the reign of Edward I., and the asylum of many a marcher. In the reign of Edward II. it was attacked, and partly burnt, by Llewelyn. In 1321 it was again attacked, and partly burnt, by Llewelyn. In 1321

THE CIVIL WAR IN AMERICA.—THE CONFEDERATE ARMY—MISSISSIPPIANS PASSING IN REVIEW BEFORE GENERAL BEAUREGARD AND STAFF



THE CIVIL WAR IN AMERICA: TORCHLIGHT PROCESSION OF GENERAL MCCLELLAN'S BRIGADE AT WASHINGTON IN HONOUR OF GENERAL MCCLELLAN TAKING COMMAND OF THE FEDERAL ARMY.—FROM A SKETCH BY OUR SPECIAL ARTIST.—SEE PAGE 606.



ARTILLERY SLEIGH FOR CANADA.

SLEIGHING IN NORTH AMERICA.

A JUDICIOUS forethought, as well as the utmost promptness, seems to have marked all the arrangements entered into by our war authorities to prepare for the possible struggle between this country and the Federal States of America. Besides large quantities of warm clothing for our men, required by the exigencies of a Canadian winter, the Melbourne, which sailed last Saturday, carried a number of sleighs intended for the transport of artillery in Canada, one of which is represented above. In the northern parts of America, as in those of Europe and Asia, the sleigh, as is well known, supersedes the wheeled carriage during the snowiest winter. No sooner does the regular winter snow fall than all the wheeled carriages are instantly dispensed with, and sleighs substituted for them; these, like the wheel-carriages, are of every kind and adapted for every purpose, from the splendid fur-covered private carriages of the wealthy to the heavy vehicles of builders and farmers. Whatever the make, or use to which it is applied, the principle of construction is the same—the carriage resting on two longitudinal bars of iron called runners—which enable it to travel over the hard snow with a minimum amount of friction. Sleighing for pleasure is the delight of the Canadians; the vehicle moving over the snow so easily and so entirely without noise that it is necessary to have little bells hanging to the horses' harness, the sound of which warns the drivers of each other's approach when too dark to be observed by the eye. A sleigh "turn out," as used by the wealthy, is a beautiful object, being painted and finished with the best carriages; rich coloured skins and furs hang over it, the heads and claws of the animals being often attached to them for ornament. Sleighs are used for carrying people to the railway stations instead of omnibuses, and, in fact, for every purpose to which a wheel-carriage can be applied. When the country is covered with snow the farmer hauls his sleigh and drives over fields and roads in as straight a line as he can—the whole country affording him a road in any direction where cleared. Thus, laden with poultry and all sorts of farm produce, he reaches the nearest town and converts these into cash, or barters them for articles of domestic use, with which he returns home loaded. By this means the whole country is opened up, every one finding a highway for himself.

TORCHLIGHT PROCESSION AT WASHINGTON.

On page 611 we give an illustration of a torchlight procession at Washington by Blenker's Brigade to celebrate M'Clellan's promotion to the command of the Federal Army. The original scene on horseback is General Blenker. The *New York Tribune* gives the following account of the Blenker procession:—"These thousand Germans of General Blenker's division constituted a torchlight procession on Monday evening, November 11, and, with regimental bands and fireworks and coloured lights, marched to General M'Clellan's house to celebrate his promotion. Transparencies and pyrotechnic devices of the most beautiful designs were added to the attraction. All Washington was one to see. The crowds soon demanded the Amazonian stimulus of a speech, and the calls for Secretaries Cameron and Seward brought them to the balcony. They briefly addressed the crowd. Calls were then made for General Blenker, who said:—'Citizens and Sojers,—I will say a few words, and it shall be few. If ever I find the enemy I will fight bonnards, and to sounds of us will fight better as I speak this noble English' (immense cheering). Cries were made continually for General M'Clellan, but he merely appeared at different times on the balcony, and bowed to the crowd of soldiers and civilians that filled the street from side to the other. Within his house Mrs. Lincoln extemporised a generous collation, and gave a warm welcome to the officers who swarmed in to take her by the hand. The whole affair was unusual was a splendid success, and is due entirely to the spirit and liberality of General Blenker and his staff."

The special correspondent of the *Times* at Washington writes as follows respecting this demonstration:—"The prettiest sight I have seen since I crossed the Atlantic was the torchlight procession got up by General Blenker and his Germans in honour of Major-General M'Clellan on his promotion to the command of the Army. It was something like a Burschen procession, but it exceeded very much any displays of the kind in the number of torchbearers and the variety of colour and effect. The camp of the Blenker men—famous for leger beer and quaint pipes, also for perverted notions respecting the sweets of liberty and the form of Secessionists—lies on the opposite side of the Potomac, in the valleys and dells of the 'old dominion,' which is nearly as old as Canada, and is equally rich in the picturesque and the primitive antiquity. From it they come in a grand procession, with bands playing, rough chorus-singing, and their own peculiar torch, bridge in a dancing stream of fire—blue, green, red, yellow, orange, and dazzling white. The air was still, the night fine, and nothing could have been more successful than the fireworks in their way, or the impression produced by the streams ended with fire, which, first glowing like a torrent of lava, then gradually broke its particles into a broad ribbon of relentless flames, which, coming nearer, was resolved into balls of the same coloured light, and, there winding its way, was cut into a narrow stripe of orange-like molten iron running through the black masses of the mould. The Germans were followed by Pennsylvania artillery, and then by the State Department, and, coming in at the gates of the White House, treated the President to a sight of the demonstration intended for his benefit."

Advices from Christiania, Norway, dated the 12th ult., mention that in the previous week the new Roe-Hammer line of railway was pushing ahead for passengers and goods traffic to Hyerum. This is one of the finest pieces of railway in Norway, the country side for the first twenty-one miles in length. It will not be completed opened till the spring of all the stations are not yet ready. The Kongsvinger line, which is above sixty miles, may be also partially opened, but it will not be finally completed before next summer. At present, it is said the trunk line is steadily developing the resources of the districts within its influence.

CHESS.

And Black gave up the game.

The Episcopal Church at Fairfax Court House, in Virginia, has been destroyed by the Confederate Federal troops. The church was one of the oldest in the United States. It was built by Lord Fairfax, and the pulpit and altar were constructed in England. It was in this church and at this altar that George Washington was married.

GENERAL M'CLELLAN.

On the retirement of General Scott, on the 31st of last October, General M'Clellan was formally declared Commander-in-Chief of the Federal forces, of which he had been for some time the virtual head. George M'Clellan was born at Philadelphia in December, 1826, and destined for the military service. In his sixteenth year he was sent to West Point, and left it in 1846, as Second Lieutenant in the Engineers, to take part in the Mexican War. His bravery in the battles of Contreras and Churubasco gained him promotion, and at the storming of the forts of Molino del Rey and Chapultepec his conduct was so brilliant that it gained him his captaincy. After the peace he was appointed a teacher at West Point, where he wrote a manual of the art of war, which is highly esteemed by American soldiers. After this he built Fort Delaware, and then was ordered to Texas and New Mexico to make a topographical survey of the districts through which the Texas Railway was to run. This difficult task was interrupted by a summons to Washington, where the military department had selected him, in conjunction with Major Mordecai and Captain Delafield, to go and witness the operations in the Crimea, which excited so great interest in America as they did in Europe. As there was no prospect of active service on his return home, M'Clellan determined to leave the army, and accepted the post of chief engineer to the Illinois Central Railway, which he held for several years with credit. In this position the outbreak of the civil war surprised him, and, as he was universally respected and known in the West, he was at once called to a high post. The Governor of Ohio appointed his Major-General and chief of the militia of that State; but by the recommendation of General Scott he was made Major-General of the regular Army, and intrusted with a most important command in West Virginia. After the defeat of the Federal army at Bull Run, M'Clellan was summoned to Washington to take supreme command. A Washington letter describes the enthusiasm felt by his men for General M'Clellan:—"General M'Clellan (he is always one of the best generals of men) he generally wears the simple blouse of the rifleman, with not even the starred shoulder-straps to denote his rank; a man who hews wastes time—for he is intelligible in his pursuit and attack of the enemy, and equally untiring in his efforts to secure the utmost comfort of his men compatible with the circumstances of a soldier's life. When his line is on the march he is ever among the men, with a kind and cheering word for every company—pleasant look, or kind salute, or hearty grasp of the hand for every officer or private with whom he is brought in speaking terms by business; and in a fight he is always at the front of the column, in the thickest of the danger, encouraging his soldiers by cheering word and fearless deed. 'He takes soldier's fare with the rest, asking no better food, and no more luxurious bed than the sweet-scented private under his command. If he sees a man without proper blouse or clothing, he has that man with his Captain sent to his own quarters, where the man is served with the garments he needs and the Captain receives a reprimand that lends him to look more closely after the comfort of his men in future."

WILLS AND BEQUESTS.

The will of the late Right Hon. Anne, Dowager Countess of Newburgh, of Shalden House, in the county of Southampton, of the fifth Earl of Newburgh, was administered to by Sir Henry Webb, Bart., her Ladyship's nephew, the residuary legatee, the executors, F. H. Hoare, Esq., and Sir Thomas L. Gage, Bart., having renounced probate. The personalty was sworn under £45,000. The will bears date Oct. 6, 1856, and the grant was issued from the Court at Chichester. The testatrix, who married the Earl of Newburgh in 1799, attained to a very venerable age, and her last personal interest, the principal of it consisting of valuable landed property and freehold estates. Her extraordinary personalty will was misnamed by the Viscount Kimsland, Marquis Bundini, and heir to the earldom, are devised the estates in Gloucester and Northumberland; and to Robert Henry, Esq., the estates in Sussex. All other the real estates, including the manor of Earthen, Sussex, together with the residue of the personalty, are bequeathed to her Ladyship's nephew, Sir Henry Webb, Bart. The pecuniary dispositions are legacies to personal friends; and the annuities are bequeathed to her Ladyship's servants, some of them being old and faithful domestics of her establishment, are most liberal. The late testatrix was a member of the Church of England, and a liberal benefactress to the Church of England, and various objects. To the Medical Benevolent Fund and the Royal Medical Benevolent College, legacies of £500 each; to the Middlesex Hospital and Medical College, Aberdeen, his books on medical subjects such as may not be selected by the trustees of the Royal Medical Benevolent College; to Aberdeen University, afterwards to the minister of Fordyce and the schoolmaster of the parish school, to appreciate the annual sum of £10 each; to the poor of Fordyce, £100; and the three best boys of that school. There are a few legacies to friends and relatives, and the residue is bequeathed to the children of the late testator (see Number.)

The will of William Stevens Richardson, Esq., formerly of Tuckhill-court, Tenterden, late of Dorset-square, Dorset, who died on the 21st ult., by Sir Henry Webb, Bart., Edward Ray, J. Lingworth, M.A., and W. S. Cookson, Esq., the trustees in the testator's handsome furniture of the testator is bequeathed, their two sons receiving it absolutely on the decease on their parents. There is a legacy of £100 to the Rev. C. Wilford, M.A., together with some pecuniary bequests, both £6, and a few other pecuniary legacies to friends, and to his former annuitants a weekly allowance of 12s. for life. To his nephew, William Selwyn, he bequeaths the codicil as presented to the testator's father by King George IV., and the University of Cambridge; and also the silver presented by certain members of "Nobody's Club. The testator has bequeathed a valuable collection of chessboard and other works of antiquity to the Cathedral Library of New Zealand, this bequest is to be free of legacy duty.

Parliament, which stood prorogued to the 17th instant, has been further prorogued to the 7th day of January next.

HOSPITAL for CONSUMPTION and DISEASES of the CHEST, Brompton, London.—Medical Officer—Dr. Hall. Applications for the admission of Out-patients into the Hospital, Additional FUNDS are greatly SOLICITED in order to meet the expenses which are necessarily heavy.—PHILIP ROSE, Hon. Sec.; HENRY DOBELL, Sub-Sec.

CRAUFURD COLLEGE, MAIDENHEAD.—Established 1846.—Preparation for the Universities, the Middle Class Examinations (of which Maidenhead is a Local Centre), Sandhurst, Woolwich, Addiscombe, and mercantile pursuits. On the best methods. French and German spoken; chemical analysis; field operations; gymnastics; riding; rowing; cricket; and all healthy exercises, agreeable to parents' wishes. Terms, Gentlemen, and physical laboratory, £60 per annum from the age of Eight. Prospectuses, with the best references, on application.

THE PALACE HOTEL, Buckingham-gate, Pimlico, S.W., is now open to receive company. There are no less than 64 Apartments, a commodious Coffee-room, and from the vicinity of Lord's Cricket Ground, and the Great Western Railway Terminus.—J. G. BEACON, Top Sec.

DANCING.—Mr. BLAND and DAUGHTERS GIVE LESSONS DAILY to Adults in the Ver, Cubic, Lancers, &c.—Mr. Bland Head Officiator at Assemblies, St. Swithin's, Bishopsgate, E.

THE GRAND GERMAN FAIR, Portland Gallery, is now open for inspecting the Fancyries has opened with a splendid display of the most unique Lace-mounting suits for Children are particularly recommended.

NOTICE.—W. BELL, 15, Oxford-street, will advance from £5 to £200 on Jewellery, warrants as collateral security; at the rate of 5 per cent per annum.

THE IRON BRIDGE ASSOCIATION, 58, Fall-road, London, manufacture and erect iron bridges, hydraulic sluices of every description. Agents wanted in California, Chili, British Columbia, Brazil, and Barbadoes.

CHIMNEYPIECES, TOMBS, MONUMENTS, &c.—JONES, 62, EDWARDES BROTHERS and BURKE, 17, Berners-street, Oxford-street, London, W., beg to inform the Nobility and Gentry that they manufacture, at their own estate in Italy, and have always on hand a large and choice assortment of Sculptured Chimneypieces, of the newest and most elegant designs. Galleries suitable specimens of red fine and British Marble Monuments and Tombs executed. Foreign Marbles direct from the Quarries. Estimates and Plans free upon application.

Shop fitted.

THE ILLUSTRATED LONDON NEWS.

No. 1122.—VOL. XXXIX.] SATURDAY, DECEMBER 21, 1861. WITH TWO SUPPLEMENTS AND COLOURED SUPPLEMENT] 1s.

DEATH OF THE PRINCE CONSORT.

THE death of his Royal Highness Prince Albert, on Saturday last, is the heaviest national calamity which has befallen this country for many years. When the Duchess of Kent, not many months ago, was taken from us, the parting, though deeply felt, was not without attendant solace. She had come to the end of her days, "like a shock of corn fully ripe." She had faithfully and successfully achieved the work given her to do. The support which her wise counsels had given to the throne of her Royal daughter had ceased to be needed, though not to be grateful, and the nation took comfort in the conviction that a husband's affection would, after awhile, supply to her Majesty whatever loss she had

REINFORCEMENTS FOR CANADA: THE MILITARY TRAIN.—SEE PAGE 621.

sustained by the decease of her mother. But now, alas! death has unexpectedly removed that prop. Our gracious Queen! The hearts of her people bleed with hers. They share her agony of grief. They are overwhelmed with the same sense of desolation. The terrible tidings which, following close upon the heels of a message full of hope, ruthlessly crushed her loving spirit have sorely bruised theirs also. England mourns with her widowed Queen. Every family in the land is smitten with the awe and the sorrow which Death excites when he breaks into the domestic circle and snatches from it its chief pride and joy. For the moment there seems no consolation. It is all dark and mysterious. Grief itself is dumb and tearless with excess of astonishment. Even faith is stunned, and can only murmur forth in fainting accents, "Thy will be done."

Most of us can recall the joyous satisfaction we felt in common with all our fellow-subjects when the young Prince came hither from his father's Court to claim the fulfilment of that maiden love had promised. Royal marriages had so seldom in this country been a union of hearts as well as hands that this exception to the rule awakened the liveliest interest, and the youthful couple pledged their troth each to the other amid the prayers and benedictions of a rejoicing people. Everything concurred to surround them with an atmosphere of affectionate sympathy, and to diffuse over the whole kingdom the gladness of hope. Nor from that day to the day of Prince Albert's death has that hope been dimmed or that sympathy impaired. The bridegroom became the husband, the husband the father, the father the grandsire, without losing in any degree the hold he had taken upon the esteem and respect of the nation. The responsibilities of his exalted relationship were calmly accepted, and their duties so faithfully discharged, that the public had come to regard him almost in the light of an institution, as confidently to be relied upon in its movements as it seemed to be necessary to complete national development. He mastered all the details of his high position with precision, and he filled it with such propriety and consistency, that we are apt to take for granted that it was assigned to him by the British Constitution, and to lose sight of the fact that it is from him, and from him alone, we derive our present notion of what is becoming to the position and character of a Prince Consort. His interpretation of the one, and his exemplification of the other, have been so appropriate, so natural, so unstrained and unostentatious as to have the effect of what is termed in that until he had familiarised us with both the popular conception of them was peculiarly vague and unsatisfactory.

Brilliant as were the prospects of Prince Albert when he received the hand of his beloved Queen, to a thoughtful mind like his they must have presented not a few difficulties. From the domain of politics his activities and influence were jealously excluded, and his own self-respect, as well as his respect and affection for her Majesty, forbade his sinking down into a mere child of pleasure. In the work of government political etiquette and tradition prohibited him from taking any part. In every State department but that of Court display he was precluded from taking the part befitting the Queen's husband. Virtuous habits, ample means, abundant leisure, and opportunity, but lacking any prescribed sphere of public duty, the temptation to a career of self-indulgence was so strong that we should have had no right to be surprised if he had yielded to it. His noble instincts and his early training preserved him from that snare. He described a wide realm of usefulness in which he might become leader without exposing himself to party suspicions and without trespassing beyond constitutional limits. There was no reason why he should not become the patron of social reform, why, in lieu of politics, he should not give himself to philanthropy; why he should abstain from bringing his efforts and influence to bear upon raising the physical condition of the people; why he should not apply the stimulus of his favour and his example to scientific research. Accordingly, he took up his position, and, having mapped out for himself a broad area of duties, he zealously discharged them. Not only in great part, we are indebted for the thoughtful and earnest attention which is being devoted to these departments of human progress, and which cordially distinguishes the present age from all that have gone before it. He has exemplified by giving to them the estimation of the British public, a dignity which they had never previously enjoyed. He has done more than can be computed to elevate the taste of his adopted country—to give its intellect a useful direction—to trace a channel for its forthcoming energy, and to open a new and beneficent sphere for the utilisation of leisure, means, and talent. In elevating and refining the character of modern civilisation Prince Albert has been a principal agent.

His name will ever be identified in the recollection of the public with the Great International Exhibition of 1851. Whether the original conception of that magnificent enterprise was due to his genius, or whether he adopted it, little matters: he made it his own by the enthusiasm with which he volunteered at the first and persevered with which he laboured to realise it, the unbounded attention with which he watched over its growth and helped it on to maturity. No one who witnessed it will forget the pride and triumph with which he announced to her Majesty on the inauguration of that glittering Palace of Industry, nor the audacity with which he shared with her a critical inspection of its contents. If by that competitive display of manufacturing art an emulative spirit was kindled in the bosom of this country prompting to higher attainments and conducing to better results—if self-satisfaction was shaken by it from its enervating slumbers, and enterprise was taught to bestir itself or be distanced—if the homes of England have in consequence become more familiar with artistic examples of graceful forms and combinations of colour, and have generally substituted elegance for uncouthness in their internal arrangements and decoration—if an art-spirit has been born amongst us, and is being cultured into a perfection to which it was imagined it could never attain among an insular population like ours—the change is mainly due to the exertions and influence of the late Prince Consort. In this respect he has done more than any other man to regenerate England; and, though called from us but too early, it is not before he has stamped upon the public mind his own image and superscription.

Upon the International Exhibition of 1862 the death of the Prince, we fear, will have a depressing effect. We do not, of course, affect to believe that the illustrious and able men to whom had been committed the general management of the undertaking will prove incompetent, on account of the loss of the presidency of the Commission of their arduous and difficult duties. But there is room for apprehension lest the spirit of the enterprise should, for some time to come at least, be less energetic; less hopeful, less elastic than it would otherwise have been, and lest the interest in it taken by the public should be flagged, with a sadness calculated to detract somewhat from the pleasurable enjoyment of its effect. The Royal Commissioners and the British public, however, owe it to the memory of the Prince Consort to commemorate their loss of him who was their chief, by showing how well he knew what it to be, as a sacred tribute of admiration and affection offered to that name with which, from the beginning, it has been inseparably associated.

We never know the full value of our blessings till we lose them. It will be impossible to estimate, even now, the immense advantages which the departed Prince conferred upon this country in his capacity as husband of our most gracious Sovereign and father of her children. The wise counsels which Sovereign and father of her children. The wise counsels which guarded her inexperience may have helped to shape her Majesty's constitutional course, his suggestions and reflections may have soothed her anxieties, his loving sympathy may have relieved her from the pressure of responsibility, we have no adequate means of knowing; nor can we associate with any approach to distinction the influence he may have exercised in forming the character, directing the education, and developing the powers of his now orphaned children. But that we justly, albeit unconsciously, attributed to him his full share in the performance of these duties, and rated that share at a high value, may be inferred from the spontaneous outburst of our solicitude in behalf of the Royal widow and her family. The first thought of every Englishman after hearing of the great affliction which has befallen the Queen was for them—the first gush of emotion had reference to their desolation—the first prayer which went up to heaven from the depth of every heart was "God bless, support, and be a husband to the bereaved Queen! God be a father to her children!" Such was the direction and strength of this national solicitude and sympathy testify to the unspeakable worth which the nation set upon the Prince Consort's life.

The time has hardly yet arrived for looking out from the shadow of death for those consolations which may hereafter mitigate the severity of this sudden dispensation of the All-wise and All-merciful. We can only bow in profound submission, and acknowledge that "His thoughts are not our thoughts, neither are our ways His ways," and seek for a sure judgment may, in His design, take the higher form of lovingkindness. We await in dumb amazement the unfolding of His purpose. Meanwhile, with inexpressible yearnings, our thoughts and sorrowful sympathies silently gather round our widowed Queen, seeking wisdom to make up to her, as fully as is possible, the loss she has sustained. To have saved her from that loss what sacrifice should we have declined too great? To comfort her under it what devotedness of affection shall we regard as disproportionate? Alas, alas, in all our helplessness as we stand face to face with this awful calamity! But never did our whole souls go forth with our prayers more unfeignedly and devoutly than now while we breathe forth our petition "God save our gracious Queen!"

WILLS AND BEQUESTS.

The will of the Right Hon. William Baron Ponsonby of Imokilly, in the county of Cork, was proved under £140,000 personalty by the executors, Lawrence Walker and Arthur Walker, Esqrs., of Grayfort, Ireland, and Frederick Ponsonby, Esq., of Hyde Park-gardens, the 24th, 25th, and 26th of last month, which were both sworn to the amount of the above. The testator bequeaths £1000 in addition to the dowry to his wife, the Lady Sarah Ponsonby, and the following pecuniary legacies: £1000 to his daughter, the Hon. Emily Ponsonby; £1000 to his son, the Hon. and Rev. William Ponsonby; £1000 to his son, the Hon. and Rev. Frederick Ponsonby; £1000 to his son, the Hon. Henry Ponsonby; £1000 to his son, the Hon. Gerald Ponsonby; £1000 to his son, the Hon. Sir William Ponsonby, K.C.B., of Waterloo fame, to leave as heir-loom to the title and estate. The Viscountcy of Ponsonby, part of the family property, he succeeded to on the 15th inst., and has only received the age of forty-four years of his father of his father of his father

millions of this loan will be repaid in monthly instalments of 1,000,000 each, and 44,000,000 in 1870. The three annuities are to be sold at certain fixed periods. Twenty-three millions of the Lottery loan at 1860 have not been taken up. The landed administration has, however, received from this source 10,508,000, for bonds of that loan, and £3,000,000 of the Hungarian loan. The National Bank is to be made independent of the State.

On the conclusion of the Ministerial statement the Council of the Empire appointed a committee of nine members to examine the budget.

INDIA.

At Allahabad the Governor-General has invested some of the native chiefs with the Star of India. After the ceremony his Excellency proceeded to Lucknow, where an interesting movement was going on among the talookdars to put down infanticide. Some details are given of the circumstances attending the death of Lieutenant Singer, who, with only eight sepoys, was sent to quell an insurrection among the lodge-pyre in the Nowgong district, and was killed in the brave exercise of the Government. The North-West Provinces were being visited with an inundation. The news is otherwise unimportant.

CHINA AND JAPAN.

Mr. Bruce continues to gain influence with the Chinese Government. He has given several advantageous loans for the public necessity, and anticipates obtaining others. The good offices of a Minister at Pekin were proving daily more powerful. The Chinese Government was exhibiting fresh intimations of a desire to maintain friendly relations with this country. They have withdrawn several trading regulations which interfered with the satisfactory working of the treaty. At Chefoo the rebels have murdered two American missionaries, named Parker and Holmes. The former of these gentlemen left a widow and six shareholder, but liberated all his slaves, and henceforth devoted himself to the work of converting the Heathen to Christianity.

In Japan affairs remain in a very unsatisfactory state, but no new difficulty has arisen.

AUSTRALIA AND NEW ZEALAND.

The news from Australia is not of much importance. In Melbourne, the Parliament having reassembled, the financial statement was shortly to be presented, which, as the revenue had fallen off, it was expected would contain propositions for increased taxation. The Hales Ministry was threatened with serious opposition, and it was doubted whether they would be able to withstand it. At Sydney the two Government Land Bills had been passed, and a bill providing for the immigration of coolies was in its last stages. A motion for the suspension of Mr. Justice Boothby had been passed by the South Australian Legislature.

Sir George Grey had arrived at Auckland and assumed the government of New Zealand. Nothing had been decided with respect to the scarcely settled natives. The latter were greatly excited at rumours that the Government to make the first overtures. The forces occasioned by the discovery of gold in New Zealand had ceased to be profitable, several thousands having been disappointed of the wealth with which they allowed their imaginations to be cheated.

COUNTRY NEWS.

Principal Cunninghame, of the New College, Edinburgh, died on Saturday morning, in his fifty-sixth year.

The death of Lord Riversdale, the aged Bishop of Killaloe, is announced. He was born in 1791, succeeded Bishop Pelham in 1839, and succeeded his brother William as third Baron Riversdale in 1848.

A monument, erected by subscription, has been placed in the churchyard at Margaret, Cumberland, to the memory of the late Captain Harrison, and the Grace Darling, who was a relative of his wife.

Commander Williams, who had charge of the mails on board the Trent at the time of the seizure of Messrs. Slidell and Mason, was on Tuesday week entertained at a complimentary dinner at the Freemasons' Tavern, Royal Western Yacht Club.

A meeting of the subscribers to the testimonial to the late Sir H. Marsh, Bart., was held at Dublin, yesterday week, to decide on the form of the testimonial. Dr. Corrigan occupied the chair. A resolution was passed by which it was determined to erect a marble statue in the hall of the new College of Physicians.

The report of the four Manchester Free Libraries for this year shows an increase in their issues of public volumes, as well as an increase in the interest with which they are regarded by the public. The libraries have materially assisted during the year, in a great measure, the circulation of books; and the mass daily aggregate of volumes put into the hands of readers has increased from 1200 in 1858 to 2000 in 1864.

THE HERBERT MEMORIAL.—A meeting of the subscribers to the Herbert Memorial was held on Thursday, at the Clarendon Hotel, Oxford, to receive the report of a committee appointed at the general meeting held a few months since. It stated that the committee had not yet come to a decision on the form of the memorial, £2005 for the statue, £1078 is. 6d. 3 and five guineas by the committee, £502 13s. 10d. The committee recommended that the statue should be of bronze. With regard to the second object memorial fund, they recommended the erection of a new building for the Royal Cornwall Polytechnic Society, which was established by Lord Herbert. They trusted that Mr. Hightower would be able to devise a plan for the new building that would at once discharge a service of love to the memory of the chief whom she so highly prized. The report was adopted, and a committee nominated to carry out the purposes of the recommendation contained in it.

THE LATE MR. ABSALOM WATKIN.—It is our painful task to announce the death of Mr. Absalom Watkin, so long known amongst us with regard to his high personal character and unbounded generosity, as well for his services in connection with the questions of education, reform, the park question, and free trade. Mr. Watkin died on Wednesday week, at his house, Rose Hill, Northen, surrounded by the members of his family. He was for many years in the commission of the peace for the borough, and for the county of Lancaster, and, while his health permitted, was constant in the performance of his magisterial duties. As a merchant and manufacturer, he was one amongst the new but failing list of men connected with Manchester who fought the battle of free trade when the principles of that measure were exceedingly unpopular, and at the risk of the loss of the support of many of his own class. Mr. Watkin's connection with literary pursuits dates from the ordinary labours of that kind undertaken by the members of the Manchester Literary and Philosophical Societies. His erudition was well known in reading circles, and his library, which was formed with much care and judgment, which, to say the least, was unusual, will not be soon forgotten by those who have been the public recipients of many of the rare and valuable works of interest at the parish church at Northen yesterday (Friday) at twelve o'clock.

The population of Nova Scotia is 330,857, of whom 294,700 were born in the province.

Dr. Schinzberger, the first Jew ever permitted to exercise the profession of advocate in Hungary, was sworn in a few days ago at Pesth.

The *Austrian Gazette* announces that from the 1st of January next it will assume the title of *Austrian Constitutional Gazette*.

The Bee Parliament was dissolved on the 15th inst., pursuant to a proclamation by her Majesty in Council, passed on Nov. 29.

The Gardenia de la Manche, in the department of the Seine and Loire, one of the most ancient mountains in France, has just been destroyed by fire.

Dr. Southwood Smith, the eminent physician and father of sanitary reform, died at Florence on the 10th inst., after six days' illness, from bronchitis.

The Message of President Lincoln to the Federal Congress, which exceeds 20,000 words, was telegraphed from Washington to New York in one hour and thirty-two minutes.

BRITISH NORTH AMERICA.—The Hon. Joseph Howe, Prime Minister of Nova Scotia, spent a few days in Montreal, and was waited on by Ashton under-Lynne, of the condition and prospects of the British provinces in North America.—The Earl of England delivered a lecture on Canada, and that very continent. The British subjects who dwell in the northern portion of the American continent, he said, were about to be called upon to form a kindred nation if they would escape the danger of the immigration of the New South, New Brunswick, Newfoundland, Prince Edward Island, and the territory of the Hudson's Bay Company, which would be a nation of nine miles of country. They were larger than the United States before those States were divided; and it would therefore be a matter for wise statesmanship to prevent enough for all the stray British subjects who might wander across the Atlantic for centuries to come. They could give a home and 100 acres of land to every spare man in Lancashire and not feel that their territory were much diminished. Although more particularly to Nova Scotia, with which he was more intimately connected, he might remark that it was 300 miles long, and nearly surrounded by the ocean. The country was next like England of any country on the face of the earth. It was like England in possessing inexhaustible mines of coal and iron; and where these were combined no country could be developed. They had, besides, lime and gypsum, and, in point of fact, every mineral one could ever want to be found in this little peninsula. Long ago the people began to dig gold; and he had brought over nuggets in their shape of large bottons that would not be at bad ornament for a Court coat.

THE CIVIL WAR IN AMERICA.

By the arrival of the Bohemian, from Portland, we have New York telegrams to the 7th inst. Congress assembled on the 5th, and immediately passed resolutions thanking Captain Wilks for his arrest of the "traitors" Slidell and Mason. Resolutions were also voted which requested the President to confine these two gentlemen in the cells of convicted felons, and to refuse to exchange them or Wood until equal to prisoners of war. Mr. Eliot, of Massachusetts, offered a series of resolutions declaring that the war waged simply for the re-establishment of the Union, but insisting upon the right of the President to emancipate all persons held as slaves in any military district in a state of insurrection, and advising such a course. The Senate refused to veto the resolution—by seventy against fifty-six—but its consideration was postponed for a week. In the Senate Mr. Trumbull, of Illinois, gave notice of a bill to confiscate the property of rebels and to give freedom to persons in the Slave States. On the second day the President's Message was received and read, and the reports of the several Departments of State were handed in to the Senate and House of Representatives. The report of the Secretary of the Treasury, which would not be ready for a few days. Subsequently, the Senate, Breckinridge, a late member of Kentucky, were elected from Congress; and a committee had been appointed by the House to inquire into the expediency of abolishing slavery in the district of Columbia.

THE PRESIDENT'S MESSAGE.

After congratulating the country on its abundant harvests, the President refers to the foreign relations of the Republic in these terms:—

You will not be surprised to learn that, in the peculiar exigencies of the times, our intercourse with foreign nations has been attended with profound solicitude, chiefly turning upon our own domestic affairs. A disloyal portion of the American people have, during a year, been engaged in an attempt to divide and break up the Union which exists ever since the day when the Father of his Country presided in the Convention which framed the Constitution, and submitted it to the people for their consideration and ratification. Our commercial relations have been greatly disturbed by the same cause. The efforts of seeming sympathisers with the insurrection to induce European governments to intervene in our affairs, have been unsuccessful. The people of the United States have not been insensible to the advantages which have accrued to them from the position of neutrality maintained by European governments during the present struggle, and they have virtually concurred with them in the general principles which they have adopted. Nevertheless, the circumstances which have led to the proclamation of these principles by the several governments have been deeply regretted by the American people, because they have tended to the belief that those governments have too readily acquiesced in the destruction of the National Union by the disloyal portion of our citizens. The exceptions to this remark are occasioned by the tardiness of some governments in excluding the vessels of war of the insurgents from their ports, and in refusing to them the privileges of hospitality enjoyed by the vessels of war of the United States. In regard to the vessels fitted out, armed, or equipped in those ports by the insurgents, and which have since entered other ports, the complaint is not so much that the vessels were originally permitted to depart, as that the local authorities have not since actively endeavoured to detain them, when informed that they were entitled to do so upon the evidence then existing. Persistent efforts have been made to induce European governments to act upon matters of fact with reference to which the information accessible to them is obviously imperfect, and to adopt principles of action which would be subversive of the peace of this country, if they had been previously adopted by it. Formal applications have been made to the British Government to prevent the departure of vessels which were undoubtedly intended to cruise against the commerce of the United States, concerning which applications the Government was compelled to act upon the domestic information which it possessed, and not upon that which was exclusively in the hands of the applicants. Subsequent developments have proved the practical justice of the principles upon which the British Government acted in these cases. Similar applications have been made to the Government of France, and with similar results. Applications have been made to the Government of Spain, with a like result, so far as the Island of Cuba is concerned. In regard to the Netherlands, the Government has thought it proper to close the ports of the Dutch East India Islands against privateers, and to refuse the use of those ports for the supply of coal to vessels of war, except in quantities sufficient to enable them to reach their own nearest port. Applications have been made to the Government of Portugal, to close the ports of Madeira against privateers, which have been refused, because the Government has been unable to see that the existing laws of Portugal are sufficient for the purpose. Applications have been made to the Government of Sweden and Norway, to close the ports of Gothenburg and Carlscrona against privateers, which have been refused, because the Government has been unable to see that the existing laws of Sweden and Norway are sufficient for the purpose. Applications have been made to the Government of Denmark, to close the ports of the Danish West India Islands against privateers, which have been refused, because the Government has been unable to see that the existing laws of Denmark are sufficient for the purpose. Applications have been made to the Government of Russia, to close the ports of that empire against privateers, which have been refused, because the Government has been unable to see that the existing laws of Russia are sufficient for the purpose. Applications have been made to the Government of Prussia, to close the ports of that kingdom against privateers, which have been refused, because the Government has been unable to see that the existing laws of Prussia are sufficient for the purpose. Applications have been made to the Government of Austria, to close the ports of that empire against privateers, which have been refused, because the Government has been unable to see that the existing laws of Austria are sufficient for the purpose. Applications have been made to the Government of Italy, to close the ports of that kingdom against privateers, which have been refused, because the Government has been unable to see that the existing laws of Italy are sufficient for the purpose. Applications have been made to the Government of Turkey, to close the ports of that empire against privateers, which have been refused, because the Government has been unable to see that the existing laws of Turkey are sufficient for the purpose. Applications have been made to the Government of Egypt, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Egypt are sufficient for the purpose. Applications have been made to the Government of Tunis, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Tunis are sufficient for the purpose. Applications have been made to the Government of Tripoli, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Tripoli are sufficient for the purpose. Applications have been made to the Government of Morocco, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Morocco are sufficient for the purpose. Applications have been made to the Government of China, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of China are sufficient for the purpose. Applications have been made to the Government of Japan, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Japan are sufficient for the purpose. Applications have been made to the Government of Siam, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Siam are sufficient for the purpose. Applications have been made to the Government of Persia, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Persia are sufficient for the purpose. Applications have been made to the Government of Afghanistan, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Afghanistan are sufficient for the purpose. Applications have been made to the Government of Nepaul, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Nepaul are sufficient for the purpose. Applications have been made to the Government of Bhutan, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Bhutan are sufficient for the purpose. Applications have been made to the Government of Sikkim, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Sikkim are sufficient for the purpose. Applications have been made to the Government of Burmah, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Burmah are sufficient for the purpose. Applications have been made to the Government of Siam, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Siam are sufficient for the purpose. Applications have been made to the Government of Persia, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Persia are sufficient for the purpose. Applications have been made to the Government of Afghanistan, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Afghanistan are sufficient for the purpose. Applications have been made to the Government of Nepaul, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Nepaul are sufficient for the purpose. Applications have been made to the Government of Bhutan, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Bhutan are sufficient for the purpose. Applications have been made to the Government of Sikkim, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Sikkim are sufficient for the purpose. Applications have been made to the Government of Burmah, to close the ports of that country against privateers, which have been refused, because the Government has been unable to see that the existing laws of Burmah are sufficient for the purpose.

The following statement of the several ports of the Secretary of the Federal Army, both volunteers and regulars:—

STATES.	Num.	The war.	Approp.	STATES.	Num.	The war.	Approp.
California ..	4,686	1,686	Nov.	New York ..	10,189	100,000	11,000
Connecticut ..	2,264	12,000	1,000	Ohio	2,000	13,000	1,000
Delaware ..	715	2,000	2,715	Pennsylv ..	13,000	24,709	13,000
Illinois	1,000	1,000	1,000	Rhode Island	1,282	5,888	2,185
Indiana	4,000	12,000	20,000	Vermont ..	2,000	5,000	2,000
Kentucky ..	1,000	10,000	1,000	Virginia ..	779	12,000	10,779
Maine	768	14,000	15,007	Wisconsin ..	1,000	10,000	1,000
Maryland ..	1	20,000	1,000	Kansas	2,000	5,000	2,000
Massachu-	2,430	26,769	30,130	Missouri ..	2,000	5,000	2,000
setts				Nebraska ..	2,000	2,000	2,000
Michigan ..	741	24,850	25,591	Nevada	2,000	2,000	2,000
Minnesota ..	1	4,340	4,341	New Mexico	1,000	1,000	1,000
Missouri ..	9,300	22,150	31,450	New Mexico	1,000	1,000	1,000
New	1,000	5,000	6,000	Columbia	2,000	3,000	3,000
Hampshire	3,068	9,342	12,410	Columbia	2,000	3,000	3,000
New Jersey						77,875	60,000	79,312

The several arms of the service are estimated as follows:—

Arms of the Service.	Volunteers.	Regulars.	Approprs.
Infantry	52,000	15,000	67,000
Cavalry	24,624	4,744	29,368
Artillery	10,000	6,000	16,000
Rifle and Sharpshooters..	8,795	8,795	
Engineers	167	167	
	440,677	260,231	693,871

The appropriations for the service of the next fiscal year are limited for a force of 500,000 men. He says he has a surplus of cavalry, and the composition of artillery and engineers, already sufficient. He only authorised a levy of 500,000, the Secretary could have raised 1,000,000 of men. The rapidity with which the Army of the Potomac, which in April amounted to 16,000 regulars, developed into a force of 150,000 regulars and volunteers, is alluded to as a fact which places beyond dispute the resources of the hands of Napoleon. He has no doubt that in case of emergency, the United States could send into the field a force of 1,000,000 of men. The Secretary of War says that 1864 will be termed "the most gigantic endeavour in the history of civil war." The Army of the Potomac gave no discouragement, and slowly postponed the campaign for a few months. The possession of Western Virginia, and the occupation of Kentucky and Missouri, have already redeemed "our manifest reverses." Mr. Cameron all alike to the recent loss of which the army of a supply of improved fire arms. The resources of the United States' armoury at Springfield bring quite inadequate to the occasion, contracts were made with private establishments, and a special agent was sent to Europe to purchase 3,000,000 dols. worth. The Government ought to have in store never less than a million of muskets, and a corresponding proportion of arms and equipments for cavalry and artillery. On the subject of the coast defences he says:—

It is of great importance that immediate attention should be given to the completion of our fortifications upon the seaboard and the lakes, and upon our navy-yard frontiers. They should at once be placed in perfect condition for successful defence. Apprehensions are seldom made upon a nation ever ready to defend its honour and to repel invasion; and we should show to the world that while engaged in quelling disturbances at home, we are able to protect ourselves against attacks from abroad.

He recommends that the accommodations at the celebrated Military Academy at West Point, which now contains only 192 cadets, be enlarged so as to allow of the education of 600 trained officers. He suggests that the distinction between regulars and volunteers should be abolished. He admits that recruiting for the regular army has been a failure. He demands that another line of railroad be constructed from Baltimore to Washington, as absolutely necessary for the supply of the troops in the event of the Potomac being closed by ice or a blockade. The paragraph favourable to the granting of the slaves are printed in some of the New York journals, although they were stricken out by Mr. Lincoln himself, after Mr. Cameron had refused to engage them with his own hand.

REPORT OF THE SECRETARY OF THE NAVY.

Secretary Welles says that the navy was early in 1861 to blockade a coast line of nearly 3000 miles to keep the navigation of the Potomac open, to support a combined military and naval expedition against points of the Southern coast, and to pursue the privateers. When the vessels now in process of construction of every class are completed, equipped, and ready for service the condition of the navy will be as follows:—

	OLD NAVY.		
Number of Vessels.		Guns.	Tons.
6 Ships-of-the-line	..	466	16,094
7 Frigates	..	350	12,136
17 Sloops	..	326	16,013
2 Brigs	..	12	530
2 Storeships	..	..	383
6 Receiving ships, &c. ..	..	102	4,342
8 Screw-frigates	..	320	21,467
5 First-class screw-sloops ..	..	120	11,262
4 Second-class screw-sloops ..	..	60	3,033
2 Second-class screw-sloops	..	48	1,703
1 Third-class screw-sloop ..	..	8	1,018
4 Third-class side-wheel steamers	..	16	1,908
4 Steam-tenders	..	8	810
76		1,789	103,671
	PURCHASED VESSELS.		
Number of Vessels.		Guns.	Tons.
14 Side-wheel steamers ..	..	108	25,000
43 Screw-steamers	..	178	30,103
13 Ships	..	249	9,289
24 Schooners	..	69	5,728
2 Barks	..	18	1,472
2 Brigs	..	..	460
136	VESSELS CONSTRUCTED.	619	71,201
Number of Vessels.		Guns.	Tons.
10 Screw-sloops	..	150	15,166
12 Gunboats	..	24	11,661
12 Side-wheel steamers ..	..	36	4,840
2 Iron-clad steamers ..	..	4	4,000
72		256	41,448

Making a total of 264 vessels, 2,731 guns and 218,676 tons. The aggregate number of vessels in the list on the 30th of June, 1861, was 90. The number is now not less than 29,000.

Since the institution of the blockade 153 vessels, sailing under various flags, have been captured.

The naval estimates for the fiscal year ending June 30, 1865, would amount to 96,000,000 dols. For the year ending June 30, 1865, they would be 51,625,000 dols.

POSTMASTER-GENERAL'S REPORT.

Mr. Blair announces that he has accepted the offer made in 1858 by Count Bichan for a reduction of the international rate between the two countries on letters from 24 to 12 cents. This has not, as yet, had great influence on the receipts of the British offices. The excess of expenditure over receipts for the year 1863 was £14,000; the estimated deficiency in 1864 is 3,141,000 dols.

The Postmaster-General defends his conduct in excluding "peace-party" journals from the mails. He finds his views supported by the authority of the late Chief Justice Story, whose opinion he quotes.

Mr. Thurlow Weed, who is at present in this country, communicates the statement that General Scott has removed to America in obedience to an urgent request from Mr. Seward. Mr. Weed states that when General Scott came back to Washington early from a desire to be "at his post."

THE CANADIAN MILITIA.

The militia of Canada, as at present organised, consists of the active militia, or the old militia force, and has a staff of Adjutant-General for each province, with two provincial Aides-de-Camp, and a Deputy Adjutant-General for each military division, known as the "Active" and the "Sedentary." There are sixteen battalions of artillery, eighty-four of infantry, and two regiments of cavalry, in the first class of active companies of rifles, and several corps of light infantry. In Lower Canada there are forty-two battalions and in Upper Canada forty-two battalions of sedentary militia. The Canadian Rifles are regularly enrolled in the cities of Quebec, Montreal, Toronto, Hamilton, London, Kingston, Montreal, and Quebec. The militia has shown that it can be relied upon in times of emergency, and that it is ready to turn out in sufficient force of volunteers in both provinces, and with the aid of the reinforcements which have already arrived, and those which are on their way or under orders, we have no fear for Canada.—*Canadian News.*

NEW BARRACKS FOR "THE GUARDS."

In 1855, when Lord Panmure was Secretary of State for War, an official committee was appointed to report on "the barrack accommodation required for the Guards." The report contained a great deal of excellent matter arising from their labours is now about taking place in London for the benefit of "the Guards."

The committee of 1855, in order to give practical effect to their recommendations, suggested that Government should invite designs from old paper accommodations and evidence of the requirements of the case. The Government adopted the suggestion of the committee, and in inviting designs for barracks at Wellington Barracks, Chelsea, Knightsbridge, and for stone barracks according to the plans which they should consider the highest in merit. Accordingly numerous designs were submitted by military and civil architects and the first prize for infantry barracks was awarded to Mr. Digby Wyatt, and for cavalry barracks to Messrs. Thomas and Digby Wyatt, all Fellows of the Royal Institute of British Architects.

The principal objects upon which to erect the proposed barracks has proved a work of difficulty and delay, and it is only recently that this has been accomplished. The site selected is a piece of ground situated Nottingham, and the infantry barracks are now commenced on and will adjoin the Knightsbridge Barracks. Hyde Park and the parade for "the Guards." The site embraces between eleven and twelve acres, and is in separated from the Knightsbridge Barracks only by a road. The new road leading to Battersea new bridge, for which work it has a considerable frontage. It is bounded on the north-west by Grosvenor-row, and on the south by the Knightsbridge road.

The plans of the infantry barracks, designed for 1000 men, are not unlike those of the same at Scots Fusilier Guards in the Regent-road, but have been adapted to suit the peculiar constitution of a battalion of the Guards, and offer an increased number of cubic space per man.

The principal feature of the plan of the soldiers' quarters is, that each room is provided for the occupation of a number of persons, besides containing single beds, and each room is to be provided with a fireplace with a window into the external air, so that through-ventilation is obtained. The plan also provides for the following: For the officers' mess and one for the sergeants' quarters, with messroom; a separate house for the married persons, a hall for the non-commissioned officers, school, hospital, lumber, reading-room and library, dry-rooms, musketry lecture-room, gymnasium, bakehouse, provision-room, guardhouse and lock-up, barrack stores, quartermaster's stores, canteen, skittle-grounds, &c.

The first portion of the works of the proposed buildings—viz., the officers, sergeants', and soldiers' quarters, with orderly rooms, musketry lecture-room, library and reading-room, guardhouse, &c.—has been let by tender at the sum of £95,000 to Mr. William Higgs, builder, of Lambeth, who is carrying out the same under the superintendence of the architect, Mr. George Morgan.

The trenches for the proposed buildings were opened on Monday, Nov. 14, 1864, being the anniversary of Inkerman. The officers and sergeants' quarters are now roofed in, and the main building, or soldiers' quarters, which is upwards of 1000ft. in length, is in a forward state, and will probably be covered in in a few weeks.

THE NEW BARRACKS FOR THE GUARDS AT CHELSEA.—SEE PRECEDING PAGE.

THE INTERMENT OF THE LATE DUKE OF SUTHERLAND AT TRENTHAM, STAFFORDSHIRE, ON THURSDAY LAST WEEK.—SEE PRECEDING PAGE.

THE LATE PRINCE CONSORT.

WHETHER the nation has under the influence of the deep feeling of sorrow which has been caused by the premature death of his Royal Highness the Prince Consort, there cannot but be a deep interest experienced in contemplating a memorial of a life which has been essentially one of calm and unostentatious usefulness, and every action of which was born of a sense of duty, carefully estimated and faithfully adhered to. His Royal Highness Francis Albert Augustus Charles Emanuel of Saxe-Coburg and Gotha, Duke of Saxony, K.G., K.T., K.P., G.C.M.G., Knight of the Golden Fleece, Grand Master of the Order of the Bath, Field Marshal in the Army, Colonel of the Grenadier Guards, Colonel-in-Chief of the Rifle Brigade, Captain-General and Colonel of the Hon. Artillery Company, Lord Warden of the Stannaries and Chief Steward of the Duchy of Cornwall, Governor and Constable of the Castle of Windsor, Ranger of Windsor Great Park, Chancellor of the University of Cambridge, and Master of the Trinity House, was the second son of Ernest Frederick Anthony Charles Louis, late Reigning Duke of Saxe-Coburg and Gotha, by his first wife, the Princess Louisa, only child of Augustus Duke of Saxe-Gotha. His Royal Highness was born at the Castle of Rosenau, near Coburg, on the 26th of August, 1819. The first part of the life of the Prince was passed—in company with his elder brother, Ernest Augustus, now the reigning Duke of Saxe-Coburg—at the Castle of Ehrenburg. The early education of the two princes was conducted with great care, under the immediate supervision of their father, until such time as they were deemed eligible for the more advanced instruction of a University. In that interval—namely, in the year 1836—the Prince of Saxe-Coburg accompanied their father the Duke on a visit to London, where they were received with much distinction by King William IV., and Queen Adelaide; and it was on this occasion that Prince Albert first met, and afterwards became the affianced husband of, his cousin, the present Queen of England.

The Princes Ernest and Albert, after leaving Coburg, proceeded to Brussels, where they resided for some time in a private house, instructed by studies under the care of an English clergyman, but, of course, under the immediate and careful supervision of their uncle Leopold, King of the Belgians. There have not been those wanting (there may have been) in the subsequent career of Prince Albert in this country marks of the influence of King Leopold on his mind and character. It has been supposed that much of the politicism and prudence which he has played in the affairs of Europe, in all its respects and nations, position of Prince Consort was owing somewhat to the insensible action of the example of his wise and public uncle; and it has not been unreasonably supposed that King Leopold, who had become apparent that Prince Albert was about to fill a station which he himself was once destined to occupy may have impressed on his nephew his ideas of what the husband of the Queen of England should be, founded on the system which he had laid down for himself and strengthened by a long experience of courtly life in a constitutional country. It was in the year 1837 that the Princes of Saxe-Coburg matriculated at the University of Bonn, on the Rhine. There they lodged at the house of Dr. Becker, a medical professor, a modest house near the University, occupying the corner of a grand row the cathedral. The Princes had a private tutor was Edelsward (Privy Councillor) Florschütz, who was subsequently Minister at Coburg. Prince Albert's character was that of an earnest and hard-working student. A contemporary remembers of his says that his dinners were ordered from Schmidt's Hotel in Bonn, but were of the most temperate kind; and that, though he and his brother occasionally entertained at their fellow-students' rooms, they themselves lived a very frugal and abstemious life. Prince Albert chiefly studied jurisprudence and history. Jurisprudence was taught by Professor Walter (an Ultramontane but a very able lawyer), Bethmann and Panthes; history by Professor Lockell. Music and painting he particularly cultivated in his intervals of leisure. He had learned music when a boy of the well-known Dr. Bechlecnich, and was reported to be a proficient in the divine art even before he entered the University. His skill in painting may be estimated by the fact that a picture of his, "The Savoyard Minstrel Boy," painted during his student life, has been engraved and printed in the Queen's collection. During his residence at Bonn Prince Albert cultivated the acquaintance of the greatest philosophers and scholars in the University. His greatest friends were Count Beust and Professor Welcker, but to his great honour he also sought out and made the illustrious Schlegel, who thought highly of him, and his amiable and unassuming manners so endeared him to the doctor that the professor, who declared "principles" and his conscience, gave him a well-to-do hotelkeeper in a town near Bonn. This worthy old man, long after the Prince had left "college," used to cry from joy when any English traveller spoke of his Royal Highness and recall all his exploits, his affability, his charity, by the hour, and he would show the visitor three portraits on the walls of his sitting-room—those of the late Duke of Saxe-Coburg, the present Duke, and the Prince Albert, the latter being the most prized of all, for eyewitnesses have recorded that the old man shed tears when he pointed it out to them. Prince Albert left college in 1838, and after a short visit (for reasons (unreal)—namely, in September, 1838. The people of Bonn were greatly grieved at his departure, for his charity to the poor had been unbounded, and it may be added that he and his elder brother, Duke Ernest, included a volume of songs, with music and illustrations, during their academical residence, for the benefit of the poor of Bonn.

During the period of Prince Albert's popliage at Bonn the coronation of her Majesty Queen Victoria was celebrated. It has been stated that the Prince of Saxe-Coburg were present on that occasion, and that at that time the first dawn of Prince Albert's future life was apparent. Again stern fact dissipates romance, for although his father, the reigning Duke, was then an honoured guest at the Court of our Sovereign, and was created a Knight of the Garter, neither of his youthful sons came to England to witness the ceremony in question. What ever may have been contemplated or hoped for by the now relatives of both her Majesty and the Prince in this respect no event of was done which could warrant that such a design as the marriage of the illustrious cousins had taken the shape of a plan.

In the winter of that year Prince Albert made a tour in Italy, and took the opportunity of cultivating and improving that taste for the arts which has always distinguished him, and which during his residence in this country placed him at the head of every institution founded for the encouragement and promotion of all that contributes to the elegances and graces of life. On the attainment of his majority, in August, 1840, Prince Albert was naturally expected to become possessed of certain property bequeathed to him by his deceased mother, consisting of landed estates, producing an income of about £3000 a year. These estates he sold in the autumn of 1840, subsequently, on his engagement of marriage with the Queen of England, came by his brother, subject to the payment of certain pensions to former members of his household.

The Queen's marriage with Prince Albert, 1839, that Prince Albert, accompanied his brother, paid his second visit to England. Naturally and in the course of things thrown into the intimate society of the youthful Queen of these realms, it is not surprising that the manifestations of grace of person, manly accomplishments, and the exercise of all the elements of character should have an influence on her Majesty; and, as all things combined to render a marriage in such a connection highly politic, the Queen secretly informed the princes of such attachment which has resulted in the formation of a model household, in the birth of nine children, and domestic happiness. Here is that the chronicles of romance may be allowed some play; and it is from one of the records of that interesting period which bears about it the stamp of authenticity that we collect the following account, taken of that ahnormal proceeding—a Royal courtship—when the lady is a Queen, and the man is known by her subjects to be the object of her sex in her conduct toward a lover of a lower degree than herself. It is stated that the Prince was not at first struck with all the grace peculiar to his family. He never willingly deserted himself from the Queen's society and presence, and her every look was anticipated with the alacrity of an unfeigned attachment. At length her Majesty, having wholly made up her mind as to the course to be pursued, found it necessary to intimate the growth of her affection to her uncle, Leopold, in order to obtain the benefit of his counsel and proper means of indicating her preference to the Prince. This was performed in a delicate and, at the same time, a manly and straightforward manner. At one of the Palace balls she took occasion to approach Prince Albert in the absence of the Prince of Saxe-Coburg. Albert was not lost upon the polite and gallant Germans. His uniform, buttoned up to the throat, did not admit of his placing the Prussian Star, but when it would be most becoming, so he immediately drew his pocket and cut a slit in the dress in the neighbourhood of the heart, in which he placed the Star, so as not to be seen. On announce to the Privy Council her intended union was an easy duty in comparison to that which she had undertaken to the foreign affairs concerned; and here, too, it is said that our Sovereign lady displayed unusual promptitude and tact in her communications. Her Majesty was perhaps the graceful sense which he entertained of his reception in England, and the delight which he had experienced during his stay from the first moment of his landing at Dover. The Queen was charmed and very pointedly, put to him the question upon which their future fate depended. "Albert," she said, "if I were not Queen, and were not this country, perhaps you would not object to remaining in it and making it your home?" To one not gifted with the Royal Family it would be said that the formal communication of her Majesty's wishes was not long delayed. On the 14th of November Prince Albert left England, and on the 29th of the same month the Queen made the following announcement to her Privy Council:—"I have caused you to be summoned, that I may declare to you my intention to marry with my Royal Highness Prince Albert of Saxe-Coburg and Gotha. Deeply impressed with the importance of the communication I am now about to make, I have not come to this decision without mature consideration, nor without feeling a strong assurance that, with the blessing of Providence, I am following the path most conducive to the best interests of my country." The resolution of her Majesty was formally announced to the House of Lords by Lord John Russell, the late Duke of Cambridge, who spoke in the most hearty and enthusiastic terms of the character and qualifications of Prince Albert, and of the wisdom of his choice. The Prince of Coburg arrived in England in February, 1840, to make his second visit to England. Naturally and in the course of things thrown into the intimate society of the youthful Queen of these realms, it is not surprising that the manifestations of grace of person, manly accomplishments, and the exercise of all the elements of character should have an influence on her Majesty; and, as all things combined to render a marriage in such a connection highly politic, the Queen secretly informed the princes of such attachment which has resulted in the formation of a model household, in the birth of nine children, and domestic happiness. Here is that the chronicles of romance may be allowed some play; and it is from one of the records of that interesting period which bears about it the stamp of authenticity that we collect the following account, taken of that abnormal proceeding—a Royal courtship—when the lady is a Queen, and the man is known by her subjects to be the object of her sex in her conduct toward a lover of a lower degree than herself. It is stated that the Prince was not at first struck with all the grace peculiar to his family. He never willingly deserted himself from the Queen's society and presence, and her every look was anticipated with the alacrity of an unfeigned attachment. At length her Majesty, having wholly made up her mind as to the course to be pursued, found it necessary to intimate the growth of her affection to her uncle, Leopold, in order to obtain the benefit of his counsel and proper means of indicating her preference to the Prince. This was performed in a delicate and, at the same time, a manly and straightforward manner. At one of the Palace balls she took occasion to approach Prince Albert in the absence of the Prince of Saxe-Coburg. Albert was not lost upon the polite and gallant Germans. His uniform, buttoned up to the throat, did not admit of his placing the Prussian Star, but when it would be most becoming, so he immediately drew his pocket and cut a slit in the dress in the neighbourhood of the heart, in which he placed the Star, so as not to be seen. On announce to the Privy Council her intended union was an easy duty in comparison to that which she had undertaken to the foreign affairs concerned; and here, too, it is said that our Sovereign lady displayed unusual promptitude and tact in her communications. Her Majesty was perhaps the graceful sense which he entertained of his reception in England, and the delight which he had experienced during his stay from the first moment of his landing at Dover. The Queen was charmed and very pointedly, put to him the question upon which their future fate depended. "Albert," she said, "if I were not Queen, and were not this country, perhaps you would not object to remaining in it and making it your home?" To one not gifted with the Royal Family it would be said that the formal communication of her Majesty's wishes was not long delayed. On the 14th of November Prince Albert left England, and on the 29th of the same month the Queen made the following announcement to her Privy Council:—"I have caused you to be summoned, that I may declare to you my intention to marry with my Royal Highness Prince Albert of Saxe-Coburg and Gotha. "Albert," she said, "if I were not Queen, and were not this country, perhaps you would not object to remaining in it and making it your home?" To one not gifted with the Royal Family it would be said that the formal communication of her Majesty's wishes was not long delayed. On the 14th of November Prince Albert left England, and on the 29th of the same month the Queen made the following announcement to her Privy Council:—"I have caused you to be summoned, that I may declare to you my intention to marry with my Royal Highness Prince Albert of Saxe-Coburg and Gotha. Deeply impressed with the importance of the communication I am now about to make, I have not come to this decision without mature consideration, nor without feeling a strong assurance that, with the blessing of Providence, I am following the path most conducive to the best interests of my country." The resolution of her Majesty was formally announced to the House of Lords by Lord John Russell, the late Duke of Cambridge, who spoke in the most hearty and enthusiastic terms of the character and qualifications of Prince Albert, and of the wisdom of his choice. The Prince of Coburg arrived in England in February, 1840, to make his second visit to England.

In the House of Commons a proposition was made by Lord J. Russell, the leader of the House, that the Royal Bridegroom should be an annuity to the Prince Consort of £50,000 a year. On this occasion the late unfortunate Mr. Disbaney rose and objected to the proposal to the majority of the House on a motion to reduce the vote to £30,000 a Year, which was finally carried, a motion to make it £21,000, which was made by Mr. Hume, having been rejected. The preparations for an early celebration of the marriage then proceeded. On the 25th of February, 1840, Prince Albert was formally installed, by the order of the Garter, in the Grand Ducal Palace at Gotha, several persons of rank from this country being present for the purpose. On the previous 10th of that month her Majesty opened Parliament in person, and in the Speech from the Throne formally announced her intended marriage. Shortly after a bill was passed for the naturalisation of the Prince, which continued a clause enabling him to hold property in this country, notwithstanding the fact her Majesty should deem fit and proper, any law, statute, or custom to the contrary notwithstanding. The bill was passed with very little opposition having previously conferred on him the title of "Royal Highness," granted him precedence next to herself; and, in 1857, on the occasion of a question, the title of Prince Consort was conferred upon him. The Prince arrived at Dover on the 6th of February, 1840, and was received on his road by detachments from the 11th Light Dragoons, of which regiment he was afterwards made Colonel, and which was converted into the 11th Hussars, and which is now known as the "Prince Albert's Own." The marriage was celebrated on the 10th of February, 1840, and from the 11th to the 13th of the same month was spent by the object of the Prince to identify himself in every way consistent with a due observance of the rights of the Crown with the interests, feelings, and best interests and the welfare of his adopted country. One of the first steps towards this end which he took was characteristic—the establishment of regular course of study of the system of law and jurisprudence, and of the rule and progress of the constitution of England, placing himself under the tuition of Professor Longley, now Archbishop of York, and Selwyn, Q.C. In a short time he turned his attention to the subject of agriculture, and became a member of the Royal Agricultural Society and a regular exhibitor and successful competitor at the agricultural shows; the Royal Commission, subsequently appointed, by a desire to give every encouragement in his power to the promotion of an important branch of British industry.

But it was not in this respect alone that Prince Albert endeavoured to do what he conceived to be his duty to the country with which he was soon to be connected by marriage and residence. His mind was rendered towards the improvement of the physical, intellectual, and moral condition of every class of the community. The breadth of his view is exemplified in the fact that when, in his position as President of the Society of Arts, the project of an Industrial Exhibition was first submitted to him simply as an exhibition of English industry, he replied, "Why not make it an exhibition of the industry of all nations?" It was due to this comprehensive principle would lend to the sound industrial advancement of the country, that it was foreseen that all the nations of the earth would be induced to be confronted with that of other countries. France had had previous exhibitions, but the Exhibition of 1851 became a great consecration of industry and of the arts, and an institution imitated by all civilised populations.

In the establishment of the South Kensington Museum, and the numerous schools of design which are spread through this country, he took a decided part; and to the principle of popular education he was an interested and steady adherent, while the importance of social and sanitary science were publicly acknowledged by him, and to the progress of those subjects he contributed by every means in his power. It was to those questions that the few speeches, technically so called, which his Royal Highness delivered were directed. When his position is considered, those of his addresses which were beyond the requirements of State etiquette will be acknowledged to be of the highest class. At the meeting of the British Association at York, where several Prince Ministers and restricted exercise spoke, it was acknowledged that the speech of Prince Albert had an intellectual pre-eminence corresponding to his superior position. The last characteristic speech he made was at the opening of the Statistical Congress in London, where he evinced a mastery of the science which professors from all parts of Europe were assembled to promote.

One of his first speeches on the subject of the condition of domestic servants will be remembered for its soundness, for its startling clearness of view, and for its benevolence in relation to the interests and condition of that large class of the community. His speech as President of the Educational Conference, when he pointed out the place which the early exercise of children have in the bridge of the poor and the early developed elementary conditions affecting the success of popular education which had not commonly received due consideration, even from professed educationists, is a high appreciation of the art of peace he was the promoter of a new branch of the Order of the Bath, founded in order to furnish a means of honouring civil merit.

In short, the most careful review of the two-and-twenty years during which Prince Albert resided among us proves that he was in every respect equal to the mission in which he was placed, and by his tact, prudence, good sense, and good feeling, properly developed, he acquired a position in the eye of the English public like the dignity and influence of which is perhaps at this moment most fully acknowledged, but the importance of which will probably not be amply realised for some little time to come. In one instance only has the popular mind taken a distasteful and unkind turn towards the husband of the Queen. In December, 1861, circumstances arising out of the dismissal of Lord Palmerston from the Foreign Office caused an idea to spread abroad that Prince Albert had interfered in the conduct of our foreign policy, and that his tendencies in that respect were opposed to what was considered to be purely English interests. Subsequently in 1854, this feeling was renewed, and popular ill-will was so high that his Royal Highness was compelled to keep within the House while accompanying the Queen to open Parliament. The prompt and candid manner in which these accusations were against him were met by the chiefs of both parties in both Houses of Parliament, in which they plainly stated to the exact part which the Prince took in the councils of her Majesty, and as justly justified and approved his conduct on purely constitutional grounds, at once and for ever put a stop to any cavilling and discussion on the subject. Prior to the moment of his lamented death the Prince Consort lived amongst the English people honoured and respected, intimately and individually associated with the constitutional sovereignty of the United Kingdom, and confidentially the counsellor and friend of which a husband, a father, and the director of a family should be.

It was in the midst of a career such as we have faintly endeavoured to sketch that the Prince, whose services enjoyed public favour, was attacked by an illness which, in its earlier stages, caused no alarm; but which, in the course of a few days, spread from the head to the spongiosum, and something more. The earliest public intimation of the illness of his Royal Highness was given on the Saturday and Sunday, the 8th instant, when it was stated that "the Prince Consort had been confined to his apartments with a feverish cold and pain in the limbs," and the usual prescription of Dr. Quin was also laid aside for the time. This notification attracted comparatively little attention, and the next official medical bulletin of Monday, the 11th instant, was published that notice was taken in the journals of the day of the circumstance. The subsequent official Royal Highness bulletins excited anxiety, but not positive apprehension; and it is not too much to say that the fact of the decease of his Royal Highness on Saturday, the 14th instant, came as much in the nature of sorrow and distress. These feelings were, however, universal, deep, and sincere.

It is almost needless to add that every outward token of sympathy has been exhibited on this occasion by every class of society in their corporate and individual capacities. From the tolling of the great bell of St. Paul's proclaiming the melancholy tidings of the death of the Prince to the sunday following, respect implied in the closed windows of almost every shop in the streets nothing has been omitted which could express the feelings. The Corporations of London, Dublin, Manchester, Liverpool, and all the great towns have voted addresses of condolence to her Majesty, and most appreciative of the loss which the Royal family and the nation has sustained. Perhaps the deepest interest of all was excited by the news of the illness could be found than in the anxiety which has with one voice been shown with regard to the effect of the sad event will be upon Queen. If those who were only acquainted with the late Prince in his capacity as the husband of her Majesty could only visit her home have known to have been the sufferings and sorrow of his wife and children? Happily all things tend to show that her Majesty has borne with exemplary fortitude a blow under which she might have been crushed if she had succumbed; and like Elizabeth, she seems to remember that the nation over which she reigns has also suffered, and that her sympathising nature must be in the main subservient. The funeral of his late Royal Highness the Prince Consort will take place next, the 23rd instant, at twelve o'clock. In accordance with the wishes of the deceased Prince, much if not all the ceremonial of the funeral will be plain and simple. All

PRIZE CATTLE AT THE SMITHFIELD CLUB CATTLE SHOW.—DRAWN BY HARRISON WEIR.—SEE SUPPLEMENT, PAGE 641.

MUSIC.

The deplorable event which has plunged our beloved Sovereign and her family in the deepest affection, and which is mourned throughout the land as a national calamity, has for a time indisposed the public mind for the usual amusements. The theatres, from a humane consideration for the multitudes of poor industrious people to whom they give employment, have, with the exception of one evening, been kept open, but the attendance has been such as might be expected from the state of public feeling. The only musical entertainment of the week has been the Monday Popular Concert, which took place on Tuesday, the engagements of the principal performers, we believe, having prevented a longer postponement. The concert was as excellent as usual; but Arabella Goddard and Madame Lemmens-Sherrington played their best, and none of the most exquisite masterpieces of the pianoforte and violoncello were given, for the first time in the annals of these concerts, to a half-filled hall. It would have been better, we think, to have closed the Session of the Monday Popular Concert Society have done—postponed their performance to a later time.

The second concert this season of the Brixton Amateur Musical Society was given at the Angell Town Institution on the 15th inst. and passed off in a most satisfactory manner. The orchestra executed the overture to "Der Freischütz," and the glees "Hail, smiling morn," and "Come, gentle Spring," were sustained by Miss Frances Wilton and Mr. Bell. The most prominent feature of the evening was the performance of Mr. Bergmüller's Regatt'-Galopp, conducted his orchestra on the guitar and contributed a pianoforte solo. The concert was given for the benefit of the harmonium fund, and we be has drilled the orchestra. The room was crowded on the occasion, and should make assurance. The next concert will take place on Jan. 5.

THE THEATRES.

The sudden death of the lamented Prince Consort interfered with the performances of Monday, but during the week the theatres have combined open on other evenings and done a fair business.

THE ADELPHI PANTOMIME.

The Christmas Pantomimes promise to be as abundant as ever and as good, with the usual talent. We still find Mr. H. J. Byron in the ascendant. He provides the Pantomime with "Puss in Boots." Mr. Edmington and his son the Strand with "Puss in Boots." Mr. Edmington and his son also has two strings to his bow—"The House that Jack Built" at Drury Lane and "Cherry and Fair Star" at the Olympic. Mr. Byron supplies the St. George's with a classical, mythological, burlesque extravaganza on the subject of "Perseus and Andromeda," and Mr. Buckstone, Junior, caters for known audiences at the HAYMARKET; while pantomime is settled at the Lyceum with "Old Daddy Longlegs." Mr. Leicester Buckingham and the Princess of the Lyceum with a new version of "Jack and the Bean Stalk," and the Princess of the Rose, the Thistle, and the Shamrock, Mr. Nelson Lee, at the CITY OF LONDON. Shakspeare has "Alonzo the Brave," or, Harlequin and the Fair Imogene." At the Standard the subject of the pantomime is "The Sleeping Beauty in the Wood;" and at the PAVILION "Obes Police Wesley Punch, or, Harlequin and the Lamplighters." The Demon Grove and the Good Fairy Silver Star of the Cave Grotto; and the SURREY has "Little Red Riding Hood, or, Gnomes and Lemons, and the Twelve Days with the Princesses." At ASTLEY'S the subject is "Dick Whittington and the Beautiful Witch of Edmonton." The specials will be of the usual order. A capital pantomime is also promised at COVENT GARDEN on the subject of "Gulliver's Travels," of which Mr. Meadows Morton and Mr. Conquest, a great transformation scene by Callcott is expected.

MR. EDMUND YATES, on Tuesday, delivered an amusing lecture on Modern Society to a numerous audience at the Lyceum, Eyre Arms, St. John's Wood. Mr. Yates showed considerable talent in depicting the various phases of humour and in his mimetic power. His truthful young man and the old gentleman and the lady in search of a husband were recognised as faithful portraitures. His delineations were principally taken from scenes in life and not from life's caricatures, serving as a "link" between the two. Mr. Yates was much applauded.

THE FARM.

The late Prince Consort's career as a farmer and breeder with Hereford at the Flemish, Devons at the Norfolk, and Shorthorns, Yorkshiremen, and the former, have been recognised by the lamented Prince's especially power of detail. While the homesteads thus furnished many a farm, and their occupants held their own so well in the field, the Prince's farms were naturally becoming more and more that great national trial-ground on which the annual improvements and experiments of the best men are to be tested; and to-day at the Prince's was one of the highest pleasures that a party of friends could enjoy. We could ask for. Under the lovers of chemistry, physiology, and all learn more than all exchange minds with scientific men, and the minor manœuvre degrees in agriculture, and had not taken his place as Grand Master for the year when the sad summons came. He had been worthily fallen into him as President of the Royal Agricultural Society for '62, but he was only once enabled to preside at the Council-table and Chairman's gathering. Their earnestness and clear perception which always would have made the subject what it might with which he had to grapple, for forthcoming "jubilee year." It is not that there are not men left, we are only true that the Windsor farms will remain just as they were in the days when they formed one of his greatest pleasures, and that the Prince of Wales may prove to the great agricultural interest all that his father, and would have been.

The great Christmas Cattle Market was, as a whole, the best on record; and it is said that, out of the 8000 beasts, fully a fourth were crosses with Shorthorns or Scots. The North Devon cows are quite the best year. Glancing at the other news of the week, we may mention the Marquis of Lothian's Cheviot sheep sale, which, we may mention bull-calf prize at Reading is his first one of any importance. Mr. Ashton's new chairman of the Farmers' Club, which meets this summer, is the and had several new accessions this year. The Smithfield Club dinner was a great contrast to the *Mercurius Dalyfol* affair at the Mansion-house. On the motion of Mr. Colman Coleod, a committee or council will be asked for to consider the affairs of the Club (which gives about 1600 in medals and prizes) in future, and on these points all that has been carried hitherto in a sort of apostolic succession, which has been conducted hitherto in a sort of apostolic succession, and the judges, we hear predicted many evils inseparable from chance. We are very much regret to find that by one vote the local committees from the distribution of a committee will not be overruled in this way in future, and the Council will be referred to very year. Mr. Dickham is selling Necklace has won the fat-cow prize at Leeds; Mr. F. R. de Trobriand, of Oak Villa, Norwood, will be happy to furnish information. English classes are handsomely provided for; and the Lincolnshire Gainsford—if which more next week.

With only two discordant voices, the press are unanimous in their pleasure and congratulations on the success of Mr. Tom's public judging motion of the Royal, and one or both of these only because difficulties to let themselves down easy for having always scouted it. Mr. Tom's motion does not go to public judging. All we can say is that the council understood it so, and so did Colonel Hood when he proposed a very judicious rider to it. If it does not, we may ask why a few more reserves are not non-members to get for being asked for a new trial, as at the gates? Again, much as the opposition Fisher Hibbert with the necessity of it, there is no reason why the public should not be admitted to the yards on the days when the judges are certainly sometimes not to stand by the judges' decisions, but to see the judges at work. Public propriety and the public right to be present in the premises, as the remark may so put quickly, to say nothing of the certainty that it would be just the way to get at the very object they wanted to effect. As to the judges knowing the beasts well enough the herdsmen, that has long been a necessary consequence of nearly all judging, private and public, as people know all the older animals; and, if the judges are changed, the judges invariably prefer a new animal to a year, it only shows that they have not the eye for form which is so necessary in a judge. Besides this makes annual tours, both of which the judges are all the year through, and the different leading herds, and it is the spring of them knowing the best animals of animals when they meet them again in the ring. If they have acquired any bias towards and herdsmen are on them, each judge has his own, and there are two or three of them, so that in fact the case is altered when they are consulted by a body of independent judges, and they are consulted by a body of independent judges, and they have the right of indictment to acquit themselves of any bias they may have. Public judging is the best way to look over the lists of men who have embarked in the Royal judges, such as Mr. Torr, Wise, and Stratton, to discuss the merits of their animals. In future the office of judge at the Royal will be a far higher compliment than it is now, and it will be given on the grounds of their decisions really seen at last, and they will have the full responsibility of their decisions really seen at last, and they will have the full responsibility of their decisions really seen at last, and they will have the full responsibility

CLOCK-TOWER, TYNEMOUTH.

THE village of Tynemouth, in the county of Northumberland, can boast, through the munificence of Mr. William Scott, of London, of one of the handsomest clock-towers and drinking-fountains in the provinces. The tower, which is a beautiful specimen of the Venetian Gothic style of architecture, was erected from the designs of Messrs. Oliver and Leith, architects, Newcastle-upon-Tyne, select of in competition, as the best out of twenty designs, many of them of more than ordinary merit, and to which the first premium was awarded. The structure is erected at the east end of Front-street, and consists of a clock-tower, fountains, marine barometer, and thermometer. The tower is divided into three stages. In the upper stage is placed the clock, which has three dials, facing north, west, and south, and was furnished by Mr. Joyce, of Whitchurch, Salop. The middle stage is occupied by ornamental openings, filled with gratings of iron. The lower stage has handsome granite drinking-fountains on the north and south sides; the west side is occupied by a marine barometer, with suitable stone case for its protection; and the east side by an entrance doorway. The materials employed in the erection are stone, red and blue bricks, and polished Aberdeen granite, the effect of which, as applied in the design, is exceedingly striking and effective. The carving, executed by Mr. Young, of Newcastle, is chaste, and executed in a highly artistic manner. The barometer, furnished by Messrs. Negretti and Zambra, of London, is similar to those provided by the Duke of Northumberland along the coast, and is inclosed in a stone case. The ladies for the drinking-fountains are of a handsome appearance, and polished both outside and inside. The water flows from a mass of rocks out of which spring an elegant group of water-flowers, and beneath the basin are drinking-troughs for dogs. On the south side, over the basin, a thermometer is placed in a conspicuous position. A good effect is produced on the middle stage by the insertion of polished red granite columns. The edifice is crowned by a finial and vane. Upon the east side of the tower is placed the following inscription:—"Erected by William Scott, Esq., of London, and presented to the Mayor, Aldermen, and Burgesses of Tynemouth, 1861." Great credit is due to Mr. Lawton, the contractor for the work, for the excellence of the workmanship throughout.

LAYING THE FIRST STONE OF A CONGREGATIONAL CHURCH AT DARLINGTON.

ON Thursday, the 10th inst., the foundation-stones of a new Congregational church was laid at Darlington by Joseph Rowntree, Esq., of Bradford, the first of numerous Congregational churches to be erected to commemorate the electment of the 2000 Nonconforming divines in 1662. After singing and prayer the Rev. John Kendall, the pastor of the church, presented to Mr. Brown, with an appropriate address, a handsome trowel, suitably inscribed, and a silver mallet. Mr. Brown then, having adjusted the stone delivered a forcible address on the principles of Congregationalism, and commended the erection of this place of worship, highly complimenting the design. A bottle was deposited in a cavity in the stone containing tracings of the ground and plans, and of the elevation, and a statement of the circumstances of the building, together with a copy of the *Darlington and Stockton Times* of the preceding Saturday, of the *Auckland Chronicle*, and of the current coins of the realm, and a record, of which the following is a copy:—

"On this site Bethel Chapel was built, in 1841 and 1842, by the denomination of Protestant Dissenters called Independents, or Congregationalists. Having at length become too small, the taking down was commenced Nov. 5, 1861, and this foundation-stone of a new building was laid, on the 5th of December following, by Joseph Rowntree, Esq., Bradford. The Congregational Chapel Building Society's Committee, having, at their meeting held in London, on October 1st, determined to raise a special fund to promote the erection of one hundred new places of worship in commemoration of the separation of the 2000 Nonconformist divines in England, and having voted the first grant from that fund towards the erection of a commodious and, at the first of the Memorial Buildings, it is to be called the 'Congregational Bicentenary Memorial Church,' and is to be opened if possible) on the bicentenary anniversary of that event, Aug. 24, 1862. The building is planned to hold six hundred adults and one hundred children, and is designed in the revived Gothic or Middle Pointed style of the early part of the 100th. high. Tracings of the ground and gallery plans, and of the exterior and interior views, are deposited along with this stone, to aid the gratification of future antiquarians. Total cost of the building, including warming, ventilation, and lighting, and allowing for value of old materials, re-used, £1500. Henry Kendall, pastor and chairman; Andrew Common, treasurer; William Forster, honorary secretary. Committee: Isaac Pidgeon, John Dodds, Samuel Richardson, John Fisher, David Graham, James Harris, Crawford Mackey, John Morrell, William Pidgeon, George Thomas, James Fisher, Edward Shaun, Thomas Taylor, William Wilson.—Darlington, December 5, 1861."

A polished brass plate containing the following inscription was placed over the bottle and screwed down by the pastor and three of the deacons:—"Foundation-stone of this new Congregational Bicentenary Memorial Church, laid December 5th, 1861 by Joseph Rowntree, Esq., Bradford, Rev. H. Kendall, pastor. Messrs. Pritchett and Son, architects; Mr. T. Robinson, builder."

Addresses were delivered by the Rev. H. Kendall, Rev. S. Goodall, of Durham, and Mr. S. S. Hodgson, of Sunderland, after which a Doxology, the assembly broke up.

In the evening a public tea meeting was held in the Mechanics' Hall, when addresses were delivered by various ministers and friends, under the presidency of Henry Brown, Esq.

The election of an Alderman for the Ward of Aldersgate, in place of the late Sir Peter Laurie, took place yesterday. Mr. Robert Besley was elected without opposition.

At a levee of the Corporation, on Monday, a resolution of condolence to the Queen on the death of the Prince Consort was passed unanimously.

Mr. John Saunders, whose first novel, "The Shadow in the House," met with so favourable a reception from the press, has, we understand, in the form of fiction in the printer's hands, the title of which will be shortly announced.

Mr. William Cox has been returned as member of Parliament for the borough of Finsbury, in the room of Mr. Duncombe, deceased. The polling took place on Monday, and the numbers were—Cox, 1,600; Bolton, 1,400; both candidates were Liberals.

On Saturday morning some person stealthily entered the Jubby of St. George's Church, Camberwell, during the hours of Divine service, and forced off and carried away one of the alms-boxes, while it was supposed to contain a considerable amount of money.

The annual meeting of the Metropolitan Board of Works was held yesterday week at their offices in Spring-gardens, Mr. Cubitt in the chair. The estimates for the ensuing year were laid before the board, from which it appeared that the sum of £111,000 is required to meet the charges. The board resolved to apply to the Corporation of the City for payment of the sum of £2,000 claimed to be due to the board for the Holborn improvements.

The birthsof 924 boys and 876 girls were registered in London last week, which is the corresponding weeks of the previous ten years the number was 1704.—The mortality of London, which declined considerably in the first week of December, showed a further decline of 100 deaths as compared with the week that ended last Saturday. The number of deaths recorded in the present return was 1,604. If the rate of mortality last week in London, which is obtained by calculation from the returns of corresponding weeks in ten previous years (1851-60) the deaths would have been 1,504.

PREFERMENTS AND APPOINTMENTS IN THE CHURCH.—The Rev. T. Hankinson, Vicar of Barlaston and Rural Dean, is appointed to be Rural Dean of Marlborough. Rev. A. Pott, Incumbent of Bunsgate, Lincolnshire, to be Prebendary and Minor Canon of Ely Cathedral. *Rectories:* Rev. T. Cuthbert, Fellow and Tutor of Emmanuel College, Cambridge, to North Cadbury, Somerset; Rev. J. R. Dillon to Sharrington, Norfolk; Hon. and Rev. W. C. Ellis to Bethal, Northumberland; Rev. S. Gibson, late Archdeacon of Montreal, to Grayshott, with the Perpetual Curacy of Kingsley; Rev. C. C. Hawkins to Overton, Hampshire; Rev. W. Hedley to Bentley, Sussex; Rev. J. H. Hollifield to Bolsover, Northampton; Rev. C. P. P. Pollard to Wrangle-dean, Norfolk; Rev. J. Rowe to Ashton-under-Lyne; Rev. Edward Smith to Stony Stratford, near Fenny Stratford, Bucks; Rev. H. Tipping to Broomfield, South Chew, Somerset; Rev. R. E. Wilson to Stub, North-west Kent; Rev. B. D'Eyncourt to Wendy, Cambridgeshire; Rev. J. W. Evans to Swansea; Rev. Westmorland Jenkins; Rev. F. Shann to St. Mary's, Marlborough; Rev. W. J. Metcalfe to be Missionary at St. Paul's, Warrington.—*Guardian*.

THE ILLUSTRATED LONDON NEWS

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

ALTHOUGH no news of importance has reached us from America, and although money for overnight purposes continues very abundant, the market for most home securities has continued in a feverish state. The death of the Prince Consort has been generally regretted, and the sympathy shown by the Queen and evidently so operative of manners can be anticipated in the funds until after the interment of the said Prince. Many days have passed since the purchases of stock for Money have been much restricted, and the dealings in Consols have been extremely small. The result is that a very large amount of stock is now afloat, and that gives buyers a further tendency to give way.

There has been a moderate, but by no means active, demand for economists. It is built at the Bank of England and in Lombard-street. Compared with last week the quotations vary little. Advances have taken place in the rates for money, which rule as under for the best paper:—

	Per cent.		Per cent.
7 day paper with ...	2½ to 3	Four months bills ...	3 to 3½
Two months bills ...	2½ to 3	Six months bills ...	3½ to 4
Three months bills ...	3 to 3½		

The value of money in the Stock Exchange is only from 1 to 1½ per cent, if on the security of Consols.

The following are the Continent capital has been in fair request, at, mostly, full quotations. We annex the rates in the leading cities:—

	Bank rate.	Open market.		Bank rate.	Open market.
	Per cent.	Per cent.		Per cent.	Per cent.
Paris ...	3	2½	Berlin ...	4	3½
Vienna ...	5	3½	Brussels ...	3	2½
Trieste ...	5	3½	Hamburgh ...	3	2½
Madrid ...	5	4	St. Petersburg ...	5	4½
Amsterdam ...	3	2½			

The monetary and commercial advices from Paris are of a more favourable character. The Bank of France has added to the stock of bullion, and that of Vienna has been productive of greater confidence amongst most classes.

The Bank of Hamburgh has reduced the rate of discount to 3 per cent, and, at the next part, they show no transmission of gold to England. The Bank of Berlin has also reduced the rate of discount to 4 per cent, against 5 per cent recently. The American panics are still laying very limited quantities of the precious metals.

The Bank of Belgium has come to hand from various quarters, and about £400,000 has been sent to the interior during the week.

The Bank of Russia, at Saint Petersburg, has demanded for economists.

At Lloyd's the war risks on home-bound ships from the East have been reduced to 40s. per cent. Amount ships have been insured.

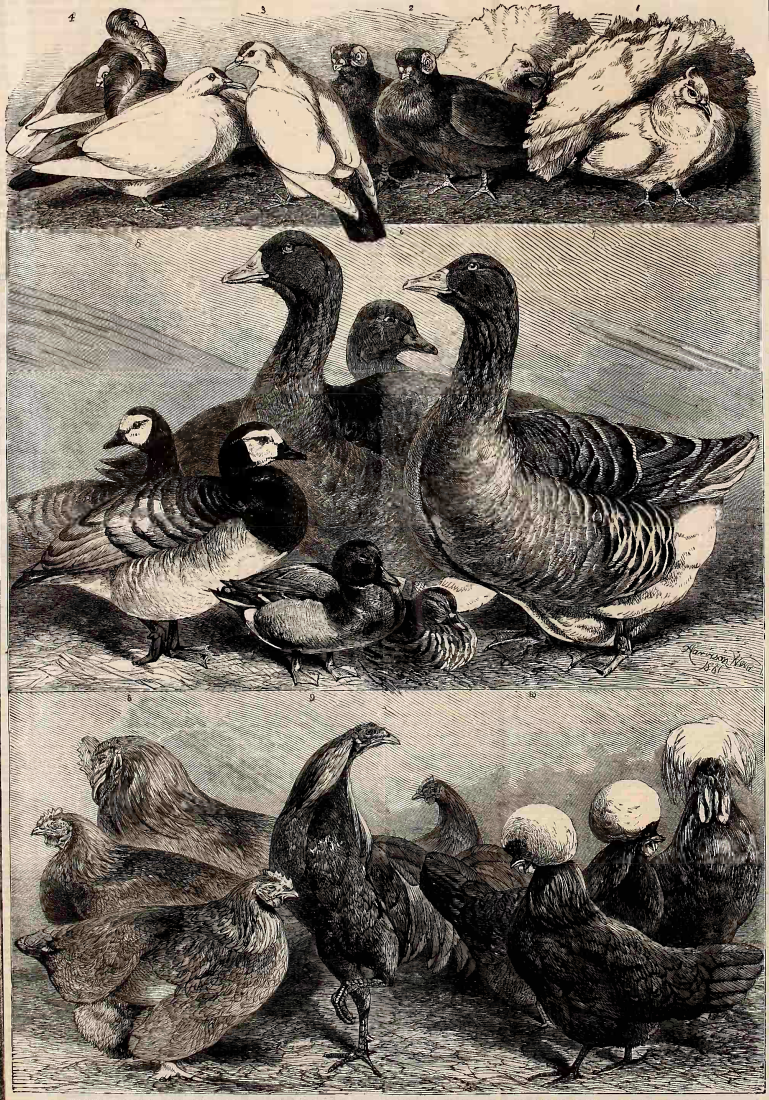
The silver market is somewhat heavy, at reduced quotations, bars having sold at 5s. 2d. per oz.

The directors of the Provincial Bank of Ireland have given notice that the dividend for the current half-year will be at the rate of £1 per share, payable with a bonus of 10s. per share.

The Stock Exchange Committee has taken cut only £41,304, chiefly for China and the Straits.

The dealings in Home and Indian Securities on Monday were limited; prevailing rates, on the whole, prices ruled steadily.—Consols for Money, closed at 89¼ to 89½ Ditto for Account, 89½ to 89¾. Reduced New Three per Cents, 90¼ Three per Cents, 89¼ Three per Cents, 1904, 89¼ Bank Stock, 214 to 216. Exchequer Bills, 1870, 1871, 1872, 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, 1883, 1884, 1885, 1886, 1887, 1888, 1889, 1890, 1891, 1892, 1893, 1894, 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1902, 1903, 1904, 1905, 1906, 1907, 1908, 1909,

THE LAST VESTIGES OF OLD WESTMINSTER BRIDGE.



PRIZE POULTRY AND PIGEONS AT THE BIRMINGHAM EXHIBITION, DRAWN BY HARRISON WEIR.—SEE SUPPLEMENT, PAGE 649.

CALENDAR FOR THE WEEK.

SUNDAY, Dec. 22.—Fourth Sunday in Advent.
MONDAY, 23.—Manchester Free Trade Meeting, 1845.
TUESDAY, 24.—Christmas Eve. Moon's last quarter, 8h. 54m., p.m.
WEDNESDAY, 25.—Christmas Day.

A PORTRAIT OF
HIS LATE ROYAL HIGHNESS THE PRINCE CONSORT,
taken shortly before his death, from a beautiful Photograph by Mayall, together with Illustrations of the most important points of the Funeral Ceremony, will appear in the following Number of this Journal.

Now ready,
THE ILLUSTRATED LONDON ALMANACK for 1862, in its 39th year. In 32, containing GROUPS OF DOMESTIC ANIMALS (printed in Colours), from Drawings by HARRISON WEIR, and other Illustrated Descriptions of the above by THOMAS MILNER. Twelve Fine-Art Engravings; also, Astronomical Diagrams (printed in Colours, &c., &c. Remarkable Phenomena, with Explanatory Notes by A. HUME, together with Illustrations of the seasons by A. HUME.
To ensure a supply of the ILLUSTRATED LONDON ALMANACK orders should be sent immediately.—Office, 198, Strand.
Agent for Germany, Russia, and Eastern Europe, Mr. Ludwig Denicke, Leipsic.

In consequence of the numerous applications for the Coloured Portrait of Garibaldi, it has been reprinted; and a few copies are still on Sale at the published price, 5d.; or by post, 6d.
Office, 198, Strand.

POSTAGE OF THE CHRISTMAS NUMBER OF THE ILLUSTRATED LONDON NEWS, PUBLISHED DEC. 21.

AT HOME.

Orders inviting the increased stamp (which must be exposed to view) should be addressed to the Publisher, Mr. Ingram, 198, Strand, London, and will be executed by all parts of the United Kingdom and the Channel Islands; unless addressed to persons within the limits of the London District Post, which cannot be posted, when they become liable to a postage of one penny. Parties who may want the present No. of the ILLUSTRATED LONDON NEWS, in addition to the Christmas Number, so as to complete the sixty issues only to be sent within three miles of the General Post Office.

Unstamped copies should have four pence per copy added to the above charge.

FOR FOREIGN PARTS.

The Increased stamp is of no service for copies which are to be sent abroad: these should be forwarded by Book Post to those according to the following rates:—

CONGREGATIONAL BICENTENARY MEMORIAL CHURCH IN COURSE OF ERECTION AT DARLINGTON.—SEE PAGE 625

DIVERS AT WESTMINSTER-BRIDGE.

THE old bridge at Westminster may now be considered a thing of the past; for, except two of the piers, which can be seen at the time of low water only, the whole of this ponderous mass of stonework has been removed.

In taking up the foundations great recourse has been had to that most useful invention, the diving-dress, which has completely superseded the diving-bell for any of the subsequent operations on these works, it having been found that the work was done with much more economy and speed in the former than in the latter.

All the magnificent Portland blocks forming the piers below low-water mark had to be removed by the aid of the divers, who went down and fixed the "lewises" in the stones by which they were raised, with the aid of the large travelling cranes on the works. These operations have been carried on both night and day with such rapidity that it has taken but little more than twelve months to complete the removal of this immense quantity of stone.

Besides being much employed in removing the old bridge, divers have been extensively engaged in putting in the foundations for the new structure. It makes but little difference to the diver whether it is night or day as far as their work is concerned, for the muddy water is so utterly impenetrable to the rays of the sun that they are in perfect darkness when diving, and consequently work entirely by the sense of touch.

It is necessary for divers to be men with good constitutions and strong nerves, particularly at Westminster-bridge, where the work is more than usually arduous, the tide running there so swiftly as to sometimes carry them completely off their legs, notwithstanding the great weights they bear, which consist of shoes with an inch thickness of lead all over the soles, and weigh about 18lb. each; also, two weights, one at the back, the other at the front, of the body, which weigh 56lb. each; then there is the helmet and dress, which weigh something considerable; yet they walk about and work at the bottom of the river as if they were on dry ground, with no weights on whatever.

A diver commences his toilet by putting on a suit of flannel; then

CLOCK-TOWER AND DRINKING-FOUNTAIN AT TYNEMOUTH.
SEE PAGE 626.

he puts on the waterproof dress, which is something like a jacket and trousers made all in one; this hooks on to the breastplate, with an indiarubber lanting, and is fastened on by "letterby" screws. His attendant fastens the indiarubber wristbands tightly round his wrists; he puts on a woollen kind of nightcap, and proceeds to the place of operation. Having arrived there, his attendant puts on his boots, weights, and belt, in which he places his tools, fixes on his helmet and life or signal line—the air-pumpers "blow up"—the signalman fixes on the mouthpiece, which completely shuts him up inside the dress, and then he descends to his unwonted labour. Divers are able to remain a considerable time under water; some of them at Westminster-bridge have been upwards of three hours down without coming up once. They work under water all through the winter, as they do not feel the cold at all when in the dress, except in the hands, which get so benumbed that they have sometimes struck them with a hammer under water, and remained perfectly ignorant of it until they came up.

The worst of the divers' sufferings, however, are in the winter, when they take off the indiarubber wristbands before mentioned, which, combined with the cold, stops the proper circulation of the blood through the hands. When these wristbands are removed, the blood again flows in its usual manner through the veins of the hands, causing them to endure most acute pain.

Yet, with all their troubles, dangers, and peculiar kind of work, they enjoy as good health as ordinary workmen. One old fellow whom we saw at Westminster-bridge told us he was between sixty and seventy years old, and had spent nearly one fourth of his life under water. He had, however, left off diving, but looked a hale, hearty old man. He had been down in the Royal George, and had seen strange sights under water in his time.

GROUP OF DIVERS AT WESTMINSTER BRIDGE.

* * *The charge for the insertion of Births, Marriages, and Deaths, is Five Shillings for each Announcement.*

CHAPPELL AND CO.'S PIANOFORTES AND HARMONIUMS.

CHAPPELL'S FOREIGN PIANINO: a very Cabinet Pianoforte, of a small size, but with the full compass, check action, and perfect musical quality of tone. Suitable for the drawing-room, parlour, boudoir, &c. Combined for keeping in tune; and the compact Pianoforte with check action yet made. From Eighteen Guineas, packed and delivered at railway.

CHAPPELL'S ENGLISH MODEL COTTAGE PIANOFORTE.—To meet the prevailing desire for a Pianoforte of the Cottage class, possessing the full musical qualities of the Grand, Chappell and Co. have produced the present model, which for elegance of design, solidity of construction, and perfection of tone and touch, they confidently submit to the public as unrivalled by any other maker, and therefore recommend to the notice of purchasers. Descriptive and illustrated outlines are sent free by post.

In the usual case, with full fret, similar to all exports to other climates, suitable for India, Australia, &c., and guaranteed to stand any climate. Price 35 guineas. Packages, 2 guineas. Drawings, on application.

CHAPPELL'S FOREIGN MODEL PIANOFORTE, price Fifty Guineas.—This instrument has obtained general favour. Compound Three Strings and the fullest compass to each note. It is strengthened by many powerful bars of iron, and possesses the full musical qualities of the Grand Pianoforte. The workmanship in all the back parts is solid, sound, full, and rich; and the power equal to that of a Grand. The touch, tone, and the capability very rapid. No Pianoforte, in all respects so reparable, has hitherto been made. Packed and delivered, carriage free, to any railway. Drawings, on application. Illustrated catalogues, with twelve specimens of the purchasers.

FULL DESCRIPTIVE LISTS (illustrated) of Pianofortes and Harmoniums, may be had on application to Chappell and Co., 50, New Bond-street.

BROADWOOD, COLLARD, ERARD, &C. Every variety of Pianoforte, by the above and all other makers, may be had on hire by one, three, six, or twelve months, and if purchased will be allowed for in the exchange. An instrument taken at any time, either for SALE or HIRE.—50, New Bond-street.

PIANOFORTES FOR HIRE.—Pianofortes of every description, by BROADWOOD, COLLARD, ERARD, and CHAPPELL, for the Country or Sea Voyages, with the option of purchase at the end of six months. Illustrated catalogues free.

SECONDHAND PIANOFORTES AND HARMONIUMS.—Alexandre Harmoniums and Pianofortes by other makers, second-hand instruments of every description, and in great variety by Broadwood, Collard, Erard, Kirkman, &c.

NEW FIFE-GUINEA HARMONIUM, by ALEXANDRE, the best of all makers. In oak case, with 4 stops, Five Guineas. At CHAPPELL'S, 50, New Bond-street.

NEW SIX-GUINEA HARMONIUM, by ALEXANDRE, with five octaves, two fall-boards, and 13 stops, the most extensive instrument in print, and superior in all other elegant harmoniums. Lists on application to CHAPPELL and Co., 50, New Bond-street.

NEW CHURCH HARMONIUMS, with two rows of keys, by ALEXANDRE, the best of all makers. No. 1, with 8 stops, 40 guineas. No. 2, with 13 stops, 50 guineas. No. 3, with double Swell, 60 guineas. Lists on application to CHAPPELL and Co., 50, New Bond-street.

THE ALEXANDRE SERAPHINA (Angelica, Kaim), also as the Harmonicelle. This charming little Instrument is now in the Queen's Private Band, and is highly recommended by Sir Michael Costa, Mr. Sims Reeves, and has a thousand testimonials. It can be played on the knee, or on a table. Its wood being entirely impervious to damp, it can be played with safety in the open air. It may be played with the new Patent Pin. Either single reeds, with the ordinary or percussive touch, or double reeds, with the percussive touch only, can be secured when first ordered. Price of single reeds, 20 guineas; of double reeds, 25 guineas; or, with the new Patent Pin, 25 and 30 guineas.

ALEXANDRE HARMONIUMS.

4. Handsome Case		35 gs.
5. Grand Sostenente		40 gs.

The whole of DITTO, from Fifteen Guineas to 45 guineas.
HIRED (or first-class Pianofortes. Any new Instrument can be had at a reduced rate if hired at once as an intended purchase.

CHAPPELL'S WEST INDIA MODEL PIANOFORTE, in elegant rosewood case, price forty guineas, after the full compass, and the best workmanship that can be made for the West Indies, and other hot climates. Each instrument has seven bass sounds available, and the large and inexpensive size of the strings renders it capable of standing in tune for a considerable period. It is recommended by many that they find the greatest success in accommodating the instrument to the climate, by placing it in a room where the temperature has been found to agree with those difficulties have been overcome by portion of the interior of the instrument being perforated and behind the soft pedals, &c.

TO MERCHANTS, SHIPPERS, CHAPPELL'S RESIDENT'S AGENCY

are prepared to supply Pianofortes, on the most favourable terms, to any part of the world with the most extensive stock in London, in any quantities, from one to a hundred. Packed and delivered, carriage free, to any railway, or on board ship in London. Drawings, and estimated free by post. Chappell and Co., 50, New Bond-street, London.

Christmas Supplement to the Illustrated London News

No. 1123.] SATURDAY, DECEMBER 21, 1861. [Vol. xxxix.

THE MISTLETOE BOUGH.

BY ANTHONY TROLLOPE.

"Let the boys have it if they like it," said Mrs. Garrow, pleading to her only daughter on behalf of her two sons.

"Pray don't, mamma," said Elizabeth Garrow. "It only means romping. To me all that is detestable; and I am sure it is not the sort of thing that Miss Holmes would like."

"We always had it at Christmas when we were young."

"But, mamma, the world is so changed!"

The point in dispute was one very delicate in its nature, hardly to be discussed in all its bearings even in fiction, and the very mention of which between a mother and daughter showed a great amount of close confidence between them. It was no less than this,—should that branch of mistletoe which Frank Garrow had brought home with him out of the Lowther woods be hung up on Christmas Eve in the dining-room at Thwaite Hall, according to his wishes, or should permission for such hanging be positively refused? It was clearly a thing not to be done after such a discussion, and therefore the decision given by Mrs. Garrow was against it.

I am inclined to think that Miss Garrow was right in saying that the world is changed as touching mistletoe boughs. Kissing, I fear, is less innocent now than it used to be when our grandmothers were alive, and we have become more fastidious in our amusements. Nevertheless, I think that she had herself fairly open to the raillery with which her brothers attacked her.

"'Honi soit qui mal y pense,'" said Frank, who was eighteen.

"Nobody will want to kiss you, my Lady Pinsairs," said Harry, who was just a year younger.

"Because you choose to be a Puritan there are to be no more cakes and ale in the house," said Frank.

"'Still waters run deep,' we all know that," said Harry.

The boys had not been present when the matter was discussed and decided between Mrs. Garrow and her daughter, nor had the mother been present when those little assenities had passed between the brother and sister.

THE FIRST CHRISTMAS FROM HOME.—DRAWN BY A. HUNT.—SEE PAGE 649.

"Only that mamma has said it, and I wouldn't seem to go against her," said Frank, "I'd ask my father. He wouldn't give way to such nonsense, I know."

Elizabeth turned away without answering, and left the room. Her eyes were full of tears, but she would not let her brothers see that they had vexed her. They were only two days home from school, and for them the time before their coming all her thoughts had been of preparare for their Christmas pleasures. She had arranged their rooms, making everything warm and pretty. Out of her own pocket-money she bought a Noah's Ark for one and skates for the other. She had told the old groom that her pony was to be kept exclusively to Master Harry for the holidays, and now Harry told her that "still waters run deep." She had been driven to the use of all her eloquence to induce her father to purchase that gun for Frank, and now Frank called her a Puritan. And why? She did not choose that a mistletoe bough should be hung in her father's hall when Godfrey Holmes was coming there to visit him. She could not explain this to Frank, but Frank might have had the wit to understand it. But Frank was thinking only of Patty Coverdale, a like-aged little romp of a cousin, who, with a party of Patty Coverdale, a like-aged little romp of a cousin, who, with her sister Kate, was coming from Penrith to spend the Christmas at Thwaite Hall. Elizabeth left her room with her slow, graceful step, and hiding her tears—shining all emotion, as, latterly, she had taught herself that it was feminine to do. "There goeseasy Lady Florella!" said Frank to himself that it was feminine to do. "There goes my

Harry, smelling his shrill voice after her.

Thwaite Hall was not a place of much pretension. It was a moderate-sized house, surrounded by pretty gardens and shrubberies, close down upon the River Kinneet, on the Westmoreland side of the river, looking over to a lovely wooded hank in Cumberland. All the way between the two counties, that the Earnont runs out of Ullesmere, and joins the Kinneet, passing under Penrith Bridge and by the old ruins of Brougham Castle, before it joins the Eden. Thwaite Hall nestled down close upon the river, the clear rocky stream, about half-way between Ullesmere and Penrith, and had been built just at a bend of the river. The windows of the dining-parlour and of the drawing-room stood at right angles to each other, and yet each commanded a reach of the stream. Immediately from a side door of the house steps were cut down through the rocky rock to the water's edge, and here a small boat was always moored to a chain. The chain was stretched across the river, and on to the opposite bank on the other side, and thus the boat was pulled by staples driven into the rock on either side. Sometimes a couple of boats hooked and fastened across the stream without aid from oars or pulleys. From the opposite side a path led through the meadows across the fields to Penrith, and this was the route commonly used between Thwaite Hall and the town.

Major Garrow was a retired officer of Engineers who had seen service in all parts of the world, and who had come to his present home in his early days as a small property which had come to him from his father. He held in his own hands about forty acres of land, and let the rest of it, or of one small farm close by, which was also his own, to a tenant. That, together with his halfpay and the interest of his wife's thousand pounds, sufficed to educate his children, and keep the wolf as a comfortable distance from his door. He himself was a perfect man, with quiet, lazy, homely habits. He had clung the work of life, but had no desire it set before him. He still retained the soldier's love of order, and was very particular about his dress, good-looking, well-disposed young people, and very fond of children. Elizabeth, at any rate, was one so, for she had already gained the affection of Major Garrow. And Isabella Holmes was another. Isabella was two years older than Elizabeth, and had been educated in Brussels. Moreover, she was comparatively a stranger at Thwaite Hall, never having been at those early Christmas meetings.

And now I must take occasion to begin my story by telling a lady's secret. Elizabeth Garrow had already been in love with Godfrey Holmes:—or perhaps it might be more accurate to say that Godfrey Holmes had already been in love with Miss Garrow. They had already been engaged. And, alas! they had already agreed that that engagement should be broken off. Young Holmes was now twenty-two years of age, and was employed in a bank at Liverpool,—not as a clerk, but as assistant manager, with a large salary. He was a man well to do in the world, who had money also of his own, and he was leaving Thwaite Hall, to marry. Some two years since, on the occasion of his leaving Thwaite Hall, he had, with low doubting whisper, told Elizabeth that he loved her, and she had given him permission to speak with her the next morning. Major had said to him, as he parted with him, "Be sure you only call, and not come to stop all night." "There is only a child, and too young to think of love affairs," he had said to himself. But Godfrey was in earnest, and he was not. But the young people had met in the summer, and one joyful letter had come from the girl home to her mother.—"I have accepted him, dearest mamma! I do love him! But I am so young yet, for I have not quite accomplished my fifteen. I think I am sure, but I am not quite sure. I am quite accomplished my fifteen. I think I am sure, but I am not quite sure. I am not quite sure about him." And then, two days after that, "Perhaps it will come a letter that was not at all proper to me, mamma,—It is not to be. It is not written in the book. We have both agreed that it will not do. I am so glad that you have not told dear papa. He could never make him understand. You will understand, for I shall tell you everything, down to his very words. But we have agreed that there shall be no quarrel. It shall be exactly as it was; and he will come at Christmas as the same. I would never do that for me and papa should be separated; nor could we now put off Isabella. It is better so in every way, for there is, and shall be, no quarrel. We still love each other. I can sure I like him, but I know that I should not make him happy as his wife. He says it is my fault. I, at any rate, have never told him that I thought it his." From all which it will be seen that the confidence between the mother and daughter was very close.

Elizabeth Garrow was a very good girl, but it might almost be a question whether she was not too good. She had learned, or thought she had learned, that most girls are silly, silly, and wicked, and that she had learned, that most girls are silly, silly, and wicked, and given chiefly to pleasure-seeking and a hankering after lovers,—and she had resolved that she would not be such a one. Industry, self-denial, and a religious purpose in life, were the tasks which she set herself; and she went about the performance of them with much courage. But much tasks, though they are excellently well adapted to fit a young lady for the work of living, may also, if carried too far, have the effect of unfitting her for that work. When Elizabeth Garrow made up her mind that the finding of a husband was not the common lot of life, she did very well. It is very well that a young lady should find her self capable of going through the world happily without one. But in teaching herself thus she also taught herself to think that there was a certain merit in refusing herself the natural delight of a lover, even though the possession of the lover were compatible with all her duties though the possession of the lover were compatible with all her duties to herself, her father and mother, and the world at large. She made no such resolve, that she had determined to have no lover. She made no such resolve, and when the proper lover came he was admitted to her heart. But she had resolved that in loving her lord she would not worship him. She had resolved that in loving her lord she would only so far love him and that in giving her heart she would only so far give it as was given to a human creature like herself. She had acted on these high principles when it had come to pass, not unnaturally, that Mr. Godfrey Holmes had told her that it was for her to say. She had resolved not to worship her lover, and he, perhaps, had resolved that he would be worshipped.

She was a pretty, fair girl, with soft dark brown hair, and soft long dark eyelashes. Her grey eyes were tender and lustrous, her face was oval, and the line of her cheek and chin perfect in their symmetry. She was generally quiet in her demeanour, but when stirred she could speak readily and well, with feeling and almost could cause herself to greet earnestly, and even eloquence for martyrdom in with fire. Her form was too great a reverence for martyrdom in with fire. Her form was too great a reverence for martyrdom in general, and a feeling, of which she was unconscious, that the young woman to be unhappy in society—had in her composition. Modesty young woman to be unhappy in society—had in her composition. Modesty I might have thought, to have a source of unhappiness hidden from the world in general and endured without any fuss to herself. But she held the fox world in general and endured without any fuss to herself. But she held the fox unless. We know the story of the Spartan boy who held the fox under his tunic. The fox was biting him into the very entrails, but the young hero spoke never a word. Now, Boy Garrow was inclined to think that it was a good thing to be brave in any such thing, so that the tortured animal was not likely to bet outward smiles. Now, at this the tortured animal was not likely to bet outward smiles. Now, at this moment the fox within her bosom was biting her sore enough, but she knew it was not likely to bet outward smiles. Now, at this moment the fox within her bosom was biting her sore enough, but she knew it was not likely to bet outward smiles. Now, at this moment the fox within her bosom was biting her sore enough, but she knew it was without flinching.

"If you would rather that he should not come I will have it arranged," her mother had said to her.

"Not for worlds!" she had answered; "I should never think well of myself again."

Her mother had changed her own mind more than once as to the conduct in this matter which it might be best for her fellow; thinking solely of her daughter's happiness. "If he comes they will be reconciled, and they will be happy," had been her first idea. But then there is the question whether they will be happy. And so she spoke of was a stern Roedess of purpose in Boggy's eyes, and Mrs. Garrow had for Mr. Holmes which had rendered such a question necessary. Mr. Holmes, while he loved her better than the young man should not come, that while he loved her better than the young man should not come, that Boggy would not permit this. It would vex her father, put out of course the arrangements of the household, and display weakness on her course the arrangements of the household, and display weakness on her own part. He should come, and she would endure without flinching while the fox gnawed at her heart.

That battle of the mistletoe had been fought on the morning before the boys arrived. Mr. and Mrs. Holmes came on Christmas Eve. Isabella Holmes was a year younger than Elizabeth Garrow, but in person was comparatively a stranger, and therefore received the same attention. She was also a stranger in mind, and since she had seen each other, and had not seen each other for a year or two had corresponded, but personally they had for the last year or two had corresponded, but personally they had never been intimate. Unfortunately for Elizabeth, she was accustomed to Isabella, Godfrey's offer and acceptance had been communicated to Isabella, who had written one of her letters. But sometimes it is very difficult to say things to her as though they were bad boys.

The first evening passed over very well. The two Coverdale girls were there, and there was much talking and merry laughter, rather more than, by nature, but on the whole none the worse for that. Isabella Holmes was a fine, tall, handsome girl, good-humoured and well disposed to be pleasant, rather Frenchified in her manners, and well disposed to take care of herself. But she was not above participation, and did not turn up her nose at the boys. Godfrey behaved himself excellently, talking much to the Major, but by no means avoiding Miss Garrow. Miss Garrow, though she had known him since he was a boy, had taken an aversion to him since he had engaged himself to her daughter; but there was no occasion on this first night for showing such aversion, and everything went off well.

"Godfrey is very much improved," the Major said to his wife that night.

"Do you think so?"

"Indeed, I do. He has filled out and become a fine man."

"In personal appearance you mean. Yes, he is well-looking enough."

"And in other respects too. He is doing uncommonly well at Liverpool. He has altogether a good head on his shoulders."

"There is nothing of that sort," said Mrs. Garrow.

"Not that I can see, you know—two years ago. Bessy was too young then, and so, indeed, was he. But if she likes him—"

"I don't think she does."

"Then there's an end of it." And so they went to bed.

"Frank," said the elder to her other brother, breaking at his door "Frank," said the elder to her other brother, breaking at his door with a low doubting whisper, "I'm coming in, if you're not in bed yet."

"I am in bed," said he, looking up with some little pride from his Greek book. "You are not going to do before I can get to bed. I'll be there directly. I've got to read uncommon hard these holidays. I've only one more half, you know, and then—"

"Don't overdo it, Frank."

"No. I'm not going to do it. I mean to take one day a week as a holiday, and work eight hours a day on the other five. That will be four days a week, and will give us just two hundred hours for the holidays. Five go into two hundred forty times, and that will be a hundred and five. I've got it quite by heart on a table. That will be a hundred and five I've got it quite by heart on a table. That will be a hundred and five hours for Greek play, forty for algebra——" And so he explained to her the exact destiny of all his long hours of proposed labour. He had got yet been through a day and a half, and had succeeded in drawing out with red lines and blue figures the table which he showed her. "If I can do that it will be pretty good, I think."

"I do think, Frank, you have come home for your holidays, to enjoy yourself."

"But I shall enjoy myself more so—"

"But a fellow must work sometimes."

"Don't overdo it, dear! that's all. But, Frank, I could not sleep if I thought I was bad without speaking to you. You made me unhappy to-night."

"Did I, Bessy?"

"You called me a Puritan, and then you quoted that ill-natured French proverb at me. Do you really believe that your sister thinks evil, Frank?" And as she spoke she put her arm caressingly round his neck.

"Of course I don't."

"Then why say so? Harry is as much younger and so thoughtless that I sometimes think I am older than he is. But if you don't like me to say anything, I will not. But it is very hard that I may not say that I am a Puritan. I would do anything in my power to make your holidays bright and pleasant I know that hope requires as much care to sustain them than gets do. Good night, dearest. Pray don't overdo yourself with work, and do take care of your eyes." So saying, she kissed him, and went her way. In twenty minutes after that he had gone to sleep over his book, and when he woke up to find the candle guttering down, he resolved that he would not begin his measured hours till Christmas Day was fairly over.

The morning of Christmas Day passed very quickly. They all went to church, and then sat round the fire chatting till the time of dinner was ready. The Coverdale girls thought it very much better than dinner than their own Italian festivities, and Frank was seen to yawn. But then everybody knows that the real fun of Christmas never begins till the day itself be passed. The hard and plodding are pendemon, and unless there be some children in the party there is a difficulty in getting any special afternoon amusements on the Sunday preceding the morning. In the evening they were to have a dance—that and bad been distinctly promised to Patty Coverdale; but the dance would not commence till eight. The beef and pudding were pendemon, but with due effects they were overcome and disappeared. The glass of port was sipped, the almonds and raisins were nibbled, and then the port was sipped, the almonds and raisins were nibbled, and then the port was sipped, the almonds and raisins were nibbled, and then the latter left the room. Ten minutes after that Elizabeth found herself seated with Isabella Holmes over the fire in her father's little book-room. It was not by her that the meeting was arranged, for she would have preferred confidence; but it could not be avoided, and, perhaps, it might be as well now as hereafter.

"Bessy," said the elder girl, "I am dying to be alone with you for a moment."

"Will you shall not die—that is, if being alone with me will save you."

"I have so much to say to you, and, if you have any true friendship in you, you also will have as much to say to me."

Miss Garrow, perhaps, had not much friendship in her at the moment, for she would gladly have avoided saying anything had that been possible. But in order to prove that she was not deficient in friendship she gave her friend her hand.

"And now tell me everything about Godfrey," said Isabella.

"Dear Bella, I have nothing to tell, literally nothing."

"That is nonsense. Stop a moment, and let me understand that I am not to know anything. It cannot be that you have nothing to tell if you choose to tell it. You are not the girl to be engaged to Godfrey without loving him, and to him she must be allowed to love without loving her. And you wrote me word that you had without loving her. And you wrote me word that you had engaged your mind, as you might about a dress, of course. I know that you had not told me all. Now I have been home a month, and you have not told me all. Now I have been home a month, and you have not told me all. Now I have been home a month, and you have

"What will papa say?"

"You must tell him all."

"And aunt Mary must be told, also. You would not like that. Miss Polly?"

"No, nothing—very little, that is. But Bella has spoken to me. Oh! mamma, I think we have been wrong in this: that is, I have been wrong. I feel as though I should disgrace myself, and turn the whole party here into a misfortune."

It would be dreadful, that tellings of the story, even though her mother should undertake the task. "I will remain if it be possible," she said; "but, mamma, if I wish to go, you will not stop me?" Her mother promised that she would not stop her, but strongly advised her to stay.

On the following morning, when she came down stairs before breakfast, she found Frank standing in the hall with his gun, of which he was trying the lock. "It is not loaded, is it, Frank?" said she.

"Oh dear no! No one thinks of loading nowadays till one has got out of the house. Directly after breakfast nowadays till one has got Godfrey to the back of Gaygarth to see after some moor fowl. He asked me to go, but Geraldin's will refuse."

"Of course not. Why should you?"

"It will be deemed hard work to make up the time. I was to have been up at four this morning, but that alarum went off and never woke me. However, I shall be able to do something to-night."

"Don't make a slavery of your holidays, Frank. What's the good of having a new gun if you're not to enjoy it?"

"It's not the new gun. I'm not such a child as that comes to. But you are Godfrey's here, and one ought to be civil to him. I'll tell you what I want you girls to do, Bessy. You must come and meet us on your pony. We'll be there on the boat, and along the path to the Pattendale road. We'll be there under the hill at about five."

"And if you are not there, are we to wait in the snow?"

"Don't make difficulties, Bessy. I tell you we will be there. We have been up at four this morning, but that alarum went off and never woke me. However, I shall be able to do something to-night."

"Oh dear no! No one thinks of loading nowadays till one has got out of the house. Directly after breakfast nowadays till one has got Godfrey to the back of Gaygarth to see after some moor fowl. He asked me to go, but Geraldin's will refuse."

"Of course not. Why should you?"

"It will be deemed hard work to make up the time. I was to have been up at four this morning, but that alarum went off and never woke me. However, I shall be able to do something to-night."

"Don't make a slavery of your holidays, Frank. What's the good of having a new gun if you're not to enjoy it?"

"It's not the new gun. I'm not such a child as that comes to. But you are Godfrey's here, and one ought to be civil to him. I'll tell you what I want you girls to do, Bessy. You must come and meet us on your pony. We'll be there on the boat, and along the path to the Pattendale road. We'll be there under the hill at about five."

"And if you are not there, are we to wait in the snow?"

"Don't make difficulties, Bessy. I tell you we will be there. We have been up at four this morning, but that alarum went off and never woke me. However, I shall be able to do something to-night."

"Why, to the meet, Miss Polly. Patty Coverdale has promised. As for Miss Holmes, if she won't, why, you must leave her at home with mamma. Mr. Kate and Patty can't come without you."

"Your discretion is not quite what one has a right to expect from you, Master Frank. Well, I suppose I must do it."

"Your discretion is not quite what one has a right to expect from you, Master Frank. Well, I suppose I must do it."

"Of course you will, Miss Polly, unsecondly.

"And if you are not there, are we to wait in the snow?"

"Don't make difficulties, Bessy. I tell you we will be there. We have been up at four this morning, but that alarum went off and never woke me. However, I shall be able to do something to-night."

"Why, to the meet, Miss Polly. Patty Coverdale has promised. As for Miss Holmes, if she won't, why, you must leave her at home with mamma. Mr. Kate and Patty can't come without you."

"Your discretion is not quite what one has a right to expect from you, Master Frank. Well, I suppose I must do it."

"Of course you will, Miss Polly, unsecondly.

"Oh, I forgot," said Patty, innocently.

"I'm sure I don't care," said Kate. "You may have Harry if you like."

"Thank you for nothing," said Miss Holmes. "I want one for myself. It's all very well for you to make the offer; but what should you do with Harry if Harry wouldn't have me? Harry, you're not to be so rude to your friend's taste."

"I'm sure he isn't anything to me," said Kate. "Why, he is not to be civil to me?"

"Nature has done that, my dear."

"But Nature should be trained, should it not? You will make them so, by acknowledgment, to be one team with unappropriated friend."

"I'm sure I have appropriated nobody," said Patty, "and don't intend."

"Godfrey, then, is the only knight whose services are claimed," said Miss Holmes, looking at Bessy. Bessy made an immediate answer with either her eyes or tongue, but when the Coverdales were gone she took her new friend to task.

"How can you fill those young girls' heads with such nonsense?"

"Poor fools! What a shame to dispose of him so soon! We'll let them go for a year or two; and then, Miss Coverdale? But as there is no help, as you call them, will look after that themselves. It is none of their elders."

"Oh, Bessy, is she only knight whose services are claimed," said Miss Holmes, looking at Bessy. Bessy made an immediate answer with either her eyes or tongue, but when the Coverdales were gone she took her new friend to task.

"How can you fill those young girls' heads with such nonsense?"

"Nature has done that, my dear."

"But Nature should be trained, should it not? You will make them so, by acknowledgment, to be one team with unappropriated friend."

"I'm sure I have appropriated nobody," said Patty, "and don't intend."

"Godfrey, then, is the

remember that, in making up your mind, you must think of him as well as of yourself. If you do not love him,—if you feel that as his wife you could not love him,—there is not another word to be said. I need not explain to my daughter that under such circumstances she would be wrong to encourage the visits of a suitor. But your mother says you do love him?"

"Oh, mamma!"

"I will not ask you. But, if you do,—if you have so told him, and allowed him to build up an idea of his life's happiness on such telling,—you will, I think, sin greatly against him by allowing false feminine pride to mar his happiness. When once a girl has confessed to a man that she loves him, the confession and the love together put upon her the burden of a duty towards him which she cannot with impunity throw aside." Then he kissed her, and, bidding her give him a reply on the morning of the New Year, left her with her mother.

She had four days for consideration, and they went past with her by no means easily. Could she have been alone with her mother the struggle would not have been so painful, but there was the necessity that she should talk to Isabella Holmes, and the necessity also that she should not neglect the Covendales. Nothing could have been kinder than Bella. She did not speak on the subject till the morning of the last day, and then only in a very few words. "Bessy," she said, "as you are great, be merciful?"

"But I am not great, and it would not be mercy," replied Bessy.

"As to that," said Bella, "he has surely a right to his own opinion."

On that evening she was sitting alone in her room when her mother came to her, and her eyes were red with weeping. Pen and paper were before her as though she were resolved to write, but hitherto no word had been written.

"Well, Bessy," said her mother, sitting down close beside her, "is the deed done?"

"What deed, mamma? Who says that I am to do it?"

"The deed is not the writing, but the resolution to write. Five words will be sufficient, if only those five words may be written."

"It is for one's whole life, mamma; for his life as well as my own."

"True, Bessy; that is quite true. But it is equally true whether you bid him come or allow him to remain away. That task of making up one's mind for life must always at last be done in some special moment of that life."

"Mamma, mamma, tell me what I should do."

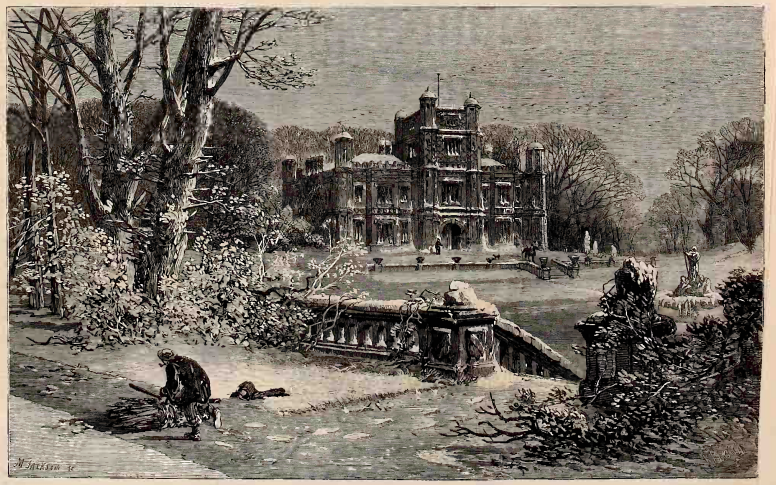
But this Mrs. Garrow would not do. "I will write the words for you if you like," she said; "but it is you who must resolve that they shall be written. I cannot bid my darling go away and leave me for another home. I can only say that in my heart I do believe that home would be happy one."

It was morning before the note was written; but when the morning came Bessy had written it and brought it to her mother. "You must take it to papa," she said. Then she went, and hid herself from all eyes till the noon was passed. "Dear Godfrey," —the letter ran,—"Papa says that you will return on Wednesday if I write to ask you. Do come back to us,—if you wish it. Yours always, Bessy."

"It is as good as though she had filled the sheet," said the Major. But in sending it to Godfrey Holmes he did not omit a few accompanying remarks of his own.

An answer came from Godfrey by return of post, and, on the afternoon of the 6th of January, Frank Garrow drove over to the

A CHRISTMAS PRESENT.—WAITING FOR THE COACH.—DRAWN BY E. DUNCAN.



JULIAN: A LEGEND OF RAVENSHURST.—ILLUSTRATED BY R. P. LEITCH.—SEE PAGE 639.

WHAT I SAW IN THE FIRE.—DRAWN BY A. CROWQUILL.—SEE PAGE 637.

station at Penrith to meet him. On their way back to Thwaite there grew up a very close confidence between the two future brothers-in-law, and Frank explained with great perspicuity a little plan which he had arranged himself. "As soon as it is dark, so that she won't see, Harry will hang it up in the dining-room," he said; "and mind you go in there before you go anywhere else."

"I am very glad you have come back, Godfrey," said the Major, meeting him in the hall. "God bless you, dear Godfrey," said Mrs. Garrow. "You will find Bessy in the dining-room," she whispered; but in so whispering she was quite unconscious of Frank's mischievous laugh.

And so also was Bessy. Nor do I think that she was much more conscious when that interview was over. Godfrey had made all manner of promises to Frank; but when the moment arrived he had found the cries too important for any special reference to the little laugh above his head. Not so, however, Patty Coverdale. "It's a shame," she said, bursting out of the room; "and if I'd known what you had done nothing on earth should have induced me to go in. I will not enter the room again till I know that you have taken it out." Nevertheless, her sister Kate too hold enough to solve the mystery before the evening was over.

CHRISTMAS MUMMERS.

"The ancient spirit is not dead." Old customs, in a sense, are never old, but always new. Cakes and ale, for all that fanaticism and Methodism may say to the contrary, are still pleasant to the mirth-disposed; ay, "and ginger is still hot in the mouth." Roast beef and plum-pudding are still substantial powers and veritable influences. They have a moral as well as a material life, and are immortal.

The season of Christmas was, in the days of old, the season of masques and revelries, and the taste for both is quick and active yet in many rural places. "All men and women are merely players," says Shakspeare; and Christmas is the time when they like to demonstrate this great truth in the clearest manner. Then it is that the Mummer feels the day of his glory has arrived, and he wisely determines to make the most of it. There is little doubt that our friend is of respectable antiquity. Etymologists ally the mass by which he is known with the Greek Momus. And why should we object to the derivation? Momus was a merry god, and the Mummer is a merry mortal who can venerate the divinity in a corresponding vein. He, moreover, is of a class not too high for good-fellowship, nor too low for self-respect. He is generally of the middle order, for your noble is too proud to mingle in such merely popular sports, and your peasant is too unlearned to take a share in them. The Mummer has to play a part in a scene, and must understand its meaning. He must be partially acquainted with legendary lore, and know something about St. George and the Dragon, as also about More of More Hall and the Dragon of Wantley, and other romances, or burlesques on them, which may fitly be made the theme of pastime at the joyous and yet sacred Christmas-tide.

Romances, or their burlesques? Ay, in the free-and-easy manner in which mummeries are exhibited it matters little whether we interpret the scene of St. George or of More of More Hall. Each had his dragon once in a senseless forest and the other at Wantley town. Guy Faux will serve the turn as well as Guy Earl of Warwick. Let every looker-on have his fancy and see in it what may best please him. The motive of the mummer's procession is to please the end obtained, why embitter the relish with intrusive criticism? To the people of the Hall it is welcome after a fashion. The Squire and his lady are interested, but the aristocratic youth regard it rather unpositively, as something to be tolerated; while the menials are disposed to enjoy the pageant. One of these holds a candle, that she may regard it in a better light, and another treats the starry gazer with a mug of ale, which he well deserves. He and his mate come to that Hall for largess, and they shall not be disappointed. Nor may their merits be questioned, for they bring their own Trumpeter with them, who, after the Drummer has drunk his quantum, will supply the flagon.

On the other side we have the peasantry, in their smock-frocks, staring with wonder, and anxious to find matter for mirth in the passing incidents. The Dragon is an object of much interest; for the child is frightened at the monster, and the dog barks at it, while the mother encourages her boy to approach nearer. He has reason to be frightened if he has read the ballad of "The Dragon of Wantley," and supposes that he now stands in presence of the monster. For what says that veracious narrative of the terror of Wantley?—

> Here you see Moore has the Dragon horne
> Fixed securely soon in his belly;
> This dragon was not quite so tall
> But very near, I'll tell ye;
> Bestrid it by your eithren three,
> That could not with him grapple:
> And at our cap he ate them up,
> As one would eat an apple.
>
> All sorts of cattle this dragon did eat,
> Some say he ate up trees;
> And that the forests sure he would
> Devour up by degrees:
> For house and churches were to him geese and turkeys;
> He ate all, and left none behind
> But some sheep, four jack, that he could not crack,
> Which on the hills you will find.

We exempt describe the fight that More of More Hall had with him for several reasons; but it is our duty to be more respectful to St. George, who was for England what St. Denis was for France. Each is the hundred or two old and rambling songs made in his praise which may be found in the Percy Collection. The first begins:—

> Why do ye boast of Arthur and his Knights,
> Concerning well-how many more have valiant fights?
> For besides King Arthur, and Lancelot du Lake,
> Or Sir Tristram de Lionel, that fought for ladies' sake,
> Read in old histories, and there you shall see
> How St. George, St. George the dragon made to flee.
> St. George he was for England; St. Denis was for France;
> Sing, "Hail our special tried patrons!"

And then the ballad proceeds to celebrate numerous other heroes: Abraham, David, Jeshuah, Gideon, Marshal, Scipio, Orlando Furioso, Remus and Romulus, Alphonso, Chiron the Dane, Bevis, the Earl of Warwick, Richard Coeur de Lion, and many others of less or greater note; but each of these, in turn, is subordinated to St. George. The same vein is reopened in the later song, which was written by John Grubb, M.A., of Christ Church, Oxford, wherein we are told how superior St. George was to all other conquerors. The stanzas are full of wit and humour, but would be out of place in a sketch like this. Our purpose is attained if we have enabled the reader to enter into the spirit of Mr. Hunt's picture, which is full of interesting details that so ficklenly explain themselves, and of suggestions that conduct the mind to the past and future while adverting to the present.

H.

CHRISTMAS GAMES.

LITTLE RED RIDING HOOD.

As it is ordained that no pleasure—scarcely a sorrow—should be enduring, it is not to be wondered at that even "Christmas holidays" should have their hours of tedium, and that little people should often desire "something to do, mamma."

As it is the pleasant mission of the Illustrated London News to supply amusement and instruction to the family circle, we, in our Christmas Supplement, always endeavour to interest the youngest of our readers, and to aid them in making the holiday time pass cheerfully. With that view the following games have been constructed and are now submitted, we hope, to kindly criticism, for there are few tasks more difficult than the production of such "exhibits."

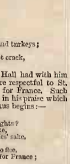
The first game we call a Doll Drama, to be played by young children after the preparation of stage characters and scenery by older heads and hands.

The Stage should be a simple frame of wood with a solid bottom, so that it may stand firmly on a table, and with movable bars of wood at the top, to which the scenery is to be attached.

It must be draped and closed at the sides thus:—

The Scenery is painted upon pasteboard the width of the stage, and may be made at once from prints and engravings.

The Characters are wooden cones having dolls' heads, dressed



to represent the Dramatis Personæ. They are placed on flat guide-sticks, which have a wire pin about an inch long, so as to allow of

the instant removal of one figure and the substitution of another. By means of the guide-sticks the characters can be moved about, and the little drama is so constructed that the action of the figures can be easily controlled. The cones can be bought of a turner for about one shilling a dozen, and some fun is to be found in dressing the company.

We will now, ladies and gentlemen, solicit your kind attention to

Little Red Riding Hood.

[versified and arranged to suit the youngest capacity.

The scenery represents—

1st Bar—A Fairy Landscape, which, on being removed, shows

2nd Bar—The Interior of Red Riding Hood's Cottage, in front of which is to be placed, at the proper time,

3rd Bar—The Forest, which, when taken away, discovers

4th Bar—The Grandmother's Cottage, with a bedstead at the back and curtains to draw in the front of it, to allow the removal of one bedstead and the substitution of another.

THE CHARACTERS ARE

Mother Bunch (the celebrated Fairy Authoress).
Patty Dumple (commonly called Red Riding Hood).
Dame Dumple (her Mother).
Old Dame Dumple (Red Riding Hood's Grandmother).
The Wolf.

As many little ladies and gentlemen as there are characters (having learned by rote the lines which are set down for them) should now be concealed behind the curtains inclosing the stage, and by moving the figures, changing the scenes, and repeating the words, enact the pathetic history of

LITTLE RED-RIDING HOOD.

Scene I. *A Fairy Landscape.*

Mother Bunch *discovered in the centre of the stage.*

I'm Mother Bunch, of whom you've heard, no doubt.
For many years have passed since I came out.
More than a hundred pictures have I sat to,
To draw this nose, this chin, this forehead that to,
And so this pretty face is known to many,
As well as our good Queen's upon a penny.
Your great-great-grandfathers loved the tales I told,
Which, strange to say, seem never to grow old;
And I find hearers wherever I come to.
For "Mother Hubbard," "Puss in Boots," "Tom Thumb,"
"Jack and the Beanstalk," "Children in the Wood,"
And my pet fancy, "Little Red Riding Hood,"
Which at this Christmas time, in form that's new,
I wish at once to introduce to you.
So, pretty! change the scene to Dumple Dell,
Wherein Red Riding Hood's good parents dwell.

[Mother Bunch *is drawn off the stage. The scene changes to* The Interior of Red Riding Hood's Cottage.

Dame Dumple *with a broom discovered as though sweeping.*

There, all is neat again! the floor swept clean,
My platters scoured, my ragged cat combed even;
The hearth well brushed, and on the shining dogs[*] *
Are piled the evening's store of well-dried logs,
Which, when I add a faggot, will blaze up
And for a while my misery bellows pity,
Will blare and crackle 'neath the three-legged pot,
And make my husband's supper porridge hot.

[*The figure is drawn to the side and the broom is removed.*

Red Riding Hood (*outside*). Mother, the cakes are ready!

Dame. Bring them here;
Also a pot of our fresh butter, dear.
My daughter Patty is both fair and good,
By neighbours called Little Red Riding Hood,
It is her custom, out of the fat of Joy,
A visit her old Grandmother to pay,
And take her some such dainty as a cake,
Or a new loaf on Friday, or the like,
A pot of butter or some clotted cream, *
Or fresh green cresses from the neighbouring stream.

Enter Red Riding Hood *carrying a basket.*

I'm ready, mother, dear. See! Cakes and honey,
Fresh butter, cresses, and twopence to money,
For yesterday I sold my eggs at seven,
To Tom, the higgler, passing by our door.

[*Appears to give money.*

Fourpence for you, and fourpence more for mother,
Twopence for me, and twopence for grandmother.
And higgler Tom declares he's always willing
For every score of eggs to give a shilling.
Now I will start, dear mother.

Dame. Darling, do.
Three miles your journey, and it's half-past two.
So, mind, don't loiter of your way.

Red Riding Hood. No! I;
I'll walk as fast almost as bird can fly.
And though I love to hear the throstle sing,
And watch the rabbit o'er the greensward spring,
Or sit upright, and with his ferry toes
Smoodge his long ears and rub his saucy nose,
And love to gather, as I onward pass,
Wood-sorrel, foxgloves, and the long spear grass,
I'll not be tempted, though, perhaps, you'll say
Already I have loitered on my way,
One kiss, dear mother. I shall not be late.
Dame. I will go with you to the garden gate;

[*As they are going there falls before he*

Scene II. *The Forest.*

Enter the Wolf.

I don't know what's the cause, but I am ailing;
I'm nervous, and my appetite is failing.
At breakfast I could eat but one poor kid;
At lunch two little lambs were all I did!
And what to have for dinner?—that's the question
It must be something easy of digestion.
There's an old goose I know of, but she's tough;
Besides, one goose would scarcely be enough.
Ah! What is that? (*Sniffs.*) 'Tis something very sweet!
Little Red Riding Hood? There is a treat!

[*Hides himself*

Enter Red Riding Hood, with *flowers in her hand.*
I could not quite resist a-while to stay,

* Iron frames on which wood is placed to burn.

And pluck these pretty flowers on my way.
And these fine blackberries! who could resist 'em?
Indeed, I should be sorry to have mine'd 'em.
In half an hour my basket I can fill. *(Pauses.)*
"DON'T LOITER ON YOUR WAY!" O yes, I will.
Dear mother's very good, but sometimes wrong.
But half an hour! Oh, that's not loitering—long.

[She appears to gather blackberries.

Wolf (aside). My nose was right,
Good sire, my lucky meal!
Red Riding Hood. O dear, Sir! Who are you?
Wolf. Don't be afraid!
I'm Master Wolf, the owner of this wood;
And you, I fancy, are Red Riding Hood?
Red Riding Hood. I hope I've done no wrong in gathering these?
Wolf. O no, my dear; pray, gather what you please.
I can excuse so pretty an offender. *[Turns away.*
She's very young, and must be very tender.
There's not a plumper partridge in the county,
Red Riding Hood. I've gathered plenty, thank your Honour's bounty.
Wolf (roughly). Where are you going? Umph.
Red Riding Hood (confidently). To yonder cot,
To take my grandmother this little pot
Of butter, and this honey, and this cake.
Wolf. Why, what alarms you so, and makes you shake?
You're not afraid of me?
Red Riding Hood. Yes—no, Sir—rather!
Wolf. You hurt my feelings; I'm myself a father!
Go to your grandmother, and pray convey
My best regards to her. My dear, good day! *(Kindly.)*
Red Riding Hood. Good day, your Honour. Well, henceforth at least
I shall believe the wolf a gentle beast.
Wolf. My appetite's returning! Shall I follow,
And at one gulp my dainty victim swallow?
No! it is wrong to hurry at one's food,
And I prefer to take my meals in quiet.
So I'll run on before. *(Stops.)* But, oh me gracious!
If exercise should make me more voracious.

[He goes and the scene changes to THE GRANDMOTHER'S COTTAGE. *A bedstead at the back, on which* OLD DAME DUMPLE *is lying.*

Old Dame. I'm very badly lying here all day,
Whilst at his work my good man is away.
My eyesight's gone, my hearing duller grown,
Yet let me think upon the good I've known.
For all the pleasure of my life I've had,
And thankful be for blessings left me yet.
A kind, good husband toiling for my sake,
A gentle grandchild's loving skill to please,
Her presence makes my poor old heart rejoice,
Though I can see her not! I scarce hear her voice,
[Knocking at the door. A pause, and then it is repeated louder.
Old Dame. I surely heard a knocking at the door?
It may one is there, pray knock once more. *[Very loud knock.*
Who is it, sweet?
Wolf. 'Tis I, grandmother, I!
Old Dame. Then pull the bobbin; up the latch will fly.

Enter THE WOLF.

Welcome, my child! Come how sad has old granny.
Wolf. Of all the world I love you best of any!
Old Dame. Dear me! how houses you rare!
Wolf. I've taken cold. *[Turns away.*
I'm very hungry, but she's very old.
Old Dame. Come! in upon the bed, that I may hear
What news you have to tell.
Wolf. Yes, granny dear, *[To Audience.*
I'll draw the curtains; (*to audience*) and, should grandmam shout,
No doubt you'll fancy what I am about.
[He draws the curtains and conceals himself and OLD DAME DUMPLE.
Old Dame. Dear me! how rough your pretty face has grown.
You're not my grandchild!
Wolf. No: the cheat I own!
I am the wolf; your husband caught my life.
I pool for evil do, and eat his wife!
[A great noise. After a pause the WOLF *puts his head through the curtain.*
Wolf. I'm very sorry for the poor old lady,
And now for sweet Red Riding Hood I'm ready. *[Knocking.*
Ah! there's her gentle tap. Who's at the door?
Red Riding Hood. Your grandchild, Riding Hood, with little store
Of cakes and honey, butter, watercresses.
Wolf (aside). Ha! I've no fancy for such mawkish messes.
But on that dainty maid I mean to sup.
[Calls like old DAME DUMPLE.
Pull at the bobbin and the latch flies up.

Enter RED RIDING HOOD.

Red Riding Hood. Well, grandmother, how do? *(Wolf coughs.* That hearty cough!
Wolf. Yes, yes; some day I'm sure twill take me off.
And I've a cold. Can't think how I came by it.
Red Riding Hood. I'm glad I brought some honey. Will you try it?
Wolf. No thank you, dear!

[RED RIDING HOOD *goes to the side, and leaves her basket.*

I'll in my gruel take it.
Your grandchild knows the proper way to make it.
So lie upon the bed, that I may hear
What news you have to tell.
Red Riding Hood. Yes, granny dear.
[The figure has been turned with the back to the audience.
Dear me, how changed your face is!
Wolf. Yes,
A rash broke out and left me quite a fright.
You've had the *nettle* rash, now mine's the *whitlo*,
And every pimple's turning to a bristle.
Red Riding Hood. How long your ears are, granny dear.
Wolf. Ay, true;
The better, my dear grandchild, to hear you.
Red Riding Hood. And what large eyes you have, and oh! how bright.
Wolf. The better to see you. Although the light
Is now more strong than pleasant to my sight;
Therefore the curtains close. Quick, child, the other!
[Curtain drawn. They are now both hidden from view.
Red Riding Hood. How large your mouth has grown, my dear grandmother!
Wolf. Your fancy, child!
Red Riding Hood. Your teeth! how sharp and long!
Don't hug me so!
Wolf. I must! I've grown so strong.
My appetite requires some dainty dish;
A daintier one than you no wolf could wish.
[A Noise. The fairy harbinger is let down, and
Enter MOTHER BUNCH.
Mother Bunch. Her mother's warning having disobeyed,
The cruel wolf Red Riding Hood betrayed,
And thus we see that little faults in time
May lead to sorrow and battle to crime.
[The stage curtain is drawn, and so ends
LITTLE RED RIDING HOOD.

THE ROYAL EXCHANGE.

This game can be played by any number of persons who will, for the time being, imagine the drawing-room to represent the place where "merchants meet do congregate," and that they are adventurers to all parts of the globe. The articles they trade with will be well-known historical events, distinguished personages, the incidents and characters of popular works of fiction. In these particulars this game resembles the old game of "The Spanish Merchant," but the business of the Royal Exchange is transacted in the following manner:—

British Merchant. I am a British merchant, and have a large store to sell.
Second Merchant. Has the stone been used as a fact or a fiction?
British Merchant. A fact.
Third Merchant. Is it to be seen?
British Merchant. Yes; I sell a sight of it.
Fourth Merchant. Where? In England, Ireland, Scotland, or the colonies?
British Merchant. I sell it in England.
Fifth Merchant. In St. Paul's?
British Merchant. I don't sell in St. Paul's.
Sixth Merchant. Is it Walthamstow's Column in Fleet-street?
British Merchant. I don't sell Walthamstow's Column in Fleet-street.
Seventh Merchant. Is it found in History?
British Merchant. I sell English history.
Eighth Merchant. Is it connected with a rebellion?
British Merchant. I sell a rebellion.
Eighth Merchant. Then I buy London Stone.
British Merchant. I sell London Stone.

The British merchant having disposed of his English fact, the other merchants proceed to traffic in French, Spanish, American, Portuguese, Italian, or English "fact" or "fiction," until they are tired of trading.

"I DID!"

As a game of forfeits is always a pleasant adjunct to a family party (and we write only for fireside gatherings), we trust that "I did!" may take its place among those more time-honoured and more worthy. Any number of young persons may be concerned in what "I did," and it must be the endeavour of all the players to multiply the forfeits by misleading each other by every variation of voice, look, and gesture which they can command—sometimes *serving a friend*, and imitating it when they can, and sometimes *hurting an object*, as shown in the annexed example of the game.

After each round or object named you clap hands thrice, and should the player whose word is mentioned not clap twice before the narrator has finished a forfeit is to be exacted.

You must begin by dividing the players into two parties, leaving a chairman in the room empty. One division represents only objects which you can see, and the other only sounds which you can hear, and which you have made into two columns, thus:—

OBJECTS WHICH YOU CAN SEE.	SOUNDS YOU CAN HEAR.
Steam-engine.	A pig's grunt.
Dun cow.	A cow's lowing.
Aunt Mary.	Steam-whistle.
Grand piano.	(When possible imitate these
A round hat, &c.	sounds.)
	Music (A chord on a piano).

We will now play a short game of "I did!"

Speaker, I went into a farmyard—I did! and there I saw—a grand piano. (Clap hands thrice.) Should Grand Piano have been misled by the speaker's reference to a farmyard and not have clapped twice, C. P. pays forfeit.

Speaker, I went into a lady's boudoir—I did! and there I saw—a dun cow. (Clap as before.) And if Dun Cow replied in time, the membership passes to D. D.

Speaker. I went into a milliner's shop—I did! and there I saw—a pig's grunting. (Clap as before.)

Speaker. I went into a greenwood—I did! and there I heard—a round hat. (Clap hands.)

Speaker. I went to tea with Aunt Mary—I did! and heard her play—a steam-engine. (Clap hands.)

Speaker. I went to the opera—I did! and there I saw—a cow lowing.

Speaker. I went into a wilderness—I did! and there I heard—a steam-whistle. (Clap hands.)

And so on. Whenever the person named claps hands in time the membership is transferred, as described, and a general change of places takes place, the speaker occupying the empty chair, and saying, "I changed my chair—I did!" Any person not seated by the time the speaker has taken his chair and clapped hands thrice is to pay a forfeit.

A little mild ranging is generally agreeable to many young people, and helps to encourage the diffident. The game can end at any time, and the forfeits be cried.

PLAY IN EARNEST.

A round game at cards seems as naturally associated with Christmas time as mince-pies and plum-pudding, or plum-pudding and mince-pies. We know not which claims precedence, and we care not to have those at our merrymaking who cannot find an hour's innocent fun in both old Seasonal delights as well as in more polite companion and any Vingt-et-un. As novelty is said to be always pleasing, we here present our bobby friends with a new formula of cards which may serve to while away a Christmas evening.

Before dealing the cards it must be understood that

Hearts represent	...	... England,
Diamonds "	...	... France,
Spades "	...	... Spain,
Clubs "	...	... Italy,

and that the Kings of each represent Kings, Warriors, and Statesmen; Queens represent Ladies and Counties;

Knaves represent the professions of Law, Physic, and Divinity; and Ace represent Art, Science, and Literature.

If more than seven players play, then the lower cards must be added to ensure four cards to each player. Each person puts in a stake, the dealer having the privilege before dealing of naming the suit which shall be trumps. The cards being dealt, the holder of the King of trumps plays it, mentioning some King, warrior, or statesman of the country named, and (if so agreed) some incident connected with them. The holders of the queen, knave, and ace play their cards in order, observing the same conditions.

Should the holder of a trump-card name, by mistake, a personage (or incident) of another country, then the holder of the card appertaining to the person (or incident) named challenges the trump-card wrongly designated, and receive the stake due to it at the termination of the game.

The holder of a trump-card may dispose of it should he wish to do so. Should the holder of a trump-card name a personage (or incident) mentioned before, he shall forfeit counters.

The stakes to be divided into four equal parts, and the king to receive any fractional counters that may remain over.

EXAMPLE.

Dealer. Diamonds or France trumps.
Holder of King. I have King Louis XI., who destroyed the feudal system in France.
Holder of the Queen. I have Queen Eleonore, wife of Louis VII., who subsequently married Henry II. of England.
Holder of Knave. I have Doctor Thouret a celebrated sanitary physician.
Holder of Ace. I have Sully, the dramatist.
Holder of Ace of Spades, or Swiss. I beg pardon. I have Sully, the Spanish dramatist, who wrote "Love and Duty." I claim forfeit of your card.
The deal passes on.

THE FAMILY PARTY

is another round game, intended for those who are content to be merry without being wise, and is played with the card cards, and so many of the lower ones as shall give five cards to each player and three over. The latter are called the Sibyl's leaves, and are placed in the centre of the table.

The King of Hearts	are called	Uncle Tom.
The King of Clubs		Uncle John.
The King of Spades		Uncle Harry.
The King of Diamonds		Uncle Sam.
The Queen of Hearts	are called	Aunt Sally.
The Queen of Clubs		Aunt Dinah.
The Queen of Spades		Aunt Dolly.
The Queen of Diamonds		Aunt Molly.
The Knave of Hearts	are called	Cousin Bob.
The Knave of Clubs		Cousin Frank.
The Knave of Spades		Cousin Joe.
The Knave of Diamonds		Cousin Fred.
The Ace of Hearts	are called	Ragtime Jem.
The Ace of Clubs		Carnaul Jolly.
The Ace of Spades		Apple Tart.
The Ace of Diamonds		Riverton Toffey.

Five cards being dealt to each person, and three—the Sibyl's leaves—placed in the centre of the table, the player next to the dealer looks at his cards and then proceeds to make up four modes, aunts, cousins, or "tuck." He is privileged to take up the three Sibyl's leaves (or as many as he pleases), replacing them with the same number of cards from his own hand, and without letting these be seen. The next player does the same, and so all round, until every one has changed cards. The player next to the dealer may again exchange with the Sibyl, or challenge the next hand by any card he requires—thus—"Cousin Bob for Aunt Sally?" or "Uncle Tom for Riverton Toffee?" If the person challenged has the card demanded he must deliver it; if not, the play proceeds, and he asks in the same way for any one card he may require should he decline to apply to the Sibyl.

The player who gets four cards of a sort exclaims, "I've all my uncles!" or "I've all my aunts!" or "I've all my cousins!" or "I've all the tuck!" and receives a fourth of the stakes, placing his surplus card on the Sibyl's heap. When the last four are obtained the game is over, and you deal again.

WHAT I SAW IN THE FIRE.

WHILE dozing by my Christmas fire,
I'd mused;
And feeling just for forty winks
Inclined
To while the time away,
In hoodlike style I wore my best handsome,
After a manner,
To hold the draughts in play:—
But not a wink;
'Twas think, think, think!
There was a sad delusion
In this *thought intrusion*
Of past, and present, and to come;
Which mental haze
That, half awake, will daze
The brains of some.

* * * *

When all at once amidst the glowing coal
I saw strange faces—stern, fantastic, droll;
Bright fairies, gnomes, and witches of the night;
Kings, ladies, sprites, all marshalled in the light;
Neat frowning rocks, with castles on the top,
That blazed, and fumed, and spat, but did not stop
Crashing
And dashing.
Castles and people, all the funny souls,
Tumbled pell-mell amidst the burning coals,
Then strange
The change!
And the debris,
You see,
Pick itself out of all the danger.
Turning at once to something, wilder, stranger,
There was each pinching,
And increasing.
Hundreds were there: I counted every one.
Such heads and faces,
Not to mention grades!
Ah, lucky dog! I had them by the ton.
Why, what a school of art
I now might start,
With everchanging studies, new and good;
And rule
A school,
That owed its rise to—peasy-humble wood!
As I thus thought, a little voice arose—
"Oh, if you please, Sir! It is only me,
For missis thought as how you'd like your tea?"
"What? who? Ah, yes!" I was just going to doze.
"If I come," I said; then seized the poker straight,
And started all the phantoms from the grate,
Resolving just to try it merely could
Produce the fantasy again on wood.
So, here it is; but really, on the whole,
The great idea was better in the coal.

A. O—RAMSO,

DRAWN BY J. GILBERT.—SEE PAGE 631.

"EDITH," HE SAID, AND HE AGAIN STOPPED HER IN THE NARROW PATH, STANDING IMMEDIATELY BEFORE ON THE WAY—"YOU REMEMBER ALL THE CIRCUMSTANCES THAT MADE US PART?"

CHRISTMAS MUMMERS—PLAYING AT A LIVE NOSE.

THE CURATE OF GLEVERING.

A CHRISTMAS STORY.

BY WILLIAM J. STEWART.

CHAPTER I.

THE clerk of a country village is generally an important personage; and Jacob Purchas, parish clerk of Glevering, collector of rents, head steward on a small scale, referee of all the difficulties in the neighbourhood, and enquirer of the secrets of those who were lucky enough to have any to keep, was not, in his own estimation or in that of his neighbours, any exception to this rule. Had he to keep pew company, reader, through three volumes of a story instead of as few columns, it would be my duty to describe Mr. Purchas at length; but all that I need say of him now is that he was about fifty years old, of a spare frame upon which hard work had left no more flesh than the muscles absolutely needed, with a shrewd hard face on which Time must have cut its wrinkles with a very strong chisel, and a ready, witty temper. His companion—as this Christmas Eve—may be described in still fewer words. Like Jacob, he was small-sized, broad-shouldered, handsome, stood very firm upon his legs, had a keen eye to the main chance, was a determined foe to vermin, animal and human, and equally prompt with Jacob to lapse from threat into action. The main point in which he differed from his friend and master was in a less frequent use of his tongue. Jacob Purchas found it the hardest trial of his life to keep his mouth shut—his companion rarely opened his except to use his teeth. For this cause perhaps he had passed through an arduous and somewhat adventurous career more than Jacob, and his scars, and if he were somewhat less liked had made himself more feared and respected. His name was Butcher, and he was, in short, a bull terrier almost ugly enough to be thoroughbred. On a slight sign, and sprang from a fighting family, Butcher's life had been one of conflict, the traces of which he bore obediently in his well-scarred face and happy nose and jaws. Age had, however, not greatly abated his fighting powers, and especially against vermin generally, now and then in support of a momentous principle, and occasionally for half an hour's recreation when he came across a human worthy of his steel, Butcher's old spirit was unquelled.

A very perfect understanding existed between Jacob Purchas and his comrade, and perhaps Butcher was the closest confidant the clerk had in the world: it might be because he kept his secrets best. Anyhow, leaning over a stile, Jacob was giving him his mind without stint, this Christmas Eve. After the fashion of friends generally, Butcher had a great deal heard, and, with his large ball head stretched upon his paws, often closed his eyes—perhaps to meditate, more likely to slumber.

It was a mild winter as yet, and the stretches of the dead summer was scarcely bare. Upon the old oaks a remnant of brown leaves still fluttered in the evening breeze; about the village hedges leaves still fluttered in the evening breeze; about the village hedges leaves still fluttered in the evening breeze; about the village hedges the autumn leaves were loth to quit their hold; the little trout stream whose gurglings voice the frost was generally the first to seize and peg still babbled through the mill weeds merrily; the village pond, over which December sunshine for the warm suits of spring, lifted while blinking here into the remembrance of summer. In spots upon the village common the yellow ferns broke out into little tongues of flame; above the old elms of the hall avenue the rooks flustered and cawed; generally the early autumn glow, as on warm summer nights; the weathervane of the little church that generally, at such a season, pointed due north grimly, as it frowns to its place, wavered backwards and forwards west, and half hinted the compass round in five minutes in its indecision; and the sun, that generally sank behind a veil of mist, had tranquilly to death upon a cloudless southern sky.

It was not ordinary Christmas weather, that was certain, and Jacob Purchas, whose notions of order were somewhat old-fashioned, was more than half-inclined to pick a quarrel with the season as he leant over the little wooden hedge, from which he could see across the village common and through the tall elms to the grey church and the pleasant rectory hard by, a lighted window at which broke through the thickening twilight gleam like an early evening star.

"It farce to me, Butcher," said the clerk, addressing his confidant, "that there's a kind o' twist in things generally. We're getting out of order, Butcher, we may or were growin' old, my son, and I doubt that's just another word for foolish. What are you a-thinkin' at that light for, my man? You weren't! I say you were. Don't I know you? Wouldn't you be off if you heard her voice, and bury it with her hand, and give your worthless old carcase for a mat for her pretty feet? Ay, I know! And I don't wonder at it either. Blame me! If I wouldn't a' sent change places with you, Butcher, for the matter of her smile and the touch of her pretty fondlin' hand. But that's where the twist is, Butcher. What is' we got to do with pretty faces an' soft hands? Our business is to keep the vermin down, and not to meddle with higher game. And, after all, we may be making kinder fools of ourselves, too. Master Addison may be born to thinne, and pretty pink nails and soft white hands haven't much to do with worthy folk generally. But she's not idle, is she, Butcher? The angels in heaven are busy enough; but their work doesn't ruffle their plumage or cut their white robes. Lord love 'em! I don't give that to them the most my old mother, the poor old body wouldn't take a bite or sup of anything she didn't make up for her. And she was the neatest hand at a mattress ever you see, and would give that flavour to cold water-grub that all the brandy in the world couldn't equal.

"'Don't tell my sister, Jacob,' says Mister Addison to me, and I see his pale little face writhe, 'don't tell Miss Lucie, Jacob.' 'But, lord love you, Butcher, if we don't some one else will. Butcher! you brute, how can you be mute! there while the beautifullest face in our village and all the pretty a-mazin' ankles go prayin' help? And yet you're right, I dare say. Shoulders are made for their own burden, and its kinder tempting Providence to overload them. We shouldn't be wise to do it, Butcher, eh? I will minded every tearful face and sad heart's. But there must be something in the season after all, although it is so contrary, that wakes me fare that soft, I wouldn't be it known in Glevering for the world. Think of the warmest coming for to know of it, Butcher, or the tenants when we go collectin' of our rents. . . But we'll take our chance of that, and I tell you what, my lad, he's in the cool of the evening, we'll just take a kinder permiscuous stroll upto the Rectory and see Skippens upon it. Your's ready enough for that, eh? Whatever trouble there may be in the Rectory parlour, there's allers a warm fire and a fat bone in the kitchen for ye. Hollon, my man why, what's the matter now ?"

For Butcher, who had been lying with his ear to the ground, started up with a vicious growl, and every bristly muscle taut for action, as a dapper little man dressed in black, with a jaunty step, approached them.

"Good evening, my man," he said, eyeing Butcher askew; "this is Glevering Green, I believe?"

The clerk, much impressed with Butcher's manner, answered shortly and suspiciously, "Yes."

"And that is Glevering Church, and that the Rectory?"

"It wouldn't be manners to contradict you," said the clerk more shortly; "but I've half a mind——"

"There's a way across the fields, isn't there? Confound that dog of yours! he'll do me a mischief. Call the cur off, will you?"

"He ain't a cur," said Jacob, coolly. "You won't find a better bit of blood in the country."

"But I've no wish to be choked up by the quality of mine," said the man in black as quickly. "Is he dangerous?"

"To warmin—yes."

"Oh!"

"And his judgment's generally to be relied on, is Butcher's."

"That's flattering."

"Only sometimes he's wrong sometimes, and may be now. You don't look like an idle man, sir?"

"Why no, or I shouldn't be here on Christmas Eve."

"Nor an army man—nor a newspaper-writer?"

"Sneerer? I am a lawyer."

"A lawyer! I humbly ask you pardon. Butcher, you old fool, what are you thinkin' on? Wuss feret, ha! Wuss feret!" and the old dog's angry growl subsided into a low watchful mutter.

"Now, upon my soul," said the lawyer, laughing heartily, "you're quite a humorist. Why, Butcher, indeed! I like that. You're going my way, are you? I shall be proud of your company, Sir. After you and your judicious friend, if you please. Were feret, indeed! By Jove, this fellow's impertinence is stupendous!"

As Miss Lucie Addison's confidential maid, and it may almost be said companion, it was not surprising that Skippens should contract a more than liking for her mistress's pets and things. It was this reflection, indeed, of Lucie's charms, and not any personal qualities of Skippens, that Mr. Purchas allowed himself to admire in that young person. But his wrongest moments in the Rectory kitchen Jacob had always taken care as yet to qualify his attentions thus, and not to commit himself to any closer or more personal relations with her.

Of course, in the parlance of the Rectory, and Skippens, coming to her kitchen, detected him there with a little scorn.

Mr. Purchas was not altogether pleased. He did not object to a sensible correspondence, but he thought Skippens should contract no more friendships than were necessary to her employers. "It's not my fault, Mr. Purchas," she said apologetically; "you should not take me by surprise."

"Of course, Skippens," explained Mr. Purchas, "I've nothing to say against your being affected at seeing me. It's very natural, and quite proper. But in the interest of showing it wouldn't suit with Miss Lucie's approval—that's all."

"I couldn't help it," urged Skippens a little testily. "I am a stock or a stone, Mr. Purchas."

"I should think not, Skippens. Articles like you and Miss Lucie ain't made of those materials. I want to see her, Skippens"——

"Miss Lucie?"

"Yes, Miss Lucie, on important business. She—she sin't engaged with the strange gentleman?"

"No. He asked to see master private, on important business—he did. There must be a deal of mystery shrund this Christmas Eve, Mr. Purchas," said Skippens as she went upon his errand.

She came to him in the passage—Miss Lucie, with the sunny smiling face that my old friend, the good pretty face, with the honest blue eyes, and the golden hair tumbling out of its purple net that I see now, and that learnt to love so well. But for me so upon they all know and had learnt to love so well. But for me so upon they all know and had learnt to love so well. But for me so upon the white brow and the little line of wrinkles about the mouth that could now and then assume a very pitiful expression, and whose cause he, Jacob Purchas, in common with them all, knew too. Lucie Addison's birthday this Christmas Eve as happy a face as ever gave a man a merry Christmas and a happy life, generally, in this strange world of ours.

"Good evening, Jacob," she said. "You asked to see me? Is there anything more to do in the church, or do you want to wish me joy this happy Christmas time?"

"Miss Lucie," exclaimed the clerk, "Heaven knows it isn't of wishes I'd stop if there was anything I could do to give you joy and happiness."

"I thank you, Jacob. You are all so good to me." She said it with a little wonder, perhaps, for the clerk was reputed to be a hard and selfish man, and yet there was an unmistakable earnestness in his manner as well as in his words.

"I wish I was good as you have been to us, Miss. It isn't many Christmases back since you made my old mother's death a happy one. I don't wish to forget it. Even when I'm dead and gone, I shall be glad, if I did."

"I am glad to think of her at this time, Jacob," she said. "It is a season when the thought of those that we have loved and lost can be borne with as little pain as possible. Your voice shook as she spoke of her, Jacob, and now about her mouth quivered pitifully.

"I've had a hard life, Miss," said the clerk, "and been a hard man—maybe the one led to the other. His life end I've ever done for the better; it's been, perhaps, I've ever had done for me. So I'm kinder ashamed like to say what I want to. But, Miss Lucie, it trouble should come to you—and I say, you know, there's no telling—be say as I've a little money left by honest living which I've no manner of use for—none whatever. If you or Mr. Addison, you would use it for me I should be that proud and happy, look ye, Miss"——

He stopped, for just then a distant door opened, and a quiet voice was heard—"Lucie, my dear, will you come this way?"

The clerk stepped back. "Don't say anything to the master, Miss Lucie."

"No, Jacob," she said wonderingly.

"But don't forget it, or think I didn't mean it, Miss."

"I will remember it, Jacob, and gratefully."

"I do mean it, from my heart. Butcher and I would begin life again bookrat to do you a service."

"Lucie," said the quiet voice from the gloom, "will you stop this way if you please?" And Jacob Purchas, with the sensation of having enjoyed a very unfamiliar luxury, went back to Skippens.

And Lucie passed with a somewhat weary step, and light hair, thin upon the temples, advanced from the fire as Lucie entered. The Rev. Louis Addison was much older than Lucie, and their mother dying young, she had taken his eyes and her hands from the time of her birth. But he had begun life while others of his age had scarcely weaned themselves from toffey and marbles; for he had turned his face from the world's pleasures, and willingly taken upon himself its heaviest responsibilities. She had been the light and pride of his life; and, although Louis Addison was a soft and plausible man generally, that man would have found him a hard and bitter foe who designed wrong or harm to Lucie. She had been wronged—how and by whom all Glevering knew, and—to forgive his own enemies was an easy injunction, seeing that he pitied them too much to hate them; but Lucie Addison had not, never would, pardon him who had ploughed that line and cut those wrinkles on his sister's face.

She took his hand and turned a flood of sunshine to his troubled face. But his greeting was an anxious one. "Lucie," he said, "I have to trouble you with a little business, my dear. This is Mr. Twisell, my lawyer." The gentleman in black bowed. "My love, my little thought, your brother was such a busy man, and our lawyers would be quitting their firesides at such a season in his cause.

"No, Louis," she said, a little puzzled.

"And you little thought, Lucie—I never intended that you should—that I was in debt—don't trem ble, love; in debt so heavily and hopelessly that all our poor means put together would but retard—could not avert—my ruin."

"Ruin, Louis!" she cried; and then she looked with surprise at his face—pale, indeed, yet with no look or sense of shame upon it.

"And I am heartless enough to tell you this, Lucie, and to ask you to bear Mr. Twissell's only plan of rescue for me."

"Pardon me, Mr. Addison," said the gentleman in black stiffly. "You will remember that I put it as a suggestion only."

"I beg your pardon: suggestion, then; and, to help me to decide upon its acceptance or rejection. You will sit down, my dear."

"No, Louis; let me be by your side, please. If you will give me your hand—thank you, I am ready now."

"I need not remind you, Lucie, under what circumstances we came to pass our pleasant life here. You have known all along that it would end in a given time, and that each year brought that end nearer."

"Yes, Louis."

"When it was said to me by one who was then our friend, 'I purpose my nephew for the Church, and this vacant living of Glevering; if you like to fill it until he can hold it, do,' he knew, with one, that once placed here, no power could drive me out. I placed you here, that I might be faithless to him with no fear of any nearer punishment than God's."

"Yes, Louis."

"That time has come, and not, of course, without some little sorrow, we had prepared to leave the place and work we had grown to love, and live elsewhere upon my fortune. But when and what work I might find to do. Regretfully, but not unhappily, Lucie"——

"Not unhappily, Louis," she echoed, to show that she was listening to and understood him.

"Lucie," he said, in another tone, "for years I have kept this care of mine from you. I always hoped that it might not fall and crush me, as it threatens now, but for little while past I have been prepared for the worst, and Mr. Twissell does not take me by surprise when he tells me further hope is vain."

"God help us, Louis!"

"I have but one chance left me," he said, hoarsely—"that suggestion I told you of. It is, Lucie, that I should refuse to give up this living that I hold but for another, and settle it worth that other's while to buy the keeping of my given word."

"Louis!"

The lawyer's face flushed painfully. "Consider, if you please, Miss Addison," he said, "how often the discharge of a plain duty is harder than the indulgence of personal feeling. It seemed to me my duty to make this suggestion, but I forever how repugnant it must be to your brother and yourself; and I think but for the special circumstances of this case I should have failed in this duty and never made it."

"And they are?" she asked.

"That—your pardon, Mr. Addison, I must speak—that your brother's creditor and the patron of this living are one and the same, and that his treatment in pressing his claim is more cruel, ungenerous, and unjust than my eyes will believe possible, and that is saying much. I am not overstating these circumstances, Sir?"

"No," said Louis quietly. "Now, Lucie, for your decision?"

She gave a here, anxious look at her brother. She was but a woman, you know, and ruin is so painful, and pain so hard to bear; and I think, had she seen symptoms of wavering in his face, her resolution might have yielded. But she saw none. "Louis," she said, "why do you ask me for my mind when yours is already fixed?"

"Because, Lucie, I cannot bear all the pain alone."

"I am quite ready to take mine, dear Louis, doing wrong we must be unhappy, come what may; acting right we may be happy, who can say we shall?"

"You hear her, Mr. Twissell? It is our only answer."

"I accept it unwillingly, Mr. Addison," he said, "but conclusively."

"If anything could be done," said Louis hoarsely, "anything urged to save my sister pain"——

"That cannot be, Louis," she interposed. "I shall know none save half pains."

The lawyer rose to go. "I have done my duty. I should be glad if you will allow me to shake your hand, Mrs. Miss Addison, if you can let me be your friend, after your experience of me as your brother's lawyer, I may be useful to you yet. It will be quite a forum, I do assure you, if you will let me try. Thank you; good night; I can find my way alone."

He was groping his way along the dark passage when he stumbled upon Jacob Purchas and Butcher. The clerk would fain have learnt his errand and its issue, but the gentleman in black was too much for Jacob this time. He evaded his inquiries, and gave him the cold shoulder sixly. "I am most proud, I am sure, to have made your acquaintance, Mr. ——. I have not been favoured with your name. It is of no consequence now. And your discriminating friend, Mr. ——, eh? A singularly happy name, no doubt. Well you call him off again? Thank you. There is something embarrassing in his close attentions. Good-by! This way, I think? A sweet Christmas, Mr. ——. Butcher, eh? If I lived in this neighbourhood, my good friend, that murderous brute should have a meal of something that should check his appetite for strangers' calves, I take it."

Jacob Purchas could not force himself away from the neighbourhood of the Rectory, although between the trees he could see the village inn alight for the night, and could picture the jovial Christmas party wondering that the seat of their acknowledged referee and oracle should be empty on this of all nights in the year. They would have wondered for name—his village friends—could they have seen Jacob's anxious face and known how his heart grieved for the troubles of Louis Addison and his sister. He really sorrowed for them. The offer of his hard-earned hoard had been made in other matters; the fear that they would shrink unselfishly from accepting it troubled him far more than the thought that his generosity would brave him pennilees. It taken a great deal to make an unselfish impression upon a mind like that of Jacob Purchas; but such an impression once made is long retained; and no more unselfish heart sorrowed for the trials of another than the hard, close clerk's of Glevering did that Christmas Eve.

With some vague thought that they might yet accept his proffered help he hung about the Rectory grounds until the night closed in darkly and the damp grass stiffened under his feet. It was so cold now that he was obliged to keep himself in motion, or his blood would have stiffened too, but he always came back at intervals to a break in the shrubs whence he could see the lighted window of

the room in which the poor brother and sister sat. Upon one of these occasions the clerk was startled to see the shadow of a man precede him. So, too, was Butcher, who gave a low, ominous growl.

Silencing the dog with a motion of his hand, and more excited than the clerk ever remembered to have felt in his life, Sands stole round by a back path to a spot where he might face this suspicious stranger. It was too dark to see him then with any distinctness, but he had made out a tall manly form, in a rough travelling dress, with a dark-bearded face turned intently to the lighted window; when Butcher, who had been growing more and more restless, broke from his hand with a sudden bound and a husk more of glad surprise than anger.

The figure turned to fly, but it was across the clerk's path, and Jacob's blood was up, and he closed with it, calling Butcher to his aid. He needed help at least sort. For a moment taken by surprise, his foe recled under the clerk's sudden onslaught, but in the next he had seized and held Jacob by the throat in a grip so strong and fierce that the clerk—with a bitter thought that Butcher had failed him in his need, for the dog was leaping at the stranger's hand with a joyful whine—felt breath and senses going, when suddenly the sword held relaxed, and a startled exclamation broke from his adversary, followed by a loud hearty laugh.

"Why Jacob, man," he cried, "is this you? This is a pretty Christmas welcome to give an old friend."

The clerk shook himself a little, and rubbed away a film that had gathered before his eyes. "Lord love me!" he said, "it's Mister Charles. I haven't hurt you, Sir?"

"Not much," he said, laughing again; "but you"——

"Blame me? I ask the clerk, confusedly. "We done two forfeits thirty weeks, Butcher and I. He mustn't recle on an' athout a lawyer, and I ha' struck a friend."

"Well for you it was a friend, Jacob. You should be more careful, man. Another moment and you wouldn't have had much breath left for to-morrow's Amens."

"You are a tough 'un, Mister Charles," said the clerk, grimly. "Who'd ha' come home, Sir?"

"Tushy—a few bones ago. Only long enough back to hurry here."

"They they don't look for you, Mister Charles?"

"No," he said; "how small I will I should be welcome?"

"They're not altogether stone," said Jacob, slowly; "there's company in them, Mister Charles."

"Ah!"

"Uninvited, Mister Charles, and unwelcome, I take it. Which his name is Cuss, Sir."

He gave a great start. "She; they are not ill," he said, in a thick voice. "Jacob, there's no one;" he could not speak the ghastly word. "How strange you look—how short you are! Has this been my doing? Are they sufferers for my fault?"

"There's nothing happened but can be mended," said the clerk, shortly. "Mister Charles, have you come back rich from furrin parts?"

"For my wants, yes, Jacob."

"Hurrah!" he broke out then. "Lord love me but this is welcome Christmas news! I hope I didn't hurt you, Mister Charles. I ask your pardon humbly. This way, Sir; we'd best take Skippent advice upon it first, I think. You don't mind my having tried to throttle you? I never should but forgiven myself if I'd succeeded, nevir. Hush! they'd better not know you're here yet, Mister Charles."

CHAPTER II.

After the lawyer's departure Louis Addison and his sister still stood as he had left them, his hand clasped tight in both of hers, her white face turned in mute despair to his. Poor Lucie! "Louis," she said, sick at heart, and with this hope so sometimes born in the first stunning sensation of misfortune, that we have fancied it all, that it cannot be real, "is—is this all a dream?"

"As life is, my love, no more," he said.

"It is so—so sudden. If I had had any warning given me!"

"There I have been wrong," he said, "but I have no little courage, Lucie."

"No, no, 'tis I who am so weak. But I am better now. You will let me know the worst, Louis? You will keep no sorrow secret from me?"

"You do know the worst already, Lucie," he said.

"But I must be your confidante altogether, Louis," she urged. "I may hope to be of some use to you then."

"You shall be," he said cheerfully, "but not now. You have had sorrow enough for one sun, Lucie."

But she pressed him once. "Take pity upon me, Louis," she said; "I can bear anything better than this dreadful uncertainty."

"Let me be a judge of that, Lucie," he said kindly, and he would have put the subject by. But she rose and faced him. "Louis, you must not trifle with me. I will do my best to be good and brave and useful to you. I can be, I think. Still, I am but a woman, and I may fail. Louis, what is this mystery you keep from me? How is it that you are in debt, you whose habits are so frugal and wants so few?"

He laughed, but not naturally. "My dear," he said, "see how little you wonder know of the world. Are notes but speculative bargains? Does misfortune always come of error?"

"Louis, you do not answer me."

He guided by me, Lucie," he was beginning to urge again when she interrupted him. "I cannot, I dare not, I would not, answer for my mind if I tried. I know too much already, Louis, had not that—that name been dropped last night before you your wish. But now I must know how and by whose fault it comes that—that Mr. Trevor has you in his power."

"Nay," he said, trying to smile, "is he not as much in mine? You heard what Twisell said."

"Louis," she said then, quitting her hold of his hand and falling back from him, "you are not the man you treat me as a child, and yet you lay upon me a burden which few women would be strong enough to bear."

It was the first time that she had used this tone and manner to him, and his face flushed painfully. "You force me, then, to speak, Lucie," he said. "If it must be so you will give me all the help you can, so that of the pain that you will bring upon yourself my share may seem as small as possible."

"Thank you, Louis; I will do all you wish."

"You compel me, Lucie, to speak of a time and of people the recollection of which irritates me, and must needs be humiliating to you?"

Her face flushed crimson, but her voice was calm. "Yes, Louis."

"I want to recall—without mentioning his name, so hard should I find it to do so calmly—one who—who"——

"I will spare you the pain, Louis," she said calmly. "You mean Charles Trevor, who was so false—to you in friendship, and in love to me."

He looked up in amaze at her calm face as she even racked and white with passion. "We were as brothers," he continued presently in a hesitating voice. "I had no doubt or suspicion of him. Had he asked me to give my life into his keeping I would have done so without a question. He was rash, headstrong, reckless, this man, and wanted money often. At some such time he came to me to help him to borrow it. I could only lend him my name, but that was useful, and I gave it. You are following me, Lucie?"

"Yes, Louis."

"I forgot it so soon as it was done. When he fell, as God in his just vengeance decreed that he should fall, I had no thought that his ruin would prove mine. But so it was. Until then I had given with him changed hands often, and came at last to Mr. Trevor."

"His uncle, Louis, and his bitter foe!"

"Justly of his own schooling. You know, Lucie, how little rath and pity I could expect from Mr. Trevor. That little I received; no more. He pressed me; then withdrew his grasp; tightened it again; again relaxed it. It seemed to me that he followed no rule, but was harsh or merciful as mere caprice dictated. But latterly his purpose has been plain enough and our rain certain."

Trembling violently, Lucie looked at the pale thin face hardening under this grievous trial into an expression of fierce hatred. "Louis," she said, "this trouble is of my bringing. I have always been a burden and a sorrow to you."

"My poor Lucie," he cried in a broken voice, "my life's joy always!"

"Thank you," she said, clinging to him; "and it—it is hard to forgive, but you will"——

"Not him," he cried fiercely. "I never will forgive that man."

"Oh, Louis! at this season?—hush!"

But the bitterness had long festered in his heart rebellious heart. But my wrong is grievous, my resentment just. And, living or dead, in his absence as if he stood to hear me, I charge my shame and ruin to his folly and to his"——he paused——"sin. Ah!" He stopped then with the fierce word from suddenly upon his white lips, his eyes fixed upon the doorway.

For there, as if called up by his bitter words, stood the man whom he had been denouncing—Charles Trevor, his old companion, brother, friend. Taking Lucie's trembling figure to his arms, with a motion of one hand before her eyes as if to keep from view some shameful or contagious sight, and with the other waving his hand, Louis Addison, erect and stern, confronted him.

"Do not mistake me, Addison," said a thick voice; "I come here chiefly on your account—inputing none"——

"For some cause at all is offence enough."

"I beg your pardon. I did not care to intrud my business to strange ears, but I have that and bad luke for you, Addison. I am told you have been hardly treated, and for my fault. This, at least, I may remedy."

"We can accept no obligation at your hands."

"I offer none; I seek to pay a simple debt."

"And then you leave us?"

"Yes, Louis, for ever."

As he spoke he stole one look at the figure upon Louis Addison's breast. But the face, if pale, was very grave and stern; and, could he have read aright the heart and hidden purpose of his foe, he might have been less confident of success.

Opening a letter, he read the letter in silence, and, sitting down, wrote a few lines. He rose then and went to the door. There he turned back to get another look at the pretty pale face that had lain on his bosom once, and was so fond and distant now. And, then, without a word of parting, he turned away.

When the door closed upon him, Lucie Addison raised the poor linguister face to her brother's. She would be guided by him always, she had sworn to herself; would know no will but his. "You are saved, Louis; I am so happy," she said. But there was something in the poor face so unlike happiness that Louis Addison was keenly conscious he could not be saved. "Heard it, "Happy, my poor darling! God be merciful to you!" he cried.

Charles Trevor forced his way over the frozen grass, Jacob Purchas breathless by his side.

"Mister Charles," the clerk managed to say, "will you give me a word?"

"Speak, man!" he said fiercely; "we are out of hearing now."

"Mister Charles—you—you are not hearing Glevering for good?"

"I am not," he said question, Jacob," he said, with a bitter laugh; "but I do not see why."

"For ever! Oh! Mister Charles, there's been some bad management here. Why didn't you leave it to Skippens? You were alwise so much set upon revenge"

"She is not heartless," he was saying, unheeding Jacob's concern; "and yet how cold and feelingless she looked! It must be true what they told me—that she has forgotten me. Another has my place. Fool! What have I done that I should doubt it? He was starting away again at a great pace, when the clerk laid a trembling hand upon his arm.

"Mister Charles," he said, "Skippens could clear that matter up. I take it. 'Skippens,' says I to her not half an hour back, when we was a-speaking together—'Skippens, in the kitchen, I'll answer for Miss Lucie's steadfastness.' But Skippens, she shakes her head. 'Skippens,' says I then, 'shakin' of the head ain't an ungraceful action when the head's a pretty one, but it don't make no kind of logic in it whatever.' 'Mr. Purchas,' says she, 'is there any kind o' logic in the fack of my seeing Miss Lucie continually taking out a little golden locket with a purple stone and lookin' at it lovingly; an' sometimes a-putting it down afore her where she may see it when she kneels to pray?'"

"A golden locket with a purple jewel! My own last gift!" he broke in.

"Eh! Why, that's strange, too, Mister Charles," cried the clerk, in another tone. "Stay one moment. Harkee! Folks allus said you'd gone to the bad, and I believe 'un now, Mister Charles."

"What do you mean?"

"Mean! Why, I'm afraid you belong to a class about whom our parson preached a sermon only last Sunday. 'The wicked,' Master Charles, 'who have fear where no fear is.'"

He broke away from him then, re-entered the house, and found Louis and his sister as he had left them. The brother looked up angrily at his entrance. "Addison," he said, "you must let me speak; I must justify myself."

"There is no need," he said; "we bring no charge against you."

"But you listen to me? I will not be long. Louis, I loved your sister, Heaven knows how dearly. So dearly do I love her now."

"Mr. Trevor," said a low, calm voice, "will you leave us if you please? In all my brother says he speaks for me, and as my heart would have him——"

"I must disobey even you, Lucie," he cried. "Hear me! I will be brief. When I found that my uncle, hard and unforgiving as he is rich and powerful, had you in his power, Louis, I went to him to take your burden on myself. But I found that I could only do so by paying what you were liable for. And I had no money. He offered then, if I would marry as he pleased, to pardon and cancel me, and threatened, if I refused, to ruin me and cheat Lucie. He was the man to keep his word, I knew that of old. Then I asked him, as I could not do his will, what if I refunded from having mine and left England for a while? He would make me no promise, but I saw that my suggestion pleased him, and I promised to leave you at once, even without an explanation. My purpose was to work—you may scoff smile at the word—and save the sum I needed to free you and myself. It was hard and bitter labour. Over and again the old man sent to me and offered pardon and wealth on the one condition that would leave me poor indeed. At last success came, and my hope was realized. But his messenger was watching me, and he heard of my intended return almost as soon as I had planned it, and hastened to crush you before help came. How nearly he succeeded you know."

He stopped to gain breath and see the effect of his words upon them Then he continued. "A few words more, and I leave my fate in your hands. This very morning the same offer was made me on the same condition. And again, as before, I refuse. Still I hold to my decision, and, free if penniless again, I stay with you or start to commence the world once more alone. Lucie! Lucie! have I said all that you will hear, or may I still speak on?"

"Your Reverence," said Jacob Purchas, some while later, when Charles, having told them of the clerk's part in their present happiness, they sent for him to dinner, "Mr. Skippens—for a true woman always cries at the thought of a wedding, even her own—robbed lonely in the passage, "Skippens is a little effected, naturally; and, it being her pride as well as duty to take care of you, she has gone upside, which she can't do well in this case without help. I've offered mine, which, being accepted, I'll be obliged if you'll 'call' as next Sunday. And, if there's no answer of impediment in the way, we'd take it kind if we might be married on the same day with Mister Charles and Miss Lucie, Sir."

All this happened some few Christmas Eves back. But no such change has taken place in Glevering as then seemed imminent. For, after Lucie's marriage, Trevor's uncle, like the uncles of stories and plays in general—and what but an old-fashioned story would you care for in this season, I wonder?—cheered and took such a fondness for Lucie that, although he carried out his threat of cutting Charles off with a shilling, he left all his wealth to her. And then they built a great house in Glevering, to near the factory that the children have only to cross the road by the lodge, where Mr. and Mrs. Purchas live, to be in Uncle Louis's arms. And there, of course, they are all very happy to this day.

THE SHADOW DANCE.

ALL constitutions are not sufficiently robust for out-door amusements, and Christmas is too blud-hearted a genius not to care for these, and to provide for the tender plants of his species requisite shelter of the drawing-room. Paterfamilias shall not call on him in vain when he needs appropriate recreations for the little ones who, at festive seasons, have vague longings for strange enjoyments, but forthwith shall be supplied with the means of gratifying the infant appetite for wonder. Magic lantems are at hand, and many another apparatus, profuse of grotesque figures that appear and vanish, causing intense amazement and provoking obstreperous mirth. But more convenient than most of these is the Shadow Puppet Show, such as Mr. K. R. Browne has represented in his picture, where by a simple arrangement on the illuminated calico the shadow of the cark figure on the cast and made to perform all manner of terpsichorean eccentricities. Here my you see Punch and Judy, modified in shape and fashioned into diagram, dance the most fantastic of dances, both curiously and furiously—dance, in a word, "like mad"—tossing about legs and arms in fashion preternatural, for surely no man or woman of real flesh and blood ever made so queer a use of either Look at them! They put the goblin Puck to shame; and Robin Goodfellow at last owns himself outdone.

And yet they are but shadows of pasteboard, impaled on wires, and moved briskly about by the hand of mortal. Effect and cause, how different! Some sage philosopher might lecture on this, and assign reason on reason for what he would designate, by a long word, the "heterogeneity." We must leave the children to puzzle themselves with the spelling and the pronunciation, which last they will have to sputter forth as best they can. Their elders, however, may find here moralise on the puppet show, and from the depth of a long and true if not sad, experience, sigh forth the melancholy conviction that "Life also is but a shadow." But this will not depress us long, as Milton said of the nightingale's song that it was both "musical" and "melancholy," so we may say of this conviction, that there is in it a certain music of delight. For the shadow is no effect without a cause, so is there no shadow without a substance. We shall do well, therefore, to refer the shadow to its source, and to look beyond this merely temporal life to the life eternal.

Nor are these thoughts too serious for a religious festival. Thoroughgrave milestoan as "vain shows" what older men have regarded as "solemn mockeries." The inventors of dramatic representation referred to be noted by puppets or men, used them as the means of instructing the people in divine mysteries, by mythical symbolisms and in historical exemplars. The art of dramatic writing has degenerated, and sought exclusively to amuse; has, to use a favourite phrase of the day, become "sensational," and has for its object simply to excite a transient interest instead of producing a permanent impression. It is not well that Paterfamilias should intend nothing higher than this by the Shadows which he exhibits. They should be to him the subjects of much discoursing, and he should avail himself of the opportunity "to point the moral and adorn the tale," by the reflections he will be able to associate with the representations in which his puppets have been players.

Between such simple representations and the works of dramatic genius, set off with the gorgeous scenery and appliances of the theatre, there is a wide and scarcely measurable interval. Yet Shakespeare recognised a likeness in both. When the rude artisans of Athens, "who had never laboured in their minds before," presented their famous Interlude before Theseus and his Hippolita, the magnanimous Prince remarked, "The best in this kind are but shadows, and the worst are no worse, if imagination amend them." The drawing-room entertainment provided by Paterfamilias may be humble in character, but in this particular it is equal to the proudest work of comic or tragic art. It is, like the latter, a "shadow?" and, more honest than the latter is sometimes, it claims to be no more.

CHARADES.

No. 1.

In the great sea and you unite, you'll show
My First. And if more of me you would know,
Proceed to Cumberland, and two-thirds take
Perforce, my Second and my Third to make;
And, though necessity is my making, many
A time my Whole is purchased for a penny.

No. 2.

Without my First, thy bounteous hand
Would lose a charm, dear cousin Carry;
Without my Second on your hand
The sun you'd never care to marry.
And were my First and Whole untied,
O, Carry! you would be delighted.

No. 3.

For, far away beyond the clouds
My First is always seen,
Save when the sun-rays hang their shrouds
The earth and sky between.
And he who heeds the murky moor
My Second hears with joy,
When skipping with the the thunder's roar
To tell his shelter's nigh.
My Whole awaits the city's stress
For lonely woodland dells,
And makes the perfumed air more sweet
That rings its fairy bells.

No. 4.

If I cut one-third of my connexion, and put the other two-thirds to join the act, what State in America do I name?

No. 5.

A timid toke away of all I possess,
And no one who heard me would think I was less;
Then take away half I have left from my store,
And my word would still pass for the same as before;
Behead, each my state (and I think it a hard 'un),
Till I get in hot water I am not worth a farden.

No. 6.—REBUS.

I am composed of fourteen letters: my 4, 11, 5, is what Cæsar was once; my 10, 7, 9, 8, is emancipable in good cases; my 5, 7, 2, is equal to two negatives; my 3, 9, 2, 14, is a capital dish; 5, 11, 12, is just like you: my 14, 1, 5, can only be well made when the sun shines; my 13, 11, 5, is an ancient Antiphates; and my 5, 6, 1, is the name of a poet's daughter. My 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, is the name of a town in England mentioned in Scott's "Ivanhoe."

No. 7.

I am a favourite Irish writer; I am composed of fifteen letters: my 16, 4, 5, is a bird mentioned in the New Testament; my 2, 1, 4, 5, is a feeling known to all; my 5, 5, 10, is a favourite colour with the ladies; my 13, 8, 9, 7, 14, is the session of spring flowers; my 3, 5, 7, 15, 14, is peculiar to the daytime; my 7, 6, 12, is found in the Queen's crown; my 12, 13, 6, 14, 15, is pleasantness; my 15, 8, 6, 11, 5, is to be said in London cabs; and my 3, 6, 5, is very expressive of anger.

No. 8.

If three Roman letters you place in a row,
What great Roman's name will those three letters show?

No. 9.

An Emperor's prison take; or, if you please,
What many a rustic covets with his peas,
To form my First. My Second part to view,
Take but the letter Ada wrote to you.
My First and Second in one Whole combined
Will name a grand creation of the mind.

No. 10.

When on my First my Second has been laid,
My First hath oft a bloody pillow made;
And, if my Whole you cannot puzzle out,
You represent it, have the slightest doubt.

No. 11.

Cut off my head, the place of woe you'll see.
Cut off my tail, a woman I shall be.
Cut off both head and tails, and I'm a man.
So now declare what am I if you can.
If you would know the region whence I come,
Within these ear I'll murmur of my home.

No. 12.

Around my First have loving arms entwined
When joy and sorrow have permeation combined,
And cruel hands have sought it when at strife,
And through its portal reached the House of Life.
My Second's proud and humble, coarse and fine,
Goes with a lady in state, to Court or else,
Or with John Thomas is content to rest,
Or go with Dolly in her Sunday best;
Will keep it sway to Hedge the gardener's host,
Or trim the jacket of the bulkiest brute.
Unite my First and Second, and you'll find
My Whole was solely for my First designed.

No. 13.

Jack Sprat fell in the sea one winter's day,
And no one could see he suffered who were my First,
And being homeless did my Second prey.
Although of dwelling places 'tis the worst,
My Whole is a poet's unique,
Whose noble mare could sometimes stoop to shame.

No. 14.

In murky cave and ruined hovel,
Where toothless hags are wont to grovel,
With witch-made fire and mouthless bellows,
My First is made, as legends tell us,
My Second loves with rapid motion
To wander through the deep green ocean,
'Tis caught by piscatorial sinner,
It finds both church and lord a dinner.
My Whole hath oftimes raised the passion
Of many a sickly-eping of fashion.

No. 15.

Without my First my Whole lacks half its zest,
Although in hard and sooty at the best;
But Second has wise brethren, now dispute
They're understanding and their worth to boot;
My Whole are gladly welcomed at the board
Of toiling serf and his high-pampered lord.

No. 16.

My hair, that's now my First,
Could twenty years ago
(Ere love my senses curse)
My Second with the crow.
He called me then "his duck,"
But now I only hear
Him ask my First and Second join'd
When other ducks are near.

No. 17.

My First is light as gossamer
And on the moonbeam rides:
My Second is the heaviest weight
That day measure provides.
Put light and heavy into one,
And you and Mrs. Brown
May take the air with "one" or "pair"
In country or in town.

No. 18.

Down Regent-street one sunny afternoon
Strolled Captain Tawyaw, dressed quite comme il faut,
His face as hairy as the young baboon
You may have seen outside a country show.
'Twas lucky Tawyaw had a rich relation
Who at a pinch could help the "ins" and "outs,"
And so T. passed his first examination.
Although his "coach" had used alarming doubts
Yet, did you see the Captain on parade,
You'd fancy, from his business and bold appearance,
He fell himself a new ready-made,
Who'd make of England's foes some day a clearance;
And I've no doubt that Tawyaw nation's right,
For English dandies when they're wanted fight.
Well, on he strolled with dull, composed face,
Outstaring all he met who chose to stare;
The tassel aside, but kept his lounging pace,
As though lord paramount of all things there.
It chanced a dustman, who had "done his round,"
And taken what he called his "drop of beer"
(Four quarts imperial measure, I'll be bound),
And felt himself compulsion for a peer:
His fustbil cocked a peek his eyes to shade.
His hands into his fcickers deep he thrust, man,
Thought "with the swells he'd 'ave a promenade.
And prove himself a freeborn British dustman."
Onward he went, as straight as Mons would let him,
With every step increasing his momentum,
And vow to those unhappy wives who met him!
Into the gutter, like a shot, he sent 'em.
Now, Captain Tawyaw, having closed one eye,
And with his eyeglass quite filled up the other,
And opening all that mammy had by her,
Riding on horseback with her gallant brother,
Saw not the danger coming at his back;
But, first he felt a thump between his shoulders,
Between his shoulders came our dustman—whack!
And on the dusty pavement laid him flat!
My First and Second then at once secured
To Captain Tawyaw, who, so bruised and buttered,
Could only stammer out a single word,
But in that One my Whole at once he uttered.

A PEARL AMONG WOMEN.

A SKETCH FOR CHRISTMAS.

BY HENRY LESLIE.

It was one of the old Earls of Macclesfield who had given his name to the street in which the Pearl I speak of dwelt. Barbo lived, Dryden died, in it. No statesman ever paced that I know of inside there now. In most of the houses the lofty dining-rooms are converted into warehouses, while the upper floors are sublet to numerous tenants; some battling to the regions of competence; but with the majority, I fear, incessant labour is the only barrier against want. Exiles from many lands wander on its broad pavement, converse in knots of two or three and then furtively slide into one of the numerous restaurants which at rather short intervals dot Gerrard-street, Soho.

Christmas Eve that year came in clear, sharp, and frosty. The air was entirely lucid. The clock of the neighbouring church struck with a distinct, ringing stroke which might have been heard for miles. A busy, happy multitude thronged Newport Market, gazing with fastidious craving eyes on the piles of eatables and preserved peel in the grocers', the ruddy meat in the butchers', the cakes and large cheeses in the butterman's, and the blaze of gas which illuminated all. It was a crowd of merry persons. The glow of approaching Christmas shone upon them, falling on the dimples of the children, princed in the singers of the women, breaking gaol in impetuous laughter from the men. The festive spirit of the season surrounded them as with an incense, stronger than the most powerful of old-time loudnesses, in forgetfulness of bygone wrong; prompting them to drown, on his gladsome festival, the troubles or animosities of the past, and bidding them walk, with clear hearts and open hands, the trials and the triumphs of the advancing year.

Assuming cheerfulness is the stent to be a constitutional monarch in the model apartments of Sidney Irving: in any way imperial and despotic. Not only my heroine, engaged in culinary operations, and Mr. White, who had devoted himself to her assistance, but the very furniture seemed to be despotic of its own will. Too hard, grimy, family pictures on the walls, the square fire-grate, the sharply-defined cornices, the regular chairs, all seemed to relax the stern outlines of their insensate natures and become jovial—almost jolly.

"Sir the fire, Mr. White, if you please," said Sillery, in a voice which appeared to bubble with happy emotion; "Don't fear for the cook! Make a good blaze, for it's Christmas—hey, dear Christmas!"

"Christmas!" replied Mr. White, relinquishing the brandish upon it he was thrusting, and wiping his hands before he touched the coalscuttle; "Well, needful to the hallanwork, I spose it's the 25th. But Christmas! I minds one old man. Ah! there was Christmases—there was!"

"It wears the same face of joy now as then—to me as to all the world. I'm as happy now in its presence as when a child, in old Irving, I welcomed it on my father's knee."

"Ah! Miss Sillery," answered Mr. White, sir, wiping his hands once more, he again returned to his spoons, "you're one of a thousand—of a million—for the matter o' that."

"Well," exclaimed Sillery, laughing and lifting the lid of a stewpan simmering on the fire, "you talk, you men, but you haven't half the heart of the women. When Fortune gives us a knockdown blow what's the use of sighing, dying, and that sort of thing? Up and hit her again—that's my motto."

"Well, you've done that, Miss Sillery. You've given her a facer. Ha, ha! A facer she has, surely."

This remark of Mr. White had hardly been uttered before a bell in the inner room was rung and the key slowly turned in the lock.

"Mr. White," whispered Sillery, ceasing her culinary studies; "Mr. White, it's grandfather!"

Mr. White with a solemn wink placed himself at the half-opened door.

"Sillery!" murmured a voice, so slowly, so feebly. "Sillery!" it repeated, and waited.

"Mr. White is here," remarked that individual, raising his voice to a loud though respectful tone.

"Ah! you! Yes, White; just—but Sillery—where is Miss Sillery?" Mr. White, turning round, looked at her. She shook her head. Mr. White, without a moment's hesitation, then plunged at once into the following gigantic fib:—

"She's down stairs in the pantry, Sir, looking over the plate. It's—It's Christmas you know, Sir," he added.

"Christmas! Ah, yes! My birthday's near away." Mr. Lawrence paused. "Very old and blind, White; very old and blind!"

"But mind clear, Sir, and heart sound. All very right and comfortable about there, Sir."

The old man was silent. His thoughts were away somewhere, brooding over some particular thing, lingering over some cherished possession.

"Glad bless my grandchild, Sillery Irving. Collar same here as at the hall, White?"

"Not so much as cobweb o' difference, Sir."

"Then glad, White, take my wine from No. 5. I had that part myself the very day Sillery was born. That's what I wanted Sillery for, No. 5 bin, White, No. 5."

So saying, the old man closed the door and once more turned the key.

"What do ye say to that Miss Sillery, No. 5 bin?"

"As injunction, Mr. White, which, being transmitted, means that we must get it from Mr. Hardy, the wine-merchant's, instead of patronising our old friend at the Coach and Horses."

With that Sillery began with great care to lay the tea things on the table by the window, while Mr. White as cautiously arranged the dinner equipage on a smaller one by the fire.

Years ago Sillery Irving was not the earnest, struggling head of the modest household, but the cherished hope of an old country family. Then a carriage conveyed her along the grand old slopes, through the thick plantations of lofty pines and avenues of stately oaks which formed her ancestral park—now an asphalte, in the heavy rain, is her only protection along the hard, stony streets; then eager anticipation fed every whim—now most she avoid her own sorrow, create her own happiness; then Sillery was cheerful, independent, and a pensioned heiress—now, still cheerful, still independent, she is very, very poor.

A craving for excitement, united with a desire to increase the fortunes of his family, had induced the father of Sillery to commence the construction of embankments, canals, and shafts, for the purpose of reclaiming some thousands of paternal acres, which the gradual approach of the sea very distant sea had converted into a swamp. The speculator had, however, overstrained his resources, and his capital was exhausted before the works were complete. They had a wondrous greed for money, so trees were felled; still money, so mortgages were executed; but money, money—always money—still not merely the prosperity but the existence of the family became dependent on success.

But success never came, for at the moment when hopes were strongest and debts the heaviest, the vexed and baffled water discovered some breach in the careful works, and gradually but surely resumed its way.

Ruin was rife everywhere. It stepped in, clothed in the sheepskin raiment of foreclosed mortgages. It published itself in auction placards. The host who had invited it succumbed as to a conqueror, and gave his life for token of his defeat.

But this ruin was not everywhere victorious. It met a foe by which it was foiled, and vanquished; the orphaned Sillery became a valiant and thinking woman. Offers of help came, indeed, but came so burdened with regrets for a father's rashness, and allusions to her own dependence, that the brave girl noticed but to decline them. So she brought away her grandfather—old, blind, and ignorant of the wreck: her sister, too young to comprehend the extent of the calamities—brought them to a modest lodging in the great city, and, like a Peri as she was, threw down her gage to the world, and did battle for herself.

"I suppose," insinuated Mr. White, watching Sillery while he was polishing the forks with a torn piece of clean washleather, "I suppose Lady Dick will come?"

"Oh! sure to come, Mr. White," responded Sillery, with just a delicate flavour of signess in her tone. "Why, what a face! what makes you turn round to look up that way?" continued Sillery, with pretended innocence.

"Oh, nothing! It's the weather, I suppose," responded Mr. White.

With Mr. White the weather was responsible for every evil. It was his solemn and declared belief that no ill ever beset our frail humanity but which in some degree was directly or indirectly traceable to the weather.

"My aunt, Lady Dick"—

"Aunt; your poor mother's fifth cousin."

"Well! you know we always call her aunt, and she always calls me niece. I fear she is not a very great favourite of yours, Mr. White?"

"A favourite of mine? I should rayther think not," retorted Mr. White, dropping a spoon, "nor of nobody she's neither," he added, spilling the salt.

"Why, Mr. White," exclaimed Sillery, in affected surprise, "I do think you're in a bad temper."

"What! me, Miss!" retorted White, turning round with astonishment on his accuser.

A glance at Mr. White as he was carefully dinging smoky pinches of salt over his shoulder to avert disaster was sufficient to repel the insinuation. His features were rather prominent than handsome—his figure bulging even to corpulence. Yet, looking at him as he stood in his worn drab breeches, in his waistcoat of fading red, and with his coarse, clean shirt rolled over his plump arm, there was such a presence of good feeling and true heart that a king would have been disbelieved on his oath had he declared that Mr. White had ever nourished an evil thought or wrought an unhandsome deed.

"I thought not he astonished," persevered the wicked Sillery, "if, when you went to fetch my aunt, she were to give you a very handsome Christmas-box."

"A Christmas-box! I thinks I'm a sailing her! Ha! ha! I likes that! Why, I never heard o' her giving away nothing, barring once, That was when she dropped a fourpenny in the church plate. Then I've my private opinion, as she must a nibbled a sixpence out as she popped the other in."

"But can it coming, Mr. White, and the sooner the better. The water's boiling—singing quite a carol, I declare. Jenny will be here with the muffins directly; then she shall fetch the wine for grandfather; by that time you will have brought Lady Dick; and then all of us, every one, will set in for a jolly, happy evening."

"Jolly! happy!" muttered Mr. White; "what, with the old 'conn?' As well be his rations under the very plausible excitement of smoking a pipe in the kitchen when the bailiffs is in in the parlours."

"What is the time, Mr. White?"

"A quarter past five it is, Miss Sillery," replied Mr. White opening the window to look at the church clock; "and Miss Jenny putting her face to the window to look at the church clock," he continued, closing the window afterwards "while she's taking her things off I'll drop over to my shop, and put on a clean neckkie."

"Oh dear me, Sillery!" cried Jenny, bursting into the room, and dropping into a chair, "I am so tired, and dear me, so vexed! There's the muffins, Sillery," she proceeded, half crying.

"Weasel! Miss Jenny," said Mr. White, unrolling and buttoning his shirt sleeves; "what has vexed you, Miss Jenny?"

"It's my cloak, Mr. White. Wearing a summer silk—all stained such weather as this, too, and Miss Wilson looking at it, and making remarks. Oh dear me!"

"But you know, Jenny," exclaimed Sillery, "you know you have my cheek chair beneath."

"If I ad a sister," expostulated Mr. White, taking his coat from a peg and slowly putting it on, "if I ad a sister or a wife, which, being a bachelor, of course, I have'n; but if I ad anybody to care for me and to work for me, as Miss Sillery does for you, I don't think"——

The child, for she was barely twelve, seemed about to interrupt.

"At night," proceeded Mr. White in a lower tone, "when I am going over the bills of reasons of my yesterd shop, just to see, you know, how much as been lost since the week afore as last, I sees this windy thrust into a fanterseem, by your sister, Miss Jenny, being the shadder behind. I knows what that shadder's up to. That it's drorin' or coloring photygraffs, and doing many other things which we couldn't do, not if we was to bow they was done. But when I sees that shadder a-working for your grandfather and for you, and then for you to be complaining of your cloak being a bit thin, I like you so well that I wish you'd never a said it—that's all." Mr. White ceased after this very long speech by spreading the door, and slowly and deliberately descending the stairs.

"A hawful, disagreeable thing!" sighed Jenny.

"Yes," replied Sillery, "and Mr. White. Think, Jenny, he leaves the little shop he took to be near us when misfortune overwhelmed us all, to wait upon our mother's father; to be the honest, unpaid protector of her children."

"The dear old thing!" cried the repentant Jenny. "I'll run down after him. Here, Mr. White! Mr. White!"

Jenny, equally descending, overtook Mr. White on the landing. Sillery could distinguish some very frantic sobs, mingled with one or two very hearty kisses. When the delinquent Jenny returned, her eyes were sparkling, and her the smile on her mouth was sure proof that she had received forgiveness.

"I say," she said; "I say, Sillery—one, two, three, four, five cups and five saucers!"

"Of course, when there are cups there must be saucers, Jenny?"

"And one at two, you three, Mr. White four, and five."

"Why, I thought," exclaimed Sillery, "that it was just likely Mr. Ryder might dine in and"——

"Oh! I understand. Mr. Ryder, the confidential secretary of Sillery that her thoughts were always with her hands ever employed. Probably it was the involuntary exercise of this habit, or possibly it might have been a desire to hide her face; but certain it is that at that moment she turned round to the drawers of the escritoire and, selecting a dinner napkin, began somewhat nervously to shape it in the well-known "mitre" pattern.

"Mr. Ryder, eh? Oh, you thought he might look in. Isn't it, now, singular that a cab should stop at the door this very minute with Mr. Ryder inside?"

"What! John?" exclaimed Sillery, dropping the "mitre?" "our John?"

"Your John," returned Jenny, with precocious demureness, "not only mine."

With these words she ran down stairs, opened the door, and admitted Ryder.

"Well, Sillery" exclaimed the fresh, broad-shouldered fellow as he reached the landing, "have ye ever, eh?"

"A merry Christmas, Mr. Ryder," interrupted Jenny.

"The same to you, little lass, and a happy New Year as well," replied John, diving into his deep pocket, bringing out a slip of sticklebat, and giving Jenny a kiss. "There, for you!"

"Oh, Mr. Ryder, I'm quite ashamed!" muttered Jenny, wiping her face; "and before my sister, too."

"Jenny," said her sister, "put on your bonnet and shawl, go to Mr. Hartley's, and ask him for a pint bottle of his old port. Mr. Hurley's—you know where."

"I'll—I'll go," blundered Ryder; "at least, that is, I'll pay for the wine."

"No."

"Yes."

"No. Do you remember, years ago, when I offered to borrow five hundred pounds of father to set you up in some of your fine schemes, how rred you got to the face, talke about your independence, and said you wouldn't be beholden to me or mine—no, that you wouldn't."

"I don't believe there's a word you ever spoke to me that I've contrived to forget, Sillery."

"Nor, John, will I, poor as I am, be beholden to you or yours; so there's your five pound back back again. Now, Jenny child, make haste. Mr. Hurley's this time, you know; and Mr. Hurley should make any professional remark about the weather you needn't hurry for five minutes—that's all."

I understand, thought Jenny, wants to be alone with Mr. Ryder; hasn't seen him for three weeks. "I say, Sillery" (in an aside to her sister), as if I didn't know.

"Really," murmured Sillery, "the rapid development of that child's perception is something extraordinary."

The younger sister had barely left the room on her errand when the manner of the elder changed, cheerfulness dropped into sadness on her face, while the chirrup of her voice subsided into an even flow.

"Why, Sillery, what a housewife you are! You'll be quite a treasure to me when"——

"John," interposed Sillery, dragging a chair to the centre of the room; "sit down here, John—here, by my side."

"Why, you serious child!" he replied, obeying her; "there is positively a tear in your eye!"

"Turn three let it stay; I'm not ashamed of it. See! see here, John!"

With this Sillery took a broken ring from an inner recess of her purse, and showed it to her companion.

"Your half of the ring, then"——

"Yes!" pursued Sillery, in the same quiet, almost solemn manner, "my half! Where the other is I don't quite know; but if I were to speculate, I should say over your honest heart, I think I should be very warm positively burning. I thought so"——

"Why, Sillery!" what—what is it you would say?"

"You remember, as I understand," when we broke this ring. Autumn was browning the leaves, John, and sipooling the corn in the meadows. I was sitting on our old lawn, waiting till you and father came from the works where you had superintended for more than four years. Poor father! He was pleased with something or other, and left you to tell the good news. You forgot all about the works, John, and you said—you said"——

The pause was broken by Ryder.

"I said that, though a rough fellow, while superintending the father's works, I caught a kind of love fever for the father's daughter, and—and"——

"Then you liked me, John. Oh yes, you did. That's a thing I am sure at all likely to forget. I spoke to father, for you hadn't the courage, and it was settled that very evening. I was so happy, John"—she continued, after a pause—"so very, very happy. Oh, I did long for the coming for father should say yes. I thought blessings would burst through our lives, John, as the white blossoms burst through the hawthorn in the explosive prime of May."

"And if I am my habits or my hand, Sillery, so shall they bloom still."

"No, John; not for us. When I was rich and you poor I took you and thought no favour. If you were rich now I couldn't be so much and thought no favour. If you were rich and I was poor I should be obliged if I guessed that wealth with me. But riches, even competence, are denied to us. I bring no burden, John, as the dowry to the honest heart I love. For their absence, John, I am sorry; but I am glad for the praying for their absence by you. I thought blessings would burst through our lives, John, as the white blossoms burst through the hawthorn in the explosive prime of May."

"And if I am my habits or my hand, Sillery, so shall they bloom still."

"No, John; not for us. When I was rich and you poor I took you and thought no favour. If you were rich now I couldn't be so much and thought no favour. If you were rich and I was poor I should be obliged if I guessed that wealth with me. But riches, even competence, are denied to us. I bring no burden, John, as the dowry to the honest heart I love. For their absence, John, I am sorry; but I am glad for the praying for which I prayed. So, John Ryder," continued Sillery, rising and laying her slender hand on the black, crisp curls of his round head, "here, at this spot, in this moment, our paths of love first opened. Here, at this spot, in this island to some fairer shrine; mine, John, mine—O who shall say whither?"

"And it is to-day," said John, with a slight tremor in his voice "the very threshold of the Christmas that you have selected to say this?"

"I should have said it before, John; but you have been away three weeks. I could not bear to be the author of your honest joy, when I knew on what a shifting sand the hope was built."

"I don't seem to give you up so. I should say more about it now, only I think, perhaps," he added with slightness, "there may be a scratching in the wind, and that we shan't be divided after all."

Jenny, returning breathlessly with the port, announced "Aunt Sims."

The faithful Mr. White had fulfilled his promise in escorting Lady Sitha Dick. In the execution of that duty he gave a tremendous knock at the street door. Watching Lady Sitha, he took in opportunity, while that gentlewoman was scraping her shoes and not looking, to insert his key in the lock, and thus artfully managed to open it himself.

"Lor! Sillery," exclaimed Lady Dick as she came in, "what a hole for a daughter of Irving! Every time I see the hole it seems a worse hole than it was before."

"Now Sitha," replied Sillery [Jenny, toast the muffins"], "that this room [" Mr. Ryder, oblige me by descanting the poor"] looks very cheerful and comfortable. A nice carpet, decent furniture, good fire, and"——

"Lor! Sillery, you're quite provincial. Now come, here's your cap, dear aunt," releasing the expansive article from a bonnet-box which Mr. White had had the unspeakable satisfaction of hauling through the narrow passage. "There is a gloss in that corner, Jenny, show your aunt. No one will see you; grandfather isn't out of his room yet."

The Lady Dick responded to this invitation, and accentuated the alteration in her label in a rather pleasing manner. The bell in the inner apartment rang once more, and the door again unlocked. Sillery and Mr. White directly ceased their occupations, and advanced to meet Mr. Lawrence, who had contemplated himself in arranging the cushions of the old man's chair by the fire.

Mr. Lawrence though swept in eighty winters, here himself so steadily, and moved so strong, that he appeared to accept the salutations of Sillery and Mr. White rather as a compliment than as a necessity.

Ryder, in helping Mr. Lawrence to his accustomed seat, by accident touched his hand. His old gentleman, startled with the contact, retained it in his grasp, exclaiming rapidly, "A stranger—Sillery, Sillery! Who, who is this?"

"Mr. Ryder, sir."

"Ryder—Ryder!" screamed her grandfather; "Ryder!"

"Your employer, sir, remember, Sir" who superintends our works at the hall."

"Yes! yes! How do you do, Sir? Memory bad at times—and how goes all on, Mr. Ryder?"

"Capitally, Sir; better and better every day."

"Ah, Sillery child, you'll be very rich, e-no-mously!"

Mr. Lawrence then comfortably settled himself in his chair, and Mr. White placed the culinary cushion of Sillery on the table near him. "Glass of wine?" said Mr. Lawrence, delicately extending his hand so as to touch the decanter. "I can't do without my port. A three-bottle man in my young day. Three bottles—ha-ha! Three bottles."

"You remember Mr. Ryder, aunt?" said Sillery to that lady as she emerged from the corner.

"Perfectly well," replied the amiable matron, "who was, I believe, employed by my late brother in those stupid works?"

"He superintended them, Aunt. Surely you recollect—such a favourite of my dear father?"

"Ah! poor soul," remarked Lady Dick, in a tone of great resignation. "He was very old, had strange whims, and encouraged mad people. If" she continued, eulogizing herself to her fellow-dignity, "I never could."

"It's by the doctor's advice I reside here," broke in Mr. Lawrence, pointing to his son-in-law, "and surrounded by my family, as man stays in the play, in—in"——

"The School for Scandal, Sir," suggested Ryder.

"The very room where Sheridan wrote it. Ryder. Lewis was Charles, and Joseph—let me think, who was Joseph?"

"You can scarcely forget me, Lady Dick. I recollect how unfortunate I used to be in exchange when you were my opponent."

Her Ladyship looked particularly uncomfortable at this remark.

"A compliment to your skill, Aunt," interposed Sillery, with a warning look at Ryder.

"The old 'conn thought," muttered Mr. White, nudging himself with delight, "it was an hallusion to her cheatin'."

"Palmer was Joseph, endlessly lucky in the old grandfather, and Polly Stephens Lady Teazle. Fine woman!" he added thoughtfully. "Good! she was a fine woman!"

Laughing with delight at the remembrance, and as independently as though he had the use of eyes, Mr. Lawrence commenced his dinner.

"Now, for once at least," said Sillery to the group as they seated themselves round the tea-table; "for once at least let us forget all our woes, and be very comfortable and happy. Sugar, I know."

"Sugar!" replied Lady Sitha, taking up a lump in the most loathin manner. "Why, whew, Miss Irving, did you get this cosset, brown stuff?"

"Well, cosset that old 'conn!" muttered Mr. White; "she always invents awful to make us jolly."

"Why," persevered Lady Dick, examining it through her eyeglass, "it isn't worth more than fourpence a pound."

"Oh, never mind the sugar, Mrs. Dick!" expostulated the contented Ryder.

"Lady Dick, Sir, if you please. My late heroic husband was a knight and an alderman!"

"Likewise a bankrupt"—whispered Mr. White to himself—"thirteen pence in the pound."

"I am sure," said Ryder, sipping his first cup of tea, "I beg your Ladyship's pardon."

"But why, Miss Irving," continued her factitious aunt, "why don't you have better sugar?"

"Because," answered Sillery, very quickly and determinately, "we won't run in debt, and we can't afford better. Come, Aunt, no jolly and have some muffin. How are you getting on, Mr. Ryder?" Sillery then signed to Mr. White, who offered the muffin to Lady Dick.

"No, James, I couldn't; oh, dear, no! If your mistress can't afford to buy good sugar, she ought not to purchase such expensive articles as muffins. I couldn't encourage such extravagances; oh, dear, no!"

"Whatan old wixt it is!" muttered Mr. White, smiling at a venture, as he laid down the plate.

Ryder was about to eat.

"Oh, don't pass!" interrupted Sillery; "let her have her own way. Do you like muffin, Jenny?" turning to her sister.

"Oh Sillery!" her mouth opening and her eyes enlarging. "Oh, Sillery!"

"There it is, then," said Sillery, handing it to her. "Eat it all, mind—every bit;" an injunction from her sister which Jenny fulfilled with the most dutiful obedience.

"I did not know," remarked Lady Dick, watching the rapidly-diminishing fabric of muffin, "that I came to be insulted, Sir."

"Insulted! Listen, Aunt Sitha! That the storm which has wrecked us should have deprived you of your allowance we are very sorry. You have an income still; we nothing but what I earn, and yet we are always content and cheerful. If you can come and be one of us happy circle, frankly and lovingly, glad we are to see you; but, if you cannot, we should take it as a particular favour if you would stay away."

"And let's weary enough for you, Mrs. Retorted Lady Dick, "to know that a daughter of the Irvings deceases herself.——But, there; your manners were always too free for my taste. I never thought you a lady, Sillery."

"A lady! When I was poor and Miss Sillery, there, an heiress, I offered her my hand," spoke the blunt Ryder.

"Do you?" responded the unyielding aunt. "Well, it was a very great piece of impertinence, I consider."

"She accepted it. Now that I am richer than she, for her sake and his sake she gave me up. I don't know what your definition of a lady may be, but Sillery Irving is a true, honest lass; and the lady that says she isn't I'll knock down in a minute, I would."

"Oh dear!" exclaimed Lady Dick. "I am threatened with personal violence. I'm to be struck for maintaining the honour of the family. Oh do, pray do; will anybody do me the great favour to strike me?"

"Well," muttered Mr. White to himself, looking upon her with supposed indignation, "I have a jolly good mind."

"Now, Aunt," interposed Sillery, "you come here but very seldom. Be jolly, and forgive me. Have a cup of warm tea, and Jenny shall toast you another muffin."

The promise of this luxury had an evident effect in softening the anger of Lady Dick. "Well, Sillery," she remarked relentingly, "I bear no malice, and am not enormously fond of muffin."

"The good are always rewarded. We've brought you a *Globe*, aunt; we know what a reader you were, and ordered a paper on purpose."

The mention of a newspaper aroused Lady Dick at the mind of a hare is supposed to excite a hawler. She directly plunged into her pocket for her spectacles, wiped them hurriedly, planted them ungraciously on her nose, and began to devour her prey.

"Has my grandfather enjoyed his dinner?" inquired Sillery of Mr. Lawrence at the smaller table.

"Glad I hear you, Sillery! it is all I can say. But I do say it very often, God bless you!"

A sudden jump and vigorous scream from Lady Dick simultaneously frightened Mr. Lawrence, startled Sillery, made John Ryder spill the tea, caused Jenny to drop the muffin under the firegrate, while Mr. White, who was pouring some boiling water into the teapot, scalded his fingers. In the confusion.

"What is it—what's the meaning of this?" cried Sillery, taking the paper. As her eye glanced at the paragraph indicated she turned very pale, dropped the paper, and sank into a chair placed for her by Ryder.

"Oh, Sillery!" exclaimed Lady Dick. "My angel! Let me assist my niece."

"Stay where you are, woman!" cried the excited Ryder, nodding Sillery to motion her aint away.

"Woman!" screamed Lady Dick. "This beats all. I was never called such an article before!"

"Oh, Sillery! my dear, dear sister; why, why are you so pale?"

"Say to grandfather, Jenny, will you?" replied Sillery, very quietly. "Read it, John Ryder, if you please."

The cause of Lady Dick's commotion was contained in the following lines:—"The Irving Exhibition, which is reported that the works which have been so long progressing are at last completed. Should their object be attained"——

"Should their object be attained!" repeated Sillery. "Oh, John, what! what does this mean? You fear lost my heart should fail; but I am very calm—very quiet. Take my hand, John; look in my face. Am I not hushed and still?"

"Do you remember, Sillery, that I hinted at something that was in the wind just now?"

An angry nod from Sillery was her only reply.

"Well," continued John, in a hesitating, almost bashful, manner, which swelled into nearly earnestness as he proceeded, "this is what this 'something' was. The embankments were all strong but in one place: the employment of inferior material there caused the destruction of the whole. I wasn't somehow satisfied that all was lost, and ever since I thought how that weak bit could be restored. When our people took me as a partner, I devoted a good bit of time to it, and, as I got richer, my savings as well. I have been away three weeks only to crown the work. I merely left that I might watch the Christmas come with you. Any moment we may

learn the result of my labour. Telegraphed to my office. I told them to send it here; and here, I believe, it is."

A loud knock had announced the messenger.

Mr. White, who had hitherto been as silent and motionless as a figure in Madame Tussaud's waxwork, was aroused by the summons into sudden and powerful vitality. He rushed at the room door, which he succeeded in double locking in his eager attempts to open. At last, however, he managed to repair his mistake and receive the telegram.

"Read it, Sillery," said Ryder, taking it.

"I can't, John. I could have gone on with a stout heart battling for those dear to me, and never have murmured, never repined; but now, knowing that competence or poverty will be revealed in that paper, I have n't the courage, John, to learn the truth it hides.'

"Oh, do somebody read it," cried Jenny, who had succeeded in pacifying her grandfather. "Mr. White, do you."

Mr. White, in the height of his excitement, tore open the envelope.

"Now, Mr. White—what, what?

"Deary me," remarked that individual. "I quite forgot when I opened it how much my edification was agin me. I—I can't read."

Jenny then took the paper, read it, crept up to her sister, and whispered in her ear, "Success!"

The manner of Sillery was unchanged.

"Success!" she repeated, "Success!"

"Well, I am sure," remarked Lady Dick, breaking her long silence, "I think it was time for something to turn up—for this silk dress has been cleaned twice and turned three times."

"Oh, grandpa!" cried Jenny, rushing to old Mr. Lawrence, "we're going back to Irving!"

"But what does Dr. Billing say?—that my health will be better there? Oh, very well: of course, then, but Sillery goes."

"Yes, oh yes! Where you go I go, always."

The blind old man stretched out his lean and withered hand, and hid it in her sunny hair—

"God bless you, Sillery. It's all I can say, but I do say it very often."

Presently Mr. Lawrence leaned back among the cushions, and, little by little, subsided into sleep.

"How still, how quiet you are, Sillery!" said Ryder, raising her. "I thought here would have been a light in your eye, and a smile on your pleasant face."

"I can't quite believe it yet. Used to the hard features of the present, I almost doubt the reality of that fair future which is so speedily to come."

"Doubt no longer, Sillery. A few short weeks, and you will be the mistress of Irving Hall."

"Oh, John, dear John! how shall such generosity be repaid?"

"Let me feebly justify the reward by the recital of my claim. My firm, Sillery, is wealthy—flourishing. My actual income was small, because, to prevent their foreclosure, I paid the interest on the Irving mortgage."

"Enough!"

"The Irvings are reinstated in their old estates, but they must pay a severe price for the privilege. They must share with me, the eldest daughter of their house"——

"Ah, John! always unselfish. You demand that which is twice your own already."

Let imagination supply the sequel. A happy return to Irving—a merry Christmas in the old hall—a wedding in the early spring—the establishment of Mr. White as the most flourishing of market-gardeners—and Lady Dick with the most outspoken admiration for her new relative, who, devoting his time to the prosecution and improvement of the once fatal works, made them a pattern of engineering skill and the source of wealth to a united and long-moral family.

GEORGE LANCE, ESQ.

STILL-LIFE PAINTING, which in its widest sense includes dead game, fish, &c., as well as fruit, flowers, vases, musical instruments, tapestry, and various ornamental articles of furniture, though not ranking with the highest departments of art, has still its legitimate uses, and holds a recognised place in the esteem of all who love and admire the beautiful in creation in a catholic spirit. Of course works of this class present claims upon our attentions in varied degree, according as they more or less show the invention, taste, and feeling of the artist and depart from mere copyism. A good half of the success achieved depends upon the selection of the objects to be represented, and the circumstances under which they are represented, there being as much tender which they are represented, there being as much judgment and skill required in a composition of this class as in one of game, or even of history itself. And, earnestly composed, executed with fine appreciation of the truth of nature in colour and texture, and with mastery of handling to realise the conception, shall not a representation of this kind afford more real satisfaction than a figure-subject in which nature is portrayed inadequately, either below the mark or extravagantly in excess of it? The Dutch and Flemish painters, who were the first to take up landscape—a domestic landscape—as a distinct branch of art, followed up with still-life; and Rubens, Snyders, Jan Fyeen, Van Aelst, Beughel, and Huysum are amongst the names of those who devoted attention to it in its various forms as a speciality; whilst Teniers, Ostade, Terburg, and Mieris availed themselves of the same materials as accessories in their charming interiors. In this country, within our own time, the theme of this branch of painting have been recognised, and received admirable details of achievement from Hunt, Mulready, Wilkie, and others, who by their example have done much to inculcate a due regard for accessorial ornament and truthful finish in genre subjects of a cabinet size, and even in some cases of more ambitious scope, by Ward and others. But the man who has distinguished himself most in the line, incontestably to take the lead of all his contemporaries, and to found, as it were, a school, is he whose name stands at the head of the present article, and of whose professional career we now proceed to give a brief memoir.

George Lance was born in March, 1802, at the Old Manor House of Little Easton, near Colchester. His father was Adjutant in the Essex Yeomanry, having previously served in a light cavalry regiment; his mother was the daughter of Colonel Constable, of Beverley, in Yorkshire.

Like most of those who have achieved distinguished eminence in art, Lance was, as one may say, born an artist; that is, his predilections for pictures and picture-books, accompanied by an intense desire to imitate what he saw, were evinced in the earliest childhood. The intention of his family, however, was to bring him up to commercial pursuits, and he was sent to a connection of the family at Leeds for that purpose. But the bent of his inclination was found to be too firmly fixed to render all opposition to it hopeless, and by the consent of all his friends he came back to London, where his parents were now residing, with the intention of undergoing a regular course of instruction in painting. The choice of a suitable master, on reasonable terms, was now the only difficulty, which, however, was soon resolved by the young embryo artist himself, and chiefly through an accidental occurrence. Going to the British Museum one day, when yet a boy in his fourteenth year, he chanced to find himself in the apartment in which the Elgin Marbles were placed, and after which three young men were copying. A glance at the scenes of the sheets of paper upon which they were drawing showed that they were all three pupils of B. R. Haydon, and one of these was Charles Landseer the future

MR. GEORGE LANCE.

Royal Academician. A very brief conversation which young Lance ventured to open with the latter sufficed to make him resolve to visit Haydon, then at the height of his renown, early next morning, and crave to be admitted to his school. Accordingly he presented himself at Haydon's residence, without a line of introduction, and was ushered into a parlour, where the enthusiastic apostle of grand art speedily made his appearances. A few seconds' pause ensued, which was broken by Haydon. "Well my boy," said he, "and what do you want with me?" "I am anxious to become an artist, Sir, and want to become one of your pupils; I am come to ask your terms, if you will receive me." "Terms! my little fellow? When I take pupils I never look at their fathers' purses. Bring me some of your best drawings, and if I think they give promise of future success I will do for you as I do and ever have done for all those who stay under me—take you for nothing." Noble conduct! and worthy to be recorded to all time, of a man of great purpose, unfortunately born in an age of little men, and whose services rendered to art, though unrecognised by his contemporaries, will be acknowledged by posterity. It was not many days after this that young Lance commenced his studies in the atelier of Haydon as well as at the schools of the Academy, which he pursued with assiduity for seven years, and which included drawing from the antique, the life, anatomy, and architecture. His progress during the first two years was doubtful, almost discouraging; but from that period he took a start, and was soon acknowledged one of the best draughtsmen of the rising men of the day. His drawings from the antique met with the highest encomiums from Fuseli, Northcote, and other of the leading authorities of the day. When the young student called upon Northcote with some of his performances, with a view to obtaining admission to the schools of the Academy, the latter asked him who he was studying with, and, on being told Haydon, he said, "Come to me, and I will teach you for nothing;" adding, "I don't like my pupils' heads usually turned inside out" (alluding to Haydon's projecting lips). Haydon, on being told this observed, "And I don't like men with their lips turned outside in" (Northcote's lips being thin and compressed). To conclude with the productions of this period of probation, we believe we are correct in stating that a large collection of anatomical drawings presented to the London Mechanics' Institution by Haydon were the work of his pupil Lance.

His powers matured by this course of study, the young artist at length resolved to try his hand at a picture, and a scene from the "Iliad," the universal *pièce d'essais* in those days, was selected and partly designed; but, prior to its being executed, it was considered desirable for the purpose of his acquiring a complete mastery over his materials, that Mr. Lance should practise his hand in copying objects of nature and "still-life." His extraordinary success in these efforts determined his future career. Sir G. Beaumont came forward to purchase his first composition of fruit and vegetables. The Earl of Shaftesbury and the Duke of Bedford—such the kind of patronage in those days—followed with commissions. For the latter he painted, in 1831, a large picture containing a specimen of every fruit produced in English horticulture to adorn an elegant summerhouse erected in the grounds at Woburn for the especial purpose of entertaining King William IV. when on a visit to the Duke. Other admirers and purchasers followed at later dates, including Lord De Tabley, Sir J. Wigram, Mr. Vernon, Mr. Sheepshanks, Mr. T. Baring, Sir S. M. Peto—indeed, there is scarcely a collection of any note in England which is not pleasingly enriched by one or more specimens of the works of this master. In the National Gallery are three specimens—two fruit-pieces, and "Red Cap," consisting of a monkey with a red cap, in a group consisting of a wild duck and vegetables; and in the Sheepshanks Collection at the South Kensington Museum is another fruitpiece.

When Haydon saw the near-pected turn which had taken place in the action of his favourite pupil he was at first not a little disconcerted; but at last he became reconciled to it. "Lance, my lad," he once said, "it seems a pity to cast off the noble walk of art; but I am so convinced you will have no competitor in that you are now

PATRAS, ON THE NORTH COAST OF THE MOREA: VESSELS WAITING FOR CURRANTS.—SEE PAGE 650.

following that I feel I should be doing wrong to art itself and you if I said one word to deter you."

Mr. Lance first exhibited at the Royal Academy in 1838, and after 1835 became a regular contributor to it and to the British Institute when his pictures always meeting with ready appreciation and what, in a worldly sense, is more important, liberal purchasers. It has been a subject of remark that he should never have been admitted to academic honours. Was it in consequence of the Academicians' earnest aspirations of high art. If so, why so many portrait-painters amongst them, to say nothing of some few in other walks of art, certainly not of the highest talent in their respective departments? For our own part, we cannot see why still-life painting, carried to its utmost perfection as it is in the hands of Mr. Lance, should be without enlargement on a distinct field of fine art. However that may be, we believe it is a fact that during some twenty or five-and-twenty years (with one year's exception) Mr. Lance has put forward himself as a candidate for associateship without success.

But Mr. Lance has not confined himself entirely to this particular walk of art, in which he has justly attained such eminence. About the year 1850 he produced an interior, which, in the figures of two months one of them seated asleep before a table covered with a rich damask, to which he gave the name of "Melancthon's First Blagiving of the Church of Rome," which obtained the prize offered by the Liverpool Academy for "the best historical picture of the season." This picture was purchased by Mr. Holt, a wealthy merchant of Liverpool, and was exhibited at the Arts Museum Exhibition at Manchester. After that appeared two figure subjects of more pretension, "Cromwell and Mr. Broderip"—"The Cavalier" and "The Lady in Waiting;" and after these came the most important historical work the artist has painted, "The Bronx Conspiracy," painted for Mr. Vernon, and exhibited at the Royal Academy in 1845. The picture represents an incident in the reign of Henry IV. of France, and is powerfully treated and finely painted in every part.

Mr. Lance's fruit and other still-life subjects are about four hundred in number, and are wonderful alike for the variety of interest displayed in them, for the splendour and truthfulness of their colouring. Amongst the pupils of Mr. Lance who have already attained a distinguished position before the public may be mentioned Mr. Duffield in the still-life line; and Mr. John Gilbert in history. A daughter of Mr. Lance, also, has shown considerable merit in fruit-painting.

"THE REPOSE IN EGYPT." BY GUIDO.

GUIDO RENI, though ordinarily and properly classed amongst the most distinguished pupils of the Caracci (being second, however, to Domenichino), must not be looked upon as very servilely following in his implicitly following their tuition. He received his first instruction from Denis Calvart, with whom he remained but a short time, and from the master often merely touched his works and passed them as his own. In the school of the Caracci he early excited the jealousy of his masters as well as that of his fellow-pupils by the promptitude and ease with which he carried into practice the new principles inculcated in it. Subsequently, at Rome, he was patronised by the powerful family of the Cicilia, but only on condition that he should execute it in the manner of Caravaggio (for our anticipation of the Caracci, which was already predominant in the Holy City); but, though he certainly adhered to his engagement, he far surpassed the model by the superior elevation and grace of character which he threw into his composition, and of which Caravaggio was altogether incapable.

Nevertheless, Guido was a mannerist, very unequal in his performances, and in sacred themes never displaying that sublimity and divine quality, derived from inspiration, which is the essence and soul of pure and satisfactory realisation. His conception was generally pretty, his touch soft and effective, his colour well compounded, but his ordinary mother looking with affectionate pride at her firstborn, and has none of that marked reverential expression which is the art expression of the idea of a trembling homage paid by the earthly mother to the divinity of the future Saviour of Mankind. In the infant itself, with its extended arms and upturned smiling face, we remark a bravura treatment no less widely differing from the types of real and devotional art. Nevertheless, although it is not the centre of the pictures, its flesh tints and the white drapery upon which it is placed form a powerful focus of light, and the unsteady eye must repose upon the face and neck of the mother, the result being highly conducive to that concentration of attention which is essential to grandeur of composition. The face of Joseph, who is a little in the rear and partially in shade, is unquestionably not a commonplace order. One circumstance worthy of remark in this picture, and in which it illustrates a new principle of composition which began to be adopted about this period, is the care bestowed upon the accessories, such as the drapories and the use made of them, not only as necessary accessories to the figures, but as forming essential and indispensable parts of the composition, both as regards the lineal forms and the colours combined in it—a principle which was adopted in the Venetian school and the followers of this school that eventually the figures which the drapories were supposed to cover were treated as altogether of secondary importance, and often in such a manner as to constitute inaccuracy or chromatic effect. When we look at this picture with an eye to truth we must be struck with the disproportion of the draperies employed, particularly that of the Virgin, which seems to have been used chiefly for the purpose of producing an imposing pyramidal mass in the middle, the sack on the one side and Joseph's coat on the other forming inferior masses to make the same description of material. The colours, blue and violet in the case of the Virgin, and yellow in that of Joseph, it must be added, are aptly enough chosen to set off the figures against the light and dark background. In respect of this last-mentioned feature—the landscape-setting of pictorial pictures—it is remarkable that during the very period had not yet aimed at giving it that importance which it afterwards attained, in such an extent as to make it the principal and represented a subordinate incident. It was under these artists (Domenichino and Guido more particularly) that this characteristic was first sought to be given to their landscape attributes; and the picture before us is no unworthy example of this new mode of treatment.

A chimpanzee has been presented to the British Zoological Gardens by Captain Holder, of the African ship Edward Ochsden.

MR. H. F. ROCHE has been appointed Registrar for Canada, in the room of Mr. Marshall, who is made Commissioner of Customs-de-Tyre in the place of Mr. Ellens, deceased.

THE Postmaster-General has issued an address to "Christian ministers," urging them, "at as early a crisis in the history of the country as that of the present moment, to call the attention of their flocks, their sons, and even their servants, to the duty of making provision for the future support of their wives and families, from the unused economies, and to diffuse whose influence through society is the one supreme and solemn burden of their office."

MONEY ORDERS.—On the 1st of January, 1862, and thence forward, the limit of the amount for which a single money order can be issued will be extended to £10, instead of being restricted to £5, as hitherto. The following table shows the rates of commission which will, from that date, be charged on Ireland and colonial money orders:—viz., for sums not exceeding £1 (if popular in the United Kingdom), 3d.; not exceeding £5, 6d.; not exceeding £7, 9d.; not exceeding £10, 1s. Money orders issued in Canada; not exceeding £5, 1s.; not exceeding £5 to £7 10s., 1s. 6d.; not exceeding £10, 2s. If payable in Malta or Gibraltar, not exceeding £5, 1s.; not exceeding £5 to £7 10s., 1s. 6d.; not exceeding £7 10s. to £10, 2s. On all other respects the issue and payment of Irish and colonial money orders will remain as at present.

THE FIRST CHRISTMAS FROM HOME.

CHAPTER I.

MR. OLIVER'S VISITOR.

SOME years ago, when Rugby was as often out of work as in, to make both ends meet I had to let my best parlour and bedroom. My first lodger was a hosiery man by the name of Oliver, who came from my part of the country, where his family was a good deal looked up to.

Some four or five weeks after Mr. Oliver had been with me a thing happened which put me into a terrible nervous uneasy that, as I said to Rugby at the time, I had a good mind to write to the young man's father about it. However, it so fell out that I had no occasion, as you shall hear.

It was on the night before Christmas Eve Rugby and I sat here in the kitchen toasting sprats and listening to the ledger playing on his trombone in the parlour, when there came a knock at the door. Now, it was neither a double knock, nor a postman's knock, nor tradesman's knock, but a very uncommon and suspicious-sounding knock; and I mentioned, I dare say, at the time, that I answered it. However, when it came a second time, I took the candle, set it down on the hall-table, and opened the door without taking down the chain. There stood just the very kind of man you might expect from his knock—a man with only a nose and a pair of furtive eyes visible between his battered hat and rough collar.

"Is Mr. Oliver at home?"

"I'll see, and, if he is, you what might be your business?"

"Tell him it's a friend from Leddleston with a present o' game as wants to see him, if he pleases." And then he shows as fine a pair of hares as I ever clapped eyes on.

Leddleston was the place Mr. Oliver came from, and the place I came from, and I could tell in a minute the man had a Leddleston tongue, and I was quite certain but that I had heard his voice before, though where or when I could not remember just then. So I went up stairs and gave Mr. Oliver his message. His face brightened up at the thoughts of seeing some one from the old place, and he told me to show him up directly. Of course I did so, and I watched him take off his coat and hat, and then, as he stood without them in the lamplight and firelight, I saw that I had not been mistaken in thinking I had seen him before. Sure enough, who should he be but Simeon Smyles, the biggest old scamp and vagabond in Leddleston—ay, in all the county for that matter? Now, what could he want with Mr. Oliver? Bringing him presents, too! He seemed to see what I was thinking, for, as I looked at him he gave me a kind of leer, and I could see he remembered me too.

"Have I to thank you for these?" asked Mr. Mark, pointing at the birds.

"Why, rest exactly," laughed Mr. Smyles. "Soon after I got to the coach I sent Mr. Hawthorne's boys waiting at the stile, with lots of hares and birds. Well, they hands 'em up, with tickets tied to 'em, and no one o' 'em I saw your name; so I told the coachman to keep 'em safe, and would you believe it, the birds safely delivered and here I am." And the happy-looking, leering old sinner seemed to think it was as just as good a present as if the birds had been his own. Very quick to think, Mr. Smyles was, and very quick to express his visit which I might take if I liked, and if I wouldn't, why—he didn't care.

"You can go, Mrs. Rugby," said Mr. Oliver, and in such a strange voice that I turned and looked at him. He was leaning against the mantelpiece with a dark frown upon his face, which was generally so good-humoured.

"You can go, Sarah Rugby!" repeated old Smyles sitting down in a chair, and leering at me again over his shoulder. And I went out: but I could hear him hanging the door and shaking my fist at it, and saying to myself, "Yes, you wicked old sinner! If I don't find out what you're after with young Oliver, I'll say you never did an evil thing in your life."

Perhaps, before I go any further, I should tell you a little of what I knew of old Smyles, that the sight of him should work me up so. As you know, I'm not one to go and tell tales of my neighbour—but clearly! He was a dainty, dapper little old man; and always wore a small drab coat with brass buttons, and drab breeches, and grey worsted stockings, and a drab waistcoat, which I've given it to, and saying to myself, "Yes, you wicked old sinner!" If I don't find out what you're after with young Oliver, I'll say you never did an evil thing in your life.

Perhaps, before I go any further, I should tell you a little of what I knew of old Smyles, that the sight of him should work me up so. As you know, I'm not one to go and tell tales of my neighbour—but clearly! He was a dainty, dapper little old man; and always wore a small drab coat with brass buttons, and drab breeches, and grey worsted stockings, and a drab waistcoat, which I've given it to, and which had long since deserted him. But his nose and chin were his features. Somehow, he always managed to have a look of his hair (silver as my best teapot) hanging over his wicked, watery blue eyes. And he never knew his own age. Altogether, his wife (who was an old man as you would fancy would throw the children apples and walnuts over his garden wall. You wouldn't think he threw stones at 'em) was a match for him. You wouldn't think she was a woman that would frighten them more by saying, "Here comes old Smyles!" than you could by saying, "Here comes Bogy!" He was landlord of two small beer, tumble-down cottages. Well, the tenant of one had just saved up money enough to buy her husband out of the army, in which he had enlisted in a fit of drunkenness; the other tenant by dying of old age had wasn't but poor weakly children to look at him, with his simple, childish air, that in the same day Simeon Smyles could take from the poor wife the ransom-money and the very bed from under the dying husband! Yes, it is a good deal to say against Smyles, I know I should tell you that old Mr. Oliver, my young gentleman's father, who was as proud an old man as ever lived, had a mortal hatred for Smyles, and would have given a five pound note to be allowed to see a bad passion growing up in anybody as Satan himself; indeed, that's what his business on earth seemed to be—bringing out the black side of human nature. And what he did it with was a knowledge of human nature for him, the old villain! They were both landlords, Mr. Oliver in a large way, Smyles in a very small way; and, as their houses both ran out on the same piece of waste ground, Mr. Oliver always thrusting him off. They made a practice of lawing one another at pretty well every session. If Mr. Oliver went long without getting Smyles's goods down by the pump, he was sure to be fetched Smyles's cows home in, and took liberties accordingly with his fences and fields. Things being in this state, you can fancy Mr. Oliver's feelings when he found a good-looking young lad, the very image of old Snyder's daughter, for he had a daughter, a very pretty one; but as forward a miss, according to my notions of girls, as never set her cap at a married man. However, it so chanced that by-and-by this father found it on young Mr. Oliver had got pretty sick of her, and was anything but sorry to be sent off to London.

It was late before Smyles took himself off. He seemed in high spirits as he came down stairs. His blue eyes watered and winked, and his little tight-stockinged legs seemed as if they had got the St. Vitus's dance, and he couldn't keep them still. When I took up Mr. Oliver's supper after that grinning beauty had gone, I found him leaning forward in his chair with his face buried in his hands, so wild and wretched-looking that I couldn't have felt more for him if he had been my own son. To make sure he wasn't ill I thought I'd just say, "Here it's the second rain, sir, that I am to tell Rugby to call you for in time to-morrow morning!"

He gave a start, and said, with his face turned away from me, "No, Mrs. Rugby; I find business will keep me in town. I shall not be able to get home to-morrow."

Not going to spend Christmas at home! I never knew one of the Olivers keep away from home on Christmas Day ever since I knew them at all. I was astonished, and over and over again that night I asked myself, while the sprats burned and Rugby grumbled, what in the name of all that's evil made old Smyles dance his grey legs up to town?

CHAPTER II.

WHAT BROUGHT OLD SMYLES TO TOWN.

Christmas Eve passed without any particular happening. All night I dreamed of Smyles; all night his dapper little figure was before my eyes, jumping about like one of those toy harlequins whose arms and legs move up and down when you pull the bit of string. At breakfast-time on Christmas Day came two letters, one for Mr. Oliver and one for me, and both from Leddleston. Mine was from my sister Rachel, who lived as nurse at Dr. Oliver's. Rugby spelt it out for me while I was tying up the pudding.

"Christmas Eve.

"My dear Sister,—I write these few lines to tell you that Master's going to pop down sudden on Mr. Mark to-morrow night, to see if he's up to any thing. It's got about somehow that it's all on again with him and Jeannette Smyles, and master swears he'll halt murder him if it is. And what makes it seem gospel truth is, that yesterday old Smyles went off to London, and to-day comes a letter from Mr. Mark to say he can't come home for Christmas.

"Please give my duty to Mr. Rugby, and believe me to conclude,

"Your affectionate sister, "RACHEL PAINE."

Here was a state of things. Even that great lounging Rugby began to scratch his head over it and say it was "uncommon queer." But you couldn't get a word more from him; so I had to sit and think over it all by myself. Mr. Mark was coming down to-night, was he? Well, what with Mr. Oliver's, I didn't know what to do, and of course it was no use expecting help from Rugby. If you gave him a plate to hold he'd be so frightened of breaking it that he'd be sure to let it fall.

It was quite dinner-time to see Mr. Oliver's dinner come down. The turkey's leg cut off, laid on a plate, and taken to the further notice of. The pudding was just as it had come out of the saucepan, the lady sticking good Mrs. Rugby's fork in it. I left the cheese at half for a walk, and came home looking so faint and jaded that I quite pitied the poor lad, and wished that my sister had got his aunt to stay and tend to make him comfortable. If it hadn't been for getting Rachel into trouble I think I should have told him what she said about Mr. Mark; I wouldn't have been the first scrape I've put him out of. Poor fellow! I shall never forget how wofully sad and homesick he looked, sitting with his face turned to the fire and his feet on the fire. Mark's letter was the cause of it. He had received it on the day when a strong hand again pushed it open, and there, with the hoar frost sparkling all over him, and his cheeks and eyes flashing angrily, stood old Mr. Oliver. He gripped me by the arm and pushed me into the kitchen.

"Sarah," he said, in a husky voice, "be quiet and hold your tongue. I'm watching Smyles. I saw him come in; he's up with Mark. Can you go and listen outside? I can hear what they're talking about?"

As it happened, Mr. Mark's bedroom had a door opening into his parlour, which he generally kept open when the fire had been fresh lighted, as the chimney smoked the least bit in the world when the rooms were all shut up. And this being now, after he had taken off his great knee-boots, I took old Mr. Oliver. The door was open, and so I could hear what they were talking about as well as if I had been in the room myself. Mark's first words were, "Well, you've got your own way, father, and I've got mine. I'm going to-night to see Jeannette Smyles, and I'm going to marry her. I'm of age, and I'll do as I please."

"Then you'll do what I please, sir," said Mr. Oliver, and in such a strange voice that I turned and looked at him. He was leaning against the mantelpiece with a dark frown upon his face, which was generally so good-humoured.

"You can go, Sarah Rugby!" repeated old Smyles sitting down in a chair, and leering at me again over his shoulder. And I went out: but I could hear him hanging the door and shaking my fist at it, and saying to myself, "Yes, you wicked old sinner! If I don't find out what you're after with young Oliver, I'll say you never did an evil thing in your life."

Perhaps, before I go any further, I should tell you a little of what I knew of old Smyles, that the sight of him should work me up so. As you know, I'm not one to go and tell tales of my neighbour—but clearly! He was a dainty, dapper little old man; and always wore a small drab coat with brass buttons, and drab breeches, and grey worsted stockings, and a drab waistcoat, which I've given it to, and which had long since deserted him. But his nose and chin were his features. Somehow, he always managed to have a look of his hair (silver as my best teapot) hanging over his wicked, watery blue eyes. And he never knew his own age. Altogether, his wife (who was an old man as you would fancy would throw the children apples and walnuts over his garden wall. You wouldn't think he threw stones at 'em) was a match for him. You wouldn't think she was a woman that would frighten them more by saying, "Here comes old Smyles!" than you could by saying, "Here comes Bogy!" He was landlord of two small beer, tumble-down cottages. Well, the tenant of one had just saved up money enough to buy her husband out of the army, in which he had enlisted in a fit of drunkenness; the other tenant by dying of old age had wasn't but poor weakly children to look at him, with his simple, childish air, that in the same day Simeon Smyles could take from the poor wife the ransom-money and the very bed from under the dying husband! Yes, it is a good deal to say against Smyles, I know I should tell you that old Mr. Oliver, my young gentleman's father, who was as proud an old man as ever lived, had a mortal hatred for Smyles, and would have given a five pound note to be allowed to see a bad passion growing up in anybody as Satan himself; indeed, that's what his business on earth seemed to be—bringing out the black side of human nature. And what he did it with was a knowledge of human nature for him, the old villain! They were both landlords, Mr. Oliver in a large way, Smyles in a very small way; and, as their houses both ran out on the same piece of waste ground, Mr. Oliver always thrusting him off. They made a practice of lawing one another at pretty well every session. If Mr. Oliver went long without getting Smyles's goods down by the pump, he was sure to be fetched Smyles's cows home in, and took liberties accordingly with his fences and fields. Things being in this state, you can fancy Mr. Oliver's feelings when he found a good-looking young lad, the very image of old Snyder's daughter, for he had a daughter, a very pretty one; but as forward a miss, according to my notions of girls, as never set her cap at a married man. However, it so chanced that by-and-by this father found it on young Mr. Oliver had got pretty sick of her, and was anything but sorry to be sent off to London.

It was late before Smyles took himself off. He seemed in high spirits as he came down stairs. His blue eyes watered and winked, and his little tight-stockinged legs seemed as if they had got the St. Vitus's dance, and he couldn't keep them still. When I took up Mr. Oliver's supper after that grinning beauty had gone, I found him leaning forward in his chair with his face buried in his hands, so wild and wretched-looking that I couldn't have felt more for him if he had been

JULIAN.

A LEGEND OF RAVENSHURST.

Come they, rising dim before me,
Priendly trusters of Ravenshurst;
Come the legends crowding o'er me
That those shadowy walls have nursed.

Steeped in blood, and dark, and mournful,
Legends of the kingly pride
Of the Argenis, grand and scornful,
Feared and hated far and wide.

As I gaze, come loud and lady,
Loud in rage and under ground;
Sauntering in the alleys shady,
With the falcon and the hound.

As I listen, armour clanging
Echoes through the courts and halls;
And I see the women hanging
Weeping on the terrace walls.

And while yet a sombre glory
Overshadows towers and trees,
Memories of one noble story
Touch me like a healthful breeze.

* * *

Pondering many an old tradition,
Filled with his dead father's praise,
Boundless in his great ambition,
Julian dreamed away his days.

Past and future fired and bound him,
Filled his fancy, fired his breast;
While the present gathered round him
Vengeance of the long oppressed.

While he toys with rusty armour,
Reads the notices on the shields,
Tools are forged for serf and farmer,
Needed not in parks and fields.

While he dreams of old Crusaders,
While his sword rusts in its sheath,
Night by night the near invaders
Gather strength from holt and heath.

Terrace peacocks shrieking coarsely
Warn him of the people's hate;
And the swans croaking hoarsely,
Clamorous watch the coming fate.

* * *

Came the autumn sunsets mellow,
Gilding lattices and domes;
Fell the dark leaves, red and yellow,
Leaving bare the ravens' homes.

Came the mountain whirlwinds tearing,
And the murky clouds hung low;
To each old ancestral bearing
Clung the diamond-fretted snow.

Anvils ring and red fire blazes
In the smithies night by night;
Darker grow the desperate faces,
Wielding freedom by its light.

* * *

Turning myrtle lettered pages
In the Christmas twilight dim,
Deep into the vanished ages
Julian's fancy guided him.

Past the brawny yeomen, laden
With the privilege and the pest,
Breathless rushed a peasant maiden,
Breathless fell at Julian's feet.

Fled the pageant quaint and pleasant
Hovering in his golden dream;
Down into the busy present—
Rushing like a mountain stream—

Dropped his spirit, as he listened
To her wildly-uttered tale;
And his dark eye dangerous glistened,
While each swarthy cert grew pale.

"He!" he cried, "my trusty yeomen,
Ye who fought for Marmaduke—
Do ye fear these base-born foemen,
Armed with spade and shepherd's crook?

"Sixty archers, keen and steady,
Hath my kinsman at the Gorse.
Gilbert, get my armour ready!
Jasper, saddle me my horse!

"I will ride through bush and bracken,
And be back with help before
They who wait for night to blacken
Set a fort on Cornel Moor."

And his stalwart form grew larger
As he left the banquet-hall;
Leapt upon the stamping charger
They had saddled at his call.

Soon they saw his helmet flashing
High above the woody hill,
Saw the heavy charger dashing
Downward like a thunderbolt.

But his anger gaining on him!
At the hamlet mode him pause,
Asking had they turned upon him,
Foes and traitors, without cause?

Slow he rode, and gazed before him,
Musing many a reckless cot.
Slower still the charger bore him,
Still the rider spurred him not;

For he heard a mother singing
In a ruined cot apart;
And her shrill voice, wild and ringing,
Like a dagger smote his heart.

For she sang how children perished
Daily in the stricken land,
While the feudal lord was cherished
In his princely castle grand.

Sang how men, how women tender,
Worked in bondage and disgrace
To maintain the ancient splendour
Of the ancient haughty race.

Came a light upon him hissing;
Fell the reins upon his horse;
And his great heart, slowly waking,
Shook him with its wild remorse.

Every grand heroic story
Of the Argenis' brilliant fame
Failed to make his race's glory
Overcome his present shame.

Not a glory could he borrow
From their deeds in distant lands;
But his face, in shame and sorrow,
Fell upon his mailed hands.

Through the cold and desolation,
Like a spirit of despair,
Rose the maiden's lamentation—
"Justice! justice!" was her prayer.

"Justice! O, my heart is riven!"
And he raised his hand on high,
Shouting, "By the God above heaven,
They shall have it, though I die!"

* * *

They who stand with fingers numbing,
Watching in the moans of stone,
Tremble as they see him coming
Back to Ravenshurst alone.

See again his helmet flashing
High above the woody holt;
See the heavy charger dashing
Downward like a thunderbolt.

* * *

Through the lines and chestnuts arching,
Towards the court and terrace white,
Come the hungry peasants marching
In the middle of the night.

Ragged, hungry, wolfish were they;
Strange looks, cruel, cheerless, rude;
All the wrongs and hatred bare they
Of a far-off multitude.

But nor men-at-arms nor warder
Challenged the loathsome rout,
As they crossed the pleasance-border,
As they rang defiance out.

No one in the hall to meet them—
Open doors inviting guests—
Silence only there to greet them;
Tables covered as at feasts.

Jealous, huddling close, they bore them,
Passing in the middle space;
All their weapons clashing over them—
Trembling, clinking or each face.

On the dais now appearing
Stands the Argent pale and proud,
And the bright sword he is bearing
Gleams in his gauntlet red for blood.

Then, like storms suspended, bursting
Fiercer for their own delay,
Onward sweeps the serfdom thirsting,
Back to strike him, all to slay.

Calm as death the Argent stands there,
Rings his brave lump of down,
Through all souls, and numbs all hands there,
While he speaks as from a tomb;

"You, I know, though late, God sendeth
Ministers his work to do,
And the noble dies, bravely bendeth
Unto Him must stoop to you.

I have wronged you: do your pleasure,—
Grant but this—my latest breath—
Say I mourned one only treasure—
All my people's love—in death."

Not a word more would he utter;
Flung his sword upon the ground;
And its echoing ring and clatter
Broke the deadly silence round.

O, the cry that rent the chamber!
How their weapons fell on his!
How they swarm and how they clamber
All about his knees to kiss.

Hands that ever more shall bless them—
Ever work for them and pray!
Hands that seek their hands to press them,
Linking future fates and cares.

Soon a plenteous feast is spreading
In the old, ancestral hall,
And the goodly yuletide shedding
Light and jollity o'er all.

Thus the past no longer bound him;
In the present was his pride,
With his people gathered round him,
In the blessed Christmas-tide.

KATHERINE SAUNDERS.

PRIZE CATTLE, SHEEP, AND PIGS AT THE SMITHFIELD CLUB SHOW.

BEAUTIFUL as the Shorthorns, Devons, Leicesters, and Southdowns were in "the last scene of all" at Baker-street, Mr. Coate and his "Improved Dorsets" made a mark in pigs which will not be forgotten. It was almost a case of "Veni, vidi, vici" with him. In the youngest class none of his breed were shown; in the under eight months' class they were second, as "Improved Hampshires," with a cross of Mr. Baker's, who was the exhibitor; in the under twelve months' class, which was a very wonderful one, Mr. Coate would have most probably been first if his pen could have stood up; and, as it was, Mr. Baker came third. No such misfortune befel Mr. Coate in the class under eighteen months, as his three blacks had the use of their legs, and, although two months and three weeks under the age limit, and opposed to such breakers as the late lamented Prince Consort, Mr. Druce, with his "Improved Oxfords;" Mr. Morland, with his "Improved Chiltons;" Mr. Beale, with his "Improved Leicester" (which had been first in the class below); Mr. Bond, with his Berkshire; Mr. J. K. Towse, with his Whites; Mr. Crisp, with his Suffolk Whites; and Mr. Cattle, with his "Improved Lincoln," they won a decisive victory. In the Extra Stock Mr. Coate viewed "his own feather on the fatal dart," but the man who beat the lot was still Mr. Baker, whose two seconds deserved such luck, and who did the trick with the Homeon blood again. Mr. Coate resides at Hanson, near Blandford; and we find on reference to the Smithfield lists that he won a high commendation for pigs under twelve months in 1858. Higher than this time were wonderfully matched, both in length, size, and type; quality beautiful, and bacon close in its texture; and, in short, never was gold medal more deservedly carried.

The late Duke of Richmond was always great in the Southdown arena, and both the present Duke and Mr. John Kent (who once trained for the late Duke) have well upheld the prestige of the flock at Smithfield. Last year Mr. Kent won the medal with Richmond wethers; this year he takes for "Prize Rigdon" added it to his Hove Cabinet; and in 1858 the late Duke had the pleasure of receiving it himself. The class from which our illustration is taken only consisted of five, and of these the Duke of Richmond finished first, and gained the gold medal. Lord Walsingham second, Mr. Rigden third, Lord Radnor fourth, and Mr. Kent last, with a commendation. As a pen the winning one was very beautiful, and that fault—shoulder over which the late Duke lamented so much, and bred so much from Babraham to correct, was not observable as it has been. Mr. Foljambe's pen of prize Leicester in the lower compartment of the picture were wonders, and the strength of the Osberton flock is shown by the fact that they were not the same pen that won the gold medal at Birmingham. Their girth was wonderful, and the only thing that could be at all quarrelled with them was that their fleece might have been a trifle heavier. Their forequarters were especially good, and hence it was all that the hindquarters could manage to be in keeping. The class was a very fine one, and the fact of the second pen (Mr. Villamedry's) being reserved for the medal goes far to prove it. For the extra-stock silver medal Mr. Foljambe won again with his wether, and has thereve was equal to the old six-shear ewe of Mr. Level which won the extra-stock medal last year, although the latter was clearly entitled to the precedence when her wonderful retention of form was taken into the estimate. The gold-medal ewe had a hard fight both with the Devon heifer, Young Pretty, and Mr. M'Combie's Scotch pair. She is a very fine, orthodox sum of 5 years 10 months, and bred by Sir John Harper Crewe, Bart., of Calke Abbey, who sold her to her present owner, Mr. Falkner. Colonel Townley had made the public eye rather fastidious with his Victoria and Beauty's Butterfly but this "Dolly," although not taking rank with some great cracks who have won their gold medal in other years, was a very fair shorthorn champion, and certainly superior of her class to the Hereford which won the medal last year. Still, true to the side of Mr. Foljambe's ewe, she would not bear examination, as certainly Mr. Taylor has had the honour of feeding, and Mr. Christopher Clark, of Rimmanby, of feeding one of the most perfect animals that ever lived on "swedes, linseed-cake, pea-meal, hay, and milk." One or two little places in its hindquarters might have been marked out for criticism, but still they hardly interfered with that magnificent roan whole, which Birmingham and Smithfield honoured with their approbation and the metropolis will about to turn into the roast beef of Old England. Even the butcher must have felt a pang when he poised his hammer for the fatal stroke which was to fell the great Christmas champion of '61.

THE PRIZE POULTRY AND PIGEONS AT BIRMINGHAM.

PARIS and its *soufrées* may set the fashion on plumage to the human creation, male and female, but Birmingham does so to the poultry-yards and pigeon-cotes of England. Scrn Bhadamanthuses they are when they ponder over the question whether the combe are to stand upright or droop, or place a goose in the scales of fate. Such, however, is the confidence felt in the judgment of these high priests at the great cotsefield of comb and feather that there were no less than 1297 entries of fowls and pens of fowls and 300 of pigeons. Our illustrations begin with (1) Mr. G. Goore of Aigburth Vale's fantail, aged twenty months, the winner in a class of eighteen. To this succeeds (2) Mr. Peter Eden of Salford's Barbe, and (3) Mr. J. Machin's Spots, the winner in an Oda Fadrids class of spots, fluffacks, short-faced self-coloured tumblers, hyacinths, whole-feather tumblers, bronzewings, yellow magpies, and worse wrongs. In 4 we have Mr. J. T. Lawrence's prize pen of the Jacobin class, which is marked at £100; Mr. J. Morris owns (5) the second prize ornamental waterfowl, or Bamdees, which had no low in their class to Mr. T. H. D. Bayley's Schatstopf geese, and beat two sets of swans. In Hunts these geese are trained, we believe, to fight like gamecocks, and beat each other furiously with the bars of their wings; but we conclude they lose their ferocity in a milder zone, or wee betide the shavers of the pond. Mr. Bayley also owns (6) the first prize ducks of any variety, which had white-cheeks, nose-covies, white-eyes, brown-cals, bahamas, mandarins, and wild ones against them.

From these we pass on to Mrs. Blair's prize pen of grey and mottled geese, which weighed 61lb., and were between six and seven months. Mrs. Blair was first and second in this class, and as she was also second in the under class, and had a first, a second, and a highly, an H O and G for Dorkings, two H Gs and a O for Brahmapootras, an H O for Buenos ducks, and a third and a C for turkeys as well, this celebrated authoress may well be said to combine "Science with Practice" at Inchmarnock, Inchture, N.B. The Brahmapootra prize (8) was won by Mr. Richard Teebay and two others. Mr. James Fletcher's brown-breasted red cock (9) was not the winner in his class, where there were four prizes and four high commendations, but came second to Mr. Gilbert Moss's birds. He was followed to the best brown-breasted red the judges had ever seen, but the two hens with him were not worthy of their consort. For the black with white-crested Polands (10) Mr. J. G. Sugden was first and second; and, although the entries were but few, the class was well represented in point of quality, and reckoned her Grace the Duchess of Sotherland among the contestants. The judges of poultry were the Rev. R. Pulleine, Mr. G. J. Andrews, Mr. J. Baily, and Mr. T. Challoner, whose labours in allotting the classes were anything but light; and Mr. Harrison Weir and Mr. T. J. Cottle presided over the seventeen classes of pigeons.

One of the correspondents of the *Debats* gives the following as a curious specimen of the boldness of the petite authorities of Warsaw, being a permission signed by the Prefect of Police:—"I authorise the bearer of the present card, M. ——, to carry a cane, even with an iron ferrule at the end, and this on account of his advanced age and the weakness of his legs.—PRINCIPAL."

A daring robbery, effected in an extraordinary manner, took place in Bologna on the 19th inst. Twenty-eight persons, dressed as Carbineers, presented themselves at the railway station, stating that they had orders to wait there on the look-out for robbers. Being admitted to the office, they broke open the cash-box and carried away a sum of 80,000f.

The President of the Canadian Institute of Montreal has received, through the medium of the French Consul, a case containing one hundred and fifty-six volumes of rare and interesting works, being a present from the Emperor Napoleon to the Institute. The gift includes a small lot of choice engravings, and is accompanied by a letter from the Prince, in which he requests the members to accept his present as a remembrance of his visit to Canada, and as a token of the interest he takes in the welfare of the Institute.

MDME. GUERRABELLA.

GENEVRA GUERRABELLA is by birth an American, of English descent, but was taken to Italy when a year and a half old where she has received her musical education. She began the pianoforte at five years of age, and at thirteen was a fine performer. At this time she became acquainted in Germany with Mdme. Sontag. That great artist took a warm interest in the child, and gave her instruction, and, when the young Genevra returned to Italy, furnished her with an introduction to Rossini, who procured a master for her, and superintended her progress, he also being much interested by her love of and talent for music. She has also had the best masters in France. It has been supposed that she has a long experience on the stage; but in truth, she has only appeared for a very short time at three or four Continental theatres, having previously been occupied above six years in the assiduous study of her art. Our musical readers are already aware that she made a brilliant debut in this country last season at one of the concerts of the Philharmonic Society, and that she is at present engaged at the Royal English Opera, Covent-garden, where she has appeared in Macfarren's "Robin Hood" and Wallace's "Maritana" with complete success. And we may now add that she has appeared with not less success as an oratorio-singer, having sung the soprano part in the Sacred Harmonic Society's performance of "The Messiah," at Exeter Hall on Friday, the 13th of December, when she was received by a crowded audience with the warmest applause.

MDME. GUERRABELLA, OF THE ROYAL ENGLISH OPERA, COVENT GARDEN.

UNCOVERING THE LONDONDERRY MONUMENT AT DURHAM.

THE monument erected to the memory of the late Marquis of Londonderry at Durham was inaugurated on Monday, the 2nd inst., with befitting pomp. The site of the monument is in the market-place, immediately adjoining St. Nicholas' Church and the Townhall. The work has been executed by the process of metal depositing called galvano-plastic or electrotyping, and it is the only equestrian statue and the largest production attempted as yet by this process by a private sculptor. For the accommodation of the principal visitors a large platform had been erected. Not an unpleasing feature of the occasion was the presence of a considerable number of men in working attire, who took up their position on the ground surrounding the statue. The attendance, too, of several of the volunteer corps of the district was a fitting mark of respect to the memory of the deceased Marquis. The ceremony began shortly after twelve. The Marchioness of Londonderry and party were escorted to the market-place by the Duke of Cleveland, and following in the procession were the Right Hon. B. Disraeli and Mrs. Disraeli, Lord Adolphus Vane Tempest and Lady Susan Vane, Mrs. Henderson, and Mrs. H. G. Wilkinson. The Mayor (J. H. Forster, Esq.), in opening the proceedings, said:—"My Lord Duke, ladies, and gentlemen—We are assembled here to-day to do honour to the memory of a respected nobleman and a brave soldier—one who served his country with great gallantry and distinction during one of the most eventful periods of its history, and to whose courage and enterprise this county in particular is vastly indebted for the part he has taken in the development of its commercial and mining interests." The bugle having sounded, the awning was removed, and amid the plaudits of the bystanders, the huge steed and noble rider were fully exposed to the gaze of the public. Receiving the command, the volunteers presented arms, and the band of the 7th Durham Rifles played "Rule Britannia," the city bells at the same time striking out joyous peals. The Duke of Cleveland presented the statue to the Mayor and Corporation, with the deed of gift, and a volume containing a list of subscribers to the Marchioness of Londonderry. The Mayor having returned thanks on behalf of the Corporation and citizens, and Lord Adolphus Vane on behalf of his family, the volunteers once more presented arms, and the National Anthem was performed by the band. Three cheers were enthusiastically given for the Queen and for Lady Londonderry, and the large assemblage dispersed.

A public luncheon at the Townhall followed, at which speeches were made by the Duke of Cleveland, Mr. Disraeli, Mr. Mowbray, Lord Adolphus Vane Tempest, and others. Among the persons toasted was Mr. Monti, the artist of the statue.

WAITING FOR CURRANTS AT PATRAS.

THE scene depicted in the Engraving at page 647—from a sketch by Captain W. Parker Terry—is one intimately connected with this season of plum puddings and mincepies, and therefore finds a place as by right in our Christmas Number. It is pretty well known that the currants of the grocers' shops are the dried berries of a small kind of grape chiefly cultivated in the Morea and the Ionian Islands. The plain of Patras, on the north coast of the Morea, produces a great quantity, which form the principal article of export from Patras.

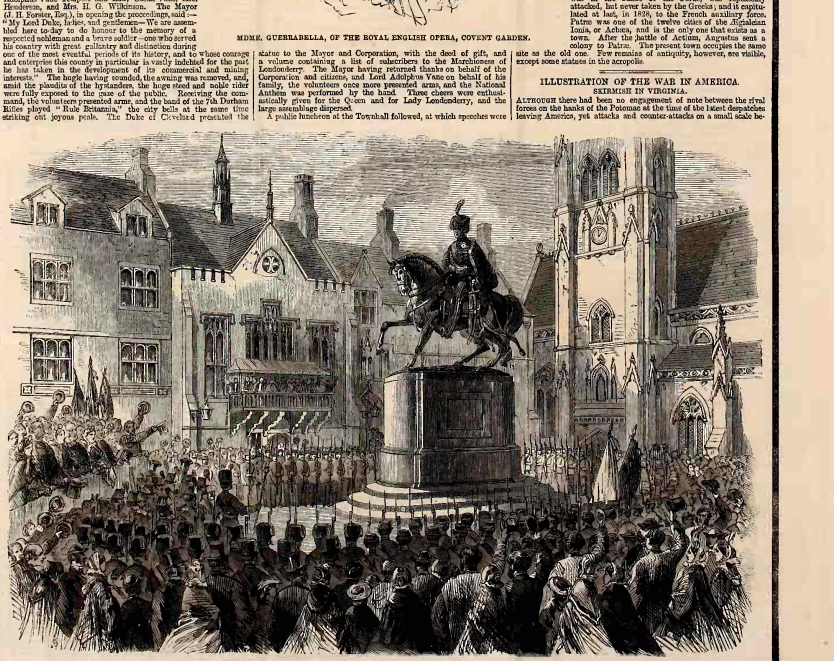
About the end of August and the beginning of September the anchorage of Patras presents a lively appearance from the number of schooners and other vessels which are daily arriving to load with currants for England. It is usual for a vessel when the first boatload comes alongside to fire a gun and decorate the masts with flags. This year there were thirteen large steamers and fifty other vessels of various sizes. The shore presents a very busy scene from the excitement of the people (who flock from other parts of Greece, the Ionian Islands, and Neapolitan shores) who are engaged in filling and stowing the new fruit into numerous casks and loading the barges alongside. The shores of the Gulf of Patras and Corinth are cultivated with the currant vine, and when the fruit is ripe enough for cutting it is laid out on a prepared sandy patch of ground to dry, and it takes (with fine weather) about eight days. This year, owing to a storm and heavy rain, a good deal of fruit was damaged.

Patras, except during the currant season, is a dull town, with little trade. It is situated about six miles south-west of the entrance to the Gulf of Lepanto, and stands on a ridge about a mile long, of which the acropolis, or citadel, crowns the summit, commanding the view of a fine and fertile plain which stretches along the seacoast. Mount Voidhia, one of the high summits of the Morea, rises above the ridge on which the town is built. Many of the houses are surrounded by gardens, with orange, fig, pomegranate, and other fruit trees, but the houses themselves are ill-built and mostly of wood. Previously to the Greek Revolution, Patras (the ancient Patræ) was the most thriving town of the Morea, being the emporium of the trade of the peninsula as well as of Western Greece. It contained about 10,000 inhabitants, nearly all Greeks, and had Consuls of most European nations. But the war of the Greek Revolution nearly ruined the town. The citadel, which was in the hands of the Turks, was repeatedly attacked, but never taken by the Greeks; and it capitulated at last, in 1829, to the French auxiliary force. Patras was one of the twelve cities of the Achaian Ionia, or Achæa, and is the only one that exists as a town. After the battle of Actium, Augustus sent a colony to Patræ. The present town occupies the same site as the old one. Few remains of antiquity, however, are visible, except some statues in the acropolis.

ILLUSTRATION OF THE WAR IN AMERICA.

SKIRMISH IN VIRGINIA.

ALTHOUGH there had been no engagement of note between the rival forces on the banks of the Potomac at the time of the latest despatches leaving America, yet attacks and counter-attacks on a small scale be-



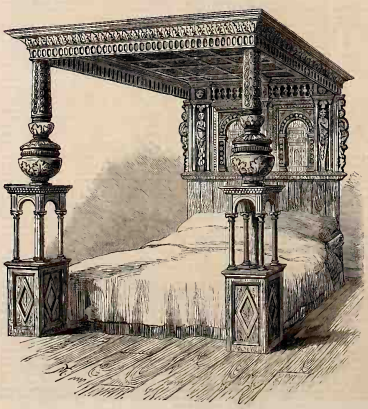
INAUGURATION OF THE STATUE TO THE MEMORY OF THE LATE MARQUIS OF LONDONDERRY AT DURHAM.

THE CIVIL WAR IN AMERICA: SKIRMISH NEAR FALL'S CHURCH, VIRGINIA.—FROM A SKETCH BY OUR SPECIAL ARTIST.

tween detached bodies were continually occurring. The accompanying Illustration, from a Sketch by our Special Artist in the Federal camp, shows a skirmish which took place a short time ago near Fall's Church, Virginia, between a body of the 14th New York (Brooklyn) Regiment and a troop of Confederate cavalry. The 14th were surprised while out foraging, and, after a smart skirmish, both parties separated, the Confederates, who lost three men, carrying off with them thirty-six prisoners and six waggons. The remainder of the 14th fell back on their supports with their wounded, leaving some dead on the ground.

TESTIMONIAL TO M. AND MME. LEGRAND, OF CORDOVA.

THE handsome piece of presentation plate of which we give an Engraving has just been executed by Messrs. R. and S. Garrard, of the Haymarket, for the Admiralty. An inscription engraved on the foot of the cup explains the particulars of the incident which gave rise to its being made and presented. It is as follows:—"Presented by the Admiralty of Great Britain to Monsieur and Madame Legrand, of Cordova, to mark their appreciation of the kindness and hospitality shown to Captain Aldham, of H.M.S. Valorous, when wounded by brigands in Mexico. 1861."



THE GREAT BED OF WARE.—SEE PAGE 650.

THE INDUSTRIAL MUSEUM OF SCOTLAND.

A MELANCHOLY interest will always attach itself to this building, in consequence of the last public act of his late Royal Highness the Prince Consort having been to lay its foundation-stone. Immediately after laying the first stone of the new General Post Office at Edinburgh, on the 23rd of October last, his Royal Highness proceeded to the University to perform the like ceremony for the intended Industrial Museum, in the large quadrangle of which the Principal (Sir David Brewster) and the members of the Senatus Academicus were in waiting to receive him. Sir David Brewster presented an address from the Senatus to the Prince Consort, which his Royal Highness briefly acknowledged. The company then proceeded to the site of the museum through one of the windows of the University, where the ceremony of laying the foundation-stone was gone through.

The building, of which a View from the north west is given, is intended to receive the large collection of natural and manufactured objects forming the Industrial Museum of Scotland, and which is now stored in some of the old houses adjoining. It will also accommodate the very beautiful natural-history collection which has been presented by the University of Edinburgh, and which is now crowded into inconvenient rooms in that building.

The site which has been chosen is immediately adjoining the University, and to the westward of it, and a plot of ground sufficient for the entire building has been secured. It is only intended, however, at present to proceed with the construction of one wing of the building.

The entire building when completed will contain in the western wing offices and library and in the eastern wing a large lecture theatre, while the space between and in the rear of these projecting wings will be occupied by the museum proper, which will consist of a series of glass-lighted courts, opening out upon a great hall 200 feet long by 70 feet wide and 70 feet high, and roofed with the same description of semicircular timber truss that has been employed by Captain Fowke in the Exhibition and in other buildings.

A peculiar feature in the structure is the two-storied cloister or gallery, which runs along the north side of the museum, and forms the low, recessed portions of the north front, as seen in the Engraving. This being glazed with plate-glass along its front, and opening into the glass-covered museum behind, will have the effect of a pierced screen as seen from the street; and by admitting the south light from the

TESTIMONIAL PRESENTED BY THE ADMIRALTY TO M. AND MME. LEGRAND, OF CORDOVA.

glass roof behind through the other side (if the expression may be used) will give an effect of light and shade to what must, from the climate and aspect, otherwise be totally wanting in those essential qualities.

The style of architecture chosen by Captain Fowke is the Venetian Renaissance, which, approaching sufficiently near to the rigid classic of the adjoining University, has the advantage of giving considerable latitude in its proportions and treatment, and also of allowing of the admission of a very large quantity of light. The building will be built throughout of the grey sandstone of the neighborhood, and the introduction of colour as sadly wanted in Edinburgh streets is effected by the employment of red sandstones from Melrose in the shafts of the smaller columns of the fronts.

The capitals of both these and the larger pilasters will be carved, from the designs of Mr. Sykes, with subjects objective illustrative of the natural history, industry, and geology of Scotland, after the manner so successfully employed by the late Oxford museum, each capital containing a different object; and it is further proposed to illustrate the granites and porphyries of Scotland by the use of them in the form of polished panel or base thereabouts materials in the wide spaces provided for that purpose between the coupled columns of the front. The building is from the designs of Captain Fowke, R.E., and is being executed under the superintendence of R. Matheson, Esq., Surveyor to the Office of Works in Edinburgh.

CHESS.

LOVE'S LABOUR'S LOST.

Answer to Pedlo Tess.

The following particular epitaph is translated from the *Nouvelle Espagne*:—

Mr. Editor,—It is with deep regret I declare to you that our friendship is entirely dissolved. You have been so in a terrible manner, and I am ashamed to say, Sir, and your Paper that first inspired me with a passion for chess, and so variously entertained us each week for all I do not laugh, Sir; do not laugh. You will only exasperate me. Sir, I am perfectly calm. Without anger I write you this. Pending and in an avenging Duley I go belief in such a one is stronger as I agree with you. "But what have I done? And what have I committed?" you ask. Ferfidious, Sir, and you shall know. I must own myself clearly, or you will pronounce me a faithless Perfidious Albion, where I should rejoice to see all champagnes, and you at their head. If you have not guessed, Sir, I am about to make my marriage; you must believe being that, if not positively handsome, I am by no means plain. I have a fine person, a well-formed head and large, expressive eyes, and my mouth is said to possess six thousand pearls en manque, and have some expectations.

I had determined, Sir, to abandon the freedom of a bachelor's life. I had found the angel of my hopes and dreams. I will not perplex her modesty by describing her attractions to you, Sir, suffice it that I was happy and exceedingly lovely woman. It is enough to say that she was beautiful and the innocent child of fifteen summers; that she was a widow, and was in the engagement of Dr. Well, Sir, to be brief, I and this lovely woman soon became devoted friends, when she was summoned to spend a few days with her family. His mother was to meet them in order to give her consent to my felicity. I went, and experienced the most cordial welcome.

One evening we were all gathered round the tea-table, and naturally some conversation chess. At the word I reveal myself, spoke of you, praised your journal, and unconsciously myself as a proficient in the game. Judge, Sir, myself The ingredient which had scarcely passed my lips when a chess-board was placed before me, a frightful, bald-headed man took his seat opposite me, and immediately we were enclosed by spectators.

I have the least room, and my adversary doesn't lose the first move. The game then begins, as follows:—

WHITE (Bald-head).	BLACK (Mr. Frederic F.)	WHITE (Bald-head).	BLACK (Mr. Frederic F.)
1. P to K 4th	P to K 4th	2. Q B P takes P	Q to K R 5th (ch)

Q to K R 5th! What a move! It is only in such distant latitudes—I was at Newry, in Ireland—that one could ever see such a move. To punish my opponent for his temerity in making it, when he had the honour to be opposed to a member of His Majesty's Sappers, I determined on a counter-attack. For an instant, however, the radiant figure of my idol, who had just taken left the room, appeared. I rallied, and, with a defiant glance; my idol because I positively determined, and with trembling fingers I played

WHITE	BLACK
P to K B 3rd	P to K 3rd

This diplomatic move, the mere recollection of which makes me blush, was accompanied by a look which said my adversary, in a sweet-sister voice, "We have exposed your King, and you are aware of the penalty." "Ah, Sir, I am pardon it, Sir, you will not be severe." Immediately I remembered the first number of the *Nouvelle Reviewe*, you know that the rule is explicit and when you touch a piece, Sir, you must move it without glance; my idol because positively determined, and with trembling fingers I played

"Two Students in Two Countries. A Cruise in one.

PAINTING IN WATER COLOUR; the Theory and Practice of the English School. By AARON PENLEY. Illustrated by Examples in Chromo-Lithography and Numerous Wood Engravings. Dedicated by Command to the Queen. Price 21s. Also, a Cheaper Edition, with Outlines for Tinting, 10s. 6d. Also, Studies for Figures, in Outline, for Advance Students in the practice of the Art. Whether as an expert amusement for home, or as a means of profitable livelihood, if it seems from the first to be a task, it will soon become a delight. The Book is the most complete and practical, and at the same time the cheapest, work on the subject. With all the assistance and purity of effect that can be contributed and realised by the most skilful mechanical aid, it is yet a book of the brush. The author of the work has only had a long years of practical study, but of the best and most eminent English masters, and he has imparted instruction in the Art for upwards of 30 years in the widest families in the kingdom, and has, first and last, had the honour of numbering among his pupils nearly all the Royal Family, and many of the highest nobility at their own residences, in London, and at their Country Seats. Specimens, by chromolithography, of the original water-colour drawings, executed expressly for the work, by the author, and the instructive and descriptive text; the whole put up in a handsome portfolio, 21s. Also, a Cheaper Edition, in paper cover, with half of the subjects, as well as a series of mechanical and more outline sketches. Only a small edition will be ready.—London: 192 and 193, Piccadilly, publisher to the Queen, the Royal Family, and the Royal Academy.

ILLUMINATED and ILLUSTRATED BOOKS on colored paper, of marvellous beauty and value, suitable for Gifts at this Season of Art, and some of the highest excellence of Day and Son, Lithographers to the Queen, 6, Gate-street, Lincoln's-inn-fields, London. Catalogue post-free on application.

THE ILLUSTRATED LONDON NEWS.

No. 1124.—VOL. XXXIX.] SATURDAY, DECEMBER 28, 1861. [WITH A SUPPLEMENT, FIVEPENCE

IN MEMORIAM.

ALL is over. The last rites of national mourning have been fulfilled as they only can be fulfilled on those rare occasions when there is added to the unexpectedness of a calamity an overwhelming sense of its irreparable nature. The son has seen the last of his father by the burialplace in the Chapel of St. George at Windsor; the widowed Queen sits alone with her children seeking and giving comfort; the lamentations of a whole people have ascended from church and chapel throughout the breadth of the land; everywhere in the public streets and places there has prevailed a great hush, a mournful but significant silence; trade has been suspended, amusements have been set aside, even the dread shadow of war itself has been almost at times forgotten in the more terrible reality of our great loss. If any manifestation of the profoundest respect for *Him*, or of the most affectionate and sympathetic loyalty *for her*, on the part of a great people, can mitigate the blow for the survivors, they have both of these things assured them to an extent and with a heartfelt sincerity that the history of this country can rarely parallel.

But can we do no more? When the tears have dried from the cheek, and the current of daily life has resumed its course, shall we content ourselves with merely cherishing the memory of the Prince as a memory, or by preserving in our records the narrative of his many admirable exertions in our behalf as a narrative only, with which we have no longer any practical concern?

Is it thus he would have acted could he have been placed in a corresponding position? Is that what he would wish if we might commune with him in spirit and seek to learn how we might most truly honour him? Let us not for a moment believe it. Let us rather imagine how, from his idea of duty, he would have shown us our duty, saying:—"Think not of me for my own personal sake, but only of what I did and sought to do. These things lay near my heart while I lived; take them now to your heart in my death, and carry them on to fruition."

What, then, are the works in which he took such constant interest, and which, to some extent, compensated to him for the absence of any public political life? They may all be compressed in the one popular phrase—"Social Science." He thought one of the first duties of men in authority was the amelioration of the state of the poor, and he said so in noble words:—

"To show how man can help man, notwithstanding the complicated state of civilised society, ought to be the aim of every philanthropic person; but it is more peculiarly the duty of those who, under the blessing of Divine Providence, enjoy station, wealth, and education." These were the Prince's sentiments as expressed in 1848 at a meeting of the Society for Improving the Condition of the Labouring Classes. And how did he himself set the example? He began with the reform of the poor man's home. He knew well that there all improvement must originate. He did not yield to the mockery of saying "Be moral," when he knew that every condition of the labourer's cottage was rife with the conditions of immorality; or of merely preaching "Be religious; look to the interest of your eternal soul," while conscious that body and soul, hope, love, and faith, were all being crushed out of existence by a hard, grinding, inexorable destiny. No; he set to work to show how the poor man could be lodged by building at his own expense a model cottage—the one that was shown during the Exhibition of 1851, and which now stands on what was Kennington Common. From building one house as an example, the transition was natural to the assisting to build many such houses for actual occupation; and the Prince gave his sanction to a very interesting experiment when he supported the Windsor Royal Society, which is essentially a co-operative effort to teach the people how to construct their own houses. The company is

THE BOUNDARY LINE BETWEEN THE UNITED STATES AND CANADA.—SEE NEXT PAGE.

limited, and the objects are twofold,—first, to provide good lodging and cottage accommodation, with garden allotments, for the humbler classes; and, second, to enable the occupants, by small investments, to become shareholders, and thus to retain in their own hands profits that, under ordinary circumstances, go to the landlord. Would it not be, indeed, a glorious memorial of the Prince if every nobleman and gentleman throughout the country who owns a landed property would commemorate this time by new or greatly-improved homes for its labourers, so that future historians may say, "The example and death of this estimable Prince appear to have given a new impulse to the feeble and partial efforts previously made for the amelioration of the dwellings of the poor. From this time we see the therapid progress of one of the greatest of social improvements; and whereas previously it was the country gentleman's pride to point to his stables and to the places where his live stock was healthfully and comfortably housed, now it is an event to pleasure and his acknowledged duty to be able to say, 'There is not a labourer on my estate who has not a comfortable home.'"

The Prince did not think sh's was the only thing he ought to do in the practical illustration of the doctrine—Property has duties as well as rights. He interested himself in things that interested the poor, and endeavoured to bridge over the chasm that so deeply separates classes. He encouraged those annual meetings in the Home Park at Windsor where flowers, fruits, and vegetables, the products of men who cultivate them with their own hands, are displayed in friendly competition and in the hope of winning a prize. Skilful artisans not unfrequently show at these meetings what they can do to lighten our labours. Gerdin's working bricklayer once exhibited a clock of his own construction. Rewards are also given by the society for long periods of domestic service. The hope of the personal notice of the Prince has been found a constant incentive; and many a poor man has gone away after receiving a card of admission from the Prince's hands, or a genial nod or look accompanying the acknowledgment of his merit, prouder than he would like to own of his success and of the Prince's recognition. How easy is it for rank to win the hearts of the people! Let those who doubt it try.

But while the Prince thus strove to foster a spirit of independence among those who have so many excuses for losing it, he did not attempt to evade on various occasions another help than that of charity. So long as any man believes the poor cannot cease out of the land, so long is he morally bound to do his best to alleviate their condition. But let him discriminate in his bounty as the Prince did, by instituting, for instance, the distribution of the New-Year's Gifts at Windsor. How this might be done by an official we all know. How it has been done under the direction of the Queen and of her lamented husband we have lately learned.

A committee of local clergymen were formed as the coals and a list of persons who might fill the wards was submitted by these gentlemen to the Prince, who acted, of course, for the Queen. And how happily was intolerance rebuked when a Dissenting minister, finding all the members chosen belonged to the Church of England, made a remonstrance in the respectful manner and was himself immediately placed on the committee!

But it was not from any want of appreciation of the higher things that belong to humanity at large, and which are therefore as much the birthright of the poor as of the rich—such as education and religion—that the Prince paid so much attention to the material necessities of the working classes. The schools at Windsor showed how much he valued popular culture. There is an anecdote told of the Prince of one of the papers devoted to the social improvement of the people which we take pleasure in repeating in connection with this subject:—" A young man then known only, if known at all, in the district for his Radical opinions, commenced a mission with week-day lectures, and schools, and night-schools, in an extremely debased and ill-reputed part of the city, not more than a few miles from one of the Royal residences. All things went on well except the financial department. The young missionary could not obtain money for his building purposes in sufficient quantities: he might implore for his own wife, but could he do? He, the notorious Radical and ultra-Dissenter, boldly applied to the Queen. The regular inquiries followed. No aid could ever be procured from that family without inquiries. Two or five pounds were never sent to an applicant for the purpose of quieting conscience and getting rid of him. The plans were approved. From that time the Prince and the Queen took a warm interest in their working. The scheme was singularly successful. It was never forgotten amid the cares or the pleasures of the Court, because the pleasures were not calculated to drive the mission out of mind, and the cares were formed of kindred objects. That mission not only received pecuniary support, but was a matter of continued personal inquiry and interest. The missionary was once a working man, who struggled onwards and upwards through many difficulties. Now he is, perhaps, the leading home missionary of the land. And yet we cannot tell how much of his perseverance in this work is due to the kindly interest and the warm encouragement afforded on this application for aid to his first mission. Kind words and deeds are noble incentives to work."

These, then, are some of the aims that Prince Albert laboured to promote, and which we should receive as a sacred trust from his hands, to be carried forward with all the wealth, and earnestness, and determined purpose of the entire nation. But there are others towards which we owe a like fidelity. We do not speak of science and fine arts, which he loved and fostered: they can very well take care of themselves. Neither do we care to dwell on the Prince's labours in horticulture and agriculture, though we owe in a great measure to the first the reviving prosperity of the Horticultural Society and the very beautiful gardens at Kensington; whilst the second have given us model farms and other and equally noticeable memorials of the share taken by Prince Albert in the recent and wonderful development of the oldest of the industrial pursuits. But we must not overlook how much England owes to him for the Great Exhibition of 1851, and what a duty his death devolves upon us with regard to the Exhibition of 1862. Already ships are on the seas bringing hither from the most distant parts of the globe whatever is rarest, most costly, or most precious in their or most valuable for its use to man. We cannot postpone this event if we would, and we ought not to do so if it were yet in our power. As we walk through the wondrous display of the wealth of the world that the spirit-stirring memories of Kensington will contain, it will be impossible for any one to forget that there, indeed, we shall be witnessing a worthy memorial of the efforts of the Prince Consort. And if the remembrances have its painful, so will it also have its consolatory associations. No man dies young who has achieved much, and in the conviction of that truth we shall learn grad sally to feel that the sting is drawn from our regret.

THE BOUNDARY LINE BETWEEN THE UNITED STATES AND CANADA.

Our Illustration represents a portion of the boundary line where it crosses the Grand Trunk Railway at Point Iberville, a town which connects the Atlantic port of Portland, in the State of Maine, with the line between Canada and Quebec. The boundary line is straight at this point, but afterwards becomes exceeding crooked, following the course of streams and rivers, and passing through the Lake of the Two Mountains, and finally reaching the Gulf of St. Lawrence. Where the line passes through the wilderness the trees have been cut down so as to leave an open avenue—some paste being set up at intervals. A short distance north, on the Canadian side of this line, are situated good towns and villages, being the eastern townships of Canada. Between them and the United States there exists no physical barrier in any way, therefore, assume that in the event of war it is upon this portion of the colony that the first blow will fall.

FOREIGN AND COLONIAL NEWS.

FRANCE.

On Saturday the French Senate adopted, with only one dissention, the Senatus Consultum embodying the constitutional changes accorded to the Chamber. The Senate then adjourned over Christmas. A speech from M. Fould, who justified the statements made in his recent report.

The important despatch of M. Thouvenel on the Trent outrage gives in words more solemn forms the principal topic of discussion in Paris. The anti-English party express their disapprobation of the opinions of the Emperor, and of the moderate tone of Thouvenel.

The death of the lamented Prince Consort continues to engage the sympathy of both French and English in France. Amongst other indications of this sentiment, a meeting of the Protestant churches of the English and French inhabitants, at which an address to our beloved Queen on her great bereavement was unanimously agreed to. Lord Brougham was in the chair, and Lords Dalhousie and Radely were present. On Monday the shops of the English in Paris were shut.

The *Journal des Débats* has received a first warning for an article which the *Moniteur* describes as "written in a party spirit, and in flagrant contradiction to the principles on which the French people agreed to found an imperial throne and the future of a dynasty."

PORTUGAL.

Prince João, brother of the King of Portugal, is dangerously ill of gastric fever. He has received the last sacraments.

The Royal Palace the other day was the scene of a special Session of the Cortes.

The principal levée which was to have taken place on Monday was postponed on account of the Prince Consort's funeral.

ITALY.

The Court has gone into mourning for his late Royal Highness the Prince Consort.

The Italian Budget is under discussion in the Senate. It has met with a good deal of opposition, but it is understood that it will be accepted on the understanding that the affirmative vote is to be considered as expressing neither confidence nor interest in the Ministry.

On Saturday last the financial statement was made in the Chamber of Deputies. The programme has received a provisional approval by a large majority, and a project of law has been presented in accordance. The Italian treasury shares the want of money which affects the exchequers of almost all the States of Europe. On and for the year 1863 for the estimated deficit of the year 1862 is stated at about £12,000,000. The Budget includes the sale of £5,000,000 of the property of the clergy, of loans already effected. The remaining £6,000,000 the Minister proposed to raise by the imposition of fresh taxes, partly direct and partly indirect, to the amount of about £3,600,000, leaving only some £800,000 to be met by an issue of Exchequer Bills.

Signor Ratazzi, in addition to the appeal of the Italian Chamber, has consented to withdraw his resignation and to retain the port of Premier.

HOLLAND.

The Second Chamber of the Hague has adopted by thirty-seven votes to twenty-five a declaration that the Ministry did not possess its confidence. The retirement of the Cabinet is therefore imminent.

BELGIUM.

The Court has gone into mourning for his late Royal Highness the Prince Consort. The Austrian Ambassador at London, Count Apponyi, has been instructed to express the sympathy of the Austrian Court to her Majesty Queen Victoria.

The Belgian Chamber, on Tuesday last Saturday afternoon, and will not return to Vienna until the 15th of January. When on his way home his Majesty will inspect the fortifications which have recently been made in the Southern Tyrol.

It is stated that Count Rechberg has forwarded to the Austrian Envoy at Munich a despatch, which has been read to the Diet. The British Government is entitled to reparation for the aggression of Denmark, and Austria and Prussia will support the British Cabinet "not to complicate their own affairs by any hesitation in satisfying the just demands of her Majesty's Government."

PRUSSIA.

In Berlin a funeral service was celebrated on Monday for the late Prince Consort. The service took place in the chapel of the English Embassy, and was attended by the Royal family, the Minister of State, and the diplomatic body. After the ceremony the King and Queen condoled with Lady Bloomfield on her widowhood.

The magistracy and the municipality of Berlin have presented to our Prussian Majesty a joint address upon the affliction that has sustained on the loss of her illustrious father. The address is expressed in language of the fullest sympathy, and indeed was a warm appreciation of the character of the late Prince Albert.

It is stated that the Prussian Parliament is to assemble on the 14th of January. The rumours of an approaching change in the Prussian Ministry have been denied.

The Royal Family assembled in celebration of the birthday of Frederick the Great, on the 24th of January—to take place at Berlin—is in great preparation. The Queen of Prussia has invited the Princes to bring their dogs, and display the splendour and glory of military strength. *Unter den Linden*, before his Majesty and guests invited to witness the ceremony.

DENMARK.

After the adoption of the Budget by the Danish Chamber of Deputies on Saturday last the Session of the Kingdom of Denmark was closed.

RUSSIA.

The Emperor has officially announced to the Governor of Finland that he intends shortly to convoke the Diet of that province. The intelligence was received with the highest satisfaction, and the city of Helsingfors was illuminated on the occasion.

Arrests continue to be made on a most extensive scale throughout the kingdom of Poland. Twelve beneficed priests have been sent to Siberia. The official journal of Warsaw publishes the acceptance of the Marquis Wielopolski's resignation.

TURKEY.

The monetary panic in Constantinople has considerably abated. An official announcement has been made that the Sultan pledges himself to introduce some effectual reforms upon the arrival of Fuad Pacha.

THE CIVIL WAR IN AMERICA.

By the arrival of the City of Baltimore we have telegrams from New-York to the evening of the 13th inst. Congress had done little anything of importance except to pass a resolution in favour of the adoption of measures for an exchange of prisoners. The President has refused for the present to furnish that body with the correspondence between the Federal Government and foreign Powers relative to the European intervention in Mexico.

MR. SEWARD'S DIPLOMACY.

A mass of correspondence between Mr. Seward and the American Ministers in Europe has been presented to Congress. The matters treated of relate to the concession of belligerent rights to the Confederate States, at which Mr. Seward is extremely indignant, and to the decision of the United States to the Declaration of the Congress of Paris relative to maritime rights, an adhesion which Great Britain and France would only receive without prejudice to the rights of the seceded States, and which was therefore withdrawn by the United States. The dispatch of reinforcements to Canada was also complained of, but pacified on the ground of the distrust of the United States' Government entertained by that of Great Britain and of the vague manner in which it stood.

THE REPORT OF THE SECRETARY OF THE TREASURY.

Mr. Chase in July estimated the expenditure of the current fiscal year (July 1, 1861, to June 30, 1862) at 318,000,000 dollars; but, in consequence of the increased number of men levied for the army, has since raised estimate to 474,000,000 dollars. Of this expenditure he has already raised by loans the sum of 197,243,000 dollars. The revenue, which he had estimated would produce 80,000,000 dollars, has, partly owing to Congress refusing to pass measures he had recommended, and partly owing to the depression of trade, so fallen off that he only expected to receive 43,000,000 dollars from it. For the purpose of filling up the deficit, the Secretary recommends the confiscation of the property of rebels, whether found in the loyal or disloyal States, but his main reliance is on loans and taxation. He recommends that the 6 per cent. interest now legal should be raised to 21 cents per pound, on clayed sugar 3 cents, on green tea to 20 cents, and on coffee to 5 cents. He further recommends that the direct tax be increased, so as to produce 20,000,000 dollars over the loyal States alone, and not only their proportion of the same, on the ground that all the States are loyal. He has a plan of excise and stamp taxes. He proposes duties on stills and distilled liquors, on tobacco, banks, bankers, carriages, the transfers of debt, and instruments for the conveyance of property and other like subjects, such as will produce 20,000,000 dols. more. From this source income tax he hopes to procure ten millions more. The whole direct and indirect taxes he would thus produce 90,000,000 dols. This sum is small compared with the agricultural property and annual savings of the people.

The Secretary's great resource lies in supplanting the banks. Their circulation in the loyal States and Western Virginia amounts to about 150,000,000 dols. He argues that their currency is a theft upon the people to the banks, costing the latter nothing but the expense of issue and redemption and the interest on deposits kept in the banks. These advantages ought to be transferred from the stockholders of the banks to the National Government. He claims to find authority in the United States' Constitution for this measure, under the power to regulate commerce and the value of coin. His method of issue is to hand this national currency to the banks, which will secure their issues by pledge of United States' stocks and an adequate provision of specie. The people will thus have a sound currency, and the Government enjoy the advantages of a loan without interest. The competition of local bank-notes is to be annihilated, in a special tax, whereas the specie now in the United States at 275,000,000 dols. Existing Acts of Congress enable the Secretary to raise 75,000,000 dols. more than he has yet issued on the Treasury notes payable in one and two years and 50,000,000 dols. more must be raised by another loan.

For the fiscal year 1863 no reliable estimates can be made. The Secretary hopes that the present war will be over before midsummer; but is not to be surprised but the contest should be long, and frames based on the hypothesis that the war will continue. These estimate including 43,000,000 dols. of interest on debt, amount to 475,231,000 dols., of which 98,800,000 may be raised by revenue, leaving a balance to be provided for of 376,431,000 dols. On July 1, 1863, the Public Debt will be 517,000,000 dols., and on the supposition 897,577,000 dols. on July 1, 1863. He thinks the loyal States alone could pay 672,000,000 dols. of the latter sum. Of the 275,000,000 dols. worth of bullion deposited in the United States' Mint in 1861, 37,000,000 dollars came from Europe. The Secretary closes his report by recommending the adoption of an international decimal system of weights, measures, and coins.

The bankers and financiers do not relish the propositions of Mr. Chase, so far as they relate to the suppression of the bank currency.

MILITARY OPERATIONS.

The Federals were about to occupy Tybee Island, at the entrance to the Savannah River.

Federal accounts state that the late artillery duel at Fort Pickens resulted in no harm to the fort, but that Warrington and part of the Pensacola Navy-yard were burnt.

A Government agent had been appointed to superintend the packing of cotton by the aid of the negroes in the neighbourhood.

CANADA.

The journals report considerable activity throughout Canada in organising the Militia and Volunteers.

MEXICO.

Prince Charles of Hohenlohe-Kirchberg, Hereditary Marshal of the Court at Wirtemberg, Lieutenant-General, and formerly Governor of the city of Stuttgard, died suddenly on Saturday in his eighty-first year.

The *Official Gazette* of Turin publishes the law recently voted for the extension of the use of paper money to the various provinces from it.

The Nationalverein has remitted 30,000 florins more to the Minister of Means for the Prussian fleet, which raises to 130,000 florins the amount subscribed by the association.

Mr. Stuart, the Australian explorer, has started again from Adelaide on a third expedition, with eleven men and seventy-five horses, to cross the centre country to the north.

Prince Conza has transmitted to the authorities a proclamation announcing his consent to the union of the Principalities. The United Assembly for Moldavia and Wallachia is convened for the 24th of January, 1863.

From a statistical account published by Inspector Nigra on primary instruction in the province of Genoa it appears that there are at present in that province 566 schools for men and for women, and that 20,000 are also 246 for girls. The number of schools of all kinds opened in the course of the present year is 18.

The Rev. W. G. Burns has of late been much engaged in the translation of Scottish psalms and hymns for the use of the Church of Rome, several only in use at several of the missionary stations, but are becoming very popular in the towns and villages of Scotland. Mr. Burns has just printed at Coolock a new hymn-book, which has thirty-three hymns in the collection, several of them detailed upon the plates. The hymns are also printed on single sheets, which are exactly upright for ? and it is a new thing in China to hear the children singing or playing them with all their heart.

CURIOUS SORT OF MANUAL LABOUR.—A singular incident marked the opening of the Assizes of the Seine. M. Dumont, set down on the list of jurymen as "rentier," or a person living on his property, purged to be exempt serving, on the ground that he was under the Empire chief equerry to the Archduc Corrigue, and could not attend. The Advocate-General observed that the applicant was required only in the evening at the theatre, and could, therefore, serve perfectly well during the day. Decrets very gravely replied that he had his republican in the anything, in order to point out to his men at what parts of each piece they were to applaud, and that, therefore, he could not serve as a jurymen. The Court, applying Article 9 of the law of June 4, 1853, which disposes all persons living by their manual labour from serving, accepted to the objection.

NATIONAL SPORTS.

Bell's Life, where winter edition has just been published, and seldom a better proposed is unfold for the forthcoming year, fourteen stocks now come within the conditions of the Sale Stakes at Newmarket; the Two Thousand has 59 subscribers, including Ace of Clubs, Old Calabar, Afrodicia, The Macaroni, Tolurco, Caterer, Wingrave, and Nottingham; the One Thousand, 49; The July, 50; The Chesterfield, 59; The Middle Park, 59; The Dewhurst, 56; The Prince of Wales's, a new Acoot stake for three-year-olds, with £1,000 added), 109; The North of England Biennial, 75; and the St. Leger, 185. In short, everything promises a very great racing year. Three Yorkshire yearling sales have been expected to be held inside of January, and there is said to be another batch of blood stock will be sent out by the East Indian Company in the spring. Mr. Richard Croker is ready to buy three of the best for names, including Dundee's and Kettledrum's dams.

The Baldock Open Meeting was remarkable for the success of three Pendlowers: two by which—Pendlower and Peony—divided one stake, and Belle of the Village ran up for another. The Bright Eyes blood was also pretty lucky at this very fixing meeting. Tilly the Fairy, although she beat Aillesbury, got no forwarder for the Ilsley Cup at Chelsea, where the lovely were to immense fields at Mr. Maddox's, inasmuch the Beacon blood was paramount with Pine, Pear, and C. A. F. Rose, Horsforthbrim to lead for Tuesday, Scotch (to) for Tuesday, &c.; Bishop's Castle (Salop) for Wednesday and Thursday; Ince Blundell, Dinnor, and Talacre for Thursday; and Filling for Thursday and Friday.

The late Mr. Greene's sale was a very spirited one, and, judging from the prices which things fetched, a very much better one than is usual for some recollection of the kind-hearted "Squire" and rarest ingle-worthy Mr. Leicestershire. The two hunters sold well as well as was expected, and Topthorn, the grey, only reached about £70 and Crimaline £50. In addition to many every other, the stem-blood has been catching and cold; but Mr. Tallby's had a wonderful run from Vowes' Gore on Saturday week, and a celebrated young jockey was in the front rank all the way.

THE FARM.

The weather during the past week has been on the verge of frost, and quite cold enough to check the progress of the young wheat, which was beginning to look far too "proud." The price of wheat is unaltered, and during the last six weeks it has just crept up a shilling more, and is now at 60s. 8d. on a sale of very nearly 100,000 qrs. which, as far as prices go, is an average of the year. Trade is very brisk, and Christmas finds the cattle still able to get a good mouthful "and something more" in the fields, and the sheep to eat a share of berries that hitherto have been generally reserved to.

The Tredegar Agricultural Show has been a most successful one, and no less than seven cups or pieces of plate were given for the best proper cattle remarks on "the great contrast between the prizes given to local and general exhibitors"; the latter bringing the principal prize cups," and the former massive silver tankards; and recommends that things should be such on this "Wales and the Welsh" and "Welsh" sort of principle. Messrs. Stratton and Bowly were both winners; and the fifty-guinea Challenge Cup for the best Jai beast was given to Mr. Edward Bishop's Bandit, a two-and-a-half-year-old grey-pail bullock, by one of Brodh's bulls from a Galloway cow. The Earl of Bradford's annual fat-stock Show at Weston Park was also quite "a great feet" among the northern butchers.

Mr. Douglas has sold his Scotch bull-calf from Maid of Athelstane, but as she is the only one of the Bracelet tribe which he has left he has, we hear, wisely decided to keep her, and to go to Royal next year. He is at present using a white Vanguard bull Freemason, bred by Mr. Torr, and a pure Booth, with the exception of the Lord Simon of Uppermill, and Mr. Douglas's Sunbeam 2nd, Silvia Gwynne, and Pearl by Hopewell, have produced two bull-calves and one heifer-calf to the Duke's Duke of Lancaster, whose brother Ben entered fall at Clifton pastures up to thirteen bulls and five heifers. The Second Duke of Thorndale has gone from the Sandy Hill to Biddenham. Messrs. Howard and Robinson very nearly lost him a few weeks ago from an attack of a very violent cold, but he is all right now. Mr. Jonathon Peel's herd is fast assuming up again. It includes Bluetail by First Grand Duke, Isabella by Bolingbroke, and her daughter Bonnifit by Second Grand Duke, Bashful by Prince Imperial, and Bashful by Third Grand Duke. Bashful has a small fat-stock Show at Bolton Abbey, assisted by Third Grand Duke; Blush, by Third Grand Duke, and Cynric, by same, are the sons of Bashful and Bonnifit, by Second Grand Duke from Beestones. Then there are the two whites, Bride, by Second Grand Duke, and her daughter, Bridesmaid, by Viscount, the only female descendants of the Warlaby Bridesmaid. Cardic completes this family trio of whites and is by Elin King, from Bride. This is the last cow sold by Mr. Peel in the Warlaby sale, and Hengist and Horse, by War Eagle, have made the Princess Maud, by Prince Arthur, from Bashful prove a very rory one so far.

An admirable judge of shorthorns writes us thus of the late Mr. Maude:—"He was one of the best judges of shorthorns I ever met with, and gave me more information about them than any one else I can remember. I deeply regret his death. He was a truly honest, upright, and genuine John Bull." Tom Lessore was also fond of "clever dodgers," and still more of his interviews with the late Lords Spencer and Dacie; how he told the former, when he declined at Pamphill to whether the sheep were not the equal of Peach would ever raise, that "we have the model at home" in Lord Althorp's people; and how, when he had the latter seated on a chair in the pastures at Broughton, while he went to change his boots, that the little lad Children was to come to the stable ship, the latter smoked two cigars over Fashion and then took a fancy to her that he at once gave lodge, for her calf Duchess. Mr. Lessore was also fond of telling feeling how Sir Charles Tempest's touching, but she was sold previously to Mr. Maxwell, of Everingham Park. Mr. Lessore sold the red Don O'Cleary with very great fear her in Tom Mason's cap. He trained him for the Yorkshire Show at four-and-a-half, and won four prizes, two of which contained the best bull of any age and the best yearling bull. Lord Spencer was a great admirer of Don, and when he looked over the yearlings on the night before he said, most unhesitatingly, "I can beat all the females, but I cannot beat this bull."

It is with pleasure by the terms of their charter the Earl of Powis cannot be nominated as President of the Royal Agricultural Society, and that by the unanimous feeling the Duke of Edinburgh, a most practical farmer and constant attendant at the council board. His Lordship was one of the best-like judges at Leeds this year.

A letter from St. Petersburg states that the first attempt at founding private banks in Russia has not been crowned with success.

The *Official Gazette* of Turin publishes a Royal decree granting a full amnesty to those who have absconded in order to avoid the 2 cent[illegible] conscription, and to conscripts who have deserted.

The Emperor of the French has resolved to establish at St. Cloud a Centre Gothic-Roman style, and to have models from the Carlovingian, Gothic, Renaissance, and Louis Quatorze, Quinze, and Seize periods, which are every year disseminated in industry.

One thousand pounds is also to be voted by the Tasmanian Legislature for the purpose of testing the quality of Tasmanian coal, and Lieutenant-Governor Sir Adamsley surveyor, is about to proceed to the interior of ascertaining ports for the shipment of coal on the eastern seaboard of the island.

The Grand Trunk Railway Company of Canada held a general meeting on Tuesday, at which the report of the directors was approved, and that of Mr. Watkin was received and adopted. This gentleman was also thanked for his services. It was resolved that the board shall appoint an agent representing all classes, with the fullest powers, to proceed to Canada, to continue negotiations with the Government and to carry out the organisation of the undertaking. A resolution appointing Mr. Watkin the company's commissioner to Canada was proposed by Mr. Chapman, but was withdrawn, after the chairman had stated that the board was unanimous in its opinion that Mr. Watkin's presence in Canada at the present session of Legislature of Canada as to "be impressed with the importance of prompt action in dealing with the question of the postal subsidy and capitalisation on the only practical means of relieving this concern from its financial embarrassments."

SCIENTIFIC NEWS.

THE COMET OF 1881.—We have received a letter from Mr. John Tebbutt, jun., dated Windsor, New South Wales, from which we extract some interesting particulars. While searching for nebulæ on the 16th inst. his attention was attracted by a faint nebulous object in the constellation Eridanus. Its approximate position he determined to be R.A. 4h. 48m., Windsor mean time, S.P.D. 108° 30′, declination, 30 deg. 8min. S. It opened as a collection of diffused nebulous matter, without a nucleus, and was estimated by him as of a 10th magnitude in position with Lonsdale's "Catalogue of Southern Stars," Mr. Tebbutt found that it just not been observed by him somewhere, and was greatly hoped that it might prove to be a comet. Owing to the cloudy state of the horizon and the early morning hour, he was unable to see the 17th May 18, but when considered that he had determined its secondary character, which he at once announced to the Rev. W. Scott, the Government Astronomer, for the usual routine series of observations were made at once and dispatched to Europe. It was found to be a comet, and on the 18th inst. Mr. Tebbutt found it to have had moved about eighteen minutes of a degree in nine days; it gradually increased in brightness, and on the 19th inst. was of the 7th magnitude, and exhibited a fairly large degree of coma. Mr. Tebbutt has kindly calculated a few elements from observations, and regarding the new approach of the comet to the earth, he says:—"On the 20th inst. it will be within one degree of the object in the morning sky; the nucleus being small, but very brilliant. At that time it appears from the tail divided into two branches; the upper, or western, branch, being the more distinct, was easily traced as far as forty-two minutes from the nucleus. The nucleus at the same night towards the close at the month was well illustrated by the fact that the nebulous envelope had, being that of one of the innermost twilight stars, extinguished the light of Rigel, a star of the five magnitude. From the accounts which Mr. Tebbutt had read in the Numbers of the ILLUSTRATED LONDON NEWS of July last, he considers that the comet must have been a conspicuous object in the northern hemisphere at the time of its discovery. In conclusion, he says, "The comet disappeared from our view on the morning of the 20th inst., it being in rapid course towards conjunction with the Sun; and it was not till the evening of August the 2nd that I again detected it. It was then a very faint nebulous object, and I was not surprised that with the detrital from the elements of the orbit calculated there. The fact that it was observed on the 16th inst. and 17th inst. by Mr. Tebbutt, and then an excessively faint object, though I have no doubt it might have been followed for some days longer with the large telescopes of Europe."

MINOR PLANETS.—At the request of M. Goldschmidt, M. Schulhof has undertaken the calculation of the elements of Doctor and Pseudo Daphne were different planets, has chosen for the latter the name Hertha (Mythological), being that of one of the sisters of Thor, and daughters of the second Jupiter. This name has been accepted by M. Gobb, Director of the Observatory of Paris, and by Mr. Hind, R.N. (1891 D). He name numbered 60, discovered by M. Chacornac on Sept. 11, 1860, which has been unfortunately lost sight of, M. Schulhof has determined the orbit. M. Heyer, has been named Olympia by Mr. J. R. Hind, superintendent of our Nautical Almanac Office, in the reply cannot be received by the end of the present names suggested by Sir John F. Herschel.

ELECTRIC LIGHTING.—A Gold Medal has been presented to the French Academy of Science a memoir in which he gives the number of his experiments, and the opportunity to say something about the electric lighting, which, he states, show they acids exercise no influence on the conductibility proper of the carbon, but only on the resistance which arises from the contact of the oxidised water possessor over that of pure water is due to the acid itself, and not to the carbon of the electrodes.

THE INTENSITY OF THE REPULSIVE FORCE OF INCANDESCENCY.—Donzel is the subject of a note addressed to the French Academy of Science by M. Becquerel. In the following manner he describes the principle of physics. He describes an experiment in which he employed hemispherical carbon electrodes, the diameter of which was 0.02 metre (about four-fifths and eight inches), but of different thicknesses, the mass of the thinnest being about 0.5 gramme, and that of the thickest 2 grammes. The electrodes were successively, beginning with the thickest, by a weak current and a resistance of 0.5 ohm, and the current was gradually increased, when the thickest electrode began to glow, and the thinnest to fuse. The thickness of the thinnest electrode was then calculated, and even more than filled, for the thickness of the thickest was found to be 0.0 millimetre, or the thickness of a spherical state. The capacity of maximum thickness was also filled, the under pressure of the atmosphere, being that of one of the thinnest electrodes, and all the thinnest capable with cold water. M. Boutigny, however, succeeded in fusing platinum in a vacuum, and found that it was then in a fluid and transparent state, however, changed the state of the water, and a violent explosion took place. The experiments were made from time to time, and some of the material points plays an important part in these phenomena, and advances, of the Academy of Science. M. Becquerel has published experiments in their mass, multiplied by the square of their temperature. Further particulars will be given in the *Annales de Chimie*.

SLAVERY AN INSTITUTION AMONG ANTS.—Ten new species of ants have been discovered in Texas by Professor Wheeler, and the habits are described by Mr. Frederick Smith in the last number of the *Journal of the Linnean Society*. Mr. Smith has also made some observations which further substantiate the statement that some species in the Rhiditoni of Europe are slave-makers. Professor Wheeler has also discovered a new Polyergus, for the rearing of their young bread and for the performance of many of the offices connected with the nest usually undertaken by workers. The connection between Formica rufescens and Attæ cephalotes is very remarkable. M. Forel, now residing in Paris, has found, in the Argentine Republic, in Algeria, live in numerous societies, and construct their formicaria mainly in sandy, ferruginous soil. Another species, Formica exsecta, is common both in the Pyrenees and the Alps, the former being always victorious, carrying off the pupæ of the latter, which are reared in captivity, and become the former's captives. Mr. Bates, who has resided several years in Brazil, states that he has found in the nests of Eciton predator, which are said to be the pupæ of more peaceable communities, but also witnessed the slaughter of the more peaceable communities. Mr. Belt has described the habits of Myrmecocystus living in perfect harmony in the nests of Formica rufescens.

THE BRITISH MUSEUM.—It is proposed to the name of an instrument, devised by Mr. W. R. Birt, for comparing colours, by having first the tints of each placed in juxtaposition on a revolving disc, and then viewed superficially the tints of various portions, such as the dark-brown centre, the yellow ring, and the white margin of a chrysanthemum flower, compared with the equal crimson. From the *Proceedings of the Royal Astronomical Society* we learn that Mr. Common has described a new form of reflecting telescope of a movable cradle, possessing a rack-and-pinion, resolving one of a series of 12-inch mirrors by the Rev. T. W. Webb, F.R.A.S., and Mr. Common with transparent colours, such colour being experimentally determined by means of an instrument similar to that described and used by the above gentlemen. The numerical value of every tint can thus be promptly ascertained. The Rev. T. W. Webb, F.R.A.S.,

Now ready,

THE ILLUSTRATED LONDON ALMANACK for 1862, price 1s. post-free, 1s. 2d., containing GROUPS OF DOMESTIC ANIMALS (published in Colours), from Drawings by HARRISON WEIR, and Interesting Illustrated Descriptions of the same by THOMAS BEWICK; Twelve Fine-Art Engravings; also, Astronomical Diagrams (printed in Colours, &c., of Remarkable Phenomena, with Explanatory Notes by R. Cowper.

Copies may be had of the ILLUSTRATED LONDON ALMANACK orders should be sent immediately.—Office, 198, Strand.

Agents for Germany, Russia, and Eastern Europe, Mr. Ludwig Denicke, Leipsic.

ANSWERS TO CHARADES IN CHRISTMAS NUMBER.

1, Cornelius Agrippa. 2, Blue Bell. 3, Connect-i-cut. 4, Tea. 5, Ashby-de-la-Zouch. 7, Oliver Goldsmith. 8, C. F. G. (Seigle). 9, Hamlet. 10, Black-break. 11, Shell. 12, Peshawur. 13, Hyacinth. 14, Spitting. 16, Pot-a-toe. 16, Gravy. 17, Fay-ton (Phaeton). 18, Fel-low.

NEW BOOKS RECEIVED.

A Christian Gentleman of Leisure for the Christian Duty of Working Men. By a Clergyman. Edited by the Rev. J. Erskine, M.A. Macmillan.

A History of Prices, from the Earliest Times to the Present. By H. D. Macleod. Longman.

Ancient Coins, Medals, and Poured Gunflint. By W. Wortworth. A and C. Black. Edinburgh.

Bubbles Broken. By H. G. Hibberd and Co.

Bread Reform. By Dr. Pathway. By the Author of "Doings and Sufferings" Fawcett Publishing Office, Leeds.

Character of the Normal Student in relation to the United Kingdom, passed in the Year of our Lord 1861. Edited by the Rev. J. Fraser, Macmillan and Co.

Chronological Tables of Modern History and Early Modern History. Longman.

Double Assertion. Stated by E. Terry.

Elementary Lessons in Book-keeping. By Theodore Edwards and Lloyd. Longman and Lloyd.

Fifteen and Fifteen for Indoor Pauper Care. By E. Jones. Longman and Co.

French Women of Letters: Biographical Sketches. By Mrs. Bray. Hurst and Blackett.

Handbook for Economists. Cassell and Co.

Handbook of Public Worship. Edited by Henry J. B. Jones. Two volumes. Smith and Elder.

Illustrated Travels. By Harriet Martineau. New Edition. Smith and Elder.

Lectures on Political Education. By E. Lee. Longman.

Our Set, New Dramatical Charades for Home Performance. By Younge. Hodges.

Rhymer's Annual for Boys, 1862. Kent and Co.

Sartain, The Early Author of "Lorenzo Benoni." Effingham Smith and Elder.

Sermons Preached in Lent, 1861, in the Parish Church of St. Paul's, Knightsbridge. Hatchard and Co.

Sermons, by Henry Melvill; a Memoir by Sir Thomas D. Acland. Bart. and Co.

Sets on Pins. By the Rev. W. Bramley-Moore. Longman and Hall.

Sibree on the Relation of the Nonconformist to the Church of England. Hatchard and Co.

Story Time. By A. Trollope. Vol. I. Longman and Co.

Stray Leaves from the Field of Practical Chemistry, and Commentaries. Edited by E. Frankland. Longman and Co.

Stuck Diamonds, A Story Book. By J. Hollingshead. Longman and Co.

Select Library of Fiction in Shilling Books. By Wallace and Mary Howitt. With Photographic Illustrations. Virtue.

Selections from the Writings of John Sterling. Edited by Julius Hare. Parker, Son, and Bourn.

Spiritual Rubbish. By E. Tagus. Hanlon.

Spiritual Opinions, Extracted from the Writings of the Fathers. Parker, Son, and Bourn. Cambridge, Macmillan.

Spiritual Rubbish. By E. Tagus. Hanlon.

Tales of all Countries. By A. Trollope. The Chevalier Dubois. By Charles Rowcroft. Longman and Co.

The Daily Prayer. By W. Bramley. Wall and Lacy.

The Dream Chamber. By W. M. Thackeray. Smith and Elder.

The Lady Lilith. By J. H. Reuben. Ward and Lock.

The Lady's Guide. Smith and Elder.

The Lamplighter's Story. Religious Tract Society.

The Duties of Death. Illustrations by J. Leighton. Religious Tract Society.

The Seven Champions of Christendom. By J. Ashton. Hotten.

The Sunday at Home. A Family Magazine for 1861. Religious Tract Society.

The Two Brides. By Miss Sewell. Longman and Co.

The Usual Tone and Comedy, as Seen by Two Spectators. By Tom Taylor. Hotten.

The Wonderful Adventures of Mr. Merriman. H. Lee. Smith and Elder.

Thoughts for Every Day. By Fredrika Bremer. Translated by Mary Howitt. New Edition. Hurst and Blackett.

Twenty Letters to Young Men on Christian Discipleship and Conduct. By J. Hollingshead. Longman and Co.

Wild Sports of the West. By W. H. Maxwell. Bentley and Son.

Wives and Sons. A Tale of South America. Three vols. Hurst and Blackett.

SUPPLEMENT GRATIS.

THE FUNERAL OF THE LATE PRINCE CONSORT.

In the ILLUSTRATED LONDON NEWS of Saturday next, Jan. 4, 1862, which will consist of Two Whole Sheets, some of the principal points in the Funeral of his late Royal Highness the Prince Consort will be illustrated, namely—The Funeral Procession on its Way from Windsor Castle to St. George's Chapel; a Group from the Procession in the Nave of the Chapel, consisting of Lord Clarence Paget, bearing the Field Marshal's Baton, Sword, and Hat of his late Royal Highness, and Earl Spencer, carrying the Prince Consort's Crown; and the Chief Mourners around the Coffin in the Choir.

Price of the Number and Full-sheet Supplement, Fivepence; Stamped, for post, Sixpence.

Office, 198, Strand.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, DECEMBER 28, 1861.

In a few days from the time of our publication England will, in all probability, be made aware of the intentions of the American Government. If Mr. Lincoln has the courage to act up to his own convictions, and to defy the menaces of an infuriated mob, Messrs. Mason and Slidell are by this time on their way to our shores. But we have not the least hope that such will be the height of the vessel now hastening to Liverpool. It is true that ultimately the Government that shall provoke a contest with England will go down in disgrace when the ignorant and angry myriads who now control affairs are compelled to forego by the chastisement which, in the event of war, England will inflict. It is true that, in the presence of disasters, no American Government, save that of military despotism, will be able to endure; and therefore that it is a choice of evils which the Lincoln Cabinet has before it. But with a certain class of minds the immediate danger is always more terrible than the remote one, and these are the chances for Messrs. Lincoln and Seward to reckon upon—the possible capital to be made out of a great success by General M'Clellan, and the possible interposition of European Powers between England and the Northern States. Of two evils choose the most distant, is a favourite variation upon a well-known rule; and we are disposed to believe that Mr. Lincoln will have taken the first person of the two rather than the yell of a mob under the windows of the White House. Therefore we do not look for a message of peace, though we hope for it, so far as hope is consistent with a calm examination of the case.

As the matter lies we are glad to believe that the French notification will have its weight with the American Government. Nothing can be more distinct than this document, and it points out so lucidly to Mr. Lincoln that Captain Wilkes has committed an act which has been disowned by every Government whatever the resolutions of the President may be. There can be no doubt of the valuable character of this State paper, inasmuch as it testifies to the European world that the first of the Continental Powers has declared that the Union cannot have the advantage of inducing Mr. Lincoln to reconsider his position and to devise some means of extricating himself from it without the fatal appeal. We speak, of course, of the document, not as if it had been composed at the period at which it was issued, but as the embodiment of a decision which was doubtless perfectly well known to our Foreign Minister when he sent the despatch to America. We cannot suppose that diplomatists acting in the interests, as friends of England and Europe, would do so tardily for the issue of a formal despatch. They must have been in perfect accord at the time the demand of England left these shores; and the President was at once made aware that, though England desires no physical strife, any concession that could be made by her would be utterly refused, she has, and is glad to have, the moral support of the Imperial Government. We can only say again that we wish to believe Mr. Lincoln strong enough to listen to reason and justice.

The close of the year is not marked by any incident of importance, and the national mourning and the national anxiety are the sombre characteristics of the last days of 1861. We have nothing at home to record except a series of tributes which are being paid to the memory of the Prince whom it has pleased Providence to take away. Nor do the Continental journals supply us with anything that deserves mention in the same column as the great question of the day. The eyes of Europe are fixed, naturally, on those of England are upon the sea over which we believe that a grave message is hasting. If that message be one of war we shall have little attention to spare for aught but the completion of our preparations, which, if we have time to work, we are confident in expressing our belief that a nation which seeks neither fame nor gain, but which demands justice, and will not submit to dishonour, will be so favoured by a superintending Providence as to secure success to its arms. If we have to write about a year's accounts, we shall have much to be thankful for when we speak of the prospects of England at the Christmas of 1863.

PREFERMENTS AND APPOINTMENTS IN THE CHURCH.—The Rev. G. M. Gipps, Canon of Worcester, Hants, to be Archdeacon of St. Kitts, and Rector of St. George Basseterre, in the same Island.—The Rev. C. M. Church, to be Archdeacon of the Cathedral Church of Wells.—The Rev. H. W. Hutton to be Rural Dean of Bampton.—The Rev. Charles Currey, Rector of Sherborne St. John, Basingstoke, Somerset; Rev. J. W. Currey to Cheriton, Somerset; Rev. J. M. Longridge

THE THEATRES.

THE termination of the present theatrical season presents the dreary blank under some rather novel aspects. The fact of £56,000 having been made by one author by a single drama is a circumstance from which by one author by a single drama is a circumstance from which no author could for a moment hope to reach reflection. Another fact, that a foreigner has undertaken to teach us how Shakspeare ought to be acted, and has succeeded in performing Lear so many as seventy-five nights before a British public, and also excited a great deal of discussion about the manner in which he performs it, is not startling or important. Both these events have recently become the subject of grave criticisms, and deeply engaged the pen and the pencil of the ablest writers in higher quarters. *Blackwood* and *Fraser's Magazines* have eloquent articles on both subjects, and some of the leading journals have elaborate and important papers.

According to these authorities the drama is not in a satisfactory state. The theatres unchokingly are flourishing, but the talent they encourage is of a low type. "The Colleen Bawn," for instance, might have been written in kind and degree. "What is wanted," says *Fraser*, "except neat construction, one scene of novel effect, which works strangely upon the sensations of the audience, and popular actor acting the two or three of the parts, is has had a run of the season, a profit to the theatre quite unprecedented in the annals of the stage. Moreover, every preparation for the run has been ended to see Myles-na-Coppaleen's tremendous header,' and all Paris is at this moment agitated by the astounding achievement of Blondin the rope. We confess that we think the writer underrates the merits of this drama, which, as a literary composition, has great merit. Setting aside the dialogue is charming, and the interest of the events is maintained with sufficient skill. Its great accomplishments the matter altogether: he supposes such a piece to bear any resemblance to those one does at minor theatres. It may be, it is a melodrama; but there is any play of fancy about it, in which case, it is clothed with poetic beauty. And Mr. Boucicault has not been neglectful of his style in this respect. Kellyrobbed, wrote in the dialect most distinctly marked, and the language they speak is eloquent, fraught with proper sentiment, and charged with as much thought and feeling as the action will bear.

The poetic drama takes, of course, a higher aim, and makes bold appeals to the imagination or the fancy. And here it must be granted that the public does not give sufficient encouragement, and that writers are not sufficiently stimulated to the production of the drama. Certain actors are bad ones. *Blackwood* calls Mr. Charles Kean a bad actor; and *Fraser* says that Macready brought the best on the modern stage, as a wretched, stage-struck, conventional affair. Owing to this fact, as Fraser says the whole system to engage actors is a miserable one, and, deservedly, the subject of the town. "Nothing so fresh and stimulating had for many a day been seen upon our stage. The whole theatrical world has been abandoned in the whole arrangements of the scene." On the whole, Mr. Fechter was praiseworthy. *Blackwood* says that Fechter's is "the genuine, the conscientious, in general with that the test of Shakspeare indicates." So he is. The reader would be reminded that Mr. Fechter's Hamlet was not dedicated to his fervent, and was not chiefly expressed. But on his Othello there is a doubt, which *Blackwood* and *Fraser* express their dissatisfaction strongly.

To this point, this matter be overstated. M. Fechter's disqualifications are merely material, not intellectual. They all resolve themselves into one. He has not sufficient physique for Othello.

The alterations and omissions which he has made in Othello tragedy by M. Fechter have not escaped the animadversion of the critics. Both complain of the latter. *Fraser* says that the action quite spoils the part. Mr. Oxley says, in the open air: but neither has observed the disposition which he has made in the last scene. We saw the play acted on a Sunday; though *Fraser* remarks that what Iago intended to do in the open air, he effected in the House was a *felony*; and not when he was busy with his papers. Such issues before the Sunday would have affected; and the outdoor employment of that day would also have been of a sensual character. We agree with *Fraser* remarks on the mistake of the acting edition, not confined to M. Fechter only, as we infer from the same writer, that Desdemona in the last M. Fechter is clearly censurable. For instance, that alluded to in the following: "Desdemona, pshaw! to the last we love my life is to bring down the sword of justice upon her guilty head. It is a mere act of the conflict of the passions, and is not usually represented between his absolute love and his fierce sense of wrong. This *Fraser* says is "to make a little further on in the same story: "It strikes where it doth love"—words of rare beauty which M. Fechter omits." These remarks are not the only ones which appear to us to be of more moment than what are called his innovations on the business of Othello. M. Fechter has exploited the new scene, and to the text of Shakspeare, and in handling haste has cut his own shins. This is retributive justice.

PANTOMIMES.

But at the present season our duties are not in merely retrospective. Christmas festivities are the occasion of annually recurring pantomimes and burlesques. The former are to be found at the large theatres principally. We begin with

COVENT GARDEN.—The Royal English Opera rejoices in presenting to the lovers of mirth the old special story of "Gulliver's Travels," and in getting up actual version the materials of Bedclothes, Liliput, and Laputa. For the selection of the theme we are indebted to the fancies Dean Swift, whose clan old acquaintance and the other of more recent birth. By the third scene we are fairly landed on the "Island of Pedalmyra" but not so Gulliver and his wife, for the latter is pulled into the water by an enormous codfish, though ultimately saved by her crinoline. We have then the interior of a Brobdingnag dwelling, where the hero and heroine are so ill-treated in the customary pantomime fashion that they are glad to make their escape. But the fair fugitives are soon recaptured in the distance, and Gulliver is compelled to convey them away in a windlasses, a la Blondin. They both take "a header" into the ocean, and the Flying Island, on its passage to Laputa, is seen floating in the distance over the ocean, and is found in an exhausted state on the beach by the tiny natives, who bear of the Man Mountain to the Imperial Court. Here Gulliver, meanwhile, has an interview with the king and obtained her liberty. Gulliver, too, obtains favour, and in return succeeds in capturing the flock of the Liliputian sheep, that had themselves to bombard the capital. This service is met with ingratitude, and brings him into trouble from which he is scarcely only by a considerable scene, which the M. Calicot has introduced some patented effects, and which is one of the most successful grandeurs. Mr. W. H. Payne, as the hero, "exactly," of course, "more wonders than a man," and Mr. Henry Payne, as Gwen Mr. Frederick Payne, as Harlequin, Mr. Lauri, as Pantaloon, and Miss Jane Coleman, are effective as the principal pantomimists.

DRURY LANE.—Mr. E. T. Smith has gone unmistakably to great expense in the production of his pantomime, "The House that Jack Built, or Harlequin Old Dame Trot and her Wonderful Cat." The old woman gives a tea party to Dame Wiggins of Lee and Dame Trot with her wonderful cat, who consult together how best to punish the young rogues at the end of Lee Hall, who shows and strong disposition to burn witches. In the Witches' Glen they tortoise a solemn incantation, and bring up an old chair capable of supplying any article of food common ground between sunset and sunrise has a right to perpetual possession. By means they receive an unlucky shot at a passing man than the Squire, and a set of elves are employed to construct Jack's tower, which Mother Richard's superstition, in reasons to the intended effect, and a reconciliation takes place. The transformation scene, called "The Will-o'-the-Wisp's Fairy House," is a brilliant example of Mr. Beverley's invention. The duty inspired by Mr. Lorenzo performs some most marvellous tricks. Mr. Atkins is Mother Richard, Mr. Tom Matthews the Squire; Miss Hunt, Jack; Messrs. Forrest and Hollier are the Clowns, Messrs. Cormack and St. Maine the Pantaloons, Misses Gutheus the Columbines, and Mr. Turner Pantaloon. There are also sprites and acrobats in abundance, Pylwyglyn's marks are, as usual, clever and funny.

HAYMARKET.—This pantomime can scarcely be described in two words, as more than Mr. Buckstone's own language. He has combined two nursery stories—that of "Little Boy Blue, blow your horn," and that of "Miss Muffet and the Spider." Little Miss Muffet was so fond of curds and whey that she sat on a tuffet under a tree all day long to eat them, but the milk fell asleep, and was then kicked by King Tarradiddle, or Daddy Longlegs, whom she enraged by boxing his ears, so that he bore her and she became a spectacle. She carefully be received by music, which is supplied by Little Boy Blue, who blows a pretty tune on his horn, and this awakes her. She falls with joy into his arms. This scene proves so interesting to the young fairies of the fields, who is the spectatores of this loving incident, that she invites them both to a ball, accompanied by the Lord Mayor and the Queen of the Bees, who is the fairy patron of the spiteful King, and counsels him to hide the Queen's crown and the Lord Mayor's gold chain, which he puts to sleep under a haycock, which Miss herself is carried off by old Longlegs, and kept a prisoner in his web. At length she is released by Little Boy, and, who is changed into Harlequin. The scenery of the fairy story is painted by Mr. P. Fenton; that of the harlequinade by Messrs. O'Connor and Telbin. The former deserves much credit for the three little drama does infinite credit to Mr. Buckstone; and it will be "a thing of beauty and a joy" for a long time. Mr. Buckstone has had the advantage of a public and fashionable education.

PRINCESS'.—The pantomime at this house is ambitious in its aim, and open with an allegorical motive, the product of Mr. Byrne's invention. King Rat is the foe of the famous Whittington, and much undisciplined spirit. The hero, however, has a powerful supporter who is named Bad Lot. Good Humour, however, protects the lad, and Bubble-and-Squeak is set in the kingdom to watch over Dick's safety. Dick, too, is the favourite of Miss Alice Fitzwarren, the daughter of the Lord Mayor, who charges him with sailing for Africa and drinkables which the cook has given to Bat's Eye one of the force. Dick, as in the story, has to fly, and sleeps on the entrance at Highgate, where Bow Bells ring in the Lord Mayor's celebrated prophesy in his favour. Hither he is pursued by Bad Lot, who is again foiled by Good Humour. Whittington is saved by the gratitude of a cat, and then seeks his fortune in foreign lands. Here he becomes associated with King Kellyrobbed, who rules in the distance by pets, and the cat does good service but is at last overborne by numbers. Bad Lot has, somehow, got to be prime minister of Kellyrobbed, and Dick and his cat in fact the worst of it. Bubble-and-Squeak blows him prison, and pepper blown from a mortar. And now Robin Hood, accompanied by Little John, Friar Tuck, and Maid Marian, and Dick marries the King's daughter. The transformation scene is magnificent, and the appropriate characters that fill the stage are numerous. The dancing groups are novel and striking. The pantomimists are Mr. J. Rogers as Harlequin, Mr. Hillyard as Pantaloon, Mr. Bennett Clown, Miss Adams as Columbine, and Master John Haslem, a pupil of Garbini Rivoli, as the Cat.

SADLER'S WELLS.—It is to the Countess D'Aulnay that Mr. Blanchard has resorted for his story, and his pantomime opens in a most picturesque manner. The interior of a Gothic chapel, where the Countess is discovered in the act of making her confession; and she is comforted by the excitement of a pantomime on the subject of Cherry and Fair Star. The story that Mr. Blanchard has selected on account of her mission are faithfully possessed, and much of both humour and pathos is introduced. The transformation is magnificent. The scenery is by Mr. Charles James, and the harlequinade is supported by Mr. Lionel Brough.

SURREY.—Mr. Martin Dalnall is the author of the pantomime at this house, which goes to the tune of "Hey Diddle Diddle, the Cat and the Fiddle," and is entitled "Harlequin and the Cow, or Old Mother Princesses." The last is an allegory concerning the mutability of fortune, and the fickleness of the world. The cow, however, is not to have not been able rightly to interpret. There is, however, enough of fun and frolic to make the pantomime successful, and the cow in the great sensation scene, entitled "The Quack-wrecker Bodenham," where the twelve dancing Princesses take dancing lessons in their night dresses. Mr. Dalnall's pantomime is full of fun, and is, on the whole, very efficiently splendid to prove generally attractive. Mr. Stephen Saville is the Harlequin, Mr. Hillyard Pantaloon, and Mr. Bennett Clown.

STANDARD.—"The Sleeping Beauty in the Wood" has seldom been treated with more effect than in the pantomime at this house. A new feature has been given to the story by the fact that Prince Love we have him as enchanted King, attended with lions, and splitting hairs to other of the Princesses. The transformation of the Princesses into those of the Princes waking after her hundred years' sleep, and a transformation scene, which is elaborated in a style emulous of Wet-end excellence.

CITY OF LONDON.—Here we have Mr. Nelson Lee's 211th pantomime. Mr. Lee's name and talent are known to the theatre is closely followed. Above taking his perjured bride to the Casbole, and the reconciliation scene, which is replete with mechanical changes and effects.

ASTLEY'S.—Another of Mr. Nelson Lee's pantomimes, on the subject of "Jack and the Beanstalk," is the pantomime at this house. It is well placed on the boards, and has a really splendid transformation scene.

BURLESQUES.

LYCEUM.—Mr. L. Buckingham, profuse of his wit and humour, entitles his burlesque "Harlequin Hudibras, or Sir Knight and Squire," and slightly operatic version of the popular nursery tale of "Little Red Riding Hood." Both are adapted to the stage at a time when the public that "the piece is composed by the Fairies of the Rose, the Shamrock, and the Thistle; and added, or, as common mortals would say, written, by Planché and Oxenford, &c." Mr. Lee has also a burlesque on that the author, foretelling popular suggestions, has made a startling prophecy. "Mr. Lee's pantomime will be entirely dependent upon the moral." He has transferred the plot to England, Scotland, and Ireland, and introduced the Fairies of the Rose, Shamrock, and Thistle, excellent and magic adventures. In conclusion, instead of hang cotes up, she is transformed into a Britannia, and Mr. Lee is left, and, marriage by him. Messrs. Grieve and Telbin have supplied much charming scenery, of which probably we shall have an opportunity of saying more hereafter. The Fairy Queen of the Rose is Miss Fanny Huddart, and is peculiarly comfortable to the superintending taste of Mr. Falconer.

OLYMPIC.—Mr. Fitzball, Esq., must have written for this theatre an extravaganza which just suits Mr. Robson; it is founded on a fairy story by Mr. Palgrave Simpson. The scene is laid in primitive Ireland, and commences with the birth of Cormac, King of Connaught, Gringrollo, who kills the native king, and imposition his son, Prince Cormac, who is born with a caul, which he sells for £5 to a sailor. He reminds princess Sabrina, and loves and is beloved. Accordingly Gringrollo, by means of Sabrina's enchantments and his fatal dice, contrives to throw into the sea, where he is again made captive by Cosmora, the Merrow king. This suggests the title to the piece, which is called "The Gambols of Gringrollo; or, the Merrow and the Caul." Cormac, desirous of rescuing her lover from the power of this mysterious monarch, applies to Cosmora, the fairy queen, who, by various ludicrous means of acting, but who nevertheless, acts to work, and, by roundabout ways, effects the object. Her plan is to procure a poor Irishman, Dan, the late king's piper, to aid in the matter, and this individual is accordingly found by Cormac in Galway. Originally he plays pipes of Dan's safety, and the fairy pronounces a spell upon his pipes, so that they throw the sea into commotion, and cause old Gringrollo to invite the piper to accompany him on a voyage. Dan's wife is a magic fish, so as to enable him to do so with safety. Once safely landed in the native dominions of Gringrollo, Dan and Cormac succeed in the fatal dice, deafness of rescuing her lover from the power of this mysterious monarch. Gringrollo, however, is not to be so easily disposed of, and resorts to various of acting, but who nevertheless, acts to work, and, by roundabout ways, effects the object. Her plan is to procure a poor Irishman, Dan, the late king's piper, to aid in the matter, and this individual is accordingly found by Cormac in Galway. Originally he plays pipes of Dan's safety, and the fairy pronounces a spell upon his pipes, so that they throw the sea into commotion, and cause old Gringrollo to invite the piper to accompany him on a voyage. Dan's wife is a magic fish, so as to enable him to do so with safety. Once safely landed in the native dominions of Gringrollo, Dan and Cormac succeed in the fatal dice, sentence and exhausted, when the Prince and Sabrina, taking advantage of the opportunity, escape to the shore, and, by means of the magic baby by which they accord to earth. Cosmora on recovering is so enraged at the poor Dan that he transforms him into a sea-monster, and sends he is hauled up in a net by King Gringrollo's prime minister. After divers adventures, poor Dan gets killed, when, by the assistance of Zephyrina, he resumes his proper shape, and in the issue the Prince and Sabrina are made happy in wedlock. This pretty story is provided with some magnificent scenery by Mr. Telbin, and cannot fail to be popular.

ST. JAMES'S.—A classical extravaganza by Mr. Brough, on the subject of "Perseus and Andromeda," will be welcome to the higher class of audience that frequents the theatre. The original fable is described by Ovid. Not being able to make a present to Polydectes of a richly-galanced horse, Perseus undertakes instead to subdue the Gorgon Medusa, and to bring home her head to the King. Counselled by Minerva, and assisted by other deities, he is duly armed for the task. Minerva throughout the piece acts as chorus, and explains such incidents as require her interference. Perseus and Mercury are well contrasted with the weakness and cowardice of Perseus, the betrothed bridegroom of Andromeda, who runs away from the danger, when the Gorgon decrees that Andromeda shall be bound to a rock and left a prey to the dreaded Sea-monster. Perseus having conquered Medusa—for, rather, the mother having been described by Fabled—he arrives, according to the story, and delivers the maiden from her bonds. Mutually inflamed with love, they are on the point of declaring their parents' consent to their union; but, unexpectedly, new dangers and difficulties await them, and Perseus has occasion for the arms with which he had been provided by the beneficent deities. Mercury, too, as the Spirit of Extravagance, commands that the piece shall end happily. The final tableau represents the departure of Perseus with Andromeda for their own home in a magnificent gilded and panelled galley.

STRAND.—"Puss in a New Pair of Boots" is the name of an entertaining Christmas piece, by Mr. H. J. Byron, at this house. We need not repeat the tale of the Marquis of Carabas and his mighty conversant cat, who gets over all difficulties by means of her versatile talents. The scenery alone of this piece, which has been exquisitely painted by Mr. A. Callcott, would ensure its success.

The celebrated vocalists Carlotta and Barbara Marchisio have arrived in London, and are to appear, for the first time in this country, at Mr. Lumley's evening concert, at Her Majesty's Hall, on Friday, the 3rd of January.

ABOUT LONDON."—Under this quaint title an entertainment of a novel and descriptive character, with models and songs, is about to be given by Mr. Mark Lemon at the Egyptian Hall, Piccadilly. It is to be comprised in three sections, including, in Part 1 (which will be delivered on Jan. 6), "Old London city walls;" part 2 "Old London City without the Walls;" and part 3, " London to Westminster."

NAVAL AND MILITARY INTELLIGENCE.

REINFORCEMENTS FOR CANADA.

The Tower has lately been the scene of great bustle, owing to the preparations for conveying military to Canada. Night and day, Sunday as well as other days, men have been engaged packing arms, clothing, and other necessaries in a great number of boxes, which were afterwards placed alongside the quays; the steam are taken thence down the river, and shipped on board the steam-transport "Admiral Walker" part 2. "Old London City without the Walls" part 3, " London to Westminster."

NAVAL AND MILITARY INTELLIGENCE.

REINFORCEMENTS FOR CANADA.

The Tower has lately been the scene of great bustle, owing to the preparations for conveying military to Canada. Night and day, Sunday as well as other days, men have been engaged packing arms, clothing, and other necessaries in a great number of boxes, which were afterwards placed alongside the quays; the steam are taken thence down the river, and shipped on board the steam-transport "Admiral Walker" part 2.

On the morning of Thursday week a great number of persons assembled at an early hour at the Wellington Barracks, Birdcage Walk, to witness the departure of the 1st battalion of the Grenadier Guards and of the 2d battalion of the Scots Fusileers for Canada. The 1st battalion of Grenadier Guards, 830 strong, under the command of Colonel the Hon. Hugh Mansoor Percy, D.S. (Victoria Cross), accompanied by their staff-officers, marched to the parade at the Wellington Barracks, preparatory to their departure for Southampton. The men looked remarkably well, and appeared at breakfast, at half-past eight o'clock the battalion marched to the Waterloo station of the South-Western Railway. Owing to the limit of the accommodation at the station, only 400 can accompany the battalion to the station. On their arrival at the terminus the men were marched into the large shed, the greatest length of the entire having been lighted by the Gothic lantern—the train started at eight o'clock precisely, amidst the cheers of the assembled crowd. The men left on the platform marched back to their barracks, full of spirits and delighted with their destination. The men were loudly cheered as they proceeded on their journey. The battalion of the Scots Fusileers, of the same strength, commanded by Colonel William John Ridley, left the Wellington Barracks at eight o'clock, and pursued the same route—the band, the Royal Coorg-stairs, and across Westminster-bridge. The same excellent arrangements, as above observed, were made for the departure of the day the battalion departed at half-past eight o'clock for its destination. As the detachments reached the station they were received by the men who had preceded by the Southampton Volunteer Rifle Corps, and escorted to their quarters in the town. The men have been cheered as they left the docks by an immense crowd of persons.

The steamer Adriatic, with the Grenadier Guards, and the Perseus, with the Scots Fusilier Guards and the eighteenth company of the Royal Engineers, left the docks about two o'clock on Thursday afternoon, and proceeded to the Nore, towards which they were accompanied early on the following morning. The Adriatic, with the Grenadier Guards, left the Nore at eight o'clock on Friday morning. As the vessel began her progress down the river the band struck up the tune, "I'm off to Charleston as early in the morning." The Perseus left the Nore at the same time on the departure of the Royal Yacht apparently considerable interest.

Each soldier received four cannels, an engraving on board of his transport, ready ready for him two pairs of woollen drawers, one jersey, two woollen undervests, two pairs of worsted stockings, one scourings, one pair of leather waistcoat, one scapulin cap with ear-shelters, one pair of scarlet mitts, one pair of Canadian boots, and one comfortable comforter.

The Royal Mail Company's steamer Magdalena, Captain Woodward, with 100 men of the Royal Artillery from Malta, left her moorings in Southampton last Saturday afternoon. She is under orders to call for Halifax direct.

The Cunard Company's Royal Mail steamer Niagara, which sailed from Liverpool on Saturday for Halifax, carrying the mails for New Scotland, also took out about 100 recruits for the different portions of the service, also took out about 100 infantry pensioners, and nearly 200 tons of army stores. The Niagara, which is a fine vessel, and was launched only a few months ago, is a screw steamer of 1,800 tons and 400 horse power. She was promptly conveyed in steam tenders to the Asia, lying at anchor in the Mersey. The Asia sailed about 11 A.M., with an extra supply of coal, any prospect of making a rapid passage to Queenstown. Amongst the military passengers there were the staff for the Canadian service.

The Flying Fish sailed yesterday week for Lisbon, with sealed orders and despatches.

Orders have been received at the camp at Colchester for volunteering for the 13th, 17th, 30th, 46th, 55th, 63rd, 64th, and 96th Regiments, which are ordered for Canadian service, and which are short of their full complement of men.

The Admiralty have determined to form a reserve of troops at Jamaica, for operations in North America, orders were on Sunday received at Chatham for the fifth company of Royal Engineers there to hold themselves in readiness to embark for Bermuda at an hour's notice.

The Admiralty have determined on the Admiralty directing the whole of the seven gun-boats attached to the first division of the steam reserve at Chatham to be commissioned for service in the Mersey for transport service.

The following further arrangements for the conveyance of troops to Canada have been completed:—The Hibernian will sail from Liverpool for New Brunswick, taking the second pensioners of the Royal Regiment of Artillery and 100 men; the 6 (Captain Hosie's) battery of the fourth brigade Royal Artillery, from Aberdeen;—artillery and 100 men; the eighth battery of the tenth brigade Royal Artillery (Captain Robinson's), from Woolwich;—of officers and 117 men; the eighth battery of the same brigade (Captain M'Kay's)—of officers and 117 men; the fourth battery of the fifth brigade, from Hull; the 2nd Royal Regiment, the fifth company of the Royal Engineers for Bermuda—3 officers and 100 men; and 4 men of the Army Hospital Corps for Bermuda. The detachment of Royal Engineers under orders to embark in the Victoria will sail in the Canada.

The regulations issued with reference to the granting of commissions in the Royal Naval Reserve seem to have generally met the approval of the service. A meeting of officers of the Royal Artillery meeting of shipowners and officers was held in London yesterday week, when resolutions of a most satisfactory character were passed. A memorial to the Government were cordially accepted, and those present expressed their confidence in the Government would discover shortly many more friends, and the honour of the country. Indeed, it appears from an official document that the applications for commissions are already in excess of the number the Admiralty has determined to issue. The applications to be enrolled among the seamen of the Royal Naval Reserve, and of these more than 6000 have passed, and there are hundreds under examination.

The following further arrangements have been completed:—The 6 (Captain Hosie's) battery of the fourth brigade Royal Artillery, from Aberdeen;—artillery and 100 men; the eighth battery of the same brigade (Captain M'Kay's)—of officers and 117 men; the fourth battery of the fifth brigade, from Hull; the 2nd Royal Regiment, the fifth company of the Royal Engineers for Bermuda—3 officers and 100 men; and 4 men of the Army Hospital Corps for Bermuda. The cessation of Indian law reform has been referred to a Royal Commission composed of the Master of the Rolls, Chief Justice Erle, Mr. Justice Willes, Mr. Justice Byles, Mr. Love, and Mr. John Macleod. The commissioners are charged with the preparation of "a body of substantive law" for our Eastern empire, and Sir Charles Wood will have the benefit of their judgment on any measure of law reform upon which he may have decided.

The survey of a parallel of north latitude running through ireland, England, Belgium, Prussia, and Russia is nearly completed, and the accurate length of a base line stretching from the west coast of Ireland to the Ural Mountains will very shortly be ascertained. This will be the grandest feat in trigonometrical surveying ever accomplished. In order to triangulate the country along the parallel, stages fifty high have been erected on the Continent by the Royal Engineers. The triangulations for the purpose of ascertaining the length of the base line will be calculated at the Ordnance Survey Office in Southampton.

REINFORCEMENTS FOR CANADA: THE GUARDS CROSSING WESTMINSTER-BRIDGE ON THEIR WAY TO THE SOUTH-WESTERN RAILWAY ISTATION.—SEE PRECEDING PAGE.

HIS LATE ROYAL HIGHNESS THE PRINCE CONSORT, FROM A PHOTOGRAPH TAKEN SHORTLY BEFORE HIS DEATH BY MAYALL.

MEMBERS OUT OF PARLIAMENT.

In their provincial expeditions, when they are "starring" among the constituencies, members generally believe themselves to be a very select species of literati. On such occasions they may be observed to play tricks more or less fantastic, according to the tumbling powers of the performer. But eccentricity has its limits, and even in mention of it we discern something more than a sense of delicacy. Promising that, it does seem to strike one as something more than a sense of delicacy does seem to strike one as something more than a sense of delicacy that a metropolitan member should go down to a county town with which he has no connexion in order to act the part of guest to a young gentleman of fortune there. There is pending an election for the populous and thriving borough of Nottingham; and, certainly, some of the proceedings of the candidates have an air of originality about them when they are viewed in the light of the British Constitution. The second time we viewed in the light of the British Constitution. The second time we viewed in the light of the British Constitution. The second time we

THE CIVIL WAR IN AMERICA: DRUMMING OUT A SOLDIER OF THE FEDERAL ARMY THROUGH THE STREETS OF WASHINGTON.—FROM A SKETCH BY OUR SPECIAL ARTIST.

ST. JOHN'S CHURCH, KINGSTONE, STAFFORDSHIRE.

THIS new church erected to replace the former parish church is situated four miles from Uttoxeter, and was consecrated by the Bishop of Lichfield on Oct. 21. The old church had become dilapidated and insecure, and, consequently, the Earl of Shrewsbury and Talbot (in whose gift is the living) was induced to build a new church on an adjoining site, from designs supplied by Mr. D. Brandon, of London. The style of architecture selected for this building is of the Early English period. In plan it has a nave, polygonal chancel, south aisle, and vestry, under which is a crypt for warming the church; and at the east end of the aisle is a tower to contain five bells and a spire. The church is designed to contain three hundred sittings. The walls are constructed of stone from the Hollington quarries. The pulpit and font which

ST. JOHN'S CHURCH, KINGSTONE, STAFFORDSHIRE.

are of a very ornate character, are also executed in the same stone. The floor is paved with Minton's tiles, of varied designs and colour. The open timber roofs rest on elaborately carved corbels, which, together with the enriched carving of the chancel arch, has been most effectively executed. The seats are of pine, stained and varnished, and are all open and free. The work was begun about twelve months back, and has been very creditably executed by Mr. Evans, of Blatherne, in Derbyshire. The church has been built at the expense of the Earl of Shrewsbury and Talbot, aided by grants from the Lichfield Diocesan Society and the Incorporated Society for Building Churches, and some private subscriptions. The picturesque design of the edifice, which is placed on the slope of a hill, groups well with the surrounding trees and scenery.

ST. MICHAEL'S CHURCH, COVENTRY.

Few persons, we should think, who have passed Coventry by rail have failed to remark how imposing is the effect of the lofty spires of that ancient city. The most famous and beautiful among them is that of St. Michael's Church, which has been lately undergoing repair.

St. Michael's is one of the three most ancient churches of Coventry: it is very remarkable for its beauty and richness of ornament. It was originally founded in 1133, in the reign of Henry I., and was given to the Benedictine monks of Coventry by Ranulph, Earl of Chester, in the reign of Stephen. It was commenced in its present style (the Perpendicular) in 1373, and finished in 1395. The length of the church is about 300ft.; the breadth, 104ft. The interior is lofty, and finely augmented with rows of clustered pillars and arches, with a roof of oak, curiously carved, and the numerous windows are filled with old stained glass. The organ is said to be one of the best in the kingdom. But the glory of the church is, as we have said, the magnificent steeple, the first among its class. It rises to an elevation of 303ft. from the ground, and its grandeur and beauty can hardly be surpassed. The spire rises from an octagonal base upon a square tower—perhaps the arrangement of flying buttresses between the square and the octagon is more singular than pleasing. As will be seen, the spire is not crocketed, but partly panelled. The tower itself displays a great variety of sculptured decoration—niches, canopies, and statues being placed in spaces left on each side of the windows, both in each stage being combined in a single design. In the tower is a fine peal of bells.

Trinity Church is the second of the ancient churches of the city; it is less elegant than St. Michael's. Its spire is 237ft. high. St. John's, the third, was founded by the Merchants' Guild, in the reign of Edward III.

On the right in the Engraving appears a part of that most interesting building, St. Mary's Hall, erected in the reign of Henry VI. Its principal chamber, 63ft. by 30ft., and 34ft. high, with carved oak roof, quaintly-worked tapestry, chair of state, portraits, coats of arms, and gallery of minstrels, is a most valuable relic of past ages. It is now used as a council chamber and civic festal hall.

Coventry, as early as 1416, was renowned for its exhibitions of pageants and processions chiefly connected with its ecclesiastical institutions, and also for the religious dramas called mysteries. The love of processions, &c., descended to the modern dwellers in Coventry, finding vent in the great show at the fair on the Friday in Trinity week—a principal feature being a beam-faced modern Lady Godiva riding, in a flesh-coloured dress, with flowing hair, on a grey horse, among men in armour and others well-bedizened with gay ribbons. Coventry was the favourite residence of Edward the Black Prince, while Queen Elizabeth delighted to see the game of Hock Tuesday, which represented the destruction of the Danes by the English in 1002.

ST. MICHAEL'S CHURCH, COVENTRY.

MOURNING COSTUME.—SEE PAGE 665.

LITERATURE.

THE SEVEN SONS OF MAMMON. By GEORGE AUGUSTUS SALA. Tinsley.

The title-page of this work declares it to be "a story;" we presume, as contradistinguished from that which is popularly denominated a novel. In his preface the author seems to anticipate, and in a manner to defy, hostile criticism. The probably implies a consciousness that his book ought be questioned as a specimen of literary workmanship, and as aiming against the real or supposed rigid canons of authorship. We rather believe that it will be judged by no such critical test. In order to be properly estimated, it must be read, not skimmed for incidents or shrewd for sarcasms. Occasion has been taken to express an expression of opinion as to the peculiar qualities and the peculiar merits of Mr. Sala as a writer, and it is by the standard which he has avowedly set up for himself that he must be considered. If in the book before us there is sought a tale constructed after the manner of a railway train, straight lines, sparks flying, the narrative rather reaching at last a large, comprehensive, and roomy terminus, containing everything to answer to our satisfaction on arrival, rather, the seekers in this wise will not find what they look for. No such clustered incidents and directions will be expected. Some will have actually lived and who ran scarcely practically identical with those which are embodied in Mr. Sala's book. Mrs. Gamp's personality is drawn from a woman whose existence and doings are known to many persons in town; we are told that Sylvain Tug, the squalid usurer, is sketched from actual life. "The Seven Sons of Mammon" having appeared in subdivisions in the pages of a monthly magazine, and its progress needed no little adaptation, there is a certain public familiarity with regard to its heroes and heroines. As usual, the story is to experience in a complete form its chief charm and vantage to contend with. It is a vicious necessity of the serial form of publication that construction and completeness are sacrificed to the sustained interest of what are in the first instance detached chapters; and although Sir Bulwer Lytton, in defending the system on an shrewd blunder in a story of his now in course of publication, states pointedly that, though most of his recent novels have appeared in magazines, they are in every shape, they were always written in full, and concluded before the first chapters appeared, it is hardly to be supposed that every contingency of such a plan could be so provident. Something of this should be taken into consideration when one is about to judge of the only finished the seven sons of Mammon, and with in these volumes. The author, besides, distinctly states that, in connection with the last chapter of his work, he has written it in the last one was to be, and that he never contemplated giving a distinct biography of each son of Mammon; and he hints as an sequel to his present narrative, and based on the invitation of the public. Reception will probably be taken to the conclusion of the story. It will be objected that mysteries are not cleared up, and that an appearance of finish does not precede the fall of the curtain. The secrets of the main mover of the piece are certainly remain undeveloped. The circumstances by which they were played is scarcely more than hinted at. If Sala be in a hurry, it is one not without purpose. There is all was a certain novel called "Vivian Grey," which created the literary reputation and laid the foundation of the political career of the author; and, if we remember rightly, at the close of that book the hero is left in the branches of a lofty tree into which he had climbed to escape from a flood; having been left there by the author during a series of adventures phantasmic enough, and nothing more has ever been heard of Vivian Grey again. The same novelist, after writing another of his heroes into a position which implies proximate destruction of his great soul, his future is discussed by the recurrence again of the arrival of his father and mother at Jerusalem in search of him. These are the kicking over the traces of genius, and are not to be visited severely by the critical lash.

It is undeniable that there are in this story, apart from that which may be called its high-pressure phases, much that is natural and of good deal that is novel. As a specimen of that which Mr. Sala has designated his "Dutch painting," we refer to the description of the Flemish village of Hoogenbosch, with its surroundings of the Monastery of the Frères Moraves (in Moravia) and the Château of St. Hendrik. Again, look at the descriptions of the home life of a French convict prison—the substitute for the same system of pulleys." It is minutely detailed, and there is not so much the impress of truthful delineation that it almost suggests the inquiry how and under what circumstances could such accurate knowledge obtained? The sketch of the Kremlin village of Swordsley is very well done, and the place is peopled with living creatures. Mr. Tent, too, there is the abnormal life of Monmouth Chambers—the most original of these great English social problems. Perhaps it is known that it reads like a description which owes nothing to fancy; for, though the background may be a fact, its occupants may be only creations of the scene. The treatment of the detective police, both in English, who are introduced, is at once humorous and suggestive: the contrast of what may be called the style of the French police is admirably illustrated. Over and over again we have had descriptions written of that great English public which is continually known as "Derby Day," and here we have another, of which to say that it will bear comparison with any of its predecessors we conceive to be recommendation. It is hardly necessary, however, to call out more of the parts and passages of these volumes, which bear on them the marks of the author's undoubted powers. It may be true that in many important respects Mr. Sala has not done full justice to himself in this work; but, as a sample of what he can do, we think that the reader will form a fair opinion about it. As to its being extensively read, that is a certainty.

THE ROMANCE OF THE FORUM; or, Narratives, Scenes, and Anecdotes from the Courts of Justice. By PETER BURKE, Serjeant-at-Law. A New Edition, forming the Volume for December of Hurst and Blackett's Standard Library.

"The Romance of the Forum," a work of peculiar and singular interest, had great success when first published. This new edition, elegantly got up in a cheaper form, is a boon at this season, when stories of marvel and of terror are not unwelcome at the social fireside. One advantage these Burke gives to his volumes, that the strangest stories of criminal histories are without—viz., a total freedom from all matter of an improper or indelicate hue. The volume may be said to teem with wonder. It concludes with (given here for the first time) the story on which is founded "The Colleen Bawn." It was, it appears, a terrible event enacted by one Eccleston about twenty years ago in Ireland, for which he was most justly hanged. The details of the thread, as given, though different, are quite as striking and quite as romantic as the celebrated Adelphi drama. All who have seen the play (and who have not?) should read the wonderful and hitherto genuine particulars of the affair. In "The Romance of the Forum" "Dr. Collins's Will" is but one of a host of remarkable narratives, many of which would furnish metal equally attractive for a romance or drama. Where, for example, could there be a finer subject than the Keswick Impostors, which destroyed the happiness of poor Mary of Buttermere, or than the trial entitled "The Physician by Day and Robber by Night," swearing of, but more clerical than, "The Miller and his Men"? The centenary of Serjeant Burke's popular work may now and then frighten the reader, but will never fail to charm and absorb his attention.

The Express, which has hitherto been dispatched from Bombay to Calcutta, Madras, and Lahore, on the arrival at Bombay of each mail from England, has been discontinued; and all letters arriving at Bombay by the Overland Mails will, in future, be forwarded from Bombay by a new Express Mail at the ordinary rates of postage. No express postage will, therefore, be payable hereafter on any letters or newspapers addressed to India.

The Glasgow branch of the National Life-boat Institution has not transmitted to it an additional contribution of £140 to erect the parent society to meet the great expense in keeping in a state of efficiency its numerous life-boat establishments on the South coast.

Dr. Topham, who has recently resigned the office of physician to the South Staffordshire General Hospital, Wolverhampton, has been presented by the supporters of that institution with a service of plate worth £150 in recognition of his valuable services during the fifteen years of his connection with the institution.

The election of a member to serve in the House of Commons for the eastern division of the county of Kent, in the room of the Hon. T. L. H. Perry, took place at Dedtwich yesterday week, when Mr. H. T. Hope was returned without opposition.

On Tuesday the committee of the Liverpool Northern Hospital presented to S. R. Graves, Esq., the handsomely illuminated and engrossed address, inclosed in a silver casket, in testimony of his successful services as the first secretary to the institution, which, largely upon the dedication of the transcare.

A fire broke out on the morning of Thursday week at Wynyard Hall, Durham, the seat of the Downger Marchioness of Londonderry; which at one time threatened the most serious consequences; but by the zeal and activity of the Duke of Portland the conflagration was got under about late afternoon, and the loss sustained is limited to the chapel and west wing.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

ALTHOUGH the news all round from America shows very little light upon the subject of the future, the tendency of the Stock Exchange is to believe that the National Stocks has exhibited more firmness this week, arising chiefly from the recognition of the valuable services rendered by Mr. Seward, the Foreign Affairs to the Minister at Washington, and in which the colour of the Government Securities has materially improved. Consols, which on the 11th inst. left off at 90¾, left off on Saturday at 91¼; there were effected for Money, and the quotations have advanced fully one-half per cent. The transfers for Time have been very large, and the business done.

There has been an improved demand for money for commercial purposes; nevertheless the supply is ample, and the Bank of England continues to take place in the rates of discount, which rule as follows for the two papers:—

	Per cent.		Per cent.
Sixty Days' Bills	—	Four Months' Bills	—
Three Months' Bills	—	Six Months' Bills	—

We have no change to notice in the value of money on the Continent: the Bank of England is still supplied to the extent of £3,000,000 sterling.

The following are the rates of discount at Lloyd's, and our risks have showed a downward tendency.

Mexico Railway are now appointed for the funeral of the late Prince Consort, the Stock Exchange was closed. On Tuesday, however, the funds were more active. The amount has been very active, and the Money Market is firm at 91 to 91¼ Ditto for Account, 91¼; Reduced and New Three per Cents, 90¾; Bankers' Stock, 91¼; Three and a Quarter per Cents, 91¼; Ditto, 1860, 91¼; Long Annuities, 1885, 22 to 25-16; Indian Securities were steady in price. The Five per Cents left off at 102½; Three per Cents, 101½; Ditto, 1859, 101½; Ditto, 1861, 102½; India Bonds, 12s. to 16s. prem.; and the Debentures, 99¾ & ¾. No change has occurred in the Exchequer Bills, which left off at 1s. to 2s. prem.

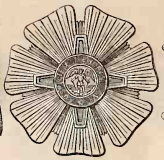
ORDER OF THE GARTER.



ORDER OF ST. MICHAEL AND ST. GEORGE.

ORDER OF THE SERAPHIM (SWEDEN).

ORDER OF ST. PATRICK.

ORDERS WORN BY HIS LATE ROYAL HIGHNESS PRINCE ALBERT.

THE PRINCE CONSORT.

We give this week, on page 653, a Portrait of the lamented Prince, and the accompanying strictly-correct Engraving of his armorial ensigns. His memoir appeared in last week's Number. A list of his extra titles and an account of the orders he bore may be matters of further interest, and are therefore here added, as follows:—

TITLES OF THE PRINCE.

The Most Illustrious and Most High Prince his Royal Highness Francis Albert Augustus Charles Emanuel, Prince Consort, Duke of Saxony and Prince of Saxe-Coburg Gotha, K.G., K.T., K.P., K.S.I., G.C.M.G., Knight of the Order of the Golden Fleece of Spain, Knight of the Order of the Seraphim of Sweden, Knight Grand Cross and Great Master of the Order of the Bath, F.C., LL.D., D.C.L., Ph.D., Field Marshal in the Army, Colonel of the Grenadier Guards, Colonel-in-Chief of the Rifle Brigade, Captain-General and Colonel of the Artillery Company, Lord Warden of the Stannaries and Chief Steward of the Duchy of Cornwall, Governor and Constable of Windsor Castle, Ranger of Windsor Great Park, Lord High Steward of New Windsor, Lord High Steward of Plymouth, Chancellor of the University of Cambridge, and Master of the Trinity House, President of the Zoological Society, President of the Horticultural Society, and President of the British Association.

The Prince was born at Rhenberg on the 26th of August, 1819, and was married to her Most Gracious Majesty Queen Victoria on the 6th of February, 1840. He was naturalised by statute the 3rd Vic. cap 1 and 2, and was empowered to quarter the Royal arms on the 7th of February, 1840. His Royal Highness died at Windsor Castle on the 14th of December, 1861, to the inexpressible grief of the Queen, the Royal Family, and the whole British nation.

ORDERS BORNE BY THE PRINCE CONSORT.

THE MOST NOBLE ORDER OF THE GARTER,

instituted by King Edward III. about August, 1348 (K.G.) Insignia:—The Collar, gold, consisting of twenty-six pieces, each in form of a garter enamelled, azure, and appended thereto the George, or figure of St. George on horseback, encountering the dragon. The George is worn to the collar; and the lesser George, pendent to a broad dark blue ribbon over the left shoulder. The Star is of eight points, silver, upon the centre of which the cross of St. George, gules, encircled with the garter. The Garter, of dark blue velvet, bearing the motto in golden letters, with buckle and pendent of gold richly chased, is worn on the left leg below the knee. Ribbon of the order, garter-blue. The Prince Consort was made a Knight of the Garter in 1840.

THE MOST ANCIENT AND MOST NOBLE ORDER OF THE THISTLE,

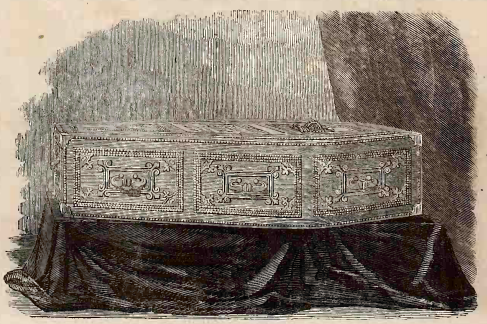
revived by King James II. in 1687. Re-established by Queen Anne, Dec. 31, 1703 (K.T.) The Star of this order, which is worn on the left side of the coat or cloak, consists of a St. Andrew's cross, of silver embroidery, with rays emanating from between the points of the cross, in the centre of which is a thistle of green, heightened with gold, upon a field of gold, surrounded by a circle of green, bearing the motto of the order in golden characters. The Badge, or Jewel, is worn pendent to the collar, or to a dark green ribbon over the left shoulder and tied under the arm. It consists of a figure of St. Andrew, of gold, enamelled, with his green gown, and the surcoat purple, bearing before him the cross, enamelled white, the whole surrounded by rays of gold in the form of a glory; the cross and feet resting upon the ground, of enamelled green. The Collar is of thistles, intermingled with sprigs of rue. By a statute passed in May, 1827, the order is to consist of the Sovereign and sixteen Knights. Motto, "Nemo me impune lacessit." The Prince Consort was made a Knight of the Thistle in 1842.

THE MOST ILLUSTRIOUS ORDER OF ST. PATRICK,

instituted by King George III., Feb. 5, 1783 (K.P.), consisting of the Sovereign, a Grand Master, and twenty-two knights. The Lord Lieutenant of Ireland for the time being is Grand Master. The Star—a cross saltier, gules, on a field, argent, surmounted with a trefoil, vert, charged with three imperial crowns, within a circle of azure, with the motto, "Quis separabit," and the date MDCCLXXXIII.—Pattern of gold, the whole surmounted by eight rays of silver. This is embroidered on the left side of the cloak or coat. The Collar is of pure gold, composed of six harps and five roses alternately joined together by twelve knots. In the centre is a crown, surmounting a harp, to which hangs the badge or jewel of the order, of gold, enamelled similar to the star, with the exception of the rays. The Jewel, which is worn pendent to the collar, or from a light blue ribbon over the right shoulder, is the same as the star, except that in place of the rays there is a circle of trefoils. Motto—"Quis separabit." Ribbon, sky-blue. The Prince Consort was made a Knight of St. Patrick in 1842.

THE MOST EXALTED ORDER OF THE STAR OF INDIA,

instituted by her Majesty Queen Victoria, Feb. 25, 1861 (K.S.I.), consisting of the Sovereign, a Grand Master, and twenty-five Knights, together with such Extra and Honorary Knights as her Majesty, her heirs, and successors, shall from time to time appoint. His Majesty's Viceroy and Governor-General of India for the time being is Grand Master. It is competent for the Sovereign to confer the dignity of Knight of the order upon those Princes and Chiefs of India who have entitled themselves to her Majesty's favour, and upon such British subjects as have, by important and loyal services rendered to the Indian empire, merited the Royal favour. The Collar is composed of the lotus of India, of palm branches tied together, in sautier, and of the united red and white rose; in the centre is an imperial crown; all richly enamelled on



COFFIN OF HIS LATE ROYAL HIGHNESS THE PRINCE CONSORT.

gold in their proper colours. The Badge is an oval cameo of her Majesty's effigy set in a perforated and ornamented oval, containing the motto of the order, "Heaven's light our guide," surmounted by a star all in diamonds. The Ribbon of the order is sky-blue, having a narrow white stripe towards each edge, and is worn from the right shoulder to the left side. The Prince Consort was made a Knight of the order at its foundation.

THE MOST HONOURABLE ORDER OF THE BATH,

instituted in 1725, revived in 1725, enlarged in 1815 and 1847. Its Class—to consist of Knights Grand Cross, number not to exceed for the military service fifty, exclusive of the Sovereign and Princes of the blood Royal, and such distinguished foreigners as may be nominated honorary knights grand cross, and number not to exceed for the civil service, the Chancellor—Commissioners, number's not to exceed, for the military service, one hundred and ten, and for the civil service fifty, exclusive of the service officers of the Royal household and naval commanders, 3rd Class—Companions of the Order, to consist, for military service, of five hundred and fifty, and for civil service of two hundred; they are to take precedence of esquires, but are not entitled to the appellation, style, &c., of knights bachelors. To wear the badge assigned to the third class, pendant by a narrow red ribbon from the buttonhole. The Badge for the Military Classes of the order is a gold Maltese cross, of eight points, enamelled, argent; in the four angles, a lion passant-guardant, or; in the centre the rose, thistle, and shamrock, issuant from a sceptre between three imperial crowns, or, within a circle, gules; thereon the motto of the order, surrounded by two branches of laurel, argent, issuing from an escrol, azure, inscribed with "Ich dien" (I serve) in letters of gold. It is worn by the grand crosses pendant from a red ribbon across the right shoulder, by the knights commanders from the neck, and by the companions from the buttonhole. The Collar is of gold (weight, thirty ounces troy weight), and is composed of nine full gold crowns, and eight roses, thistles, and shamrocks, issuing from a sceptre, enamelled in their proper colours, and of linked together by crossed gold knots, enamelled gules, surrounded by a badge of the order pendent therefrom. The Star of the Military Grand Cross is to consist of rays or flames of silver, between a plain silver cross, and in the centre, within the motto, branches of laurel, issuant as in the badge. The Knights Grand Cross wear the collar and the badge and star of the order. The star is of silver, formed with eight points or rays, charged with three imperial crowns, proper, upon a glory of silver surrounded with a red circle, upon which is the motto of the order. Their badge is of gold, composed of a rose, thistle, and shamrock, issuant from a sceptre between three imperial crowns, enclosed by the motto. The civil knights commanders wear the same badge, of smaller size, round the neck, and the military commanders the oval companions the same, but of a still smaller size, from the button-hole, pendent from a red ribbon. The Star of the Knights Companions is in the form of a cross-pate of silver, having a small gold cross, and in the centre, within the motto, branches of laurel, issuant as in the badge. The Knights Companions wear the badge and collar and star of the order. The star is of silver, formed with eight points or rays, charged with three imperial crowns, proper, upon a glory of silver surrounded with a red circle, upon which is the motto of the order. Their badge is of gold, composed of a rose, thistle, and shamrock, issuant from a sceptre between three imperial crowns, enclosed by the motto. The civil knights commanders wear the same badge, of smaller size, round the neck, and the military and civil companions the same, but of a still smaller size, from the button-hole, pendent from a red ribbon. The Star of the Knights Companions is in the form of a cross-pate of silver, having a small gold cross, and in the centre, within the motto, branches of laurel, issuant as in the badge. The Knights Companions wear the badge and collar and star of the order. The star is of silver, formed with eight points or rays, charged with three imperial crowns, proper, upon a glory of silver surrounded with a red circle containing the motto, and the whole encircled with the words "Tria juncta in uno." The Prince Consort was made a Knight Grand Cross of the order in 1841, and its Grand Master in June, 1847.

THE MOST DISTINGUISHED ORDER OF ST. MICHAEL AND ST. GEORGE,

instituted 27th April, 1818, by letters patent, under the Great Seal of Great Britain, for natives of the United States of the Ionian Islands, and of the island of Malta and its dependencies, and for such other subjects of her Majesty as may hold high and confidential situations in the Mediterranean. By statutes dated 11th August, 1832, the order is to consist of fifteen Knights Grand Cross, exclusive of the Grand Master, twenty-five Knights Commanders, and fifty Companions. Insignia—The Star of a Knight Grand Cross is composed of rays of silver, having a small ray of gold between each of them, and over all the cross of St. George, gules. In the centre is a representation of the archangel St. Michael encountering the imperial crown, over two winged lions, passant-guardant, each holding a book, and sceptre, or. At the opposite end of the cross of gules is a similar lions. The whole is of gold, except the crosses, which are of white enamel, and is surmounted with a white enamel riband. The Badge is a gold cross of fourteen points of white enamel, edged with gold, having in the centre, on one side the Archangel St. Michael encountering Satan, and on the other St. George, on horseback, encountering a dragon, within a blue circle, on which the motto of the order is inscribed. The cross is surmounted by the imperial crown, and is worn by the Knights Grand Cross to the collar, or to a wide crimson ribbon, passing over the right shoulder to the opposite left side. The mantle is of Saxon-blue satin, lined with scarlet silk, tied with cordons of blue and scarlet silk and gold, and has on the left side the star of a Knight Grand Cross. The chapeau is of blue satin lined with scarlet, surmounted with white and black ostrich feathers. The Knights Commanders wear the badge suspended to a narrower ribbon from the neck, and have on their left side a star composed of four rays, with a small ray of eight points between each of silver, surmounted by the cross of St. George, gules, and having the same centre as the star of the Grand Crosses. The Companions wear the small cross of the order from a still narrower ribbon at the buttonhole of the left breast. The motto of the order is "Auspicium Melioris Ævi." Ribbon of the order, Saxon blue with a scarlet stripe. The Prince Consort was made a Knight Grand Cross of the order in 1842.

THE HONOURS OF THE CROWN AND PEERAGE.

This great and illustrious order of knighthood, which is second only to the Garter, was instituted Jan. 10, 1129, by Philip the Good, Duke of Burgundy and Brabant, and Earl of Flanders, the most puissant prince of that age. The original collar of the order is composed of double steels interwoven with flint stones, enamelled gules (or fire, the whole enamelled in their proper colours); at the end of the collar hangs on the breast a golden fleece. The fleece is tied round two-and-two together as if they were double BBs, the cipher of Burgundy. The first statute of the ancient union of the sovereigns of Burgundy and Spain is dated 1478. The motto of the order is "Pretium non vile laborum." The badge consists of a golden fleece suspended from a flint stone, which is environed with flames of gold; this is usually worn round the neck suspended from a peacoat, or fire-coloured ribbon. In Spain, the Sovereign of the order, followed by the knights, wears a buttonhole of a red ribbon, suspending the insignia either round the neck or at the button-hole. The Spanish Order of the Golden Fleece differs in some slight points from the original order. The Prince Consort received the Order of the Golden Fleece from the King of Spain in 1845.

THE ROYAL ORDER OF THE SERAPHIM OF SWEDEN,

Magnus III., King of Sweden, instituted this order in 1334. The badge consists of an eight-pointed star, enamelled, upon the centre of the four principal angles are disposed eight seraphim in carnation-coloured enamel. In the centre of this cross is a blue enamelled shield, on which appear the initials I.H.S. (Jesus Hominum Salvator) in letters of gold, and the passion nails, in black enamel, are inserted between. This cross is suspended from a rich broad, sky-blue watered ribbon, which is worn scarfwise over the right shoulder. The Prince Consort was made a knight of this order by Oscar I., King of Sweden, in 1856.

The late King of Portugal is said to have left some political papers, written in an enlightened spirit, which it is intended to publish.

Lieutenant Maury, so well known for his researches concerning the laws of storms, which is a native of Louisiana, has declined to accept an invitation of the Great Duke Constantine to take up his residence in Russia until the war between the Southern States and the North shall have been brought to a close.

MR. CODDEN ON THE T-NT CASE.—A letter from Mr. Codden on the subject of the dispute with America has been published. The gentleman, who is one of the Anti-Corn-Law League, declares that there no call to appeal to the law of nations; civilization abhors it, except by acknowledging the belligerent rights of the South," strongly urges that the question should be referred to arbitration. He holds that the "cry for peace alone is hardly sufficient at the present moment." What is required is peace "on the principles of impartial justice" and this, he thinks, can be best secured by placing the matter in the hands of a disinterested arbitrator. If England would strive to work a cessation, and America immediately reject the proposal, then "we should be united as one man to repel the outrage."

THE FUNERAL OF HIS LATE ROYAL HIGHNESS THE PRINCE CONSORT.

On Monday the remains of the late Prince Consort were interred in the last resting-place of England's Sovereigns—the Chapel Royal of St. George's, Windsor. By the express desire of her Royal Highness the funeral was of the plainest and most private character; but the choice of the Queen's Most Illustrious Consort to sit beside her in death was every sign of sorrow and mourning the nation at large manifested its sense of the loss which it had sustained.

The Royal borough of Windsor at an early hour assumed the character of a public mourning. Shops were closed, and soldiers arriving from London and Woolwich to take part in the mournful ceremonial of the day. Business was entirely suspended, and the groups of inhabitants who were collected before their doors evinced the sympathising what every one appeared to think an individual loss.

At half-past one the minute-guns—the Royal Salute—fell from the summit of the Round Tower, five-minute guns were fired from the end of the Long Walk, and the bells of the parish church were also rung continued during the morning until the Royal remains left the castle, when the bells no longer announced its arrival.

The Duke of Saxe-Coburg, brother to the lamented Prince Consort, and other illustrious personages, left Osborne at an early hour on Monday morning to proceed to Reading, and, passing the Southampton, travelled by a special train on the South-Western Railway to Windsor, where they arrived shortly before eleven o'clock, and proceeded in the Queen's carriages through the House Park to the castle.

The Duke of Saxe-Coburg and Prince Arthur immediately arrived at the castle from Frogmore.

At half-past one o'clock a special train on the Great Western Railway brought down a huge party of noblemen and gentlemen honoured with the Queen's commands to attend the funeral. In this train travelled the Archbishop of Canterbury, Lord Chamberlain Sefton, the Lord Chancellor, the Duke of Buccleuch, the Duke and Duchess of Wellington, the Duke of Cambridge, Earl Granville, Secretary, the Speaker, the Marquis of Exeter, the Marquis of Abercorn, the Baboo of Westminster, the Bishop of Oxford, the Lord Steward, and very many other notable individuals: in fact, perhaps no one train ever contained a more numerous assemblage of persons of rank and position. On reaching Windsor the occupants of this train were conveyed in the Queen's carriages to St. George's Chapel, where they assembled in the Quadrangle.

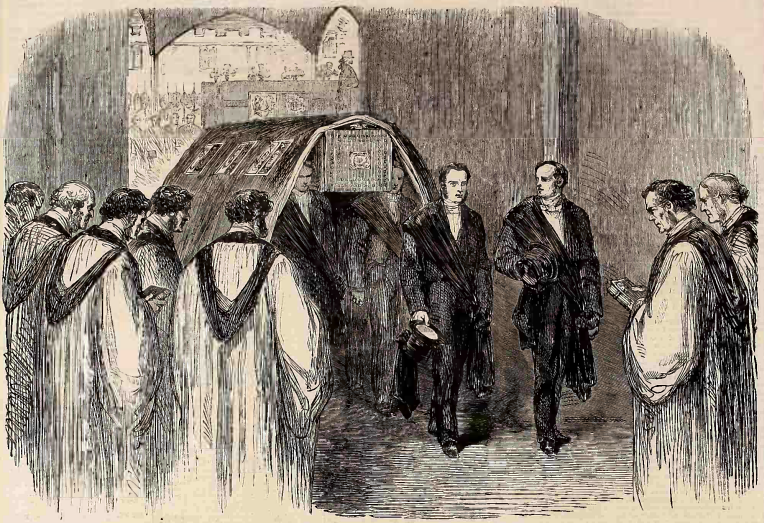
The preparations for the Royal interment were completed on Saturday, the 21st inst., by Garter King-at-Arms, who issued orders to arrange the recent occasion of the interment of the remains of the Duchess of Kent. A gallery was erected from the door of the choir to the west nave, along the sides and centre of which a stage had been erected upon a uniform level with the choir. This stage, as well as the transepts, and the floor of the choir itself, were covered with black cloth: a simple white line marking the course of the bier from the west door of the nave to the entrance of the choir.

The escort of Life Guards and the guard of honour of the Grenadier Guards, which were present at the funeral, left the castle at seven o'clock and took up their respective positions.

At half-past one o'clock the distinguished personages invited to be present in the chapel were conducted by the Lord Chamberlain's officers to their places in the choir. There were not more than seven or eight Knights of the Garter present. These occupied the north side, but generally the great officers of State were accommodated with seats opposite the Royal vault. This arrangement was to prevent certain political associations. Thus the Earl of Derby found himself in the midst of the party of the late Prince Consort, and Lord Palmerston was enthroned between two leading members of the Tory party. It was a matter of general remark that the Premier appeared much affected during the funeral, not being yet sufficiently recovered from his attack of gout. The Marquis of Lansdowne was also an absentee, owing to indisposition. Mr. Gladstone represented the Cabinet, and the Ministry at large.

The Archbishop of Canterbury; the Duke of Buccleuch, K.G.; the Duke of Newcastle, the Duke of Somerset, Earl Granville, Earl Russell; the Duke of Wellington, K.G.; Viscount Torrington, Lord Lords of the Bedchamber to his late Royal Highness; the Duke of Cambridge, K.G.; the Duke of Saxe-Coburg, K.G.; the Duke of Argyll, K.T.; the Lord Lieutenant of Ireland; the Marquis of Abercorn, K.G.; the Marquis of Exeter, K.G.; and Lord Ebury, formerly Grooms of the Bedchamber to his late Royal Highness; the Lord Chancellor, K.T.; the Earl of Derby, K.G.; Earl Delaware; the Earl of Clarendon, K.G., Lord Steward; the Chancellor of the Exchequer, the Home Secretary; the Earl of Morley and Lord Stanley, formerly Lords of the Bedchamber to his late Royal Highness; the Lord Bishop of Oxford, the Lord Bishop of Oxford, the Lord Bishop of Chester, and the Lord Bishop of Worcester, Clerks of the Closet to his late Royal Highness; Lord Colville of Culross, Lieutenant-Colonel commanding the Hon. Artillery Company, of which his late Royal Highness was Colonel and Captain-General; Lord Ashburton, Commissioner of the Great Seal; Lord Truro, Speaker of the House of Commons; Lieutenant-General Sir George Wrottesley, K.C.B.; Lieutenant-General Sir Richard Dalbiac, late Royal Highness's Colonel Lambert, commanding the Grenadier Guards, of which his late Royal Highness was Colonel; Lieutenant-Colonel Lord Alfred Paget, Colonel of the Household Cavalry; Major-General Bouverie, late Royal Highness's Equerry to his late Royal Highness;

THE FUNERAL OF HIS LATE ROYAL HIGHNESS THE PRINCE CONSORT.



RECEPTION OF THE BODY BY THE CLERGY AT THE ENTRANCE OF ST. GEORGE'S CHAPEL.

FIRING MINUTE GUNS IN THE LONG WALK, WINDSOR PARK.

THE FUNERAL OF HIS LATE ROYAL HIGHNESS THE PRINCE CONSORT.—THE HEARSE.

Relics of the Past.

ANCIENT MARRIAGE CUSTOMS.

A BETROTHING TOKEN.

The small piece of silver represented above is connected with a singularly-interesting custom, once prevalent in most civilised countries, and still observed in some of the remoter districts of Germany. This custom consisted in the person of opposite sex entering into a formal contract of future marriage, either by mutual promise, by oath, the interchange of some token, or by all these together.

Mr. Donne, to whom we are indebted for a great deal of curious and interesting information on the subject, has shown that the custom was perfectly familiar to our northern ancestors. The process with them was as follows:—1. *Proverbs*, or wooing. 2. *Inspraecia*, or demanding of the parents; 3. The conditions of the contract. All these were ended by joining the right hands, by a certain form of words, and a confirmation before witnesses; the contract of the affiancing party being called *handfaest* (whence our *betroth*), and that of the consenting party, *handfestinge*.

The length of time between espousals and marriage was indefinite and governed by the convenience of the time (or money) had, unless they lived in separate countries and the interference of substitutes or proxies was required, it generally extended to a few months only. In more recent times the modes of betrothment varied in different periods and places. In this country the contract appears to have been frequently celebrated in church, and with almost the same solemnity as an actual marriage. Thus, Shakspeare makes Olivia, in "Twelfth Night," say to her page:

> Now go with me and with this holy man
> Into the chantry by: there, before him,
> And underneath that consecrated roof,
> *Plight me the full assurance of your faith*;
> That my most jealous and too doubtful soul
> May live at peace. He shall conceal it,
> Whiles you are willing it shall come to note;
> What time we will our celebration keep
> According to my birth.

Until of very modern times it was usual that by the form described the lady meant matrimony itself, but she really proposed only an *affiancing*, or an assignation of the same to a future occasion, in the terms it. This is manifest, indeed, by what the priest says afterwards; and the detailed description of the rite affords, no doubt, an accurate picture of the ordinary mode in which *betrothings* were performed at church in Shakspeare's age:—

> A contract of eternal bond of love,
> Confirm'd by mutual joinder of your hands,
> Attested by the holy close of lips,
> Strengthen'd by interchangement of your rings;
> And all the ceremony of this compact
> Seal'd in my function, by my testimony.

The first feature described is the joining of the joining hands, a mode of ratifying contracts, whether of love or business, so common even now as to be familiar. Chaucer, in the "Knight's Tale," speaks of "the holy close of lips." The kiss on these occasions was a natural one. When the ceremony took place at church the lady, of course, withdrew the veil which was usually worn there. Shakspeare, in "Pericles," and in private the kiss was generally followed by drinking healths. Thirdly, we have the "holy close of lips," a form of which Chaucer speaks in "Troylus and Cryseyde:"—

> And after this the speche of sondry things
> As fell to purpose of this aventure,
> As playnly longeth unto fyn amoure,
> Of which I can not telle no scripture,
> To gon to bed gan they tho alle ordeyne.

According to the ritual of the Greek Church, the priest, in betrothing, first placed the ring on the finger of the contracting couple, who afterwards exchanged them. Leoland, the celebrated saint of Devon, who flourished about the sixth century, being persuaded in his youth to marry, gave his betrothed a ring, a kiss, and a pair of shoes, the ring and shoes being typical of securing the lady's hands and feet in the trammels of conjugal obedience. In a romance written by Richard Coer de Lion, concerning the Emperor Dioclesian's captivity, a knight devotes himself to the service of a lady who promises him his in a years time when she shall be married, and they ratify the contract by a kiss and a ring.

Shakspeare again alludes both to the kiss and interchange of rings in his "Troylus and Cressida:"—

> *Julia.* Keep this remembrance for thy Julia's sake (*giving a ring*).
> *Proteus.* Why, then we'll make exchange (*gives a ring*).
> *Julia.* And seal the bargain with a holy kiss.

The last point to be noted in the betrothing is the testimony to the covenant. This was usually considered sufficient, as in later times, especially in the church were often prohibited because the parties, relying on the betrothing, lived too affectionately, and did not delay to live together as man and wife, which occasioned no little scandal and disorder. Sometimes, however, the betrothing was sealed by the celebration of betrothings in taverns and alehouses, and some of the synodal decrees actually compelled the persons attending shall not get drunk on such occasions.

To come now to the immediate subject of our Engraving, which is of silver, inscribed "Denirs De Foy Pour Foyance," and has on each side a heart between two hands, and on the other two dians de la Foyance." The word "foyance" is evidently a corruption of the French *accordailles*, or betrothing, and the "denirs de foy" are the actual purchase of the contract. The "foyance" is the offering which the lover or betrothed exchanged, like a ring, not at the marriage but at the espousals. Be this as it may, however, it is certain that the same form of inscription is addressed by the distinguished antiquary mentioned that the practice of purchasing a pair of silver spoons was common in ancient times. It was known to the Greeks, for Aristotle strongly reprobates the custom.

Among the ancient Germans and some other of the northern nations the betrothing was not certain proof of marriage, as appears from the case of Rachel and Jacob, and from the following passage in Tacitus, that our Saxon forefathers adopted it is manifest from some of their laws, as that of Ina, who ordains that "if any one shall have promised marriage, either as earnest-money or for the actual purchase of the object, and he afterwards desire to withdraw from the bargain, he shall forfeit what he has given, or pay the amount of the bargain." Among the Romans the betrothing was sometimes accompanied with a written contract, and in other cases which Mr. Donne alludes to, mere earnest-money or actual purchase was deemed sufficient; and although he has clearly proved, by extracts from ancient rituals, that it was customary for the husband to pay money on his espousals to the bride, it is nothing to show that payment was made in especial reference to the betrothing.

In the Ritual of Rheims the priest demands of the husband thirteen pieces of gold, which, he says, are himself, delivers the rest to the man, who, after putting on the ring, deposits the money in the bride's hand as in a purse brought by her for the purpose, adding the words, "I endow thee with all my goods."

In the Manuel of Noyon the priest puts the money into the woman's hand, saying, "Behold, I endow thee with all my goods, moveable and immoveable." In the Ritual of Lisieux, in 1714, the same custom is mentioned, and the inscription "Denier Tournois Pour Espousez."

1 Ann. Fuld. 151, ii, 6, vi. Eos in coitu suo stili something of the nature of betrothing and ceremony until that event should take place.

† There is another kind, with the inscription "Denier Tournois Pour Espousez."

‡ The "denirs de foy" are spoke of under the name of earnest-money as late as the time of Queen Elizabeth, as appears from the following passage in Stowe's "Annals," 1585:—"Also this year the Queen's Majesty, of her princely bounty, gave to every of the Lords of the Council, and to every of the Judges, a piece of plate, of the value of twenty pounds, for a token of her gracious favour towards them, and to encourage them to the better remembrance of her affairs, as she was informed that the Spaniard had given great earnest-money to divers of the Lords of the Council, and to the Judges, to further his affairs."

§ Mr. Donne has also shown that the custom of betrothing was not confined to the Germanic nations, but was also practised by the Celtic tribes, and that it was known to the Romans, and was even practised by the Jews. The following passage from Deuteronomy, xxii. 23, 24, is clearly a case of betrothing:—"If a damsel that is a virgin be betrothed unto a husband, and a man find her in the city, and lie with her; then ye shall bring them both unto the gate of that city, and ye shall stone them with stones that they die; the damsel because she cried not, being in the city; and the man because he hath humbled his neighbour's wife: so thou shalt put away evil from among you."

|| Mr. Donne has also shown that the custom of betrothing was not confined to the Germanic nations, but was also practised by the Celtic tribes, and that it was known to the Romans, and was even practised by the Jews. The following passage from Deuteronomy, xxii. 23, 24, is clearly a case of betrothing:—"If a damsel that is a virgin be betrothed unto a husband, and a man find her in the city, and lie with her; then ye shall bring them both unto the gate of that city, and ye shall stone them with stones that they die; the damsel because she cried not, being in the city; and the man because he hath humbled his neighbour's wife: so thou shalt put away evil from among you."

THE FRENCH GOVERNMENT AND THE OUTRAGE

M. Thouvenel, the French Minister of Foreign Affairs, has addressed the following highly important despatch to the representative of France at Washington:—

THE MINISTER OF FOREIGN AFFAIRS TO THE FRENCH MINISTER AT WASHINGTON.

Paris, Dec. 3, 1861.

Monsieur,—The arrest of MM. Mason and Slidell on board the English packet Trent by an American cruiser has produced in France, if not the same excitement as in England, at least a profound emotion, and an extreme anxiety.

Public opinion at once inquired, with anxiety for the consequences, whether such an act could possibly be the consequence of orders given by the highest desire of the general government. The act seems to the public so entirely at variance with the ordinary rules of international law that it destroys the responsibility exclusively upon the commander of the San Jacinto.

The government of the United States has disavowed the act, and the Emperor's Government has therefore felt called upon to consider the question raised by the capture of the Trent, and to weigh the matter, that there may be contributed to its settlement, so far as perhaps is imminent, between two Powers towards whom it is animated by equally friendly sentiments, the full duty of maintaining—with a view to the interests of humanity and the dearest of attach—certain principles essential to the security of neutrals, and, what more nearly touches ourselves, the French Government has at present remain completely clear under existing circumstances.

It, to our great regret, the United States should be disposed to approve the conduct of the commander of the San Jacinto, they must consider that they have given to the right of search or of visit a scope which there would be an extremely regrettable forgetfulness of principle, on which we have always found the United States on our side.

On what ground, in the first supposed case, can the American cruiser have arrested the two agents of the Southern United States have given to the war, in treaties concluded between the two countries, that the freedom of the flag extends to persons found on board neutral vessels, with the exception of military men actually in the service of the enemy. MM. Mason and Slidell are American citizens; the principle, which we have just recalled, and by diplomatic acts of which the United States have availed themselves, perfectly free under the neutral flag of England.

It will not, therefore, be admitted that the Trent has not remained a neutral ship. What constitutes contraband of war is set, it is true, by the law of nations, and by treaties, with more or less precision; but, so far as exacts persons, the stipulations found in treaties relative to military persons clearly define the character of the persons who are to be seized and captured by belligerents.

Now, it cannot be necessary to demonstrate that MM. Mason and Slidell can in no way be assimilated to persons in this category. There would, therefore, remain no ground to explain the capture but the pretext that it were bearers of official despatches from the enemy. But this is the place to call to your recollection that, in the case of the Trent, which Captain Wilkes declared of the American cruiser to have been unidentifiable.

The Trent was not bearer of despatches from either of the belligerents. It was carrying its cargo and passengers to a neutral country; and, moreover, it was in a neutral port when it had taken in its cargo. If it were said, in a similar such circumstances, the neutral flag did not completely cover the persons found on board neutral vessels, it would be difficult to contest a principle which the commercial navigation of third Powers would be liable to suffer at any moment from the caprice of belligerents. Without pausing to discuss the question, we will limit ourselves to observing that it requires from the neutral the most complete impartiality, and he interdicts to himself any mixing up in any way with the passions of war. Now, has not a reproach been upon the liberty of commerce and navigation which modern international law endeavours to enlarge or legislate. There would be a return, in word, to those vexatious practices against which, in former times, no Power protected more energetically than the United States.

If the Washington Cabinet should regard the two persons arrested as rebels, it seems to us that always it is right to seize, but that, though such a ground, could not be more resolved in a case favourable to the commander of the San Jacinto. In such a case there would be a question of principle in virtue of which such a fact to be a portion of the territory whose flag it bears, and there would be a violation of the sovereignty which forbids a foreign Sovereign to exercise jurisdiction on that territory. It cannot doubtless be necessary to call to mind the energy with which the United States has ever resisted to defend this immunity and the right of asylum which is a consequence of it. The Washington Cabinet has, in fact, invoked these principles in the case of the Creole, when the English vessel of MM. Mason and Slidell came said enough, I think, to show that the Cabinet of Washington could not, in our opinion, maintain these principles which all nations have hitherto admitted in maintaining without putting itself in contradiction with its own conduct up to the present time. We cannot suppose that the commander of the San Jacinto, in the first things the Cabinet of Washington cannot, in our opinion, hesitate as to the course to be taken.

Lord Lyons is already charged to present the demand for satisfaction which the English Government has a right to claim on account of inability, and which in the immediate release of the persons taken from the Trent, and explanations which shall disavow the act of Captain Wilkes, and declare it to be of a private character to the British flag. The Federal Government would be inspired by a just and sincere sentiment in giving to these demands. It is, perhaps, to conceive any object or any interest that it could have to run the risk of provoking a rupture with the British Empire, and, in the midst of a struggle for conservation, she would see in such a rupture a complication in every way disastrous. The Government of the United States of Washington will not, we do not doubt, hesitate to establish the occasion serious uncertainties to all the Powers not parties to the present conflict, and to the whole of the commerce of loyal friendship to the United States is not consulting from it our opinion.

We pray you, Sir, to take the first opportunity of speaking to Mr. Seward, and, if he should desire it, to leave him a copy of this despatch.—Receive, &c.

THOUVENEL.

Arrangements are now in progress for extending the Post Office savings bank system to Ireland.

In the village of Lass, district of Schlanken, in the Tyrol, a law has existed for many centuries, according to which all the inhabitants are without shelter. The loss is estimated at 48,000*l*.

Advices from Vienna announce that the Archduke Albert has been sent to place in better state the defence of Dalmatia and the Tyrol, in view of eventualities which may take place in Northern Italy.

Advices from Havannah state that the French brig Jules et Marie, which was lately searched and accidentally injured by the American cruiser Iroquois, has been condemned by the Prize Court at Havannah.

Two gold medals founded by the late Sir Gilbert Blane have just been awarded to Mr. Assistant-Surgeon Hall, of the 1st Battalion Rifle Brigade, and to Mr. William Macleod, M.D., of her Majesty's 93rd Highlanders.

The Government have ordered the removal of the wives and friends of the troops leaving for Canada that the "Persia, and the other large steamers, may carry their beds fitted with Clifford's rafters for instantly and safely lowering them.

The annual report of the Woods and Forests department has been issued for the year ending March 31, 1861. The total net produce is of 376,484, from the Crown estate, including Windsor Park; but from this must be deducted 272,176 expenditure, and 24,000*l* for the Duchy of Cornwall, such as property tax and pensions; the receipts from the Royal forests and chases into the same account, and the expenditure to 37,961. The total, therefore, was a gross receipt of 451,144*l*, an expenditure of 412,687, and a consequent surplus of 38,747 for the Exchequer.

Excavations made by the Abbé Cochet on the site of the old Chapel of St. Nicolas of Candebec, near the citadel of Dieppe, have led to the discovery of thirty-five gold coins of the fifteenth and sixteenth centuries, the most recent bearing the date of 1565. Another discovery of coins still more ancient has also been made at Dieppe. Just where the river forming the port leaves into the sea a gold coin was found under the dikade, and six of them have been secured by the Abbé Cochet. They are all Roman, and belong to the reigns of Valentinian, Valens, Theodosius the Great, Arcadius, and to Honorius, ranging in date from A.D. 375 to 420.

HOSPITAL for CONSUMPTION and DISEASES of the CHEST, Brompton, London, S.W.—Nearly Two Hundred Inpatients and many hundreds of Outpatients are annually relieved at this Hospital. Donations and Subscriptions are earnestly SOLICITED in order to meet the expenses, which are necessarily heavy.—PHILIP DAVIS, Hon. Sec.; HENRY BODKIN, Sec.

LONDON HOMŒOPATHIC HOSPITAL, GOWER-STREET, BEDFORD-SQUARE.
The next ELECTION will take place in JANUARY.
ADDITIONAL FUNDS are still urgently REQUIRED for the due carrying out of the Charity.—By order,
Bankers—The Union Bank, 2, Princes-street, Bank. HENRY SMITH, Sec.

ROYAL ASYLUM of ST. ANN'S SOCIETY for the Relief and other NECESSITOUS CHILDREN of PARENTS ONCE in PROSPERITY.
Patron—HER MAJESTY and the Royal Family.
President—The Archbishop of Canterbury.
Three Hundred Children are now supported by this Institution, and a New Thousand has been received by its Children, whilst under the ruins may be purchased from the Asylum, the Annual Subscription greatly increasing.
Office, 8, Wellington-street, Strand.
Subscriptions will be thankfully received by the Secretary, at the Offices, or by Messrs. Drummond, 49, Charing-cross.

THE PALACE HOTEL, Buckingham-gate, London, S.W., is now open to receive company. There are Coffee-rooms, Drawing-rooms, Dining-rooms, and Private Apartments for the use of families. Breakfasts, Dinners, and Suppers (at any hour), equipages, sparkling champagne always ready. Wines of the finest vintages of all countries, and every description of refreshments from the new Victoria Railway Terminus.—J. G. REACH, Proprietor.

NATAL, South Africa.—The LONDON and SOUTH AFRICAN BANK, Incorporated, London, LIMITED, HEREBY GIVES NOTICE that the Rate of INTEREST allowed by the Bank on Deposits of Money, and on Current Accounts, will be reduced to Four per cent. per annum, on and after the 1st January, 1851.
By Order of the Board,
J. A. JARVOISE, General Manager.
Commercial and Agricultural Bank of Natal.
Durban, Port Natal, Sept. 30, 1850.

EDUCATION, RICHMOND-HILL.—In a Private and Genteel Protestant Establishment, conducted by a Gentleman of long experience and the highest Masters for French, Italian, German, Scientific Lectures, Drawing, Painting, Dancing, Riding, Boating, &c., Pupils are received on a Clergyman, GERMANISING PARENTS to receive visits to or from their Children at any time. The Terms are 60 guineas to which the highest Masters for French, Italian, German, Drawing, French, and German: and conversational proficiency under French and German Governesses. The Terms are 60 guineas to which the highest Masters for French, Italian, German, Drawing, Painting, Dancing, and the Piano,

NEW BOOKS.

ALMANACS FOR 1862.

THE BRITISH WORKMAN'S ALMANAC
Is now ready. Price One Penny. It contains Six Splendid Engravings by John Gilbert, with Considerable Working Matter.
THE BABY OF HOPE ALMANAC is also ready. Price One Penny. Illustrated by Archer and Weir.
S. W. PARTRIDGE, 9, Paternoster-row, London.

ILLUSTRATED PRESENTS.
With 200 Engravings.
A Complete Edition of the BRITISH WORKMAN for 1858—59, bound in cloth, price 3s. 6d.; gilt edges, 4s. The BRITISH WORKMAN for 1860, bound in cloth, price 3s. 6d.; gilt edges, 4s.
With Eight Hundred Engravings, a Complete Edition of THE BAND OF HOPE REVIEW for the first Two Years, in cloth 4s., gilt edges 5s.
"Every Sunday-school should be one."—Mothers' Friend.
The Three Volumes Post-free, and can be had separately in gilt cloth, uniform in price, 4s. each.
Cloth, gilt, price 1s., with Coloured Plates and 64 gilt pages, 6d.; and the
ILLUSTRATED SONGS AND HYMNS FOR THE YOUNG. With One Hundred and Sixty Woodcuts, from Designs by John Gilbert, H. Weir, Archer, J. Jones, A. Lycett, H. Sharp, and others.
"This is a most exquisite volume. It is a charming present, and, we trust, will meet with general appreciation at the hands of the class upon whom may be fortunate enough to possess it."—Weekly Times.
Price Sixpence, coloured, price 1s. 6d., gilt 2s.
MORNING DEW-DROPS; or, Juvenile Almanac. By the Author of "Ruth."
"In the Editor literally body we trust it will speedily appear as its thousand predecessors."—Christian News.
"A perfect bill of fare suitable to all tastes at one penny per copy, written in an accustomed Christian spirit."—Mothers' Friend.
A Similar work for 1862, containing One Hundred Enigmas, Illustrated by Archer and Weir.
ILLUSTRATED HANDBILLS. Compiled by the Editor of the Band of Hope Review. Suitable for general distribution. Embracing Religion, Sabbath Observance, the Sacred Scriptures, Temperance, Kindness to Animals, Sabbath Breaking, Profane Swearing, &c. Nos. 1 to 4, price 1d. each, or 6d. per dozen. This is an alternative little present for working men, domestics, &c.
Second Edition, with Eight Illustrations, price 1s., neat cover, in
A MOTHER'S SCRIPTURES FOR HER CHILDREN. By the Author of "Ruth."
Price One Shilling, in cloth, a Present for Domestic Servants, by the Author of "Ruth," entitled, THE SERVANT'S FRIEND. By Mrs. ELLIS. Adapted to her Friends in the Cottage and the Kitchen.
"It is an admirable and excellent little book to place in the hands of young women going to service. It reminders of those admirable manuals of Mrs. Sherwood, Mrs. Trimmer, and Mrs. Hannah More."—Christian Times.
Just published, bound in cloth, price One Shilling, with Illustrations
THE CONFESSIONS OF A DECANTER. By Mrs. ELLIS.
"We found from the title of "Confessions of a Decanter" has put us in mind of Mrs. Ellis's "Pictures of Private Life," and we have been much pleased with the graceful spread of Intemperance in families, by Declamation and Satire, will, we trust, prove a warning to not a few. The Author has done good service to the cause of Temperance, and we hope she will continue her labours; for why should not a great master, in the means who designed them, when before, write?"
Wesleyan-place, Cross Gardens, Cork.
TOIL and TROUBLE; or, Life-Story of Patty, the Workwoman. By Mrs. ELLIS.
"Patty Trout is a creation born from the mind of moral genius. Her life-story is a romance will be as interesting as its morals."—Christian Spectator.
Price Threepence, neatly sewed, and in a superior style,
THE WARNING: A NARRATIVE of Facts addressed to Wives and Mothers. By Mrs. C. L. BALFOUR.
"A most touching narrative, and one that will be remembered in the midst of working, sorrow, and anguish."—Record.
Second Edition, with Thirteen Wood-engravings,
THE BIBLE BOOK FOR ALL. By JACOB POST.
"We most cordially recommend this book to the careful perusal of any one who is desirous of obtaining a clear general view of the Bible, and who has not time to read it through. The Author has done his work in a very pleasing manner, and has succeeded admirably; for why could more completely the exact of its title, and a better stepping-stone on the same object than the Bible Book for All?"—Morning Advertiser.
A True and Thrilling Narrative.—Illustrated Wrapper, price 1s.
THE WRECK OF THE *Stag*; or, Evening's Amusement at the Cuddy. By Mrs. C. L. BALFOUR.
"A most interesting story; but the well-chosen words in which it is told will fully gratify and commodious of the style, render it a very suitable present for those who have the heart of the young."—Bradford Observer.
Price Eighteen-pence, Parts of Forty-eight.
THE LITTLE PEOPLE'S LITTLE POLES. (Illustrated.) Edited by Mrs. ELLIS. Embracing the Scriptures—Conveyance of the Sabbath—Godliness in Domestic—Prayer—Kindness to Animals—Temperance, and Kindness.
Third Edition, Illustrated Wrapper, price One Shilling,
A VOICE FROM THE VINTAGE. By Mrs. ELLIS, Authoress of "Women of England," &c.
"Mrs. Ellis has written a most valuable and accommodating and useful volume, and we can only say that we wish it every success and increased circulation."—Wesleyan Magazine.
"Mrs. Ellis has written a most valuable and accommodating and useful volume, and we can only say that we wish it every success and increased circulation."—Wesleyan Magazine.
A Book for Working Lads, Illustrated Wrapper, price One Shilling,
THE YOUNG MAN'S Worthiness Help'd by Faith. By Mrs. C. L. BALFOUR.
"This is a book of sentences of 5 pure London workmen by which the Author endeavours to show the value of faith in Christ, especially of honesty, truthfulness, and obedience. It is a suitable present for apprentices and the more elevated in Sunday-schools."
For Temperance Societies, &c. Shilling Packet of
